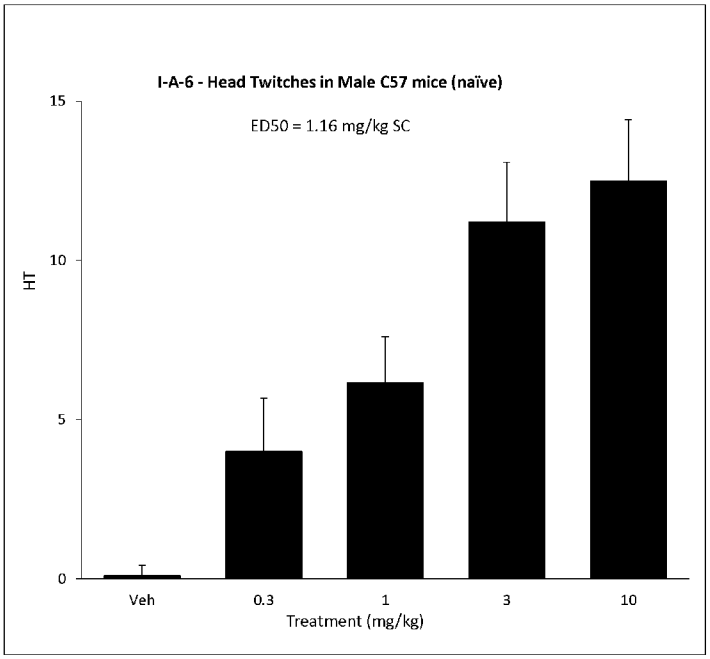
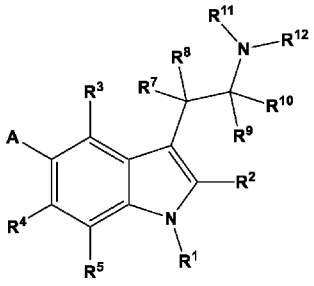
(54) Title: INDOLE DERIVATIVES AS SEROTONERGIC AGENTS USEFUL FOR THE TREATMENT OF DISORDERS RELATED THERETO





Formula (I-A)

(57) Abstract: The present application relates to 3-amino-indole derivatives of general Formula (I-A), to processes for their preparation, to compositions comprising them and to their use in activation of a serotonin receptors in a cell, as well as to treating diseases, disorders or conditions by activation of a serotonin receptors in a cell. The diseases, disorders or conditions include, for example, psychosis, mental illnesses and CNS disorders.

TITLE: INDOLE DERIVATIVES AS SEROTONERGIC AGENTS USEFUL FOR THE TREATMENT OF DISORDERS RELATED THERETO

RELATED APPLICATIONS

[0001] The present application claims the benefit of priority of co-pending United States provisional patent application no. 63/155,634 filed on March 2, 2021 the contents of which are incorporated herein by reference in their entirety.

FIELD

[0002] The application relates to 3-amino-indole derivatives of general Formula (I-A) for the treatment of different conditions that are treated by activation of serotonin receptors, for example, mental illnesses and neurological disease, in the fields of psychiatry, neurobiology and pharmacotherapy. The present application further comprises methods for making the compounds of Formula (I-A) and corresponding intermediates.

BACKGROUND OF THE APPLICATION

[0003] Mental health disorders, or mental illness, refer to a wide range of disorders that include, but are not limited to, depressive disorders, anxiety and panic disorders, schizophrenia, eating disorders, substance misuse disorders, post-traumatic stress disorder, attention deficit/hyperactivity disorder and obsessive compulsive disorder. The severity of symptoms varies such that some individuals experience debilitating disease that precludes normal social function, while others suffer with intermittent repeated episodes across their lifespan. Although the presentation and diagnostic criteria among mental illness conditions are distinct in part, there are common endophenotypes of note across the diseases, and often comorbidities exist. Specifically, there exist phenotypic endophenotypes associated with alterations in mood, cognition and behavior. Interestingly, many of these endophenotypes extend to neurological conditions as well. For example, attentional deficits are reported in patients with attention deficit disorder, attention deficit hyperactivity disorder, eating disorders, substance use disorders, schizophrenia, depression, obsessive compulsive disorder, traumatic brain injury, Fragile X, Alzheimer's disease, Parkinson's disease and frontotemporal dementia.

[0004] Many mental health disorders, as well as neurological disorders, are impacted by alterations, dysfunction, degeneration, and/or damage to the brain's serotonergic system, which may explain, in part, common endophenotypes and comorbidities among neuropsychiatric and neurological diseases. Many therapeutic agents that modulate serotonergic function are commercially available, including serotonin reuptake inhibitors,

selective serotonin reuptake inhibitors, antidepressants, monoamine oxidase inhibitors, and, while primarily developed for depressive disorders, many of these therapeutics are used across multiple medical indications including, but not limited to, depression in Alzheimer's disease and other neurodegenerative disease, chronic pain, existential pain, bipolar disorder, obsessive compulsive disorder, anxiety disorders and smoking cessation. However, in many cases, the marketed drugs show limited benefit compared to placebo, can take six weeks to work and for some patients, and are associated with several side effects including trouble sleeping, drowsiness, fatigue, weakness, changes in blood pressure, memory problems, digestive problems, weight gain and sexual problems.

[0005] The field of psychedelic neuroscience has witnessed a recent renaissance following decades of restricted research due to their legal status. Psychedelics are one of the oldest classes of psychopharmacological agents known to man and cannot be fully understood without reference to various fields of research, including anthropology, ethnopharmacology, psychiatry, psychology, sociology, and others. Psychedelics (serotonergic hallucinogens) are powerful psychoactive substances that alter perception and mood and affect numerous cognitive processes. They are generally considered physiologically safe and do not lead to dependence or addiction. Their origin predates written history, and they were employed by early cultures in many sociocultural and ritual contexts. After the virtually contemporaneous discovery of (5R,8R)-(+)-lysergic acid-N,N-diethylamide (LSD, 5, Scheme 1) and the identification of serotonin in the brain, early research focused intensively on the possibility that LSD and other psychedelics had a serotonergic basis for their action. Today there is a consensus that psychedelics are agonists or partial agonists at brain serotonin 5-hydroxytryptamine 2A (5-HT2A) receptors, with particular importance on those expressed on apical dendrites of neocortical pyramidal cells in layer V, but also may bind with lower affinity to other receptors such as the sigma-1 receptor. Several useful rodent models have been developed over the years to help unravel the neurochemical correlates of serotonin 5-HT2A receptor activation in the brain, and a variety of imaging techniques have been employed to identify key brain areas that are directly affected by psychedelics.

[0006] Psychedelics have both rapid onset and persisting effects long after their acute effects, which includes changes in mood and brain function. Long lasting effects may result from their unique receptor affinities, which affect neurotransmission via neuromodulatory systems that serve to modulate brain activity, i.e., neuroplasticity, and promote cell survival, are neuroprotective, and modulate brain neuroimmune systems. The mechanisms which lead to these long-term neuromodulatory changes are linked to epigenetic modifications, gene expression changes and modulation of pre- and post-synaptic receptor densities. These, previously under-researched, psychedelic drugs may potentially

provide the next-generation of neurotherapeutics, where treatment resistant psychiatric and neurological diseases, e.g., depression, post-traumatic stress disorder, dementia and addiction, may become treatable with attenuated pharmacological risk profiles.

[0007] Although there is a general perception that psychedelic drugs are dangerous, from a physiologic safety standpoint, they are one of the safest known classes of CNS drugs. They do not cause addiction, and no overdose deaths have occurred after ingestion of typical doses of classical psychotic agents, such as LSD, psilocybin, or mescaline (1, Scheme 1). Preliminary data show that psychedelic administration in humans results in a unique profile of effects and potential adverse reactions that need to be appropriately addressed to maximize safety. The primary safety concerns are largely psychologic, rather than physiologic, in nature. Somatic effects vary but are relatively insignificant, even at doses that elicit powerful psychologic effects. Psilocybin, when administered in a controlled setting, has frequently been reported to cause transient, delayed headache, with incidence, duration, and severity increased in a dose-related manner [Johnson et al., Drug Alcohol Depend (2012) 123(1-3):132–140]. It has been found that repeated administration of psychedelics leads to a very rapid development of tolerance known as tachyphylaxis, a phenomenon believed to be mediated, in part, by 5-HT2A receptors. In fact, several studies have shown that rapid tolerance to psychedelics correlates with downregulation of 5-HT2A receptors. For example, daily LSD administration selectively decreased 5-HT2 receptor density in the rat brain [Buckholtz et al., Eur. J. Pharmacol. 1990, 109:421–425. 1985; Buckholtz et al., Life Sci. 1985, 42:2439–2445].

