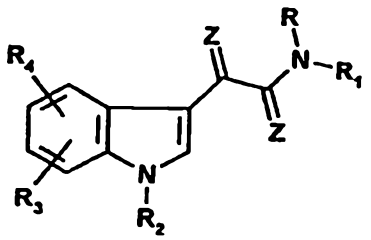
(54) Title: INDOLYL–3–GLYOXYLIC ACID DERIVATIVES WITH ANTITUMORAL ACTIVITY

(54) Bezeichnung: INDOLYL–3–GLYOXYLSÄURE–DERIVATE MIT ANTITUMORWIRKUNG



(1)

(57) Abstract

The invention relates to the use of N–substituted indol–3–glyoxyamides of general formula (1) as antitumoral agents, as well as to pharmaceutical compositions with an antitumoral activity characterised in that they contain at least one of the compounds of general formula (1), possibly in the form of their physiologically acceptable acid addition salts or N oxides. The invention also relates to antitumoral agents containing as active ingredient one or more N–substituted indol–3–glyoxyamides of general formula (1) and their physiologically acceptable acid addition salts, and as far as possible their N–oxides, as well as a pharmaceutically acceptable carrier and/or diluent or additive, in the form of tablets, dragées, capsules, solutions for infusion or ampoules, suppositories, dressings, powder preparations for inhalation, suspensions, creams and ointments.

(57) Zusammenfassung

Die Erfindung betrifft die Verwendung von N–substituierten Indol–3–glyoxylamiden der allgemeinen Formel (1) als Antitumormittel sowie pharmazeutische Zusammensetzung mit Antitumorwirkung, gekennzeichnet durch einen Gehalt an mindestens einer der Verbindungen der allgemeinen Formel (1) ggf. auch in Form der physiologisch verträglichen Säureadditionssalze oder N–Oxide. Ferner umfasst die Erfindung auch Antitumormittel enthaltend als aktiven Wirkstoff ein oder mehrere N–substitierte Indol–3–glyoxylamide gemäss der allgemeinen Formel (1) sowie ggf. deren physiologisch verträglichen Säureadditionssalze und, sofern möglich, N–Oxide und einen pharmazeutisch verwendbaren Träger– und/oder Verdünnungs– bzw. Hilfsstoff in Form von Tabletten, Dragees, Kapseln, Lösungen zur Infusion oder Ampullen, Suppositorien, Pflaster, inhalativ einsetzbaren Pulverzubereitungen, Suspensionen, Cremes und Salben.

Indolyl-3-glyoxylic acid derivatives having antitumor action

Indole-3-glyoxylamides have a variety of uses as pharmacodynamically active compounds and as synthetic building blocks in pharmaceutical chemistry.

In the patent application Neth.Appl. 6502481, compounds are described which have an anti-inflammatory and antipyretic activity profile and analgesic activity.

In the British Application GB-B 1 028 812, derivatives of indolyl-3-glyoxylic acid and their amides are used as analgesic, anticonvulsant and β-adrenergic compounds.

G. Domschke et al. (Ber. 94, 2353 (1961)) describes [sic] 3-indolylglyoxylamides which are not characterized pharmacologically.

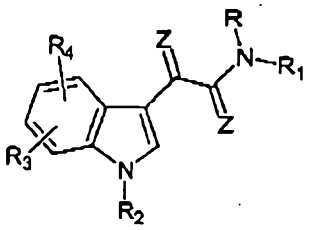
E. Walton reports in J. Med. Chem, 11, 1252 (1968) on indolyl-3-glyoxylic acid derivatives which have an inhibitory action on glycerophosphate dehydrogenase and lactate dehydrogenase.

In the European Patent Specification EP 675110, 1H-indole-3-glyoxylamides are described which are profiled as sPLA2 inhibitors and are used in the treatment of septic shock, in pancreatitis and in the treatment of allergic rhinitis and rheumatoid arthritis.

The aim of the present invention is to make available N-substituted indole-3-glyoxylamides which have an antitumor action and thus to enrich the available pharmaceutical wealth.

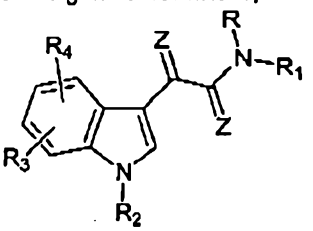
The compounds mentioned have already been disclosed as medicaments having antiasthmatic, antiallergic and immunosuppressant/immunomodulating action in DE-A 19636150 A1.

The invention therefore relates to the use of N-substituted indole-3-glyoxylamides [sic] of the general formula 1 for the production of antitumor agents, antitumor agents having a content of active substance according to formula 1 and their use for the treatment of oncoses.



Formula 1

According to one embodiment of this invention, there is provided the use of one or more N-substituted Indole-3-glyoxylamides of the general formula 1,



Formula 1

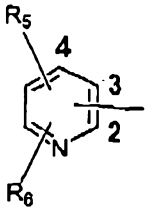
where the radicals R, R_1, R_2, R_3, R_4 and Z have the following meaning:

R= hydrogen, (C_1-C_6)-alkyl, where the alkyl group can be mono- or polysubstituted by a phenyl ring and this phenyl ring for its part can be mono- or polysubstituted by halogen, (C_1-C_6)-alkyl, (C_3-C_7)-cycloalkyl, by carboxyl groups, carboxyl groups esterified with C_1-C_6-alkanols, trifluoromethyl groups, hydroxyl groups, methoxy groups, ethoxy groups, benzyloxy groups and by a benzyl group which is mono- or polysubstituted in the phenyl moiety by (C_1-C_6)-alkyl groups, halogen atoms or trifluoromethyl groups;

R is further a benzyloxycarbonyl group (Z group) or a tertiary-butoxycarbonyl radical (BOC radical), furthermore an acetyl group;

R_1 can be a phenyl ring, which is mono- or polysubstituted by (C_1-C_6)-alkyl, (C_1-C_6)-alkoxy, cyano, halogen, trifluoromethyl, hydroxyl, benzyloxy, nitro, amino, (C_1-C_6)-

alkylamino, (C_1-C_6)-alkoxycarbonylamino and by a carboxyl group or by a carboxyl group esterified with C_1-C_6-alkanols, or can be a pyridine structure of formula 2



Formula 2

and its N-oxide, where the pyridine structure is alternatively bonded to the ring carbon atoms 2, 3 and 4 and can be substituted by the substituents R_5 and R_6, wherein the radicals R_5 and R_6 can be identical or different and have the meaning (C_1-C_6)-alkyl and the meaning (C_3-C_7)-cycloalkyl, (C_1-C_6)-alkoxy, nitro, amino, hydroxy, halogen, trifluoromethyl and further are a ethoxycarbonylamino radical and the group carboxyalkyloxy in which the alkyl group can have 1-4 C atoms;

R_1 can further be a 2- or 4-pyrimidinyl heterocycle, where the 2-pyrimidinyl ring can be mono- or polysubstituted by a methyl group, furthermore can be a 2-, 3-, and 4- and 8-quinolyl structure substituted by (C_1-C_6)-alkyl, halogen, a nitro group, an amino group and a (C_1-C_6)-alkylamino radical, can be a 2-, 3-, and 4-quinolylmethyl group, where the ring carbons of the pyridylmethyl radical of the quinolyl group and of the quinolylmethyl radical can be substituted by (C_1-C_6)-alkyl, (C_1-C_6)-alkoxy, nitro, amino and (C_1-C_6)-alkoxycarbonylamino;

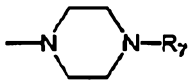
R_1, can be, in the case in which R = hydrogen, a methyl or benzyl group as well as a benzyloxycarbonyl radical (Z radical), a tert-butoxycarbonyl radical (BOC radical) and an acetyl group, can furthermore be the following radicals:
$-CH_2COOH$; $-CH(CH_3)-COOH$; $-(CH_3)_2-CH-(CH_2)_2-CH-COO-$; $H_3C-H_2C-CH(CH_3)-CH(COOH)-$; $HO-H_2C-CH(COOH)-$; phenyl-CH_2-$CH(COOH)-$; (4-imadazolyl)-CH_2-$CH(COOH)-$; $HN=C(NH_2)-NH-(CH_2)_3-CH(COOH)-$; $H_2N-(CH_2)_4-CH(COOH)-$; $H_2N-CO-CH_2-CH-(COOH)-$; $HOOC-(CH_2)_2-CH(COOH)-$;

R_1 can further, in the case in which R is hydrogen, be a Z group, a BOC radical, an acetyl or a benzyl group, can furthermore be an acid radical of a natural or unnatural amino acid, preferably an α-glycyl, α-sarcosyl, α-alanyl, α-leucyl, α-isoleucyl, α-seryl, α-phenylalanyl, α-histidyl, α-prolyl, α-arginyl, α-lysyl, α-asparagyl and α-glutamyl radical, where the amino groups of the respective amino acids can be present

unprotected or can be protected, where a preferred protective group of the amino function is a carbobenzoxy radical (Z radical) and a tert-butoxycarbonyl radical (BOC radical) as well as an acetyl group, and where, in the case of the asparagyl and glutamyl radical claimed for R_1, the second, unbonded carboxyl group is present as a free carboxyl group or in the form of an ester with C_1-C_6-alkanols, preferably as a methyl, ethyl or as a tert-butyl ester;

R_1 can furthermore be a allylaminocarbonyl-2-methylprop-1-yl group;

R and R_1 can further form, together with the nitrogen atom to which they are bonded, a piperazine ring of the formula 3 or a homopiperazine ring, provided R_1 is an aminoalkylene group, in which



Formula 3

R_7 is an alkyl radical, is a phenyl ring which can be mono- or polysubstituted by (C_1-C_6)-alkyl, (C_1-C_6)-alkoxy, halogen, a nitro group, an amino function and by a (C_1-C_6)-alkylamino group;

R_7 is furthermore a benzhydryl group and a bis-p-fluorobenzylhydryl group;

R_2 can be hydrogen and a (C_1-C_6)-alkyl group, where the alkyl group is mono- or polysubstituted by halogen and phenyl, which for its part can be mono- or polysubstituted by halogen, (C_1-C_6)-alkyl, (C_3-C_7)-cycloalkyl, carboxyl groups, carboxyl groups esterified with C_1-C_6-alkanols, trifluoromethyl groups, hydroxyl groups, methoxy groups, ethoxy groups or benzyloxy groups, where the (C_1-C_6)-alkyl group counting as R_2 can further be substituted by the 2-quinolyl group and a 2-, 3- and 4-pyridyl structure, which can both in each case be mono- or polysubstituted by halogen, (C_1-C_4)-alkyl groups or (C_1-C_4)-alkoxy groups;

R_2 is further the aroyl radical, where the aryl moiety on which this radical is based is the phenyl ring, which can be mono- or polysubstituted by halogen, (C_1-C_6)-alkyl, (C_3-C_7)-cycloalkyl, carboxyl groups, carboxyl groups esterified with C_1-C_6-alkanols, trifluoromethyl groups, hydroxyl groups, methoxy groups, ethoxy groups or benzyloxy groups;

R_3 and R_4 can be identical or different and are hydrogen, (C_1-C_6)-alkyl, (C_3-C_7)-cycloalkyl, (C_1-C_6)-alkanoyl, (C_1-C_6)-alkoxy, halogen and benzyloxy;

R_3 and R_4 can furthermore be a nitro group, an amino group, a (C_1-C_4)-mono or dialkyl-substituted amino group, and a (C_1-C_6) alkoxycarbonylamino function or (C_1-C_6)-alkoxycarbonylamino-(C_1-C_6)-alkyl function;

Z is O and S;

or a physiologically tolerable acid addition salt thereof or an N-oxide thereof, for the preparation of a medicament for the treatment of a tumor disease.

According to another embodiment of this invention, there is provided the use of an N-substituted Indole-3-glyoxylamide of the below-mentioned formula:

D 24241 N-(Pyridin-4-yl)-[1-(4-fluorobenzyl)-indol-3-yl]glyoxylamid

or a physiologically tolerable acid addition salt thereof or an N-oxide thereof, for the preparation of a medicament for the treatment of a tumor disease.

According to a further embodiment of this invention, there is provided the use of an N-substituted Indole-3-glyoxylamide of the below-mentioned formula:

D 24843 N-(Pyridin-4-yl)-(1-benzylindole-3-yl)-glyoxylamide

or a physiologically tolerable acid addition salt thereof or an N-oxide thereof, for the preparation of a medicament for the treatment of a tumor disease.

According to yet a further embodiment of this invention, there is provided the use of an N-substituted Indole-3-glyoxylamide of the below-mentioned formula:

D 24850 N-(4-Fluorophenyl)-[1-(3-pyridylmethyl)-indole-3-yl]glyoxylamide

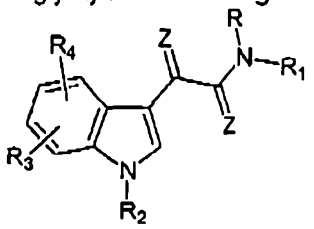
or a physiologically tolerable acid addition salt thereof or an N-oxide thereof, for the preparation of a medicament for the treatment of a tumor disease.

According to yet another embodiment of this invention, there is provided the use of an N-substituted Indole-3-glyoxylamide of the below-mentioned formula:

D 24851 N-(Pyridin-4-yl)-[1-(4-chlorbenzyl)-indole-3-yl]glyoxylamide

or a physiologically tolerable acid addition salt thereof or an N-oxide thereof, for the preparation of a medicament for the treatment of a tumor disease.

