UNITED STATES PATENT OFFICE.

JAMES P. MOORE, OF CLEVELAND, OHIO.

IMPROVEMENT IN PACKAGES FOR ETHYLENE.

Specification forming part of Letters Patent No. **168,340**, dated October 5, 1875; application filed March 3, 1875.

To all whom it may concern:

Be it known that I, JAMES P. MOORE, of Cleveland, in the county of Cuyahoga and State of Ohio, have invented an Improved Package for Containing Ethylene or other similar Substances, of which the following is a specification:

This invention relates to that class of packages for containing articles as above stated, and which require, for the using or application of said articles, a sponge; and consists of a capsule of sufficient size for holding a sponge above the cork of the bottle.

To enable others to fully understand my invention, I proceed to describe the same in detail with the aid of the accompanying drawing, in which the figure represents a bottle having my improvement attached, the neck, cork, capsule, and sponge shown in section.

A is the bottle, B the neck, and C the cork.

In order to accompany this package with a sponge, I employ a capsule, D, of the same diameter as the flange of the neck, and of sufficient capacity for holding a sponge, E, above the cork.

To insert the sponge, I first wet or moisten the sponge, whereby it may be greatly compressed in size, then placing it in the capsule. The capsule is then placed over the cork, and the edge of the capsule is compressed around the neck, under the flange thereof. This makes a very compact and convenient package.

Having described my invention, I claim—

In combination with the neck B and cork C of the bottle A, the sponge E and capsule D, as and for the purpose set forth.

JAMES P. MOORE.