Scheme 1: Chemical structures of or mescaline (1), DMT (2), 5-MeO-DMT (3), LSD (4), psilocybin (5) and psilocin (6)

[0008] Classic psychedelics and dissociative psychedelics are known to have rapid onset antidepressant and anti-addictive effects, unlike any currently available treatment. Randomized clinical control studies have confirmed antidepressant and anxiolytic effects of classic psychedelics in humans. Ketamine also has well established antidepressant and anti-addictive effects in humans mainly through its action as an NMDA antagonist. Ibogaine has demonstrated potent anti-addictive potential in pre-clinical studies and is in the early stages of clinical trials to determine efficacy in robust human studies [Barsuglia et al., Prog Brain Res, 2018, 242:121-158; Corkery, Prog Brain Res, 2018, 242:217-257].

[0009] Psilocybin (4-phosphoryloxy-N,N-dimethyltrypatmine (5, Scheme 1) has the chemical formula C12H17N2O4P. It is a tryptamine and is one of the major psychoactive constituents in mushrooms of the psilocybe species. It was first isolated from psilocybe mushrooms by Hofmann in 1957, and later synthesized by him in 1958 [Passie et al. Addict Biol., 2002, 7(4):357-364], and was used in psychiatric and psychological research and in psychotherapy during the early to mid-1960s up until its controlled drug scheduling in 1970 in the US, and up until the 1980s in Germany [Passie 2005; Passie et al. Addict Biol., 2002, 7(4):357-364]. Research into the effects of psilocybin resumed in the mid-1990s, and it is currently the preferred compound for use in studies of the effects of serotonergic hallucinogens [Carter et al. J. Cogn. Neurosci., 2005 17(10):1497–1508; Gouzoulis-Mayfrank et al. Neuropsychopharmacology 1999, 20(6):565-581; Hasler et al, Psychopharmacology (Berl) 2004, 172(2):145–156], likely because it has a shorter duration of action and suffers from less notoriety than LSD. Like other members of this class, psilocybin induces sometimes profound changes in perception, cognition and emotion, including emotional lability.

[0010] In humans as well as other mammals, psilocybin is transformed into the active metabolite psilocin, or 4-hydroxy-N,N-dimethyltryptamine (6, Scheme 1). It is likely that psilocin partially or wholly produces most of the subjective and physiological effects of psilocybin in humans and non-human animals. Recently, human psilocybin research confirms the 5HT2A activity of psilocybin and psilocin, and provides some support for indirect effects on dopamine through 5HT2A activity and possible activity at other serotonin receptors. In fact, the most consistent finding for involvement of other receptors in the actions of psychedelics is the 5-HT1A receptor. That is particularly true for tryptamines and LSD, which generally have significant affinity and functional potency at this receptor. It is known that 5-HT1A receptors are colocalized with 5-HT2A receptors on cortical pyramidal cells

[Martín-Ruiz et al. J Neurosci. 2001, 21(24):9856–986], where the two receptor types have opposing functional effects [Araneda et al. Neuroscience 1991, 40(2):399–412].

[0011] Although the exact role of the 5-HT2A receptor, and other 5-HT2 receptor family members, is not well understood with respect to the amygdala, it is evident that the 5-HT2A receptor plays an important role in emotional responses and is an important target to be considered in the actions of 5-HT2A agonist psychedelics. In fact, a majority of known 5HT2A agonists produce hallucinogenic effects in humans, and rodents generalize from one 5HT2A agonist to others, as between psilocybin and LSD [Aghajanian et al., Eur J Pharmacol., 1999, 367(2-3):197–206; Nichols at al., J Neurochem., 2004, 90(3):576–584]. Psilocybin has a stronger affinity for the human 5HT2A receptor than for the rat receptor and it has a lower Ki for both 5HT2A and 5HT2C receptors than LSD. Moreover, results from a series of drug-discrimination studies in rats found that 5HT2A antagonists, and not 5HT1A antagonists, prevented rats from recognizing psilocybin [Winter et al., Pharmacol Biochem Behav., 2007, 87(4):472–480]. Daily doses of LSD and psilocybin reduce 5HT2 receptor density in rat brain.

[0012] Clinical studies in the 1960s and 1970s showed that psilocybin produces an altered state of consciousness with subjective symptoms such as “marked alterations in perception, mood, and thought, changes in experience of time, space, and self.” Psilocybin was used in experimental research for the understanding of etiopathogenesis of selective mental disorders and showed psychotherapeutic potential [Rucker et al., Psychopharmacol., 2016, 30(12):1220–1229]. Psilocybin became increasingly popular as a hallucinogenic recreational drug and was eventually classed as a Schedule I controlled drug in 1970. Fear of psychedelic abuse led to a significant reduction in research being done in this area until the 1990s when human research of psilocybin was revived when conditions for safe administration were established [Johnson et al., Psychopharmacol., 2008, 22(6):603-620]. Today, psilocybin is one of the most widely used psychedelics in human studies due to its relative safety, moderately long active duration, and good absorption in subjects. There remains strong research and therapeutic potential for psilocybin as recent studies have shown varying degrees of success in neurotic disorders, alcoholism, depression in terminally ill cancer patients, obsessive compulsive disorder, addiction, anxiety, post-traumatic stress disorder and even cluster headaches. It could also be useful as a psychosis model for the development of new treatments for psychotic disorders. [Dubovyk and Monahan-Vaughn, ACS Chem. Neurosci. (2018), 9(9):2241−2251].

[0013] Recent and exciting developments in the field have occurred in clinical research, where several double-blind placebo-controlled phase 2 studies of psilocybin-assisted psychotherapy in patients with treatment resistant, major depressive disorder and

cancer-related psychosocial distress have demonstrated unprecedented positive relief of anxiety and depression. Two recent small pilot studies of psilocybin assisted psychotherapy also have shown positive benefit in treating both alcohol and nicotine addiction. Recently, blood oxygen level–dependent functional magnetic resonance imaging and magnetoencephalography have been employed for in vivo brain imaging in humans after administration of a psychedelic, and results indicate that intravenously administered psilocybin and LSD produce decreases in oscillatory power in areas of the brain's default mode network [Nichols DE. Pharmacol Rev. (2016) 68(2):264–355].

[0014] Preliminary studies using positron emission tomography (PET) showed that psilocybin ingestion (15 or 20 mg orally) increased absolute metabolic rate of glucose in frontal, and to a lesser extent in other, cortical regions as well as in striatal and limbic subcortical structures in healthy participants, suggesting that some of the key behavioral effects of psilocybin involve the frontal cortex [Gouzoulis-Mayfrank et al., Neuropsychopharmacology, 1999, 20(6):565-581; Vollenweider et al., Brain Res. Bull. 2001, 56(5):495–507]. Although 5HT2A agonism is widely recognized as the primary action of classic psychedelic agents, psilocybin has lesser affinity for a wide range of other pre- and post-synaptic serotonin and dopamine receptors, as well as the serotonin reuptake transporter [Tyls et al., Eur. Neuropsychopharmacol. 2014, 24(3):342–356]. Psilocybin activates 5HT1A receptors, which may contribute to antidepressant/anti-anxiety effects.

[0015] Depression and anxiety are two of the most common psychiatric disorders worldwide. Depression is a multifaceted condition characterized by episodes of mood disturbances alongside other symptoms such as anhedonia, psychomotor complaints, feelings of guilt, attentional deficits and suicidal tendencies, all of which can range in severity. According to the World Health Organization, the discovery of mainstream antidepressants has largely revolutionized the management of depression, yet up to 60% of patients remain inadequately treated. This is often due to the drugs' delayed therapeutic effect (generally 6 weeks from treatment onset), side effects leading to non-compliance, or inherent non-responsiveness to them. Similarly, anxiety disorders are a collective of etiologically complex disorders characterized by intense psychosocial distress and other symptoms depending on the subtype. Anxiety associated with life-threatening disease is the only anxiety subtype that has been studied in terms of psychedelic-assisted therapy. This form of anxiety affects up to 40% of individuals diagnosed with life-threatening diseases like cancer. It manifests as apprehension regarding future danger or misfortune accompanied by feelings of dysphoria or somatic symptoms of tension, and often coexists with depression. It is associated with decreased quality of life, reduced treatment adherence, prolonged hospitalization, increased disability, and hopelessness, which overall contribute to decreased survival rates.