According to another embodiment of this invention, there is provided a method of treating a tumor disease in a patient comprising administering to the patient a therapeutically effective amount of one or more N-substituted Indole-3-glyoxylamides of the general formula 1,



Formula 1

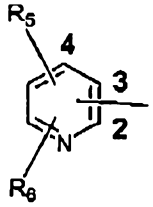
where the radicals R, R_1, R_2, R_3, R_4 and Z have the following meaning:

R= hydrogen, (C_1-C_6)-alkyl, where the alkyl group can be mono- or polysubstituted by a phenyl ring and this phenyl ring for its part can be mono- or polysubstituted by halogen,

(C_1-C_6)-alkyl, (C_3-C_7)-cycloalkyl, by carboxyl groups, carboxyl groups esterified with C_1-C_6-alkanols, trifluoromethyl groups, hydroxyl groups, methoxy groups, ethoxy groups, benzyloxy groups and by a benzyl group which is mono- or polysubstituted in the phenyl moiety by (C_1-C_6)-alkyl groups, halogen atoms or trifluoromethyl groups;

R is further a benzyloxycarbonyl group (Z group) or a tertiary-butoxycarbonyl radical (BOC radical), furthermore an acetyl group;

R_1 can be a phenyl ring, which is mono- or polysubstituted by (C_1-C_6)-alkyl, (C_1-C_6)-alkoxy, cyano, halogen, trifluoromethyl, hydroxyl, benzyloxy, nitro, amino, (C_1-C_6)-alkylamino, (C_1-C_6)-alkoxycarbonylamino and by a carboxyl group or by a carboxyl group esterified with C_1-C_6-alkanols, or can be a pyridine structure of formula 2



Formula 2

and its N-oxide, where the pyridine structure is alternatively bonded to the ring carbon atoms 2, 3 and 4 and can be substituted by the substituents R_5 and R_6, wherein the radicals R_5 and R_6 can be identical or different and have the meaning (C_1-C_6)-alkyl and the meaning (C_3-C_7)-cycloalkyl, (C_1-C_6)-alkoxy, nitro, amino, hydroxy, halogen, trifluoromethyl and further are a ethoxycarbonylamino radical and the group carboxyalkyloxy in which the alkyl group can have 1-4 C atoms;

R_1 can further be a 2- or 4-pyrimidinyl heterocycle, where the 2-pyrimidinyl ring can be mono- or polysubstituted by a methyl group, furthermore can be a 2-, 3-, and 4- and 8-quinolyl structure substituted by (C_1-C_6)-alkyl, halogen, a nitro group, an amino group and a (C_1-C_6)-alkylamino radical, can be a 2-, 3-, and 4-quinolylmethyl group, where the ring carbons of the pyridylmethyl radical of the quinolyl group and of the quinolylmethyl radical can be substituted by (C_1-C_6)-alkyl, (C_1-C_6)-alkoxy, nitro, amino and (C_1-C_6)-alkoxycarbonylamino;

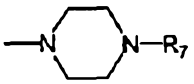
R1, can be, in the case in which R = hydrogen, a methyl or benzyl group as well as a benzyloxycarbonyl radical (Z radical), a tert-butoxycarbonyl radical (BOC radical) and an acetyl group, can furthermore be the following radicals:
$-CH_2COOH$; $-CH(CH_3)-COOH$; $-(CH_3)_2-CH-(CH_2)_2-CH-COO-$; $H_3C-H_2C-CH(CH_3)-CH(COOH)-$; $HO-H_2C-CH(COOH)-$; phenyl-CH_2-$CH(COOH)-$; (4-imadazolyl)-CH_2-$CH-$

(COOH)-; HN=C(NH_2)-NH-(CH_2)$_3$-CH(COOH)-; H_2N-(CH_2)$_4$-CH(COOH)-; H_2N-CO-CH_2-CH-(COOH)-; HOOC-(CH_2)$_2$-CH(COOH)-;

R_1 can further, in the case in which R is hydrogen, be a Z group, a BOC radical, an acetyl or a benzyl group, can furthermore be an acid radical of a natural or unnatural amino acid, preferably an α-glycyl, α-sarcosyl, α-alanyl, α-leucyl, α-isoleucyl, α-seryl, α-phenylalanyl, α-histidyl, α-prolyl, α-arginyl, α-lysyl, α-asparagyl and α-glutamyl radical, where the amino groups of the respective amino acids can be present unprotected or can be protected, where a preferred protective group of the amino function is a carbobenzoxy radical (Z radical) and a tert-butoxycarbonyl radical (BOC radical) as well as an acetyl group, and where, in the case of the asparagyl and glutamyl radical claimed for R_1, the second, unbonded carboxyl group is present as a free carboxyl group or in the form of an ester with C_1-C_6-alkanols, preferably as a methyl, ethyl or as a tert-butyl ester;

R_1 can furthermore be a allylaminocarbonyl-2-methylprop-1-yl group;

R and R_1 can further form, together with the nitrogen atom to which they are bonded, a piperazine ring of the formula 3 or a homopiperazine ring, provided R_1 is an aminoalkylene group, in which



Formula 3

R_7 is an alkyl radical, is a phenyl ring which can be mono- or polysubstituted by (C_1-C_6)-alkyl, (C_1-C_6)-alkoxy, halogen, a nitro group, an amino function and by a (C_1-C_6)-alkylamino group;

R_7 is furthermore a benzhydryl group and a bis-p-fluorobenzylhydryl group;

R_2 can be hydrogen and a (C_1-C_6)-alkyl group, where the alkyl group is mono- or polysubstituted by halogen and phenyl, which for its part can be mono- or polysubstituted by halogen, (C_1-C_6)-alkyl, (C_3-C_7)-cycloalkyl, carboxyl groups, carboxyl groups esterified with C_1-C_6-alkanols, trifluoromethyl groups, hydroxyl groups, methoxy groups, ethoxy groups or benzyloxy groups, where the (C_1-C_6)-alkyl group counting as R_2 can further be substituted by the 2-quinolyl group and a 2-, 3- and 4-pyridyl structure, which can both in each case be mono- or polysubstituted by halogen, (C_1-C_4)-alkyl groups or (C_1-C_4)-alkoxy groups;

R_2 is further the aroyl radical, where the aryl moiety on which this radical is based is the phenyl ring, which can be mono- or polysubstituted by halogen, (C_1-C_6)-alkyl, (C_3-C_7)-cycloalkyl, carboxyl groups, carboxyl groups esterified with C_1-C_6-alkanols,

trifluoromethyl groups, hydroxyl groups, methoxy groups, ethoxy groups or benzyloxy groups;

R_3 and R_4 can be identical or different and are hydrogen, (C_1-C_6)-alkyl, (C_3-C_7)-cycloalkyl, (C_1-C_6)-alkanoyl, (C_1-C_6)-alkoxy, halogen and benzyloxy;

R_3 and R_4 can furthermore be a nitro group, an amino group, a (C_1-C_4)-mono or dialkyl-substituted amino group, and a (C_1-C_6) alkoxycarbonylamino function or (C_1-C_6)-alkoxycarbonylamino-(C_1-C_6)-alkyl function;

Z is O and S;

or a physiologically tolerable acid addition salt thereof or an N-oxide thereof, or a pharmaceutical composition comprising said one or more N-substituted Indole-3-glyoxylamides of the general formula 1, together with a pharmaceutically acceptable carrier.

According to a further embodiment of this invention, there is provided the method of treating a tumor disease in a patient comprising administering to said the patient a therapeutically effective amount of an N-substituted Indole-3-glyoxylamide of the below-mentioned formula:

D 24241 N-(Pyridin-4-yl)-[1-(4-fluorobenzyl)-indol-3-yl]glyoxylamid

or a physiologically tolerable acid addition salt thereof or an N-oxide thereof, or a pharmaceutical composition comprising said compound together with a pharmaceutically acceptable carrier.

According to another embodiment of this invention, there is provided the method of treating a tumor disease in a patient comprising administering to said the patient a therapeutically effective amount of an N-substituted Indole-3-glyoxylamide of the below-mentioned formula:

D 24843 N-(Pyridin-4-yl)-(1-benzylindole-3-yl)-glyoxylamide

or a physiologically tolerable acid addition salt thereof or an N-oxide thereof, or a pharmaceutical composition comprising said compound together with a pharmaceutically acceptable carrier.

According to a further embodiment of this invention, there is provided the method of treating a tumor disease in a patient comprising administering to said the patient a therapeutically effective amount of an N-substituted Indole-3-glyoxylamide of the below-mentioned formula:

D 24850 N-(4-Fluorophenyl)-[1-(3-pyridylmethyl)-indole-3-yl]glyoxylamide

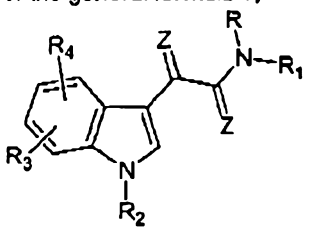
or a physiologically tolerable acid addition salt thereof or an N-oxide thereof, or a pharmaceutical composition comprising said compound together with a pharmaceutically acceptable carrier.

According to a further embodiment of this invention, there is provided the method of treating a tumor disease in a patient comprising administering to said the patient a therapeutically effective amount of an N-substituted Indole-3-glyoxylamide of the below-mentioned formula:

D 24851 N-(Pyridin-4-yl)-[1-(4-chlorbenzyl)-indole-3-yl]glyoxylamide

or a physiologically tolerable acid addition salt thereof or an N-oxide thereof, or a pharmaceutical composition comprising said compound together with a pharmaceutically acceptable carrier.

According to another embodiment of this invention, there is provided one or more N-substituted Indole-3-glyoxylamides of the general formula 1,



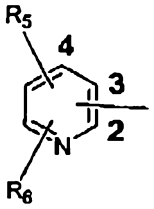
Formula 1

where the radicals R, R_1, R_2, R_3, R_4 and Z have the following meaning:

R= hydrogen, (C_1-C_6)-alkyl, where the alkyl group can be mono- or polysubstituted by a phenyl ring and this phenyl ring for its part can be mono- or polysubstituted by halogen, (C_1-C_6)-alkyl, (C_3-C_7)-cycloalkyl, by carboxyl groups, carboxyl groups esterified with C_1-C_6-alkanols, trifluoromethyl groups, hydroxyl groups, methoxy groups, ethoxy groups, benzyloxy groups and by a benzyl group which is mono- or polysubstituted in the phenyl moiety by (C_1-C_6)-alkyl groups, halogen atoms or trifluoromethyl groups;

R is further a benzyloxycarbonyl group (Z group) or a tertiary-butoxycarbonyl radical (BOC radical), furthermore an acetyl group;

R_1 can be a phenyl ring, which is mono- or polysubstituted by (C_1-C_6)-alkyl, (C_1-C_6)-alkoxy, cyano, halogen, trifluoromethyl, hydroxy, benzyloxy, nitro, amino, (C_1-C_6)-alkylamino, (C_1-C_6)-alkoxycarbonylamino and by a carboxyl group or by a carboxyl group esterified with C_1-C_6-alkanols, or can be a pyridine structure of formula 2



Formula 2

and its N-oxide, where the pyridine structure is alternatively bonded to the ring carbon atoms 2, 3 and 4 and can be substituted by the substituents R_5 and R_6, wherein the radicals R_5 and R_6 can be identical or different and have the meaning (C_1-C_6)-alkyl and the meaning (C_3-C_7)-cycloalkyl, (C_1-C_6)-alkoxy, nitro, amino, hydroxy, halogen, trifluoromethyl and further are a ethoxycarbonylamino radical and the group carboxyalkyloxy in which the alkyl group can have 1-4 C atoms;

R_1 can further be a 2- or 4-pyrimidinyl heterocycle, where the 2-pyrimidinyl ring can be mono- or polysubstituted by a methyl group, furthermore can be a 2-, 3-, and 4- and 8-

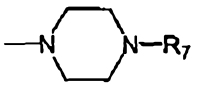
quinolyl structure substituted by (C_1-C_6)-alkyl, halogen, a nitro group, an amino group and a (C_1-C_6)-alkylamino radical, can be a 2-, 3-, and 4-quinolylmethyl group, where the ring carbons of the pyridylmethyl radical of the quinolyl group and of the quinolylmethyl radical can be substituted by (C_1-C_6)-alkyl, (C_1-C_6)-alkoxy, nitro, amino and (C_1-C_6)-alkoxycarbonylamino;

R1, can be, in the case in which R = hydrogen, a methyl or benzyl group as well as a benzyloxycarbonyl radical (Z radical), a tert-butoxycarbonyl radical (BOC radical) and an acetyl group, can furthermore be the following radicals:
$-CH_2COOH$; $-CH(CH_3)-COOH$; $-(CH_3)_2-CH-(CH_2)_2-CH-COO-$; $H_3C-H_2C-CH(CH_3)-CH(COOH)-$; $HO-H_2C-CH(COOH)-$; phenyl-$CH_2-CH(COOH)-$; (4-imadazolyl)-$CH_2-CH(COOH)-$; $HN=C(NH_2)-NH-(CH_2)_3-CH(COOH)-$; $H_2N-(CH_2)_4-CH(COOH)-$; $H_2N-CO-CH_2-CH-(COOH)-$; $HOOC-(CH_2)_2-CH(COOH)-$;

R_1 can further, in the case in which R is hydrogen, be a Z group, a BOC radical, an acetyl or a benzyl group, can furthermore be an acid radical of a natural or unnatural amino acid, preferably an α-glycyl, α-sarcosyl, α-alanyl, α-leucyl, α-isoleucyl, α-seryl, α-phenylalanyl, α-histidyl, α-prolyl, α-arginyl, α-lysyl, α-asparagyl and α-glutamyl radical, where the amino groups of the respective amino acids can be present unprotected or can be protected, where a preferred protective group of the amino function is a carbobenzoxy radical (Z radical) and a tert-butoxycarbonyl radical (BOC radical) as well as an acetyl group, and where, in the case of the asparagyl and glutamyl radical claimed for R_1, the second, unbonded carboxyl group is present as a free carboxyl group or in the form of an ester with C_1-C_6-alkanols, preferably as a methyl, ethyl or as a tert-butyl ester;

R_1 can furthermore be a allylaminocarbonyl-2-methylprop-1-yl group;

R and R_1 can further form, together with the nitrogen atom to which they are bonded, a piperazine ring of the formula 3 or a homopiperazine ring, provided R_1 is an aminoalkylene group, in which



Formula 3

R_7 is an alkyl radical, is a phenyl ring which can be mono- or polysubstituted by (C_1-C_6)-alkyl, (C_1-C_8)-alkoxy, halogen, a nitro group, an amino function and by a (C_1-C_6)-alkylamino group;

R_7 is furthermore a benzhydryl group and a bis-p-fluorobenzylhydryl group;

R_2 can be hydrogen and a (C_1-C_6)-alkyl group, where the alkyl group is mono- or polysubstituted by halogen and phenyl, which for its part can be mono- or polysubstituted by halogen, (C_1-C_6)-alkyl, (C_3-C_7)-cycloalkyl, carboxyl groups, carboxyl groups esterified with C_1-C_6-alkanols, trifluoromethyl groups, hydroxyl groups, methoxy groups, ethoxy groups or benzyloxy groups, where the (C_1-C_6)-alkyl group counting as R_2 can further be substituted by the 2-quinolyl group and a 2-, 3- and 4-pyridyl structure, which can both in each case be mono- or polysubstituted by halogen, (C_1-C_4)-alkyl groups or (C_1-C_4)-alkoxy groups;

R_2 is further the aroyl radical, where the aryl moiety on which this radical is based is the phenyl ring, which can be mono- or polysubstituted by halogen, (C_1-C_6)-alkyl, (C_3-C_7)-cycloalkyl, carboxyl groups, carboxyl groups esterified with C_1-C_6-alkanols, trifluoromethyl groups, hydroxyl groups, methoxy groups, ethoxy groups or benzyloxy groups;

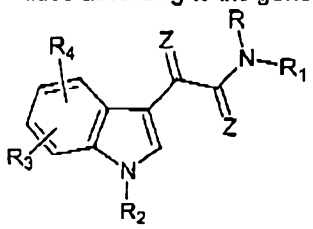
R_3 and R_4 can be identical or different and are hydrogen, (C_1-C_6)-alkyl, (C_3-C_7)-cycloalkyl, (C_1-C_6)-alkanoyl, (C_1-C_6)-alkoxy, halogen and benzyloxy;

R_3 and R_4 can furthermore be a nitro group, an amino group, a (C_1-C_4)-mono or dialkyl-substituted amino group, and a (C_1-C_6) alkoxycarbonylamino function or (C_1-C_6)-alkoxycarbonylamino-(C_1-C_6)-alkyl function;

Z is O and S;

or a physiologically tolerable acid addition salt thereof or an N-oxide thereof, when used in a therapeutically effective amount for the treatment of a tumor disease in a patient.

