(54) Title: PREVENTIVE HEALTH CARE DEVICE, SYSTEM AND METHOD

(57) Abstract: The present invention provides a system, method and device for assisting users in assessing individual health, deriving intervention programs and making health related decisions. A health assessment-intervention component collects and screens diagnostic and demographic data from clients and assists in forming health-care related decisions, action plans and treatment plans. The system can collect and maintain health-related data from third parties such as physicians, researchers, universities and the like, and can provide user accessible personal health records and health decision assistance. The invention can be implemented in numerous ways, including as a system, a device, a method, or a computer readable medium implemented as a smart drive device and/or keychain-type memory device, for example.