Pharmacological and psychosocial interventions are commonly used to manage this type of anxiety, but their efficacy is mixed and limited such that they often fail to provide satisfactory emotional relief. Recent interest into the use of psychedelic-assisted therapy may represent a promising alternative for patients with depression and anxiety that are ineffectively managed by conventional methods.

[0016] Generally, the psychedelic treatment model consists of administering the orally-active drug to induce a mystical experience lasting 4-9 h depending on the psychedelic [Halberstadt, Behav Brain Res., 2015, 277:99-120; Nichols, Pharmacol Rev., 2016, 68(2): 264-355]. This enables participants to work through and integrate difficult feelings and situations, leading to enduring anti-depressant and anxiolytic effects. Classical psychedelics like psilocybin and LSD are being studied as potential candidates. In one study with classical psychedelics for the treatment of depression and anxiety associated with life-threatening disease, it was found that, in a supportive setting, psilocybin, and LSD consistently produced significant and sustained anti-depressant and anxiolytic effects.

[0017] Psychedelic treatment is generally well-tolerated with no persisting adverse effects. Regarding their mechanisms of action, they mediate their main therapeutic effects biochemically via serotonin receptor agonism, and psychologically by generating meaningful psycho-spiritual experiences that contribute to mental flexibility. Given the limited success rates of current treatments for anxiety and mood disorders, and considering the high morbidity associated with these conditions, there is potential for psychedelics to provide symptom relief in patients inadequately managed by conventional methods.

[0018] Further emerging clinical research and evidence suggest psychedelic-assisted therapy, also shows potential as an alternative treatment for refractory substance use disorders and mental health conditions, and thus may be an important tool in a crisis where existing approaches have yielded limited success. A recent systematic review of clinical trials published over the last 25 years summarizes some of the anti-depressive, anxiolytic, and anti-addictive effects of classic psychedelics. Among these, are encouraging findings from a meta-analysis of randomized controlled trials of LSD therapy and a recent pilot study of psilocybin-assisted therapy for treating alcohol use disorder [dos Santos et al., Ther Adv Psychopharmacol., 2016, 6(3):193-213]. Similarly encouraging, are findings from a recent pilot study of psilocybin-assisted therapy for tobacco use disorder, demonstrating abstinence rates of 80% at six months follow-up and 67% at 12 months follow-up [Johnson et al., J Drug Alcohol Abuse, 2017 43(1):55-60; Johnson et al., 2014, Psychopharmacol. 2014, 28(11):983-992], such rates are considerably higher than any documented in the tobacco cessation literature. Notably, mystical-type experiences generated from the psilocybin sessions were significantly correlated with positive treatment outcomes. These

results coincide with bourgeoning evidence from recent clinical trials lending support to the effectiveness of psilocybin-assisted therapy for treatment-resistant depression and end-of-life anxiety [Carhart-Harris et al. Neuropsychopharmacology, 2017 42(11):2105-2113]. Research on the potential benefits of psychedelic-assisted therapy for opioid use disorder (OUD) is beginning to emerge, and accumulating evidence supports a need to advance this line of investigation. Available evidence from earlier randomized clinical trials suggests a promising role for treating OUD: higher rates of abstinence were observed among participants receiving high dose LSD and ketamine-assisted therapies for heroin addiction compared to controls at long-term follow-ups. Recently, a large United States population study among 44,000 individuals found that psychedelic use was associated with 40% reduced risk of opioid abuse and 27% reduced risk of opioid dependence in the following year, as defined by DSM-IV criteria [Pisano et al., J Psychopharmacol., 2017, 31(5):606-613]. Similarly, a protective moderating effect of psychedelic use was found on the relationship between prescription opioid use and suicide risk among marginalized women [Argento et al., J. Psychopharmacol., 2018, 32(12):1385-1391]. Despite the promise of these preliminary findings with classical psychedelic agents, further research is warranted to determine what it may contribute to the opioid crisis response given their potential toxicity. Meanwhile, growing evidence on the safety and efficacy of psilocybin for the treatment of mental and substance use disorders should help to motivate further clinical investigation into its use as a novel intervention for OUD.

[0019] Regular doses of psychedelics also ameliorate sleep disturbances, which are highly prevalent in depressive patients with more than 80% of them having complaints of poor sleep quality. The sleep symptoms are often unresolved by first-line treatment and are associated with a greater risk of relapse and recurrence. Interestingly, sleep problems often appear before other depression symptoms, and subjective sleep quality worsens before the onset of an episode in recurrent depression. Brain areas showing increased functional connectivity with poor sleep scores and higher depressive symptomatology scores included prefrontal and limbic areas, areas involved in the processing of emotions. Sleep disruption in healthy participants has demonstrated that sleep is indeed involved in mood, emotion evaluation processes and brain reactivity to emotional stimuli. An increase in negative mood and a mood-independent mislabeling of neutral stimuli as negative was for example shown by one study while another demonstrated an amplified reactivity in limbic brain regions in response to both negative and positive stimuli. Two other studies assessing electroencephalographic (EEG) brain activity during sleep showed that psychedelics, such as LSD, positively affect sleep patterns. Moreover, it has been shown that partial or a full night of sleep deprivation can alleviate symptoms of depression suggested by resetting

circadian rhythms via modification of clock gene expression. It further was suggested that a single dose of a psychedelic causes a reset of the biological clock underlying sleep/wake cycles and thereby enhances cognitive-emotional processes in depressed people but also improving feelings of well-being and enhances mood in healthy individuals [Kuypers, Medical Hypotheses, 2019, 125:21–24].

[0020] In a systematic meta-analysis of clinical trials from 1960-2018 researching the therapeutic use of psychedelic treatment in patients with serious or terminal illnesses and related psychiatric illness, it was found that psychedelic therapy (mostly with LSD) may improve cancer-related depression, anxiety, and fear of death. Four randomized controlled clinical trials were published between 2011 and 2016, mostly with psilocybin treatment, that demonstrated psychedelic-assisted treatment can produce rapid, robust, and sustained improvements in cancer-related psychological and existential distress. [Ross, Int. Rev. Psychiatry, 2018, 30(4):317-330]. Thus, the use of psychedelics in the fields of oncology and palliative care is intriguing for several reasons. First, many patients facing cancer or other life-threatening illnesses experience significant existential distress related to loss of meaning or purpose in life, which can be associated with hopelessness, demoralization, powerlessness, perceived burdensomeness, and a desire for hastened death. Those features are also often at the core of clinically significant anxiety and depression, and they can substantially diminish quality of life in this patient population. The alleviation of those forms of suffering should be among the central aims of palliative care. Accordingly, several manualized psychotherapies for cancer-related existential distress have been developed in recent years, with an emphasis on dignity and meaning-making. However, there are currently no pharmacologic interventions for existential distress per se, and available pharmacologic treatments for depressive symptoms in patients with cancer have not demonstrated superiority over placebo. There remains a need for additional effective treatments for those conditions [Rosenbaum et al., Curr. Oncol., 2019, 26(4): 225–226].