According to a further embodiment of this invention, there is provided one or more N-substituted Indole-3-glyoxylamides according to the general formula 1,



Formula 1

where the radicals

R = hydrogen

R_1 = 4-pyridyl, 4-fluorophenyl;

R_2 = benzyl, 4-chlorobenzyl, 4-fluorobenzyl, 3-pyridylmethyl, 4-bromobenzyl;

R_3 and R_4 = hydrogen; and

Z is oxygen;

COMS ID No: SMBI-00474549 Received by IP Australia: Time (H:m) 13:01 Date (Y-M-d) 2003-10-30

or a physiologically tolerable acid addition salt thereof or an N-oxide thereof, when used in a therapeutically effective amount for the treatment of a tumor disease in a patient.

According to another embodiment of this invention, there is provided one or more of the following N-substituted Indole-3-glyoxylamides or a physiologically tolerable acid addition salt thereof or an N-oxide thereof, when used in a therapeutically effective amount for the treatment of a tumor disease in a patient.:

D 24241 N-(pyridin-4-yl)-[1-(4-fluorobenzyl)-indol-3-yl]glyoxylamide

D 24843 N-(pyridin-4-yl)-(1-benzylindol-3-yl)-glyoxylamide

D 24850 N-(4-fluorophenyl)-[1-(3-pyridylmethyl)-indol-3-yl]glyoxylamide

D 24851 N-(pyridin-4-yl)-[1-(4-chlorobenzyl)-indol-3-yl]glyoxylamide

D 25505 N-(pyridin-4-yl)-[1-(4-fluorobenzyl)-indol-3-yl]glyoxylamide HCL.

According to a further embodiment of this invention, there is provided an N-substituted Indole-3-glyoxylamide of the below-mentioned formula:

D 24241 N-(Pyridin-4-yl)-[1-(4-fluorobenzyl)-indol-3-yl]glyoxylamid

or a physiologically tolerable acid addition salt thereof or an N-oxide thereof, when used in a therapeutically effective amount for the treatment of a tumor disease in a patient.

According to another embodiment of this invention, there is provided an N-substituted Indole-3-glyoxylamide of the below-mentioned formula:

D 24843 N-(Pyridin-4-yl)-(1-benzylindole-3-yl)-glyoxylamide

or a physiologically tolerable acid addition salt thereof or an N-oxide thereof, when used in a therapeutically effective amount for the treatment of a tumor disease in a patient.

According to another embodiment of this invention, there is provided an N-substituted Indole-3-glyoxylamide of the below-mentioned formula:

D 24850 N-(4-Fluorophenyl)-[1-(3-pyridylmethyl)-indole-3-yl]glyoxylamide

or a physiologically tolerable acid addition salt thereof or an N-oxide thereof, when used in a therapeutically effective amount for the treatment of a tumor disease in a patient.

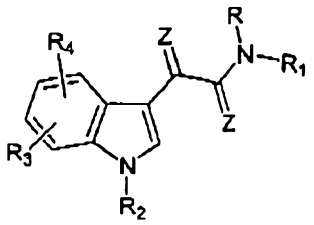
According to another embodiment of this invention, there is provided an N-substituted Indole-3-glyoxylamide of the below-mentioned formula:

D 24851 N-(Pyridin-4-yl)-[1-(4-chlorbenzyl)-indole-3-yl]glyoxylamide

or a physiologically tolerable acid addition salt thereof or an N-oxide thereof, when used in a therapeutically effective amount for the treatment of a tumor disease in a patient.

According to another embodiment of this invention, there is provided the method of using N-substituted indole-3-glyoxylamides of the general formula 1

2k



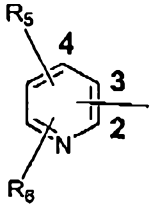
Formula 1

where the radicals R, R_1, R_2, R_3, R_4 and Z have the following meaning:

R= hydrogen, (C_1-C_6)-alkyl, where the alkyl group is optionally mono- or polysubstituted by a phenyl ring and this phenyl ring for its part is optionally mono- or polysubstituted by halogen, (C_1-C_6)-alkyl, (C_3-C_7)-cycloalkyl, by carboxyl groups, carboxyl groups esterified with C_1-C_6-alkanols, trifluoromethyl groups, hydroxyl groups, methoxy groups, ethoxy groups, benzyloxy groups and by a benzyl group which is mono- or polysubstituted in the phenyl moiety by (C_1-C_6)-alkyl groups, halogen atoms or trifluoromethyl groups;

R is further a benzyloxycarbonyl group or a tertiary-butoxycarbonyl radical (BOC radical), furthermore an acetyl group;

R_1 is a pyridine structure of formula 2



Formula 2

or its N-oxide, where the pyridine structure is alternatively bonded to the ring carbon atoms 2, 3 and 4 and is optionally substituted by the substituents R_5 and R_6; R_5 and R_6 are identical or different and signify (C_1-C_6)-alkyl, (C_3-C_7)-cycloalkyl, (C_1-C_6)-alkoxy, nitro, amino, hydroxy, halogen, trifluoromethyl ethoxycarbonylamino radical, and a carboxyalkyloxy group in which the alkyl group can have 1-4 C atoms;

R_2 is hydrogen or a (C_1-C_6)-alkyl group, where the alkyl group is mono- or polysubstituted by halogen and phenyl, which for its part is optionally mono- or polysubstituted by halogen, (C_1-C_6)-alkyl, (C_3-C_7)-cycloalkyl, carboxyl groups, carboxyl groups esterified with C_1-C_6-alkanols, trifluoromethyl groups, hydroxyl groups, methoxy groups, ethoxy groups or benzyloxy groups, the (C_1-C_6)-alkyl group is optionally substituted by the 2-quinolyl group and a 2-, 3- and 4-pyridyl structure, which are optionally in each case be mono- or polysubstituted by halogen, (C_1-C_4)-alkyl groups or (C_1-C_4)-alkoxy groups, or R_2 is an aroyl radical, where the aryl moiety on which the radical is based is the phenyl

ring, which is optionally mono- or polysubstituted by halogen, (C_1-C_6)-alkyl, (C_3-C_7)-cycloalkyl, carboxyl groups, carboxyl groups esterified with C_1-C_6-alkanols, trifluoromethyl groups, hydroxyl groups, methoxy groups, ethoxy groups or benzyloxy groups;

R_3 and R_4 are identical or different and are hydrogen, (C_1-C_6)-alkyl, (C_3-C_7)-cycloalkyl, (C_1-C_6)-alkanoyl, (C_1-C_6)-alkoxy, halogen and benzyloxy, or a nitro group, an amino group, a (C_1-C_4)-mono or dialkyl-substituted amino group, and a (C_1-C_6) alkoxycarbonylamino function or (C_1-C_6)-alkoxycarbonylamino-(C_1-C_6)-alkyl function; and

Z is O or S;

and their physiologically tolerable acid addition salts for the treatment of tumors or oncoses, said method comprising administering at least one of the following compounds or a physiologically acceptable acid addition salt or N-oxide thereof:

N-(pyridin-4-yl)-[1-(4-fluorobenzyl)-indol-3-yl]glyoxylamide;

N-(pyridin-4-yl)-(1-benzylindol-3-yl)-glyoxylamide;

N-(4-fluorophenyl)-[1-(3-pyridylmethyl)-indol-3-yl]glyoxylamide;

N-(pyridin-4-yl)-[1-(4-chlorobenzyl)-indol-3-yl]glyoxylamide; and

N-(pyridin-4-yl)-[1-(4-fluorobenzyl)-indol-3-yl]glyoxylamide hydrochloride salt;

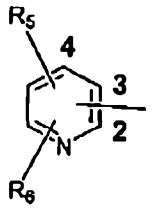
a subject in need of such treatment.

Disclosed herein are compounds of Formula 1 where the radicals R, R_1, R_2, R_3, R_4 and Z have the following meaning:

R= hydrogen, (C_1-C_6)-alkyl, where the alkyl group can be mono- or polysubstituted by a phenyl ring and this phenyl ring for its part can be mono- or polysubstituted by halogen, (C_1-C_6)-alkyl, (C_3-C_7)-cycloalkyl, by carboxyl groups, carboxyl groups esterified with C_1-C_6-alkanols, trifluoromethyl groups, hydroxyl groups, methoxy groups, ethoxy groups, benzyloxy groups and by a benzyl group which is mono- or polysubstituted in the phenyl moiety by (C_1-C_6)-alkyl groups, halogen atoms or trifluoromethyl groups,

R is further the benzyloxycarbonyl group (Z group) and a tertiary-butoxycarbonyl radical (BOC radical), furthermore the acetyl group;

R_1 can be the phenyl ring, which is mono- or polysubstituted by (C_1-C_6)-alkyl, (C_1-C_6)-alkoxy, cyano, halogen, trifluoromethyl, hydroxyl, benzyloxy, nitro, amino, (C_1-C_6)-alkylamino, (C_1-C_6)-alkoxycarbonylamino and by the carboxyl group or by the carboxyl group esterified with C_1-C_6-alkanols, or can be a pyridine structure of the formula 2



Formula 2

and its N-oxide, where the pyridine structure is alternatively bonded to the ring carbon atoms 2, 3 and 4 and can be substituted by the substituents R_5 and R_6. The radicals R_5 and R_6 can be identical or different and have the meaning (C_1-C_6)-alkyl and the meaning (C_3-C_7)-cycloalkyl, (C_1-C_6)-alkoxy, nitro, amino, hydroxyl, halogen and trifluoromethyl and further are the ethoxycarbonylamino radical and the group carboxyalkyloxy in which the alkyl group can have 1-4 C atoms.

R_1 can further be a 2- or 4-pyrimidinyl heterocycle, where the 2-pyrimidinyl ring can be mono- or polysubstituted by the methyl group, furthermore are the 2-, 3-, and 4- and 8-quinolyl structure substituted by (C_1-C_6)-alkyl, halogen, the nitro group, the amino group and the (C_1-C_6)-alkylamino radical, are [sic] a 2-, 3- and 4-quinolylmethyl group, where the ring carbons of the pyridylmethyl radical of the quinolyl group and of the quinolylmethyl radical can be

substituted by (C_1-C_6)-alkyl, (C_1-C_6)-alkoxy, nitro, amino and (C_1-C_6)-alkoxycarbonylamino.

R_1, in the case in which R = hydrogen, the methyl or benzyl group and the benzyloxycarbonyl radical (Z radical), the tert-butoxycarbonyl radical (BOC radical) and the acetyl group, can furthermore be the following radicals:

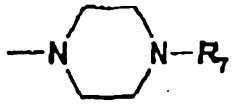
$-CH_2COOH$; $-CH(CH_3)-COOH$; $-(CH_3)_2-CH-(CH_2)_2-CH-COO-$; $H_3C-H_2C-CH(CH_3)-CH(COOH)-$; $HO-H_2C-CH(COOH)-$; phenyl-$CH_2-CH(COOH)-$; (4-imidazolyl)-$CH_2-CH-(COOH)-$; $HN=C(NH_2)-NH-(CH_2)_3-CH(COOH)-$; $H_2N-(CH_2)_4-CH(COOH)-$; $H_2N-CO-CH_2-CH-(COOH)-$; $HOOC-(CH_2)_2-CH(COOH)-$;

R_1, in the case in which R is hydrogen, the Z group, the BOC radical, the acetyl or the benzyl group, can furthermore be the acid radical of a natural or unnatural amino acid, e.g. the α-glycyl, the α-sarcosyl, the α-alanyl, the α-leucyl, the α-isoleucyl, the α-seryl, the α-phenylalanyl, the α-histidyl, the α-prolyl, the α-arginyl, the α-lysyl, the α-asparagyl and the α-glutamyl radical, where the amino groups of the respective amino acids can be present unprotected or can be protected. A possible protective group of the amino function is the carbobenzoxy radical (Z radical) and the tert-butoxycarbonyl radical (BOC radical) as well as the acetyl group. In the case of the asparagyl and glutamyl radical claimed for R_1, the second, unbonded carboxyl group is present as a free carboxyl group or in the form of an ester with C_1-C_6-alkanols, e.g. as a methyl, ethyl or as a tert-butyl ester.

Furthermore, R_1 can be the allylaminocarbonyl-2-methylprop-1-yl group.

