UNITED STATES PATENT OFFICE.

SIMON WIENER AND OSCAR WIENER, OF NEWARK, NEW JERSEY.

DESIGN FOR HARNESS-MOUNTING.

SPECIFICATION forming part of Design No. 15,152, dated July 15, 1884.

Application filed December 12, 1883. Term of patent 7 years.

To all whom it may concern:

Be it known that we, SIMON WIENER and OSCAR WIENER, citizens of the United States, residing at Newark, in the county of Essex and State of New Jersey, have invented a certain new and original Design for Harness-Mountings; and we do hereby declare the following to be a full, clear, and exact description of the invention, such as will enable others skilled in the art to which it appertains to make and use the same, reference being had to the accompanying drawings, and to letters of reference marked thereon, which form a part of this specification.

In said drawings, Figures 1, 2, and 3 illustrate, respectively, a fly check-hook, a terret, and a fly-terret, said figures being deemed sufficient for the purpose of illustration.

The leading feature of our design consists in the horizontally-oblong body portion of the mountings having vertically-projecting knobs arranged substantially as will be hereinafter set forth.

Referring to the drawings, A in the figures is the body portion of the mountings, which is in general contour horizontally oval or oblong when viewed in front elevation. From the said body portion a knob-shaped protuberance, B, projects upward vertically and prominently above the general line of the body. Whether the several parts be round, flat, or oval in section, as through line *x*, is immaterial.

What we claim as our invention is—

The design for a harness-mounting, to wit: a harness-mounting having the horizontally-oblong body and vertically-projecting protuberance, substantially as shown and described.

In testimony that we claim the foregoing we have hereunto set our hands this 4th day of December, 1883.

SIMON WIENER.
OSCAR WIENER.