[0021] Recently, there has been growing interest in a new dosing paradigm for psychedelics such as psilocybin and LSD referred to colloquially as microdosing. Under this paradigm, sub-perceptive doses of the serotonergic hallucinogens, approximately 10% or less of the full dose, are taken on a more consistent basis of once each day, every other day, or every three days, and so on. Not only is this dosing paradigm more consistent with current standards in pharmacological care, but may be particularly beneficial for certain conditions, such as Alzheimer's disease and other neurodegenerative diseases, attention deficit disorder, attention deficit hyperactivity disorder, and for certain patient populations such as elderly, juvenile and patients that are fearful of or opposed to psychedelic assisted therapy. Moreover, this approach may be particularly well suited for managing cognitive deficits and

preventing neurodegeneration. For example, subpopulations of low attentive and low motivated rats demonstrate improved performance on 5 choice serial reaction time and progressive ratio tasks, respectively, following doses of psilocybin below the threshold for eliciting the classical wet dog shake behavioral response associated with hallucinogenic doses (Blumstock et al., WO 2020/157569 A1). Similarly, treatment of patients with hallucinogenic doses of 5HT2A agonists is associated with increased BDNF and activation of the mTOR pathway, which are thought to promote neuroplasticity and are hypothesized to serve as molecular targets for the treatment of dementias and other neurodegenerative disorders (Ly et al. Cell Rep., 2018; 23(11):3170-3182). Additionally, several groups have demonstrated that low, non-hallucinogenic and non-psychomimetic, doses of 5HT2A agonists also show similar neuroprotective and increased neuroplasticity effects (neuroplastogens) and reduced neuroinflammation, which could be beneficial in both neurodegenerative and neurodevelopmental diseases and chronic disorders (Manfredi et al., WO 2020/181194, Flanagan et al., Int. Rev. Psychiatry, 2018, 13:1-13; Nichols et al., 2016, Psychedelics as medicines; an emerging new paradigm). This repeated, lower, dose paradigm may extend the utility of these compounds to additional indications and may prove useful for wellness applications.

[0022] 5-methoxy-N,N-dimethyltryptamine (5-MeO-DMT; 3, Scheme 1) has the chemical formula $C_{13}H_{18}N_2O$ is a tryptamine natural product most commonly identified as the primary psychoactive component of the parotid gland secretions of Incilius alvarius, the Sonoran Desert toad and is present in low concentrations in a variety of plants, shrubs, and seeds [Uthaug, M. V. et al., Psychopharmacology 2019, 236:2653−2666; Weil et al., J. Ethnopharmacol. 1994, 41(1-2):1−8]. N,N-dimethyltryptamine (DMT; 2, Scheme 1) has the chemical formula $C_{12}H_{15}N_2$ is a tryptamine natural product most commonly identified as the primary psychoactive component of various natural plants and vines including Acacia, Desmodium, Mimosa, Virola, Delosperma and Phalaris. Human consumption of these materials for their psychoactive properties has been reported for several 100 years [Agurell et al., Acta Chem. Scand. 1969, 23(3):903-916; Torres et al., Haworth Herbal Press: New York, 2014].

[0023] 5-MeO-DMT has demonstrated sub-micromolar binding affinity across most serotonin receptor subtypes expressed in the CNS, with about 300-fold selectivity for the human 5-HT1A (3 ± 0.2 nM) versus 5-HT2A (907 ± 170 nM) receptor subtypes [Halberstadt et al., Psychopharmacology, 2012, 221(4):709−718]. DMT has greater than 3-fold binding affinity for 5-HT1A (0.075 nM) over 5-HT2A (0.237 nM). Data has suggested that activation of the 5-HT1A receptor may also play a significant role in contributing to the subjective and behavioral effects elicited by psychedelics in a synergistic way with 5-HT2A activation. By

contrast to 5-MeO-DMT and DMT, psilocin (the active metabolite of psilocybin) is about 5-fold more selective for human 5-HT2A receptors (107 nM) versus 5-HT1A (567 nM) [Sherwood et al., ACS Omega, 2020, 5(49):32067−32075].

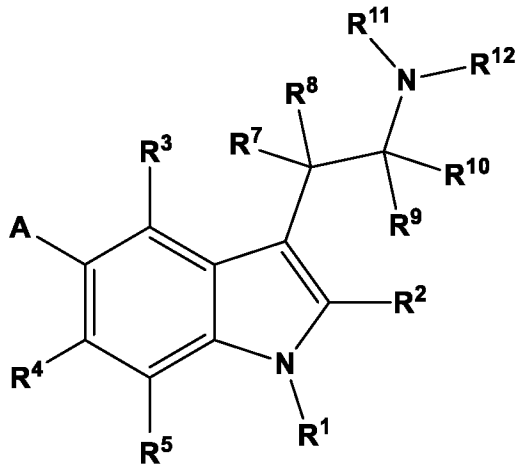
[0024] It is reported that 5-MeO-DMT consumption leads to a general lack of colorful geometric visual hallucinations typically associated with other psychedelics including DMT. It is also suggested that both 5-MeO-DMT and DMT may be helpful in treating clinical mental health conditions [Barsuglia et al. Front. Psychol. 2018, 9:2459; Davis et al., Am. J. Drug Alcohol Abuse, 2019, 45(2):161−169; Malcolm et al., Mental Health Clinician, 2017, 7(1):39-45; Uthaug, M. V. et al., Psychopharmacology 2019, 236:2653−2666]. These data suggest that 5-MeO-DMT and DMT produce mystical experiences with intensity comparable or greater than those produced with psilocybin, but with a shorter duration of effect lasting between 10 and 60 min depending on the route of administration.

[0025] Therefore, 5-MeO-DMT and DMT appear to be pharmacodynamically unique compared to previous clinically studied psychedelics, particularly psilocybin and LSD, and could provide a useful comparator in contemporary controlled clinical studies with psychedelics to better understand their mode of action. Unlike psilocybin, psychedelic tryptamines such as DMT and 5-MeO-DMT are subject to rapid first-pass metabolism by monoamine oxidase and are therefore not orally active [Mckenna, D. J. et. al., J. Ethnopharmacol., 1984, 12(2):179−211]. When consumed parenterally, they produce a significantly shorter duration of action, typically less than 1 h, compared to the 5−8 h duration of effects produced by psilocybin.

[0026] With a short duration of action and possibly significant 5-HT1A receptor selectivity, 5-MeO-DMT and DMT possesses unique pharmacodynamic and pharmacokinetic properties compared to other clinically studied psychedelics. These features may correlate with more positive therapeutic outcomes in controlled human clinical trials and the shorter duration of action may help reduce the amount of time a patient would spend in the clinic during psychedelic-assisted psychotherapy. To test this hypothesis and to better understand the psychotherapeutic utility of 5-MeO-DMT and DMT, the preparation of active pharmaceutical ingredient (API) is required with adequate controls to ensure potency, purity, and strength. The current application reports novel analogs of both these compounds with the goal of pharmacologically optimizing next-generation short-acting psychedelic medicines that are related to 5-MeO-DMT and DMT.

SUMMARY OF THE APPLICATION

[0027] The present application includes compounds having the general structural formula (I-A):



Formula (I-A)

or a pharmaceutically acceptable salt, solvate and/or prodrug thereof,

wherein

R^1 is selected from hydrogen, deuterium, C_1-C_3alkyl, C_{1-6}alkyleneP(O)$(OR^6)_2$, C_{1-6}alkyleneOP(O)$(OR^6)_2$,C(O)R^6, CO_2R^6, C(O)N$(R^6)_2$, S(O)R^6 and SO_2R^6;

R^2, R^7, R^8, R^9 and R^{10} are independently selected from hydrogen, deuterium, halogen and C_1-C_6alkyl;

R^3 is independently selected from hydrogen, deuterium, CN, C_1-C_6alkyl, C_1-C_6haloalkyl, C_2-C_6haloalkenyl, CO_2R^{18}, C(O)N$(R^{18})_2$, C_2-C_6alkenyl, C_2-C_6alkynyl, C_2-C_6haloalkynyl, C_3-C_7cycloalkyl and a 3- to 7-membered heterocyclic ring comprising 1 to 2 heteromoeities selected from O, S, S(O), SO_2, N and NR^{18}, wherein said C_1-C_6alkyl, C_1-C_6haloalkyl, C_2-C_6alkenyl, C_2-C_6haloalkenyl, C_2-C_6alkynyl, C_2-C_6haloalkynyl, C_3-C_7cycloalkyl and 3- to 7-membered heterocyclic ring groups are optionally substituted by one or more substituents independently selected from CN, OR^{18}, N$(R^{18})_2$ and SR^{18}, and wherein said C_3-C_7cycloalkyl and 3- to 7-membered heterocyclic ring are each further optionally substituted with a substituent selected from halogen, CO_2R^{18}, C(O)N$(R^{18})_2$, SO_2R^{18}, C_1-C_6alkyl, C_1-C_6haloalkyl, C_2-C_6alkenyl, C_2-C_6haloalkenyl, C_2-C_6alkynyl, C_2-C_6haloalkynyl, C_3-C_6cycloalkyl and a 3- to 6-membered heterocyclic ring including 1 to 2 ring heteromoieties selected from O, S, S(O), SO_2, N, and NR^{18};