R and R_1 can further form, together with the nitrogen atom to which they are bonded, a

piperazine ring of the formula III or a homopiperazine ring, provided R_1 is an aminoalkylene group, in which



Formula 3

R_7 is an alkyl radical, is a phenyl ring which can be mono- or polysubstituted by (C_1-C_6)-alkyl, (C_1-C_6)-alkoxy, halogen, the nitro group, the amino function and by the (C_1-C_6)-alkylamino group. R_7 is furthermore the benzhydryl group and the bis-p-fluorobenzylhydryl group.

R_2 can be hydrogen and the (C_1-C_6)-alkyl group, where the alkyl group is mono- or polysubstituted by halogen and phenyl, which for its part can be mono- or polysubstituted by halogen, (C_1-C_6)-alkyl, (C_3-C_7)-cycloalkyl, carboxyl groups, carboxyl groups esterified with C_1-C_6-alkanols, trifluoromethyl groups, hydroxyl groups, methoxy groups, ethoxy groups or benzyloxy groups. The (C_1-C_6)-alkyl group counting as R_2 can further be substituted by the 2-quinolyl group and the 2-, 3- and 4-pyridyl structure, which can both in each case be mono- or polysubstituted by halogen, (C_1-C_4)-alkyl groups or (C_1-C_4)-alkoxy groups. R_2 is further the aroyl radical, where the aryl moiety on which this radical is based is the phenyl ring, which can be mono- or polysubstituted by halogen, (C_1-C_6)-alkyl, (C_3-C_7)-cycloalkyl, carboxyl groups, carboxyl groups esterified with C_1-C_6-alkanols, trifluoromethyl groups, hydroxyl groups, methoxy groups, ethoxy groups or benzyloxy groups.

R_3 and R_4 can be identical or different and are hydrogen, (C_1-C_6)-alkyl, (C_3-C_7)-cycloalkyl,

(C_1-C_6)-alkanoyl, (C_1-C_6)-alkoxy, halogen and benzyloxy. R_3 and R_4 can furthermore be the nitro group, the amino group, the (C_1-C_4)-mono or dialkyl-substituted amino group, and the (C_1-C_6)-alkoxycarbonylamino function or (C_1-C_6)-alkoxycarbonylamino-(C_1-C_6)-alkyl function.

Z is O and S.

The designation alkyl, alkanol, alkoxy or alkylamino group for the radicals R, R_1, R_2, R_3, R_4, R_5, R_6, R_7 is normally understood as meaning both "straight-chain" and "branched" alkyl groups, where "straight-chain alkyl groups can be, for example, radicals such as methyl, ethyl, n-propyl, n-butyl, n-pentyl, n-hexyl and "branched alkyl groups" designate, for example, radicals such as isopropyl or tert-butyl. "Cycloalkyl" is understood as meaning radicals such as, for example, cyclopropyl, cyclobutyl, cyclopentyl, cyclohexyl or cycloheptyl.
The designation "halogen" represents fluorine, chlorine, bromine or iodine. The designation "alkoxy group" represents radicals such as, for example, methoxy, ethoxy, propoxy, butoxy, isopropoxy, isobutoxy or pentoxy.

The compounds can also be employed as acid addition salts, for example as salts of mineral acids, such as, for example, hydrochloric acid, sulfuric acid, phosphoric acid, salts of organic acids, such as, for example, acetic acid, lactic acid, malonic acid, maleic acid, fumaric acid, gluconic acid, glucuronic acid, citric acid, embonic acid, methanesulfonic acid, trifluoroacetic acid, succinic acid and 2-hydroxyethanesulfonic acid.
Both the compounds of the formula 1 and their salts are biologically active.

The compounds of the formula 1 can be administered in free form or as salts with physiologically tolerable acids.

Administration can be performed orally, parenterally, intravenously, transdermally or by inhalation.

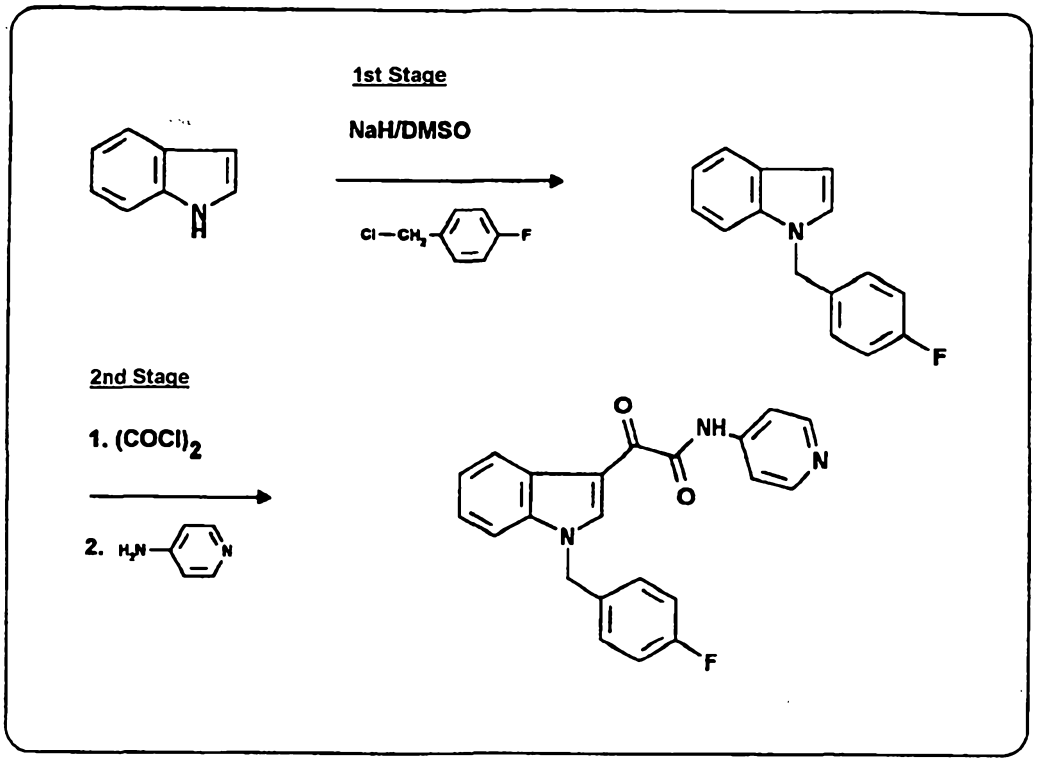
The invention furthermore relates to pharmaceutical preparations which contain at least one of the compounds of the formula 1 or their salts with physiologically tolerable inorganic or organic acids and, if appropriate, pharmaceutically utilizable excipients and/or diluents or auxiliaries.

Suitable administration forms are, for example, tablets, coated tablets, capsules, solutions for infusion or ampoules, suppositories, patches, powder preparations which can be employed by inhalation, suspensions, creams and ointments.

The processes for the production of the compounds according to the invention are described in the following reaction schemes 1 and 2 and in general procedures. All compounds can be prepared as described or analogously.

The compounds of the general formula 1 with Z = O, R_1 = aryl, aralkyl, heteroaryl and heteroaralkyl and R_2 = alkyl, aralkyl and heteroaralkyl are obtainable according to the following Scheme 1:

Scheme 1



1st Stage:

The indol derivative, which can be unsubstituted or monosubstituted or polysubstituted on C-2 or in the phenyl structure, is dissolved in a protic, dipolar aprotic or nonpolar organic solvent, such as, for example, isopropanol, tetrahydrofuran, dimethyl sulfoxide, dimethylformamide, dimethylacetamide, N-methylpyrrolidone, dioxane, toluene or methylene chloride and added dropwise to a suspension of a base prepared in a three-necked flask under an N_2 atmosphere or employed in a molar amount or in excess, such as, for example, sodium hydride, powdered potassium hydroxide, potassium tert-butoxide, dimethylaminopyridine or sodium amide, in a suitable solvent. Then the desired alkyl, aralkyl or heteroaralkyl halide, for example, is added, if appropriate with addition of a catalyst, such as, for

example, copper and the mixture is allowed to react for some time, for example for 30 minutes to 12 hours, and the temperature is maintained within a range from 0°C to 120°C, preferably between 30°C to 80°C, particularly between 50°C and 65°C. After completion of the reaction, the reaction mixture is added to water, the solution is extracted, e.g. with diethyl ether, dichloromethane, chloroform, methyl tert-butyl ether or tetrahydrofuran, and the organic phase obtained in each case is dried with anhydrous sodium sulfate. The organic phase is concentrated in vacuo, the residue which remains is crystallized by trituration or the oily residue is purified by recrystallization, distillation or by column or flash chromatography on silica gel or alumina. The eluent used is, for example, a mixture of dichloromethane and diethyl ether in the ratio 8:2 (vol/vol) or a mixture of dichloromethane and ethanol in the ratio 9:1 (vol/vol).

2nd Stage

The N-substituted indol obtained according to the above procedure of the 1st Stage is dissolved under a nitrogen atmosphere in an aprotic or nonpolar organic solvent, such as, for example, diethyl ether, methyl tert-butyl ether, tetrahydrofuran, dioxane, toluene, xylene, methylene chloride or chloroform and added to a solution prepared under a nitrogen atmosphere of a monomolar up to 60% excess amount of oxalyl chloride in an aprotic or nonpolar solvent, such as, for example, in diethyl ether, methyl tert-butyl ether, tetrahydrofuran, dioxane, toluene, xylene, methylene chloride, the temperature being kept between -5°C and 20°C. The reaction solution is then heated at a temperature between 10°C and 130°C, preferably between 20°C and 80°C, particularly between 30°C and 50°C, for a period of 30 minutes to 5 hours and the solvent is

then evaporated. The residue of the "indolyl-3-glyoxyloyl chloride" formed in this manner which remains is dissolved in an aprotic solvent such as, for example, tetrahydrofuran, dioxane, diethyl ether, toluene or alternatively in a dipolar aprotic solvent, such as, for example, dimethylformamide, dimethylacetamide or dimethyl sulfoxide, cooled to a temperature between 10°C and -15°C, preferably between -5°C and 0°C, and treated in the presence of an acid scavenger with a solution of the primary or secondary amine in a diluent. Possible diluents are the solvents used above for dissolving the indolyl-3-glyoxyloyl chloride. Acid scavengers used are triethylamine, pyridine, dimethylaminopyridine, basic ion exchanger, sodium carbonate, potassium carbonate, powdered potassium hydroxide and excess primary or secondary amine employed for the reaction. The reaction takes place at a temperature from 0°C to 120°C, preferably at 20-80°C, particularly between 40°C and 60°C. After a reaction time of 1-3 hours and standing at room temperature for 24 hours, the hydrochloride of the acid scavenger is filtered, the filtrate is concentrated in vacuo and the residue is recrystallized from an organic solvent or purified by column chromatography on silica gel or alumina. Eluents used are, for example, a mixture of dichloromethane and ethanol (95:5, vol/vol).

Working Examples

According to this general procedure for Stages 1 and 2, on which synthesis scheme 1 is based, the following compounds were synthesized which are evident from the following tabulated list detailing the respective chemical name. In Tables 1a-j on pages A-J, the structures of these compounds and their melting points can be seen from the general formula 1 and the substituents R_1-R_4 and Z:

Example 1

N-(Pyridin-4-yl)-[1-(4-fluorobenzyl)indol-3-yl}glyoxyl-amide (D 24241)

1st Stage

1-(4-Fluorobenzyl)indole

A solution of 11.72 g (0.1 mol) of indol in 50 ml of dimethyl sulfoxide is added to a mixture of 2.64 g of sodium hydride (0.11 mol, mineral oil suspension) in 100 ml of dimethyl sulfoxide. The mixture is heated at 60°C for 1.5 hours, then allowed to cool and 15.9 g (0.11 mol) of 4-fluorobenzyl chloride are added dropwise. The solution is warmed to 60°C, allowed to stand overnight and then poured into 400 ml of water with stirring. The mixture is extracted a number of times with a total of 150 ml of methylene chloride, the organic phase is dried using anhydrous sodium sulfate, filtered and the filtrate is concentrated in vacuo. The residue is distilled in a high vacuum: 21.0 g (96% of theory) b.p. (0.5 mm): 140°C.

2nd Stage

N-(Pyridin-4-yl)-[1-(4-fluorobenzyl)indol-3-yl]glyoxyl-amide (D 24241)

A solution of 4.75 g (21.1 mmol) of 1-(4-fluoro-benzyl)indol in 25 ml of ether is added dropwise at 0°C and under N_2 to a solution of 2.25 ml of oxalyl chloride in 25 ml of ether. The mixture is heated to reflux for 2 hours and the solvent is then evaporated. 50 ml of tetrahydrofuran were then added to the residue, the solution was cooled to -5°C and treated dropwise with a solution of 4.66 g (49.5 mmol) of

4-aminopyridine in 200 ml of THF. The mixture is heated to reflux for 3 hours and allowed to stand at room temperature overnight. The 4-aminopyridine hydrochloride is filtered off with suction, the precipitate is washed with THF, the filtrate is concentrated in vacuo and the residue is recrystallized from ethyl acetate.

