(54) Title: TELEPHONE CALLBACK SIGNALING PROCESS VIA INTERNET

(57) Abstract: Patent of Invention process for signaling "callback" type phone calls, via Internet, supported by a phone book type application for single or multi-user computers, refers to a process that allows to the user to make phone calls of the "callback" type with the aid of the Internet, which reduces substantially the time for connection, eliminates the need for additional high cost equipment ("hardware"), the need for making uncompleted calls, and the need for Internet Browsers to process calls. Through a "phone book" type application, idealized for computer nets or for single user computers having access to the Internet, the user must just dial the number he wants to call or click with the mouse on a pre-stored number and the ready call (calling in the user-chosen phone), is given in the ordinary telephone of the user in a few seconds.