R^4 and R^5 are independently selected from hydrogen, deuterium, halogen, CN, OR^{18}, N$(R^{18})_2$, SR^{18}, C_1-C_6alkyl, C_1-C_6haloalkyl, C_2-C_6haloalkenyl, CO_2R^{18}, C(O)N$(R^{18})_2$, S(O)R^{18}, SO_2R^{18}, C_2-C_6alkenyl, C_2-C_6alkynyl, C_2-C_6haloalkynyl, C_3-C_7cycloalkyl and a 3- to 7-membered heterocyclic ring comprising 1 to 2 heteromoeities selected from O, S, S(O), SO_2, N and

NR^{18}, wherein said C_1-C_6alkyl, C_1-C_6haloalkyl, C_2-C_6alkenyl, C_2-C_6haloalkenyl, C_2-C_6alkynyl, C_2-C_6haloalkynyl, C_3-C_7cycloalkyl and 3- to 7-membered heterocyclic ring groups are optionally substituted by one or more substituents independently selected from CN, OR^{18}, $N(R^{18})_2$ and SR^{18}, and wherein said C_3-C_7cycloalkyl and 3- to 7-membered heterocyclic ring are each further optionally substituted with a substituent selected from halogen, CO_2R^{18}, $C(O)N(R^{18})_2$, SO_2R^{18}, C_1-C_6alkyl, C_1-C_6haloalkyl, C_2-C_6alkenyl, C_2-C_6haloalkenyl, C_2-C_6alkynyl, C_2-C_6haloalkynyl, C_3-C_6cycloalkyl and a 3- to 6-membered heterocyclic ring including 1 to 2 ring heteromoieties selected from O, S, S(O), SO_2, N, and NR^{18};

R^6 is independently selected from hydrogen, deuterium and C_1-C_6alkyl;

R^{11} and R^{12} are independently selected from hydrogen, deuterium and C_1-C_6alkyl;

A is selected from selected from hydrogen, deuterium, halogen, OR^{19}, $N(R^{19})(R^{19a})$, SR^{19}, $S(O)R^{19}$ and $S(O_2)R^{19}$;

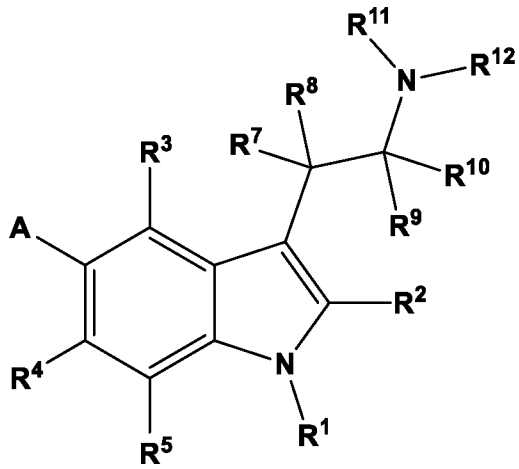
each R^{18} is independently selected from hydrogen, C_1-C_6alkyl, C_1-C_6haloalkyl, C_2-C_6alkenyl, C_2-C_6haloalkenyl, C_2-C_6alkynyl, C_2-C_6haloalkynyl, C_3-C_7cycloalkyl, and a 3- to 7-membered heterocyclic ring including 1 to 2 ring heteromoieties selected from O, S, S(O), SO_2, N and NR^{20}, wherein said C_1-C_6alkyl, C_1-C_6haloalkyl, C_2-C_6alkenyl, C_2-C_6haloalkenyl, C_2-C_6alkynyl, C_2-C_6haloalkynyl, C_3-C_7cycloalkyl and 3- to 7-membered heterocyclic ring groups are optionally substituted by one or more substituents independently selected from CN, OR^{20}, $N(R^{20})_2$ and SR^{20}, and wherein said C_3-C_7cycloalkyl and 3- to 7-membered heterocyclic ring are each further optionally substituted with a substituent selected from halogen, CO_2R^{20}, $C(O)N(R^{20})_2$, SO_2R^{20}, C_1-C_6alkyl, C_1-C_6haloalkyl, C_2-C_6alkenyl, C_2-C_6haloalkenyl, C_2-C_6alkynyl, C_2-C_6haloalkynyl, C_3-C_6cycloalkyl and a 3- to 6-membered heterocyclic ring including 1 to 2 ring heteromoieties selected from O, S, S(O), SO_2, N and NR^{20};

R^{19}, R^{19a} and each R^{20} are independently selected from hydrogen, deuterium, , substituted or unsubstituted C_1-C_6alkyl, substituted or unsubstituted C_2-C_6alkenyl, substituted or unsubstituted C_2-C_6alkynyl, substituted or unsubstituted C_1-C_6haloalkyl, substituted or unsubstituted C_3-C_7cycloalkyl, substituted or unsubstituted C_3-C_7heterocycloalkyl, substituted or unsubstituted aryl, and substituted or unsubstituted heteroaryl; and

wherein all available hydrogen atoms are optionally substituted with a halogen atom and/or all available atoms are optionally substituted with an alternate isotope thereof.

[0028] In some embodiments, the compounds of Formula (I-A) and pharmaceutically acceptable salts, solvates and/or prodrugs thereof, are isotopically enriched with deuterium. In aspects of these embodiments, one or more of A, R^1, R^2, R^3, R^4, R^5, R^6, R^7 R^8, R^9 R^{10}, R^{11}, R^{12}, R^{18}, R^{19}, R^{19a} and R^{20} optionally comprise deuterium.

[0029] In some embodiments, the present application includes a compound of Formula (I-A):



Formula (I-A)

or a pharmaceutically acceptable salt, solvate and/or prodrug thereof,

wherein

R^1 is selected from hydrogen, deuterium, C_1-C_3alkyl, C_1-C_3deuteroalkyl, C_1-C_3fluoroalkyl, C_1-C_6alkyleneP(O)$(OR^6)_2$, C_1-C_6alkyleneOP(O)$(OR^6)_2$, C(O)R^6, CO_2R^6, C(O)N$(R^6)_2$, S(O)R^6 and SO_2R^6;

R^2, R^3, R^4 and R^5 are independently selected from hydrogen and deuterium;

R^7, R^8, R^9 and R^{10} are independently selected from hydrogen, deuterium, C_1-C_6alkyl, C_1-C_6deuteroalkyl and C_1-C_6fluoroalkyl;

A is selected from selected from hydrogen, deuterium and OR^{19};

R^6 is selected from hydrogen, deuterium, C_1-C_6alkyl, C_1-C_6deuteroalkyl and C_1-C_6fluoroalkyl;

R^{11} and R^{12} are independently selected from hydrogen, deuterium, C_1-C_6alkyl, C_1-C_6deuteroalkyl and C_1-C_6fluoroalkyl; and

R^{19} is selected from C_1-C_6alkyl, C_1-C_6deuteroalkyl and C_1-C_6fluoroalkyl;

with the proviso that either

(1) R^2, R^3, R^4 and R^5 are all D and A, R^1, R^6-R^{12} and R^{19} are as defined above the proviso; or

(2) A is OR^{19} wherein R^{19} is selected from C_1-C_6deuteroalkyl and C_1-C_6fluoroalkyl and R^1-R^{12} are as defined above the proviso.

[0030] In a further embodiment, the compounds of the application are used as medicaments. Accordingly, the application also includes a compound of the application for use as a medicament.

[0031] The present application includes a method for activating a serotonin receptor in a cell, either in a biological sample or in a patient, comprising administering an effective amount of one or more compounds of the application to the cell.

[0032] The present application also includes a method of treating psychosis or psychotic symptoms comprising administering a therapeutically effective amount of one or more compounds of the application to a subject in need thereof.

[0033] The present application also includes a method of treating a mental illness comprising administering a therapeutically effective amount of one or more compounds of the application to a subject in need thereof.

[0034] The application additionally provides a process for the preparation of compounds of the application. General and specific processes are discussed in more detail below and set forth in the examples below.