Yield: 7.09 g (90% of theory)

Melting point: 225-226°C

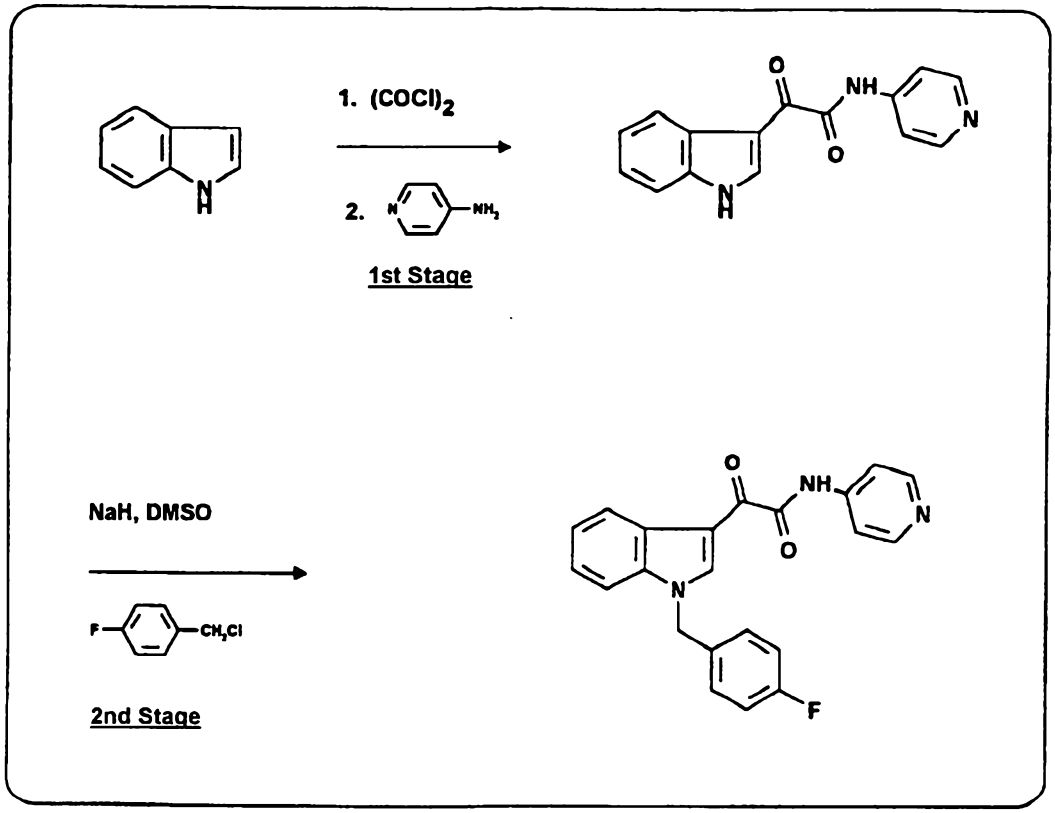
and the allylamino-carbonyl-2-methylprop-1-yl group and R_2 = alkyl, aralkyl and the heteroaralkyl group are also obtainable according to the synthesis route of Scheme 2:

Scheme 2



The compounds D 24241, D 24841, D 24840 and D 24834 (2nd Stage of reaction scheme 2, see also Table 1) and their respective precursors D 24825, D 24831, D 24832 and D 24833 (1st Stage of reaction scheme 2, see also Table 2 on page K) were obtained according to the present Scheme 2.

N-(Pyridin-4-yl)-[1-(4-fluorobenzyl)indol-3-yl]-glyoxylamide (D 24241)

1st Stage

N-(Pyridin-4-yl)-(indol-3-yl)glyoxylamide

A solution of 10 g (85.3 mmol) of indole in 100 ml of ether is added dropwise at 0°C to a solution of 9 ml of oxalyl chloride in 100 ml of anhydrous ether. The mixture is kept under reflux for 3 hours. A suspension of 12 g (127.9 mmol) of 4-aminopyridine in 500 ml of tetrahydrofuran is then added dropwise at -5°C, the reaction mixture is heated to reflux temperature with stirring for 3 hours and allowed to stand overnight at room temp. It is filtered, the precipitate is treated with water and the dried compound is purified on a silica gel column (silica gel 60, Merck AG, Darmstadt) using the eluent methylene chloride/ethanol (10:1, v/v).

Yield: 9.8 g (43.3% of theory)

M.p.: from 250°C

2nd Stage:

N-(Pyridin-4-yl)-[1[4-fluorobenzyl)indol-3-yl]-glyoxylamide (D 24241)

The N-(pyridin-4-yl)-(indol-3-yl)glyoxylamide obtained according to the 1st Stage is reacted with 4-fluorobenzyl chloride according to the "benzylation procedure" (page 5) and the compound D 24241 obtained is isolated.

Yield: 41% of theory

M.p.: 224-225°C

Elemental analysis:

calc.	C 70.77	H 4.32	N 11.25
found	C 70.98	H 4.40	N 11.49

General procedure for the preparation of the compounds of the general formula 1 according to Scheme 2

1st Stage:

The indol derivative, which can be unsubstituted or substituted on C-2 or in the phenyl ring, dissolved in a solvent, as, for example, indicated above for oxalyl chloride, is added dropwise at a temperature between -5°C and +5°C to a solution prepared under a nitrogen atmosphere of a monomolar up to 60% excess amount of oxalyl chloride in an aprotic or nonpolar solvent, such as, for example, in diethyl ether, methyl tert-butyl ether, tetrahydrofuran, dioxane or alternatively dichloromethane. The reaction solution is then heated for 1 to 5 hours to a temperature between 10°C and 120°C, preferably between 20°C and 80°C, particularly between 30°C and 60°C, and the solvent is then evaporated. The residue of the (indol-3-yl)glyoxyloyl chloride which remains is dissolved or suspended in an aprotic solvent, such as, for example, tetrahydrofuran, dioxane, diethyl ether, toluene or alternatively in a dipolar aprotic solvent, such as, for example, dimethylformamide, dimethylacetamide or dimethyl sulfoxide, cooled to a temperature between -10°C and +10°C, preferably to -5°C to 0°C, and treated in the presence of an acid scavenger with a solution of the primary or secondary amine in a diluent. Possible diluents are the solvents used for dissolving the "indolyl-3-glyoxyloyl chloride". Acid scavengers used

are triethylamine, pyridine, dimethylaminopyridine, basic ion exchanger, sodium carbonate, potassium carbonate, powdered potassium hydroxide and excess primary or secondary amine employed for the reaction. The reaction takes place at a temperature from 0°C to 120°C, preferably at 20-80°C, particularly between 40°C and 60°C. After a reaction time of 1-4 hours and standing at room temperature for 24 hours, the mixture is filtered, the precipitate is digested with water, filtered off with suction and dried in vacuo. The desired compound is purified by recrystallization in an organic solvent or by column chromatography on silica gel or alumina. The eluent used is, for example, a mixture of dichloromethane and ethanol (10:1, vol/vol).

2nd Stage

The "indol-3-ylglyoxylamide" obtained according to the above procedure of the 1st Stage is dissolved in a protic, dipoplar aprotic or nonpolar organic solvent, such as, for example, in isopropanol, tetrahydrofuran, dimethyl sulfoxide, dimethylformamide, dimethylacetamide, N-methylpyrrolidone, dioxane, toluene or methylene chloride and added dropwise to a suspension of a base prepared in a three-necked flask under an N_2 atmosphere or employed in a molar amount or in excess, such as, for example, sodium hydride, powdered potassium hydroxide, potassium tert-butoxide, dimethylaminopyridine or sodium amide in a suitable solvent. The desired alkyl, aralkyl or heteroaralkyl halide is then added either undiluted or in a diluent, which was also used, for example, for dissolving the "indol-3-ylglyoxylamide", if appropriate with addition of a catalyst, such as, for example, copper and the mixture is allowed to react for some time, e.g. for 30 minutes to 12 hours, and the temperature is kept within a range between 0°C and 120°C, preferably

between 30°C and 80°C, particularly between 50 and 70°C. After completion of the reaction, the reaction mixture is added to water, the solution is extracted, for example, with diethyl ether, dichloromethane, chloroform, methyl tert-butyl ether, tetrahydrofuran or n-butanol and the organic phase obtained in each case is dried using anhydrous sodium sulfate.
The organic phase is concentrated in vacuo, the residue which remains is crystallized by trituration or the oily residue is purified by distillation or by column or flash chromatography on silica gel or alumina. The eluent used is, for example, a mixture of methylene chloride and diethyl ether in the ratio 8:2 (vol/vol) or a mixture of methylene chloride and ethanol in the ratio 9:1 (v/v)

According to this general procedure for stages 1 and 2, on which the synthesis scheme 2 is based, the compounds D 24241, D 24841, D 24840 and D 24834 were synthesized, which have also already been prepared according to the synthesis procedure of reaction scheme 1 and are evident from Table 1. The relevant precursors of these compounds can be seen from Table 2 on page K and L.

The compounds show a good dose-dependent antitumor action in the following pharmacological models:

The indoles, particularly D-24851 and D-24241, are first apparent in the XTT proliferation test/cytotoxicity test (Table 3 and Table 3a). In this test system, the effect of substances on the proliferation behavior of tumor cell lines is investigated. In the course of this, the cytotoxic potential of these substances is determined. The test method is described in Scudiero et al. 1988, Cancer Res. 48, 4827.

The following tumor cell lines were employed in the investigations:
The KB cell line an epidermal carcinoma of the oral cavity,
the L1210 cell line a lymphatic leukemia of the mouse,
the LNCAP cell line a prostate carcinoma and
the SK-OV-3 cell line an ovarian carcinoma.

A large number of different indols were active in all four tumor cell lines. D-24851 and D-24241 showed the strongest actions, D-24851 being more active than D-24241 (Table 3 and 4).

In further comparative investigations with D-24851 and D-24241 in the hollow fiber assay on the nude mouse and on L 1210 (mouse), a strong dose-dependent antitumor action was observed for both compounds (Table 3 and 5). In the hollow fiber assay, both compounds were almost equally strongly active, while on L 1210 D-24851 was markedly more strongly active after oral and intraperitoneal administration than D-24241. In comparison with the antitumor substances available on the market, D-24851 is markedly more strongly active in many cases in the leukemia model than the known comparison substances (Table 5).

A further great advantage of D-24851 in comparison with the antitumor substances available on the market is the low toxicity of the compound (Tables 3 and 5). With LD 50 values of 1000 mg/kg p.o. and > 1000 mg/kg i.p., the compound has a great therapeutic breadth.
Furthermore, after administration of D-24851 no DNA fragmentation was observed. In the hematopoiesis test, too, none of the blood parameters investigated were modified by the intraperitoneal administration of D-24851.

In a further chemotherapy model, the Dunning tumor in the rat, a stoppage of tumor growth and in some animals even tumor regression was observed after repeated oral administration of D24851.

In the KB test on the nude mouse, an antitumor action was likewise observed after administration of the two indols D-24851 and D-24241 (Tables 3, 3a and 4).

In the investigations with the tumor cell line L1210, a lymphatic leukemia of the mouse, a distinct dose-dependent prolongation of the survival time was seen after intraperitoneal or oral administration of D 24851 with a 100 and 147 mg/kg multiple dose (Figure 1a and Figure 1b).

On account of the good therapeutic breadth, which was demonstrated experimentally, the active substance can be administered in a higher amount than commercially available tumor pharmaceuticals.

Without wishing to restrict the scope of the invention by the following details, it can be said that doses from approximately 20 mg up to 500 mg daily are possible orally. In the case of intravenous administration as an injection or as an infusion, up to 250 mg/day or more can be administered depending on the body weight of the patient and individual tolerability.

Further animal experimental results:

Stoppage of tumor growth, in some animals even tumor regression, was observed in the Dunning tumor after administration of 7 × 100 mg/kg and 7 × 147 mg/kg p.o. of D-24851.

In comparison with the original form, the testing of the crystalline form yielded no differences.

D-24851 causes no DNA fragmentation

In the hematopoiesis test, none of the blood parameters investigated were altered by the intraperitoneal administration of D-24851.

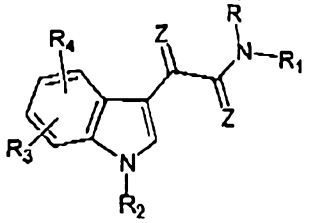
The claims defining the invention are as follows:

1. Use of one or more N-substituted Indole-3-glyoxylamides of the general formula 1,



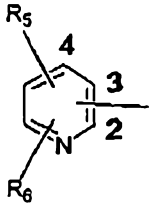
Formula 1

where the radicals R, R_1, R_2, R_3, R_4 and Z have the following meaning:

R= hydrogen, (C_1-C_6)-alkyl, where the alkyl group can be mono- or polysubstituted by a phenyl ring and this phenyl ring for its part can be mono- or polysubstituted by halogen, (C_1-C_6)-alkyl, (C_3-C_7)-cycloalkyl, by carboxyl groups, carboxyl groups esterified with C_1-C_6-alkanols, trifluoromethyl groups, hydroxyl groups, methoxy groups, ethoxy groups, benzyloxy groups and by a benzyl group which is mono- or polysubstituted in the phenyl moiety by (C_1-C_6)-alkyl groups, halogen atoms or trifluoromethyl groups;

R is further a benzyloxycarbonyl group (Z group) or a tertiary-butoxycarbonyl radical (BOC radical), furthermore an acetyl group;

R_1 can be a phenyl ring, which is mono- or polysubstituted by (C_1-C_6)-alkyl, (C_1-C_6)-alkoxy, cyano, halogen, trifluoromethyl, hydroxyl, benzyloxy, nitro, amino, (C_1-C_6)-alkylamino, (C_1-C_6)-alkoxycarbonylamino and by a carboxyl group or by a carboxyl group esterified with C_1-C_6-alkanols, or can be a pyridine structure of formula 2



Formula 2

and its N-oxide, where the pyridine structure is alternatively bonded to the ring carbon atoms 2, 3 and 4 and can be substituted by the substituents R_5 and R_6, wherein the radicals R_5 and R_6 can be identical or different and have the meaning (C_1-C_6)-alkyl and the meaning (C_3-C_7)-cycloalkyl, (C_1-C_6)-alkoxy, nitro, amino, hydroxy, halogen, trifluoromethyl and further are a ethoxycarbonylamino radical and the group carboxyalkyloxy in which the alkyl group can have 1-4 C atoms;

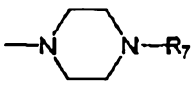
R_1 can further be a 2- or 4-pyrimidinyl heterocycle, where the 2-pyrimidinyl ring can be mono- or polysubstituted by a methyl group, furthermore can be a 2-, 3-, and 4- and 8-quinolyl structure substituted by (C_1-C_6)-alkyl, halogen, a nitro group, an amino group and a (C_1-C_6)-alkylamino radical, can be a 2-, 3-, and 4-quinolylmethyl group, where the ring carbons of the pyridylmethyl radical of the quinolyl group and of the quinolylmethyl radical can be substituted by (C_1-C_6)-alkyl, (C_1-C_6)-alkoxy, nitro, amino and (C_1-C_6)-alkoxycarbonylamino;

