UNITED STATES PATENT OFFICE.

FRANZ WACHSMUTH, OF ROHRBACH, NEAR HEIDELBERG, GERMANY.

COIN-WRAPPER.

1,057,512.

Specification of Letters Patent.

Patented Apr. 1, 1913.

Application filed May 14, 1912. Serial No. 697,106.

To all whom it may concern:

Be it known that I, FRANZ WACHSMUTH, a citizen of the German Empire, and resident of Rohrbach, near Heidelberg, Germany, with post-office address Panoramastrasse 8, have invented new and useful Improvements in Coin-Wrappers, of which the following is a specification.

The object of this invention is a wrapper of paper or any other suitable material more particularly adapted for wrapping up coins.

The opening of wrapped coin rolls has hitherto been cumbersome and wasteful because the closed wrapper offered no convenient handle for its opening.

In order to obviate this drawback the invention consists in providing the wrapper with a tearing thread. All that is then required is to grip the protruding ends of the thread and exert a pull thereon whereby the roll is immediately opened and the coins freed.

The essential feature of the invention consists in the tearing thread being intimately connected to the wrapper preferably by sewing. The stitches facilitate on the one hand the tearing open of the wrapper while on the other hand they hold the thread securely in connection with the wrapper. When the cover is applied to the coins, the thread will engage in the usual grooves provided in the periphery of the coins to effi-

ciently hold the wrapper from slipping and moving circumferentially of the coins.

In the drawing a practical form of the invention is illustrated by way of example.

The wrapper is shown flattened out and the tearing thread 2 is shown to be sewn on by stitches 3 so as to be intimately connected with the wrapper at a very large number of points.

It will at once be seen from the drawing that the wrapper when closed can be readily torn open by the exertion of a lateral pull on the thread 2.

In the place of a thread a tape or a thin wire or any other body may be employed.

Now what I claim and desire to secure by Letters Patent is the following:

A wrapper for coins and the like provided with a tearing thread sewed to the wrapper, said thread adapted to cooperate with the perforations caused by the sewing to tear the wrapper, and said thread adapted to engage in the usual grooves in the coins to prevent the wrapper from slipping.

In testimony, that I claim the foregoing as my invention, I have signed my name in presence of two witnesses, this 25th day of April 1912.

FRANZ WACHSMUTH.