[0035] Other features and advantages of the present application will become apparent from the following detailed description. It should be understood, however, that the detailed description and the specific examples, while indicating embodiments of the application, are given by way of illustration only and the scope of the claims should not be limited by these embodiments but should be given the broadest interpretation consistent with the description as a whole.

BRIEF DESCRIPTION OF THE DRAWINGS

[0036] The present application will be described in greater detail with reference to the attached drawings and Tables in which:

[0037] Figure 1 is a graph showing the effect of various doses of exemplary compound of Formula I-A, I-A-6, on head-twitch response (HTR) in male mice. The mice were treated with compound I-A-6 (0.3, 1, 3, 10 mg/kg) by SC route in saline, and the total number of head twitches were recorded. Data is expressed as mean±SEM.

DETAILED DESCRIPTION

I. Definitions

[0038] Unless otherwise indicated, the definitions and embodiments described in this and other sections are intended to be applicable to all embodiments and aspects of the

present application herein described for which they are suitable as would be understood by a person skilled in the art.

[0039] The term "compound(s) of the application" or "compound(s) of the present application" and the like as used herein refers to a compound of Formula (I-A), (I-A1), (I-A2), (I-A3), (I-A4),and includes pharmaceutically acceptable salts, solvates and/or prodrugs thereof.

[0040] The term "composition(s) of the application" or "composition(s) of the present application" and the like as used herein refers to a composition, such a pharmaceutical composition, comprising one or more compounds of the application.

[0041] The term "and/or" as used herein means that the listed items are present, or used, individually or in combination. In effect, this term means that "at least one of or "one or more" of the listed items is used or present. The term "and/or" with respect to pharmaceutically acceptable salts and/or solvates thereof means that the compounds of the application exist as individual salts and solvates, as well as a combination of, for example, a salt of a solvate of a compound of the application.

[0042] As used in the present application, the singular forms "a", "an" and "the" include plural references unless the content clearly dictates otherwise. For example, an embodiment including "a compound" should be understood to present certain aspects with one compound, or two or more additional compounds.

[0043] As used in this application and claim(s), the words "comprising" (and any form of comprising, such as "comprise" and "comprises"), "having" (and any form of having, such as "have" and "has"), "including" (and any form of including, such as "include" and "includes") or "containing" (and any form of containing, such as "contain" and "contains"), are inclusive or open-ended and do not exclude additional, unrecited elements or process steps.

[0044] The term “consisting” and its derivatives as used herein are intended to be closed terms that specify the presence of the stated features, elements, components, groups, integers and/or steps and also exclude the presence of other unstated features, elements, components, groups, integers and/or steps.

[0045] The term “consisting essentially of”, as used herein, is intended to specify the presence of the stated features, elements, components, groups, integers and/or steps as well as those that do not materially affect the basic and novel characteristic(s) of these features, elements, components, groups, integers and/or steps.

[0046] In embodiments comprising an “additional” or “second” component, such as an additional or second compound, the second component as used herein is chemically

different from the other components or first component. A “third” component is different from the other, first and second components and further enumerated or “additional” components are similarly different.

[0047] The term “suitable” as used herein means that the selection of the particular compound or conditions would depend on the specific synthetic manipulation to be performed, the identity of the molecule(s) to be transformed and/or the specific use for the compound, but the selection would be well within the skill of a person trained in the art. All process/method steps described herein are to be conducted under conditions sufficient to provide the product shown. A person skilled in the art would understand that all reaction conditions, including, for example, reaction solvent, reaction time, reaction temperature, reaction pressure, reactant ratio and whether or not the reaction should be performed under an anhydrous or inert atmosphere, can be varied to optimize the yield of the desired product and it is within their skill to do so.

[0048] The terms "about", “substantially” and “approximately” as used herein mean a reasonable amount of deviation of the modified term such that the end result is not significantly changed. These terms of degree should be construed as including a deviation of at least ±5% of the modified term if this deviation would not negate the meaning of the word it modifies or unless the context suggests otherwise to a person skilled in the art.

[0049] The present description refers to a number of chemical terms and abbreviations used by those skilled in the art. Nevertheless, definitions of selected terms are provided for clarity and consistency.

[0050] The term "solvate" as used herein means a compound, or a salt or prodrug of a compound, wherein molecules of a suitable solvent are incorporated in the crystal lattice. A suitable solvent is physiologically tolerable at the dosage administered.

[0051] The term “prodrug” as used herein means a compound, or salt of a compound, that, after administration, is converted into an active drug.

[0052] The term “alkyl” as used herein, whether it is used alone or as part of another group, means straight or branched chain, saturated alkyl groups. The number of carbon atoms that are possible in the referenced alkyl group are indicated by the prefix “$C_{n1\text{-}n2}$”. Thus, for example, the term “$C_{1\text{-}6}$alkyl” (or “C_1-C_6alkyl”) means an alkyl group having 1, 2, 3, 4, 5, or c carbon atoms and includes, for example, any of the hexyl alkyl and pentyl alkyl isomers as well as n-, iso-, sec- and ter-butyl, n- and iso-propyl, ethyl and methyl. As another example, “C_4alkyl” refers to n-, iso-, sec- and tert-butyl, n- and isopropyl, ethyl and methyl.

[0053] The term “alkenyl” whether it is used alone or as part of another group, means a straight or branched chain, saturated alkylene group, that is, a saturated carbon chain that contains substituents on two of its ends. The number of carbon atoms that are possible in the referenced alkylene group are indicated by the prefix “C_{n1-n2}”. For example, the term C_{2-6}alkylene means an alkylene group having 2, 3, 4, 5 or 6 carbon atoms.

[0054] The term “alkynyl" as used herein, whether it is used alone or as part of another group, means straight or branched chain, unsaturated alkynyl groups containing at least one triple bond. The number of carbon atoms that are possible in the referenced alkyl group are indicated by the prefix “C_{n1-n2}”. For example, the term C_{2-6}alkynyl means an alkynyl group having 2, 3, 4, 5 or 6 carbon atoms.

[0055] The term “cycloalkyl,” as used herein, whether it is used alone or as part of another group, means a saturated carbocyclic group containing from 3 to 20 carbon atoms and one or more rings. The number of carbon atoms that are possible in the referenced cycloalkyl group are indicated by the numerical prefix “C_{n1-n2}”. For example, the term C_{3-10}cycloalkyl means a cycloalkyl group having 3, 4, 5, 6, 7, 8, 9 or 10 carbon atoms.

[0056] The term “aryl” as used herein, whether it is used alone or as part of another group, refers to carbocyclic groups containing at least one aromatic ring and contains either 6 to 20 carbon atoms.

[0057] The term “available”, as in “available hydrogen atoms” or “available atoms” refers to atoms that would be known to a person skilled in the art to be capable of replacement by a substituent.

[0058] The term “heterocycloalkyl” as used herein, whether it is used alone or as part of another group, refers to cyclic groups containing at least one non-aromatic ring containing from 3 to 20 atoms in which one or more of the atoms are a heteromoiety selected from O, S, S(O), SO_2 and N and the remaining atoms are C. Heterocycloalkyl groups are either saturated or unsaturated (i.e. contain one or more double bonds). When a heterocycloalkyl group contains the prefix C_{n1-n2} or “n1 to n2” this prefix indicates the number of carbon atoms in the corresponding carbocyclic group, in which one or more, suitably 1 to 5, of the ring atoms is replaced with a heteromoeity as selected from O, S, S(O), SO_2 and N and the remaining atoms are C. Heterocycloalkyl groups are optionally benzofused.

[0059] The term “heteroaryl” as used herein, whether it is used alone or as part of another group, refers to cyclic groups containing at least one heteroaromatic ring containing 5-20 atoms in which one or more of the atoms are a heteroatom selected from O, S and N and the remaining atoms are C. When a heteroaryl group contains the prefix C_{n1-n2} this prefix indicates the number of carbon atoms in the corresponding carbocyclic group, in which one

or more, suitably 1 to 5, of the ring atoms is replaced with a heteroatom as defined above. Heteroaryl groups are optionally benzofused.

[0060] All cyclic groups, including aryl, heteroaryl, heterocycloalkyl and cycloalkyl groups, contain one or more than one ring (i.e. are polycyclic). When a cyclic group contains more than one ring, the rings may be fused, bridged, spirofused or linked by a bond.