R_1, can be, in the case in which R = hydrogen, a methyl or benzyl group as well as a benzyloxycarbonyl radical (Z radical), a tert-butoxycarbonyl radical (BOC radical) and an acetyl group, can furthermore be the following radicals:
$-CH_2COOH$; $-CH(CH_3)-COOH$; $-(CH_3)_2-CH-(CH_2)_2-CH-COO-$; $H_3C-H_2C-CH(CH_3)-CH(COOH)-$; $HO-H_2C-CH(COOH)-$; phenyl-$CH_2-CH(COOH)-$; (4-imadazolyl)-$CH_2-CH(COOH)-$; $HN=C(NH_2)-NH-(CH_2)_3-CH(COOH)-$; $H_2N-(CH_2)_4-CH(COOH)-$; $H_2N-CO-CH_2-CH-(COOH)-$; $HOOC-(CH_2)_2-CH(COOH)-$;

R_1 can further, in the case in which R is hydrogen, be a Z group, a BOC radical, an acetyl or a benzyl group, can furthermore be an acid radical of a natural or unnatural amino acid, preferably an α-glycyl, α-sarcosyl, α-alanyl, α-leucyl, α-isoleucyl, α-seryl, α-phenylalanyl, α-histidyl, α-prolyl, α-arginyl, α-lysyl, α-asparagyl and α-glutamyl radical, where the amino groups of the respective amino acids can be present unprotected or can be protected, where a preferred protective group of the amino function is a carbobenzoxy radical (Z radical) and a tert-butoxycarbonyl radical (BOC radical) as well as an acetyl group, and where, in the case of the asparagyl and glutamyl radical claimed for R_1, the second, unbonded carboxyl group is present as a free carboxyl group or in the form of an ester with C_1-C_6-alkanols, preferably as a methyl, ethyl or as a tert-butyl ester;

R_1 can furthermore be a allylaminocarbonyl-2-methylprop-1-yl group;

R and R_1 can further form, together with the nitrogen atom to which they are bonded, a piperazine ring of the formula 3 or a homopiperazine ring, provided R_1 is an aminoalkylene group, in which



Formula 3

R_7 is an alkyl radical, is a phenyl ring which can be mono- or polysubstituted by (C_1-C_6)-alkyl, (C_1-C_6)-alkoxy, halogen, a nitro group, an amino function and by a (C_1-C_6)-alkylamino group;

R_7 is furthermore a benzhydryl group and a bis-p-fluorobenzylhydryl group;

R_2 can be hydrogen and a (C_1-C_6)-alkyl group, where the alkyl group is mono- or polysubstituted by halogen and phenyl, which for its part can be mono- or polysubstituted by halogen, (C_1-C_6)-alkyl, (C_3-C_7)-cycloalkyl, carboxyl groups, carboxyl groups esterified with C_1-C_6-alkanols, trifluoromethyl groups, hydroxyl groups, methoxy groups, ethoxy groups or benzyloxy groups, where the (C_1-C_6)-alkyl group counting as R_2 can further be substituted by the 2-quinolyl group and a 2-, 3- and 4-pyridyl structure, which can both in each case be mono- or polysubstituted by halogen, (C_1-C_4)-alkyl groups or (C_1-C_4)-alkoxy groups;

R_2 is further the aroyl radical, where the aryl moiety on which this radical is based is the phenyl ring, which can be mono- or polysubstituted by halogen, (C_1-C_6)-alkyl, (C_3-C_7)-cycloalkyl, carboxyl groups, carboxyl groups esterified with C_1-C_6-alkanols, trifluoromethyl groups, hydroxyl groups, methoxy groups, ethoxy groups or benzyloxy groups;

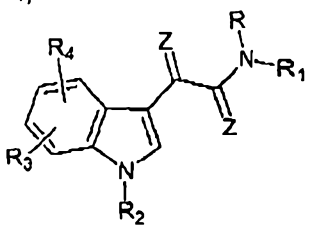
R_3 and R_4 can be identical or different and are hydrogen, (C_1-C_6)-alkyl, (C_3-C_7)-cycloalkyl, (C_1-C_6)-alkanoyl, (C_1-C_6)-alkoxy, halogen and benzyloxy;

R_3 and R_4 can furthermore be a nitro group, an amino group, a (C_1-C_4)-mono or dialkyl-substituted amino group, and a (C_1-C_6) alkoxycarbonylamino function or (C_1-C_6)-alkoxycarbonylamino-(C_1-C_6)-alkyl function;

Z is O and S;

or a physiologically tolerable acid addition salt thereof or an N-oxide thereof, for the preparation of a medicament for the treatment of a tumor disease.

2. Use of one or more N-substituted Indole-3-glyoxylamides according to the general formula 1 according to claim 1,



Formula 1

where the radicals

R = hydrogen

R_1 = 4-pyridyl, 4-fluorophenyl;

R_2 = benzyl, 4-chlorobenzyl, 4-fluorobenzyl, 3-pyridylmethyl, 4-bromobenzyl;

R_3 and R_4 = hydrogen; and

Z is oxygen;

or a physiologically tolerable acid addition salt thereof or an N-oxide thereof, for the preparation of a medicament for the treatment of a tumor disease.

3. Use of one or more N-substituted Indole-3-glyoxylamides of the general Formula 1 according to claim 1 or 2 for the preparation of a medicament for the treatment of a tumor disease, wherein the physiologically tolerable acid addition salt is preferably a salt of a mineral acid, preferably hydrochloric acid, sulfuric acid, phosphoric acid, or a salt of an organic acid, preferably acetic acid, lactic acid, malonic acid, maleic acid, fumaric acid, gluconic acid, glucuronic acid, citric acid, embonic acid, methanesulfonic acid, trifluoroacetic acid succinic acid and 2-hydrop0xyethanesulfonic acid or an N-oxide thereof.

4. Use of one or more N-substituted Indole-3-glyoxylamides of the general Formula 1 according to claim 1 or 2 or a physiologically tolerable acid addition salt thereof or as far as possible an N-oxide thereof, for the preparation of a medicament for the treatment of a tumor disease, namely preferably the following compounds or their salts with a physiologically tolerable acid or their N-oxides:

D 24241 N-(pyridin-4-yl)-[1-(4-fluorobenzyl)-indol-3-yl]glyoxylamide

D 24843 N-(pyridin-4-yl)-(1-benzylindol-3-yl)-glyoxylamide

D 24850 N-(4-fluorophenyl)-[1-(3-pyridylmethyl)-indol-3-yl]glyoxylamide

D 24851 N-(pyridin-4-yl)-[1-(4-chlorobenzyl)-indol-3-yl]glyoxylamide

D 25505 N-(pyridin-4-yl)-[1-(4-fluorobenzyl)-indol-3-yl]glyoxylamide HCL.

5. Use of one or more N-substituted Indole-3-glyoxylamides of the general Formula 1 according to claim 1 or 2 or a physiologically tolerable acid addition salt thereof or an N-oxide thereof, preferably one or more of the compounds according to claim 4 or a physiologically tolerable acid addition salt thereof or as far as possible the N-oxide thereof, for the preparation of a medicament for the treatment of a tumor disease, preferably by oral, parenteral, intravenous, transdermal or inhalative administration, whereby preferably by oral application doses from approximately 20 mg up to 500 mg daily are possible and in the case of intravenous administration as an injection or as an infusion up to 250 mg/day or more can be administered depending on the body weight of the patient and individual tolerability.

6. Use of an N-substituted Indole-3-glyoxylamide of the below-mentioned formula:

D 24241 N-(Pyridin-4-yl)-[1-(4-fluorobenzyl)-indol-3-yl]glyoxylamid

or a physiologically tolerable acid addition salt thereof or an N-oxide thereof, for the preparation of a medicament for the treatment of a tumor disease.

7. Use of an N-substituted Indole-3-glyoxylamide of the below-mentioned formula:

D 24843 N-(Pyridin-4-yl)-(1-benzylindole-3-yl)-glyoxylamide

or a physiologically tolerable acid addition salt thereof or an N-oxide thereof, for the preparation of a medicament for the treatment of a tumor disease.

8. Use of an N-substituted Indole-3-glyoxylamide of the below-mentioned formula:

D 24850 N-(4-Fluorophenyl)-[1-(3-pyridylmethyl)-indole-3-yl]glyoxylamide

or a physiologically tolerable acid addition salt thereof or an N-oxide thereof, for the preparation of a medicament for the treatment of a tumor disease.

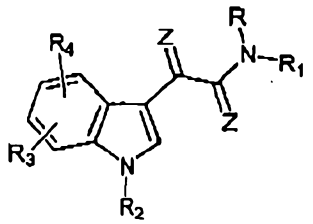
9. Use of an N-substituted Indole-3-glyoxylamide of the below-mentioned formula:

D 24851 N-(Pyridin-4-yl)-[1-(4-chlorbenzyl)-indole-3-yl]glyoxylamide

or a physiologically tolerable acid addition salt thereof or an N-oxide thereof, for the preparation of a medicament for the treatment of a tumor disease.

10. Use of one or more N-substituted Indole-3-glyoxylamides of the general formula 1 according to claim 1 or 2 or a physiologically tolerable acid addition salt thereof or an N-oxide thereof, preferably one or more compounds according to one of claims 4 and 6 to 9 or a physiologically tolerable acid addition salt thereof or as far as possible an N-oxide thereof, for the preparation of a medicament for the treatment of tumor diseases, wherein the medicament comprises preferably a pharmaceutically utilizable excipient and/or diluent or auxillary and is pereferably provided in the form of tablets, coated tablets, capsules, solutions for infusion or ampoules, suppositories, patches, powder preparations which can be employed by inhalation, suspensions, creams and ointments.

11. A method of treating a tumor disease in a patient comprising administering to the patient a therapeutically effective amount of one or more N-substituted Indole-3-glyoxylamides of the general formula 1,



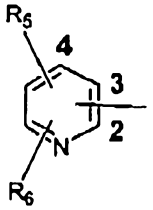
Formula 1

where the radicals R, R_1, R_2, R_3, R_4 and Z have the following meaning:

R= hydrogen, (C_1-C_6)-alkyl, where the alkyl group can be mono- or polysubstituted by a phenyl ring and this phenyl ring for its part can be mono- or polysubstituted by halogen, (C_1-C_6)-alkyl, (C_3-C_7)-cycloalkyl, by carboxyl groups, carboxyl groups esterified with C_1-C_6-alkanols, trifluoromethyl groups, hydroxyl groups, methoxy groups, ethoxy groups, benzyloxy groups and by a benzyl group which is mono- or polysubstituted in the phenyl moiety by (C_1-C_6)-alkyl groups, halogen atoms or trifluoromethyl groups;

R is further a benzyloxycarbonyl group (Z group) or a tertiary-butoxycarbonyl radical (BOC radical), furthermore an acetyl group;

R_1 can be a phenyl ring, which is mono- or polysubstituted by (C_1-C_6)-alkyl, (C_1-C_6)-alkoxy, cyano, halogen, trifluoromethyl, hydroxyl, benzyloxy, nitro, amino, (C_1-C_6)-alkylamino, (C_1-C_6)-alkoxycarbonylamino and by a carboxyl group or by a carboxyl group esterified with C_1-C_6-alkanols, or can be a pyridine structure of formula 2



Formula 2

and its N-oxide, where the pyridine structure is alternatively bonded to the ring carbon atoms 2, 3 and 4 and can be substituted by the substituents R_5 and R_6, wherein the radicals R_5 and R_6 can be identical or different and have the meaning (C_1-C_6)-alkyl and the meaning (C_3-C_7)-cycloalkyl, (C_1-C_6)-alkoxy, nitro, amino, hydroxy, halogen, trifluoromethyl and further are a ethoxycarbonylamino radical and the group carboxyalkyloxy in which the alkyl group can have 1-4 C atoms;

R_1 can further be a 2- or 4-pyrimidinyl heterocycle, where the 2-pyrimidinyl ring can be mono- or polysubstituted by a methyl group, furthermore can be a 2-, 3-, and 4- and 8-quinolyl structure substituted by (C_1-C_6)-alkyl, halogen, a nitro group, an amino group and a (C_1-C_6)-alkylamino radical, can be a 2-, 3-, and 4-quinolylmethyl group, where the ring carbons of the pyridylmethyl radical of the quinolyl group and of the quinolylmethyl radical can be substituted by (C_1-C_6)-alkyl, (C_1-C_6)-alkoxy, nitro, amino and (C_1-C_6)-alkoxycarbonylamino;

R1, can be, in the case in which R = hydrogen, a methyl or benzyl group as well as a benzyloxycarbonyl radical (Z radical), a tert-butoxycarbonyl radical (BOC radical) and an acetyl group, can furthermore be the following radicals:

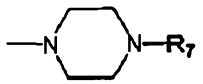
$-CH_2COOH$; $-CH(CH_3)-COOH$; $-(CH_3)_2-CH-(CH_2)_2-CH-COO-$; $H_3C-H_2C-CH(CH_3)-CH(COOH)-$; $HO-H_2C-CH(COOH)-$; phenyl-$CH_2-CH(COOH)-$; (4-imadazolyl)-$CH_2-CH-(COOH)-$; $HN=C(NH_2)-NH-(CH_2)_3-CH(COOH)-$; $H_2N-(CH_2)_4-CH(COOH)-$; $H_2N-CO-CH_2-CH-(COOH)-$; $HOOC-(CH_2)_2-CH(COOH)-$;

R_1 can further, in the case in which R is hydrogen, be a Z group, a BOC radical, an acetyl or a benzyl group, can furthermore be an acid radical of a natural or unnatural amino acid, preferably an α-glycyl, α-sarcosyl, α-alanyl, α-leucyl, α-isoleucyl, α-seryl, α-

phenylalanyl, α-histidyl, α-prolyl, α-arginyl, α-lysyl, α-asparagyl and α-glutamyl radical, where the amino groups of the respective amino acids can be present unprotected or can be protected, where a preferred protective group of the amino function is a carbobenzoxy radical (Z radical) and a tert-butoxycarbonyl radical (BOC radical) as well as an acetyl group, and where, in the case of the asparagyl and glutamyl radical claimed for R_1, the second, unbonded carboxyl group is present as a free carboxyl group or in the form of an ester with C_1-C_6-alkanols, preferably as a methyl, ethyl or as a tert-butyl ester;

R_1 can furthermore be a allylaminocarbonyl-2-methylprop-1-yl group;

R and R_1 can further form, together with the nitrogen atom to which they are bonded, a piperazine ring of the formula 3 or a homopiperazine ring, provided R_1 is an aminoalkylene group, in which



