Anna Wagner Hinrichs,

INVENTOR

BY *Vieta J. Evans*

ATTORNEY

WITNESS:

UNITED STATES PATENT OFFICE.

ANNA W. HINRICH, OF DAVENPORT, IOWA.

PURSE.

Application filed May 26, 1926. Serial No. 111,806.

This invention has particular relation to fastening and supporting devices for pouches, bill folders, etc., upon wearing apparel.

5 An object of the invention comprehends the use of sleeve members carried by the article supported thereby and adapted to receive therethrough a pin fastener in order that the article may be readily suspended
10 upon the apparel and within convenient reach of the wearer.

With the above and other objects in view, the invention further includes the following novel features and details of construction,
15 to be hereinafter more fully described, illustrated in the accompanying drawing and pointed out in the appended claim.

In the drawings:

20 Figure 1 is illustrative of the manner by means of which a purse may be conveniently carried.

Figure 2 is a perspective of a pouch with a cover flap open and illustrating the fastening means for the sleeve members thereon.

25 Figure 3 is a perspective of the purse with a pin fastener connected with the sleeve members.

30 Figure 4 is a sectional view of the sleeve members connected with an appropriate portion of the purse.

Figure 5 is a perspective of the sleeve member.

35 Figure 6 is a similar view to that of Figure 4 embodying a modified form of the invention.

Figure 7 is a perspective of the modified form of sleeve member purse.

40 Referring to the drawings in detail wherein like characters of reference denote corresponding parts, the reference character 10 indicates a purse or pouch divided into spaced compartments by strips 11 each of

which terminates in flaps 12, one of which includes a fastening means to close the open ends of the compartments. Such compartments may be utilized to carry cosmetics, coins and other paraphernalia.

Sleeve members 13 provide sharpened tongues 14 depending from under side thereof, and adapted to penetrate the locking flap of the purse and thereby depend upon themselves to securely hold the sleeve members 13 thereon. Said sleeve members are arranged in direct alignment transversely of the purse and upon the upper portion of the particular locking flap. A fastening means 15' is also employed to attach the purse upon a garment.

It will be seen from the foregoing discourse and accompanying drawings that the invention provides an exceedingly useful and advantageous form of supporting means for pouches, bill folders and the like which may be readily and easily adapted to any desired portion of garments and to be held against displacement and unauthorized use.

The invention is susceptible of various changes in its form, proportions and minor details of construction, and the right is herein reserved to make such changes as properly fall within the scope of the appended claim.

Having thus described my invention, what is claimed is:

75 A purse, a hollow cylindrical supporting member, tongues depending from the member being pointed to penetrate a portion of the purse and bent upon themselves at their junctures with said member to secure the latter thereon, and a pin fastener passed within the bore of the member to attach the purse upon a garment.

In testimony whereof I affix my signature.
(Mrs.) ANNA W. HINRICH.