[0061] The term "benzofused" as used herein refers to a polycyclic group in which a benzene ring is fused with another ring.

[0062] A first ring being "fused" with a second ring means the first ring and the second ring share two adjacent atoms there between.

[0063] A first ring being "bridged" with a second ring means the first ring and the second ring share two non-adjacent atoms there between.

[0064] A first ring being "spirofused" with a second ring means the first ring and the second ring share one atom there between.

[0065] The term "halogen" (or "halo") whether it is used alone or as part of another group, refers to a halogen atom and includes fluoro, chloro, bromo and iodo.

[0066] The term "haloalkyl" as used herein refers to an alkyl group as defined above in which one or more of the available hydrogen atoms have been replaced with a halogen. Thus, for example, "$C_{1\text{-}6}$haloalkyl" (or "C_1-C_6haloalkyl") refers to a C_1 to C_6 linear or branched alkyl group as defined above with one or more halogen substituents.

[0067] As used herein, the term "haloalkenyl" refers to an alkenyl group as defined above in which one or more of the available hydrogen atoms have been replaced with a halogen. Thus, for example, "$C_{1\text{-}6}$haloalkenyl" (or "C_1-C_6haloalkenyl") refers to a C_1 to C_6 linear or branched alkenyl group as defined above with one or more halogen substituents.

[0068] As used herein, the term "haloalkynyl" refers to an alkynyl group as defined above in which one or more of the available hydrogen atoms have been replaced with a halogen. Thus, for example, "$C_{1\text{-}6}$haloalkynyl" (or "C_1-C_6haloalkynyl") refers to a C_1 to C_6 linear or branched alkynyl group as defined above with one or more halogen substituents.

[0069] As used herein, the term "alkoxy" as used herein, alone or in combination, includes an alkyl group connected to an oxygen connecting atom.

[0070] As used herein, the term "one or more" item includes a single item selected from the list as well as mixtures of two or more items selected from the list.

[0071] The term "substituted" as used herein means, unless otherwise indicated, that the referenced group is substituted with one or more substituents independently selected

from halogen, CO_2H, CO_2CH_3, $C(O)NH_2$, $C(O)N(CH_3)_2$, $C(O)NHCH_3$, SO_2CH_3, $SOCH_3$, C_1-C_6alkyl, C_1-C_6haloalkyl, C_2-C_6alkenyl, C_2-C_6haloalkenyl, C_2-C_6alkynyl, C_2-C_6haloalkynyl, C_3-C_6cycloalkyl and a 3- to 6-membered heterocyclic ring including 1 to 2 ring members selected from O, S, S(O), SO_2, N, NH and NCH_3.

[0072] The term “alternate isotope thereof” as used herein refers to an isotope of an element that is other than the isotope that is most abundant in nature.

[0073] In the compounds of general Formula (I-A) and pharmaceutically acceptable salts, solvates and/or prodrug thereof, the atoms may exhibit their natural isotopic abundances, or one or more of the atoms may be artificially enriched in a particular isotope having the same atomic number, but an atomic mass or mass number different from the atomic mass or mass number predominantly found in nature. The present disclosure is meant to include all suitable isotopic variations of the compounds of general Formula (I-A) and pharmaceutically acceptable salts, solvates and/or prodrug thereof. For example, different isotopic forms of hydrogen (H) include protium (1H), deuterium (2H) and tritium (3H). Protium is the predominant hydrogen isotope found in nature.

[0074] The term “all available atoms are optionally substituted with alternate isotope” as used herein means that available atoms are optionally substituted with an isotope of that atom of having the same atomic number, but an atomic mass or mass number different from the atomic mass or mass number predominantly found in nature.

[0075] The term “compound” refers to the compound and, in certain embodiments, to the extent they are stable, any hydrate or solvate thereof. A hydrate is the compound complexed with water and a solvate is the compound complexed with a solvent, which may be an organic solvent or an inorganic solvent. A “stable” compound is a compound that can be prepared and isolated and whose structure and properties remain or can be caused to remain essentially unchanged for a period of time sufficient to allow use of the compound for the purposes described herein (e.g., therapeutic administration to a subject). The compounds of the present application are limited to stable compounds embraced by general Formula (I-A), or pharmaceutically acceptable salts, solvates and/or prodrug thereof.

[0076] The term “pharmaceutically acceptable” means compatible with the treatment of subjects.

[0077] The term “pharmaceutically acceptable carrier” means a non-toxic solvent, dispersant, excipient, adjuvant or other material which is mixed with the active ingredient in order to permit the formation of a pharmaceutical composition, i.e., a dosage form capable of administration to a subject.

[0078] The term “pharmaceutically acceptable salt” means either an acid addition salt or a base addition salt which is suitable for, or compatible with, the treatment of subjects.

[0079] An acid addition salt suitable for, or compatible with, the treatment of subjects is any non-toxic organic or inorganic acid addition salt of any basic compound.

[0080] A base addition salt suitable for, or compatible with, the treatment of subjects is any non-toxic organic or inorganic base addition salt of any acidic compound.

[0081] The term "protecting group" or "PG" and the like as used herein refers to a chemical moiety which protects or masks a reactive portion of a molecule to prevent side reactions in those reactive portions of the molecule, while manipulating or reacting a different portion of the molecule. After the manipulation or reaction is complete, the protecting group is removed under conditions that do not degrade or decompose the remaining portions of the molecule. The selection of a suitable protecting group can be made by a person skilled in the art. Many conventional protecting groups are known in the art, for example as described in "Protective Groups in Organic Chemistry" McOmie, J.F.W. Ed., Plenum Press, 1973, in Greene, T.W. and Wuts, P.G.M., "Protective Groups in Organic Synthesis", John Wiley & Sons, 3rd Edition, 1999 and in Kocienski, P. Protecting Groups, 3rd Edition, 2003, Georg Thieme Verlag (The Americas).

[0082] The term "subject" as used herein includes all members of the animal kingdom including mammals, and suitably refers to humans. Thus the methods of the present application are applicable to both human therapy and veterinary applications.

[0083] The term "treating" or "treatment" as used herein and as is well understood in the art, means an approach for obtaining beneficial or desired results, including clinical results. Beneficial or desired clinical results include, but are not limited to alleviation or amelioration of one or more symptoms or conditions, diminishment of extent of disease, stabilized (i.e. not worsening) state of disease, preventing spread of disease, delay or slowing of disease progression, amelioration or palliation of the disease state, diminishment of the reoccurrence of disease and remission (whether partial or total), whether detectable or undetectable. "Treating" and "treatment" can also mean prolonging survival as compared to expected survival if not receiving treatment. "Treating" and "treatment" as used herein also include prophylactic treatment. For example, a subject with early cancer can be treated to prevent progression, or alternatively a subject in remission can be treated with a compound or composition of the application to prevent recurrence. Treatment methods comprise administering to a subject a therapeutically effective amount of one or more of the compounds of the application and optionally consist of a single administration, or alliteratively comprise a series of administrations. .

[0084] As used herein, the term "effective amount" or "therapeutically effective amount" means an amount of one or more compounds of the application that is effective, at dosages and for periods of time necessary to achieve the desired result. For example, in the context of treating a disease, disorder or condition mediated or treated by agonism or activation of serotonergic receptors and downstream second messengers, an effective amount is an amount that, for example, increases said activation compared to the activation without administration of the one or more compounds.

[0085] “Palliating” a disease, disorder or condition means that the extent and/or undesirable clinical manifestations of a disease, disorder or condition are lessened and/or time course of the progression is slowed or lengthened, as compared to not treating the disorder.

[0086] The term "administered" as used herein means administration of a therapeutically effective amount of one or more compounds or compositions of the application to a cell, tissue, organ or subject.

[0087] The term "prevention" or "prophylaxis", or synonym thereto, as used herein refers to a reduction in the risk or probability of a patient becoming afflicted with a disease, disorder or condition or manifesting a symptom associated with a disease, disorder or condition.

[0088] The "disease, disorder or condition" as used herein refers to a disease, disorder or condition treated or treatable by activation a serotonin receptor, for example 5-HT_{2A} and particularly using a serotonin receptor agonist, such as one or more compounds of the application herein described.