Formula 3

R_7 is an alkyl radical, is a phenyl ring which can be mono- or polysubstituted by (C_1-C_6)-alkyl, (C_1-C_6)-alkoxy, halogen, a nitro group, an amino function and by a (C_1-C_6)-alkylamino group;

R_7 is furthermore a benzhydryl group and a bis-p-fluorobenzylhydryl group;

R_2 can be hydrogen and a (C_1-C_6)-alkyl group, where the alkyl group is mono- or polysubstituted by halogen and phenyl, which for its part can be mono- or polysubstituted by halogen, (C_1-C_6)-alkyl, (C_3-C_7)-cycloalkyl, carboxyl groups, carboxyl groups esterified with C_1-C_6-alkanols, trifluoromethyl groups, hydroxyl groups, methoxy groups, ethoxy groups or benzyloxy groups, where the (C_1-C_6)-alkyl group counting as R_2 can further be substituted by the 2-quinolyl group and a 2-, 3- and 4-pyridyl structure, which can both in each case be mono- or polysubstituted by halogen, (C_1-C_4)-alkyl groups or (C_1-C_4)-alkoxy groups;

R_2 is further the aroyl radical, where the aryl moiety on which this radical is based is the phenyl ring, which can be mono- or polysubstituted by halogen, (C_1-C_6)-alkyl, (C_3-C_7)-cycloalkyl, carboxyl groups, carboxyl groups esterified with C_1-C_6-alkanols, trifluoromethyl groups, hydroxyl groups, methoxy groups, ethoxy groups or benzyloxy groups;

R_3 and R_4 can be identical or different and are hydrogen, (C_1-C_6)-alkyl, (C_3-C_7)-cycloalkyl, (C_1-C_6)-alkanoyl, (C_1-C_6)-alkoxy, halogen and benzyloxy;

R_3 and R_4 can furthermore be a nitro group, an amino group, a (C_1-C_4)-mono or dialkyl-substituted amino group, and a (C_1-C_6) alkoxycarbonylamino function or (C_1-C_6)-alkoxycarbonylamino-(C_1-C_6)-alkyl function;

Z is O and S;

or a physiologically tolerable acid addition salt thereof or an N-oxide thereof, or a pharmaceutical composition comprising said one or more N-substituted Indole-3-glyoxylamides of the general formula 1, together with a pharmaceutically acceptable carrier.

12. Method according to claim 11

where the radicals

R = hydrogen

R_1 = 4-pyridyl, 4-fluorophenyl;

R_2 = benzyl, 4-chlorobenzyl, 4-fluorobenzyl, 3-pyridylmethyl, 4-bromobenzyl;

R_3 and R_4 = hydrogen; and

Z is oxygen.

13. Method according to claim 12 or 13, wherein the physiologically tolerable acid addition salt is preferably a salt of a mineral acid, preferably hydrochloric acid, sulfuric acid, phosphoric acid, or a salt of an organic acid, preferably acetic acid, lactic acid, malonic acid, maleic acid, fumaric acid, gluconic acid, glucuronic acid, citric acid, embonic acid, methanesulfonic acid, trifluoroacetic acid succinic acid and 2-hydrop0xyethanesulfonic acid or an N-oxide thereof.

14. Method according to claim 12 or 13, wherein the one or more N-substituted Indole-3-glyoxylamides or their salts with a physiologically tolerable acid or their N-oxides comprise:

D 24241 N-(pyridin-4-yl)-[1-(4-fluorobenzyl)-indol-3-yl]glyoxylamide

D 24843 N-(pyridin-4-yl)-(1-benzylindol-3-yl)-glyoxylamide

D 24850 N-(4-fluorophenyl)-[1-(3-pyridylmethyl)-indol-3-yl]glyoxylamide

D 24851 N-(pyridin-4-yl)-[1-(4-chlorobenzyl)-indol-3-yl]glyoxylamide

D 25505 N-(pyridin-4-yl)-[1-(4-fluorobenzyl)-indol-3-yl]glyoxylamide HCL.

15. Method according to claim 11, 12 or 14, wherein said administering is by oral, parenteral, intravenous, transdermal or inhalative administration, whereby preferably by oral application doses from approximately 20 mg up to 500 mg daily are possible and in the case of intravenous administration as an injection or as an infusion up to 250 mg/day or more can be administered depending on the body weight of the patient and individual tolerability.

16. Method of treating a tumor disease in a patient comprising administering to said the patient a therapeutically effective amount of an N-substituted Indole-3-glyoxylamide of the below-mentioned formula:

D 24241 N-(Pyridin-4-yl)-[1-(4-fluorobenzyl)-indol-3-yl]glyoxylamid

or a physiologically tolerable acid addition salt thereof or an N-oxide thereof, or a pharmaceutical composition comprising said compound together with a pharmaceutically acceptable carrier.

17. Method of treating a tumor disease in a patient comprising administering to said the patient a therapeutically effective amount of an N-substituted Indole-3-glyoxylamide of the below-mentioned formula:

D 24843 N-(Pyridin-4-yl)-(1-benzylindole-3-yl)-glyoxylamide

or a physiologically tolerable acid addition salt thereof or an N-oxide thereof, or a pharmaceutical composition comprising said compound together with a pharmaceutically acceptable carrier.

18. Method of treating a tumor disease in a patient comprising administering to said the patient a therapeutically effective amount of an N-substituted Indole-3-glyoxylamide of the below-mentioned formula:

D 24850 N-(4-Fluorophenyl)-[1-(3-pyridylmethyl)-indole-3-yl]glyoxylamide

or a physiologically tolerable acid addition salt thereof or an N-oxide thereof, or a pharmaceutical composition comprising said compound together with a pharmaceutically acceptable carrier.

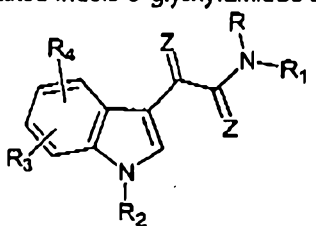
19. Method of treating a tumor disease in a patient comprising administering to said the patient a therapeutically effective amount of an N-substituted Indole-3-glyoxylamide of the below-mentioned formula:

D 24851 N-(Pyridin-4-yl)-[1-(4-chlorbenzyl)-indole-3-yl]glyoxylamide

or a physiologically tolerable acid addition salt thereof or an N-oxide thereof, or a pharmaceutical composition comprising said compound together with a pharmaceutically acceptable carrier.

20. Method according to any one of claims 11 to 19 wherein said pharmaceutical composition is administered to said patient said composition optionally comprising a pharmaceutically utilizable excipient and/or diluent or auxillary and is pereferably provided in the form of tablets, coated tablets, capsules, solutions for infusion or ampoules, suppositories, patches, powder preparations which can be employed by inhalation, suspensions, creams and ointments.

21. One or more N-substituted Indole-3-glyoxylamides of the general formula 1,



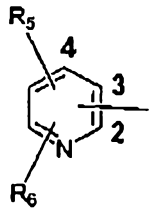
Formula 1

where the radicals R, R_1, R_2, R_3, R_4 and Z have the following meaning:

R= hydrogen, (C_1-C_6)-alkyl, where the alkyl group can be mono- or polysubstituted by a phenyl ring and this phenyl ring for its part can be mono- or polysubstituted by halogen, (C_1-C_6)-alkyl, (C_3-C_7)-cycloalkyl, by carboxyl groups, carboxyl groups esterified with C_1-C_6-alkanols, trifluoromethyl groups, hydroxyl groups, methoxy groups, ethoxy groups, benzyloxy groups and by a benzyl group which is mono- or polysubstituted in the phenyl moiety by (C_1-C_6)-alkyl groups, halogen atoms or trifluoromethyl groups;

R is further a benzyloxycarbonyl group (Z group) or a tertiary-butoxycarbonyl radical (BOC radical), furthermore an acetyl group;

R_1 can be a phenyl ring, which is mono- or polysubstituted by (C_1-C_6)-alkyl, (C_1-C_6)-alkoxy, cyano, halogen, trifluoromethyl, hydroxy, benzyloxy, nitro, amino, (C_1-C_6)-alkylamino, (C_1-C_6)-alkoxycarbonylamino and by a carboxyl group or by a carboxyl group esterified with C_1-C_6-alkanols, or can be a pyridine structure of formula 2



Formula 2

and its N-oxide, where the pyridine structure is alternatively bonded to the ring carbon atoms 2, 3 and 4 and can be substituted by the substituents R_5 and R_6, wherein the radicals R_5 and R_6 can be identical or different and have the meaning (C_1-C_6)-alkyl and the meaning (C_3-C_7)-cycloalkyl, (C_1-C_6)-alkoxy, nitro, amino, hydroxy, halogen, trifluoromethyl and further are a ethoxycarbonylamino radical and the group carboxyalkyloxy in which the alkyl group can have 1-4 C atoms;

R_1 can further be a 2- or 4-pyrimidinyl heterocycle, where the 2-pyrimidinyl ring can be mono- or polysubstituted by a methyl group, furthermore can be a 2-, 3-, and 4- and 8-quinolyl structure substituted by (C_1-C_6)-alkyl, halogen, a nitro group, an amino group and a (C_1-C_6)-alkylamino radical, can be a 2-, 3-, and 4-quinolylmethyl group, where the ring carbons of the pyridylmethyl radical of the quinolyl group and of the quinolylmethyl radical can be substituted by (C_1-C_6)-alkyl, (C_1-C_6)-alkoxy, nitro, amino and (C_1-C_6)-alkoxycarbonylamino;

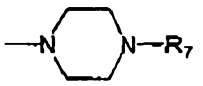
R1, can be, in the case in which R = hydrogen, a methyl or benzyl group as well as a benzyloxycarbonyl radical (Z radical), a tert-butoxycarbonyl radical (BOC radical) and an acetyl group, can furthermore be the following radicals:

-CH_2COOH; -$CH(CH_3)$-COOH; -$(CH_3)_2$-CH-$(CH_2)_2$-CH-COO-; H_3C-H_2C-$CH(CH_3)$-CH(COOH)-; HO-H_2C-CH(COOH)-; phenyl-CH_2-CH(COOH)-; (4-imadazolyl)-CH_2-CH-(COOH)-; HN=C(NH_2)-NH-$(CH_2)_3$-CH(COOH)-; H_2N-$(CH_2)_4$-CH(COOH)-; H_2N-CO-CH_2-CH-(COOH)-; HOOC-$(CH_2)_2$-CH(COOH)-;

R_1 can further, in the case in which R is hydrogen, be a Z group, a BOC radical, an acetyl or a benzyl group, can furthermore be an acid radical of a natural or unnatural amino acid, preferably an α-glycyl, α-sarcosyl, α-alanyl, α-leucyl, α-isoleucyl, α-seryl, α-phenylalanyl, α-histidyl, α-prolyl, α-arginyl, α-lysyl, α-asparagyl and α-glutamyl radical, where the amino groups of the respective amino acids can be present unprotected or can be protected, where a preferred protective group of the amino function is a carbobenzoxy radical (Z radical) and a tert-butoxycarbonyl radical (BOC radical) as well as an acetyl group, and where, in the case of the asparagyl and glutamyl radical claimed for R_1, the second, unbonded carboxyl group is present as a free carboxyl group or in the form of an ester with C_1-C_8-alkanols, preferably as a methyl, ethyl or as a tert-butyl ester;

R_1 can furthermore be a allylaminocarbonyl-2-methylprop-1-yl group;

R and R_1 can further form, together with the nitrogen atom to which they are bonded, a piperazine ring of the formula 3 or a homopiperazine ring, provided R_1 is an aminoalkylene group, in which



Formula 3

R_7 is an alkyl radical, is a phenyl ring which can be mono- or polysubstituted by (C_1-C_6)-alkyl, (C_1-C_6)-alkoxy, halogen, a nitro group, an amino function and by a (C_1-C_6)-alkylamino group;

R_7 is furthermore a benzhydryl group and a bis-p-fluorobenzylhydryl group;

R_2 can be hydrogen and a (C_1-C_6)-alkyl group, where the alkyl group is mono- or polysubstituted by halogen and phenyl, which for its part can be mono- or polysubstituted by halogen, (C_1-C_6)-alkyl, (C_3-C_7)-cycloalkyl, carboxyl groups, carboxyl groups esterified with C_1-C_6-alkanols, trifluoromethyl groups, hydroxyl groups, methoxy groups, ethoxy groups or benzyloxy groups, where the (C_1-C_6)-alkyl group counting as R_2 can further be substituted by the 2-quinolyl group and a 2-, 3- and 4-pyridyl structure, which can both in each case be mono- or polysubstituted by halogen, (C_1-C_4)-alkyl groups or (C_1-C_4)-alkoxy groups;

R_2 is further the aroyl radical, where the aryl moiety on which this radical is based is the phenyl ring, which can be mono- or polysubstituted by halogen, (C_1-C_6)-alkyl, (C_3-C_7)-cycloalkyl, carboxyl groups, carboxyl groups esterified with C_1-C_6-alkánols, trifluoromethyl groups, hydroxyl groups, methoxy groups, ethoxy groups or benzyloxy groups;

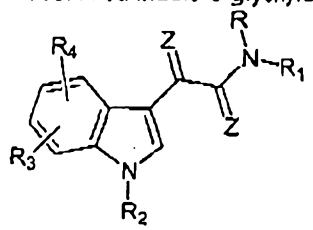
R_3 and R_4 can be identical or different and are hydrogen, (C_1-C_6)-alkyl, (C_3-C_7)-cycloalkyl, (C_1-C_6)-alkanoyl, (C_1-C_6)-alkoxy, halogen and benzyloxy;

R_3 and R_4 can furthermore be a nitro group, an amino group, a (C_1-C_4)-mono or dialkyl-substituted amino group, and a (C_1-C_6) alkoxycarbonylamino function or (C_1-C_6)-alkoxycarbonylamino-(C_1-C_6)-alkyl function;

Z is O and S;

or a physiologically tolerable acid addition salt thereof or an N-oxide thereof, when used in a therapeutically effective amount for the treatment of a tumor disease in a patient.

