UNITED STATES PATENT OFFICE.

MOSES OVENU AND WOLF FREINKELSTEIN, OF CHICAGO, ILLINOIS.

HEAD-COVERING.

SPECIFICATION forming part of Letters Patent No. 335,300, dated February 2, 1886.

Application filed May 12, 1885. Serial No. 165,164. (No model.)

To all whom it may concern:

Be it known that we, MOSES OVENU and WOLF FREINKELSTEIN, both subjects of the Emperor of Russia, residing at Chicago, in the county of Cook and State of Illinois, have invented certain new and useful Improvements in Head-Coverings and Mufflers, of which the following is a specification, reference being had therein to the accompanying drawings.

Our invention relates to an improved head-covering and muffler.

The object of the invention is to obtain a device which in cold weather will thoroughly protect the head, the throat, and the lower part of the face, at the same time arranging for perfect breathing facilities for the wearer.

To the accomplishment of the above the invention consists of a head-covering formed with extensions arranged to surround the throat, and, further, in providing one of such extensions with an opening arranged to come in line with the mouth of the wearer, and thus provide perfect breathing facilities.

Reference will be made to the accompanying drawings, in which Figure 1 is a view of the device, and Fig. 2 a view showing its application.

Like letters refer to like parts in each view.

The article may be formed of any suitable material, and consists of a head-covering, A, and two extensions, B B'. The head-covering may be of any suitable shape, and may be ornamented, if desired. We prefer to have covering A of such a size that it will fit over the head when a cap is worn, although this is not absolutely necessary. The parts B B' are of sufficient length to pass around the throat a suitable number of times and be tied, as shown in Fig. 2. Part B is adapted to pass over the nose and mouth; and to enable the wearer to breathe freely we provide an opening, C, so arranged that when the part B is drawn over the mouth said opening will be in a line therewith.

We are aware that it is not new to provide a head-covering with extensions adapted to be wound around the neck, and also that it is not new to form a head-covering with an extension to cover the entire head and face, and to provide such extension with mouth and eye openings, and therefore we do not claim either feature, broadly; but

What we claim is—

The combination, with a head-covering, A, of extensions B B', the former provided with mouth-opening C, as and for the purpose set forth.

In testimony whereof we affix our signatures in presence of two witnesses.

MOSES OVENU.
WOLF FREINKELSTEIN.