22. One or more N-substituted Indole-3-glyoxylamides according to the general formula 1,



Formula 1

where the radicals

R = hydrogen

R_1 = 4-pyridyl, 4-fluorophenyl;

R_2 = benzyl, 4-chlorobenzyl, 4-fluorobenzyl, 3-pyridylmethyl, 4-bromobenzyl;

R_3 and R_4 = hydrogen; and

Z is oxygen;

or a physiologically tolerable acid addition salt thereof or an N-oxide thereof, when used in a therapeutically effective amount for the treatment of a tumor disease in a patient.

23. One or more of the following N-substituted Indole-3-glyoxylamides when used according to claim 21 or 22, wherein the physiologically tolerable acid addition salt is preferably a salt of a mineral acid, preferably hydrochloric acid, sulfuric acid, phosphoric acid, or a salt of an organic acid, preferably acetic acid, lactic acid, malonic acid, maleic acid, fumaric acid, gluconic acid, glucuronic acid, citric acid, embonic acid, methanesulfonic acid, trifluoroacetic acid succinic acid and 2-hydrop0xyethanesulfonic acid or an N-oxide thereof.

24. One or more of the following N-substituted Indole-3-glyoxylamides or a physiologically tolerable acid addition salt thereof or an N-oxide thereof, when used in a therapeutically effective amount for the treatment of a tumor disease in a patient.:

D 24241 N-(pyridin-4-yl)-[1-(4-fluorobenzyl)-indol-3-yl]glyoxylamide

D 24843 N-(pyridin-4-yl)-(1-benzylindol-3-yl)-glyoxylamide

D 24850 N-(4-fluorophenyl)-[1-(3-pyridylmethyl)-indol-3-yl]glyoxylamide

D 24851 N-(pyridin-4-yl)-[1-(4-chlorobenzyl)-indol-3-yl]glyoxylamide

D 25505 N-(pyridin-4-yl)-[1-(4-fluorobenzyl)-indol-3-yl]glyoxylamide HCL.

25. One or more N-substituted Indole-3-glyoxylamides when used according to claim 21, 22 or 24 or a physiologically tolerable acid addition salt thereof or an N-oxide thereof, preferably by oral, parenteral, intravenous, transdermal or inhalative administration, whereby preferably by oral application doses from approximately 20 mg up to 500 mg daily are possible and in the case of intravenous administration as an injection or as an infusion up to 250 mg/day or more can be administered depending on the body weight of the patient and individual tolerability.

26. An N-substituted Indole-3-glyoxylamide of the below-mentioned formula:

D 24241 N-(Pyridin-4-yl)-[1-(4-fluorobenzyl)-indol-3-yl]glyoxylamid

or a physiologically tolerable acid addition salt thereof or an N-oxide thereof, when used in a therapeutically effective amount for the treatment of a tumor disease in a patient.

27. An N-substituted Indole-3-glyoxylamide of the below-mentioned formula:

D 24843 N-(Pyridin-4-yl)-(1-benzylindole-3-yl)-glyoxylamide

or a physiologically tolerable acid addition salt thereof or an N-oxide thereof, when used in a therapeutically effective amount for the treatment of a tumor disease in a patient.

28. An N-substituted Indole-3-glyoxylamide of the below-mentioned formula:

D 24850 N-(4-Fluorophenyl)-[1-(3-pyridylmethyl)-indole-3-yl]glyoxylamide

or a physiologically tolerable acid addition salt thereof or an N-oxide thereof, when used in a therapeutically effective amount for the treatment of a tumor disease in a patient.

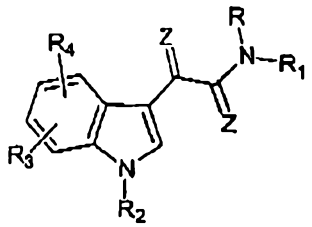
29. An N-substituted Indole-3-glyoxylamide of the below-mentioned formula:

D 24851 N-(Pyridin-4-yl)-[1-(4-chlorbenzyl)-indole-3-yl]glyoxylamide

or a physiologically tolerable acid addition salt thereof or an N-oxide thereof, when used in a therapeutically effective amount for the treatment of a tumor disease in a patient.

30. A method of treating a tumor disease in a patient comprising administering to the patient a therapeutically effective amount of a one or more N-substituted Indole-3-glyoxylamides of Formula 1 of claim 1 and substantially as herein described with reference to the Examples or a pharmaceutical composition comprising one or more of said N-substituted Indole-3-glyoxylamides together with a pharmaceutically acceptable carrier.

31. Method of using N-substituted indole-3-glyoxylamides of the general formula 1



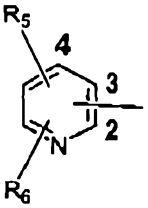
Formula 1

where the radicals R, R_1, R_2, R_3, R_4 and Z have the following meaning:

R= hydrogen, (C_1-C_6)-alkyl, where the alkyl group is optionally mono- or polysubstituted by a phenyl ring and this phenyl ring for its part is optionally mono- or polysubstituted by halogen, (C_1-C_6)-alkyl, (C_3-C_7)-cycloalkyl, by carboxyl groups, carboxyl groups esterified with C_1-C_6-alkanols, trifluoromethyl groups, hydroxyl groups, methoxy groups, ethoxy groups, benzyloxy groups and by a benzyl group which is mono- or polysubstituted in the phenyl moiety by (C_1-C_6)-alkyl groups, halogen atoms or trifluoromethyl groups;

R is further a benzyloxycarbonyl group or a tertiary-butoxycarbonyl radical (BOC radical), furthermore an acetyl group;

R_1 is a pyridine structure of formula 2



or its N-oxide, where the pyridine structure is alternatively bonded to the ring carbon atoms 2, 3 and 4 and is optionally substituted by the substituents R_5 and R_6; R_5 and R_6 are identical or different and signify (C_1-C_6)-alkyl, (C_3-C_7)-cycloalkyl, (C_1-C_6)-alkoxy, nitro, amino, hydroxy, halogen, trifluoromethyl ethoxycarbonylamino radical, and a carboxyalkyloxy group in which the alkyl group can have 1-4 C atoms;

R_2 is hydrogen or a (C_1-C_6)-alkyl group, where the alkyl group is mono- or polysubstituted by halogen and phenyl, which for its part is optionally mono- or polysubstituted by halogen, (C_1-C_6)-alkyl, (C_3-C_7)-cycloalkyl, carboxyl groups, carboxyl groups esterified with C_1-C_6-alkanols, trifluoromethyl groups, hydroxyl groups, methoxy groups, ethoxy groups or benzyloxy groups, the (C_1-C_6)-alkyl group is optionally substituted by the 2-quinolyl group and a 2-, 3- and 4-pyridyl structure, which are optionally in each case be

mono- or polysubstituted by halogen, (C_1-C_4)-alkyl groups or (C_1-C_4)-alkoxy groups, or R_2 is an aroyl radical, where the aryl moiety on which the radical is based is the phenyl ring, which is optionally mono- or polysubstituted by halogen, (C_1-C_6)-alkyl, (C_3-C_7)-cycloalkyl, carboxyl groups, carboxyl groups esterified with C_1-C_6-alkanols, trifluoromethyl groups, hydroxyl groups, methoxy groups, ethoxy groups or benzyloxy groups;

R_3 and R_4 are identical or different and are hydrogen, (C_1-C_6)-alkyl, (C_3-C_7)-cycloalkyl, (C_1-C_6)-alkanoyl, (C_1-C_6)-alkoxy, halogen and benzyloxy, or a nitro group, an amino group, a (C_1-C_4)-mono or dialkyl-substituted amino group, and a (C_1-C_6) alkoxycarbonylamino function or (C_1-C_6)-alkoxycarbonylamino-(C_1-C_6)-alkyl function; and

Z is O or S;

and their physiologically tolerable acid addition salts for the treatment of tumors or oncoses, said method comprising administering at least one of the following compounds or a physiologically acceptable acid addition salt or N-oxide thereof:

N-(pyridin-4-yl)-[1-(4-fluorobenzyl)-indol-3-yl]glyoxylamide;

N-(pyridin-4-yl)-(1-benzylindol-3-yl)-glyoxylamide;

N-(4-fluorophenyl)-[1-(3-pyridylmethyl)-indol-3-yl]glyoxylamide;

N-(pyridin-4-yl)-[1-(4-chlorobenzyl)-indol-3-yl]glyoxylamide; and

N-(pyridin-4-yl)-[1-(4-fluorobenzyl)-indol-3-yl]glyoxylamide hydrochloride salt;

a subject in need of such treatment.

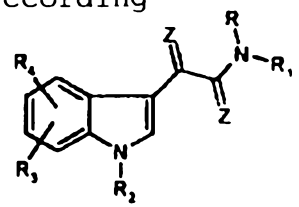
Table 1c: Indolylglyoxylamides according to reaction scheme 1

Example D	R	R_1	R_2	R_3	R_4	Z	M.p.
12 D-24850	H			H	H	O	144°C
13 D-24851	H			H	H	O	262°C
14 D-24852	H			H	H	O	184°C
15 D-24853	H			H	H	O	141°C
16 D-24847	H			H	H	O	202°C
17 D-24858	R+R_1 together			H	H	O	115°C
18 D-24854	H			H	H	O	112-3°C

Table 1d: Indolylglyoxylamides according to reaction scheme 1

Example D	R	R_1	R_2	R_3	R_4	Z	M.p.
19 D 25421	H			6-NHCOOEt	H	O	>250°C
20 D 25422	H			5-NHCOOEt	H	O	183°C
21D 25423	H			6-NHCOO- 	H	O	
22 D 25420	R+R_1 together 			H	H	O	160-62°C
23 D-24866				H	H	O	139-141°C
24 D-25561	H			5-OCH_3	H	O	188°C
25 D-25559	H			5-CH_2-NHCOOEt	H	O	175-176°C

Table 1e Indole-3-glyoxylic acid derivative according to reaction scheme 1



Formula 1

Example, D-	R	R_1	R_2	R_3	R_4	Z	M.p.
26 D-50570	H			H	H	O	
27 D-51076	H			H	H	O	
28 D-49404	H			5-F	H	O	205-207°C
29 D-44073	H			H	H	O	192-194°C
30 D-44072	H			H	H	O	196-198°C
31 D-44067	H			H	H	O	219-221°C

Table 1 f Indole-3-glyoxylic acid derivative according to reaction scheme 1

Example, D-	R	R_1	R_2	R_3	R_4	Z	M.p.
32 D-44081	H			H	H	O	238-240°C
33 D-43163	H			H	H	O	203-205°C
34 D-51273	H			H	H	O	305-307°C
35 D-44070	H			H	H	O	>250°C
36 D-49405	H			H	H	O	237-239°C
37 D-44071	H			H	H	O	154-156°C
38 D-44069	H			H	H	O	213-215°C
39 D-44068	H			H	H	O	183-185°C

Table 1g Indole-3-glyoxylic acid derivative according to reaction scheme 1

Example, D-	R	R_1	R_2	R_3	R_4	Z	M.p.
40 D-44066	H			H	H	O	187-189°C
41 D-49406	H				H	O	191-193°C
42 D-49403	H				H	O	193-195 C
43 D-44064	H			H	H	O	104-106°C
44 D-43156	H			6-NO_2	H	O	238-240°C
45 D-43155	H			5-NO_2	H	O	203-205°C
46 D-43152	H			H	H	O	196-198°C
47 D-43151	H			H	H	O	141-143°C

H

Table 1h Indole-3-glyoxylic acid derivative according to reaction scheme 1

Example, D-	R	R_1	R_2	R_3	R_4	Z	M.p.
48 D-43149	H			H	H	O	202-204°C
49 D-43148	H			H	H	O	183-185°C
50 D-25505 hydrochloride	H			H	H	O	Hydrochlorid
51 D-51133 trifluoroacetate	H			H	H	O	251-253°C Trifluoracetat
52 D-51128	H			H	H	O	173-174°C
53 D-51077	H			H	H	O	244-245°C
54 D-51195	H				H	O	228-230°C
55 D-51391	H			H	H	O	270-271°C

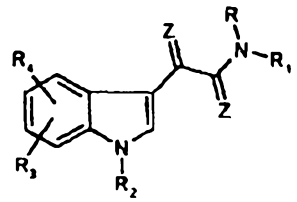
Table 1: Indole-3-glyoxylic acid derivative according to reaction scheme 1

Example, D-	R	R_1	R_2	R_3	R_4	Z	M.p.
56 D-51393	H			H	H	O	Öl
57 D-51394	H			H	H	O	216-218°C
58 D-51184	H			H	H	O	215-217°C
59 D-51185	H			H	H	O	241-242°C
60 D-25463	H			H	H	O	°C
61 D-24584	H			H	H	O	°C
62 D-25320	H			H	H	O	145-147°C

Table 1j Indole-3-glyoxylic acid derivative according to reaction scheme 1

Example, D-	R	R_1	R_2	R_3	R_4	Z	M.p.
63 D-51396	R,R together:			H	H	O	137°C
64 D-44065	R,R together:			H	H	O	205-207°C
65 D-43146	R,R together:			H	H	O	89-91°C
66 D-43145	R,R together			H	H	O	68-70°C
67 D-25558	R,R together.			6-NHCOOC$_2$H$_5$	H	O	oil

Table 2: Indolylglyoxylamides according to reaction scheme 2



Formula 1

Example, D-	R	R_1	R_2	R_3	R_4	Z	M.p.
1 D-24825	H		H	H	H	O	>250°C
2 D-24831	H		H	H	H	O	>250°C
3 D-24832	H		H	H	H	O	233-5°C
4 D-24833	H		H	H	H	O	235°C

Table 2a Indolylglyoxylamides according to reaction scheme 2

Example, D-	R	R_1	R_2	R_3	R_4	Z	M.p.
5 D-43154	H		H	6-NO_2	H	O	250°C (dec.)
6 D-43153	H		H	5-NO_2	H	O	>250°C
7 D-25319	H		H	H	H	O	156-157°C

Table 2b Indol-3-glyoxylic acid derivatives according to reaction scheme 1

Example, D-	R	R_1	R_2	R_3	R_4	Z	M.p.
5 D-43154	H		H	6-NO_2	H	O	250°C (dec.)
6 D-43153	H		H	5-NO_2	H	O	>250°C
7 D-25319	H		H	H	H	O	156-157°C