[0089] The term “treating a disease, disorder or condition by activation of a serotonin receptor” as used herein means that the disease, disorder or condition to be treated is affected by, modulated by and/or has some biological basis, either direct or indirect, that includes serotonergic activity, in particular increases in serotonergic activity. These diseases respond favourably when serotonergic activity associated with the disease, disorder or condition is agonized by one or more of the compounds or compositions of the application.

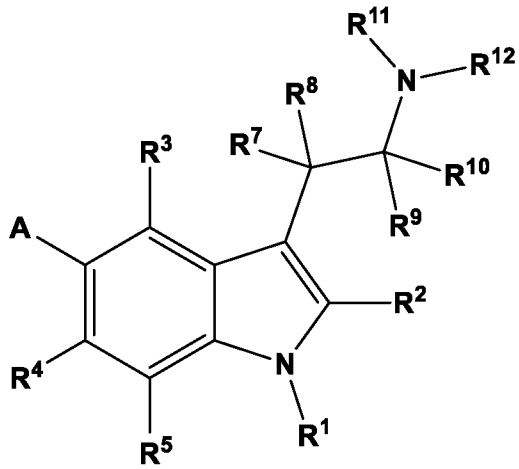
[0090] The term “activation” as used herein includes agonism, partial agonist and positive allosteric modulation of a serotonin receptor.

[0091] The terms “5-HT_{1A}” and “5-HT_{2A}” are used herein mean the 5-HT_{2A} and 5-HT_{2A} receptor subtypes of the 5-HT_2 serotonin receptor.

[0092] The term “therapeutic agent” as used herein refers to any drug or active agent that has a pharmacological effect when administered to a subject.

II. Compounds

[0093] The present application includes a compound of Formula (I-A):



Formula (I-A)

or a pharmaceutically acceptable salt, solvate and/or prodrug thereof,

wherein

R^1 is selected from hydrogen, deuterium, C_1-C_3alkyl, C_{1-6}alkyleneP(O)$(OR^6)_2$, C_{1-6}alkyleneOP(O)$(OR^6)_2$, C(O)R^6, CO_2R^6, C(O)N$(R^6)_2$, S(O)R^6 and SO_2R^6;

R^2, R^7, R^8, R^9 and R^{10} are independently selected from hydrogen, deuterium, halogen and C_1-C_6alkyl;

R^3 is independently selected from hydrogen, deuterium, CN, C_1-C_6alkyl, C_1-C_6haloalkyl, C_2-C_6haloalkenyl, CO_2R^{18}, C(O)N$(R^{18})_2$, C_2-C_6alkenyl, C_2-C_6alkynyl, C_2-C_6haloalkynyl, C_3-C_7cycloalkyl and a 3- to 7-membered heterocyclic ring comprising 1 to 2 heteromoeities selected from O, S, S(O), SO_2, N and NR^{18}, wherein said C_1-C_6alkyl, C_1-C_6haloalkyl, C_2-C_6alkenyl, C_2-C_6haloalkenyl, C_2-C_6alkynyl, C_2-C_6haloalkynyl, C_3-C_7cycloalkyl and 3- to 7-membered heterocyclic ring groups are optionally substituted by one or more substituents independently selected from CN, OR^{18}, N$(R^{18})_2$ and SR^{18}, and wherein said C_3-C_7cycloalkyl and 3- to 7-membered heterocyclic ring are each further optionally substituted with a substituent selected from halogen, CO_2R^{18}, C(O)N$(R^{18})_2$, SO_2R^{18}, C_1-C_6alkyl, C_1-C_6haloalkyl, C_2-C_6alkenyl, C_2-C_6haloalkenyl, C_2-C_6alkynyl, C_2-C_6haloalkynyl, C_3-C_6cycloalkyl and a 3- to 6-membered heterocyclic ring including 1 to 2 ring heteromoieties selected from O, S, S(O), SO_2, N, and NR^{18};

R^4 and R^5 are independently selected from hydrogen, deuterium, halogen, CN, OR^{18}, $N(R^{18})_2$, SR^{18}, C_1-C_6alkyl, C_1-C_6haloalkyl, C_2-C_6haloalkenyl, CO_2R^{18}, $C(O)N(R^{18})_2$, $S(O)R^{18}$, SO_2R^{18}, C_2-C_6alkenyl, C_2-C_6alkynyl, C_2-C_6haloalkynyl, C_3-C_7cycloalkyl and a 3- to 7-membered heterocyclic ring comprising 1 to 2 heteromoeities selected from O, S, S(O), SO_2, N and NR^{18}, wherein said C_1-C_6alkyl, C_1-C_6haloalkyl, C_2-C_6alkenyl, C_2-C_6haloalkenyl, C_2-C_6alkynyl, C_2-C_6haloalkynyl, C_3-C_7cycloalkyl and 3- to 7-membered heterocyclic ring groups are optionally substituted by one or more substituents independently selected from CN, OR^{18}, $N(R^{18})_2$ and SR^{18}, and wherein said C_3-C_7cycloalkyl and 3- to 7-membered heterocyclic ring are each further optionally substituted with a substituent selected from halogen, CO_2R^{18}, $C(O)N(R^{18})_2$, SO_2R^{18}, C_1-C_6alkyl, C_1-C_6haloalkyl, C_2-C_6alkenyl, C_2-C_6haloalkenyl, C_2-C_6alkynyl, C_2-C_6haloalkynyl, C_3-C_6cycloalkyl and a 3- to 6-membered heterocyclic ring including 1 to 2 ring heteromoieties selected from O, S, S(O), SO_2, N, and NR^{18};

A is selected from selected from hydrogen, deuterium, halogen, OR^{19}, $N(R^{19})(R^{19a})$, SR^{19}, $S(O)R^{19}$ and $S(O_2)R^{19}$; each R^{18} is independently selected from hydrogen, C_1-C_6alkyl, C_1-C_6haloalkyl, C_2-C_6alkenyl, C_2-C_6haloalkenyl, C_2-C_6alkynyl, C_2-C_6haloalkynyl, C_3-C_7cycloalkyl, and a 3- to 7-membered heterocyclic ring including 1 to 2 ring heteromoieties selected from O, S, S(O), SO_2, N and NR^{20}, wherein said C_1-C_6alkyl, C_1-C_6haloalkyl, C_2-C_6alkenyl, C_2-C_6haloalkenyl, C_2-C_6alkynyl, C_2-C_6haloalkynyl, C_3-C_7cycloalkyl and 3- to 7-membered heterocyclic ring groups are optionally substituted by one or more substituents independently selected from CN, OR^{20}, $N(R^{20})_2$ and SR^{20}, and wherein said C_3-C_7cycloalkyl and 3- to 7-membered heterocyclic ring are each further optionally substituted with a substituent selected from halogen, CO_2R^{20}, $C(O)N(R^{20})_2$, SO_2R^{20}, C_1-C_6alkyl, C_1-C_6haloalkyl, C_2-C_6alkenyl, C_2-C_6haloalkenyl, C_2-C_6alkynyl, C_2-C_6haloalkynyl, C_3-C_6cycloalkyl and a 3- to 6-membered heterocyclic ring including 1 to 2 ring heteromoieties selected from O, S, S(O), SO_2, N and NR^{20};

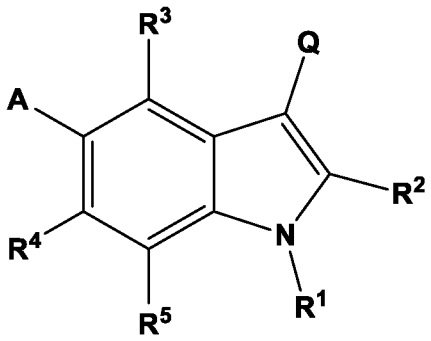
R^6 is independently selected from hydrogen, deuterium and C_1-C_6alkyl;

R^{11} and R^{12} are independently selected from hydrogen, deuterium and C_1-C_6alkyl;

R^{19}, R^{19a} and each R^{20} are independently selected from hydrogen, deuterium, , substituted or unsubstituted C_1-C_6alkyl, substituted or unsubstituted C_2-C_6alkenyl, substituted or unsubstituted C_2-C_6alkynyl, substituted or unsubstituted C_1-C_6haloalkyl, substituted or unsubstituted C_3-C_7cycloalkyl, substituted or unsubstituted C_3-C_7heterocycloalkyl, substituted or unsubstituted aryl, and substituted or unsubstituted heteroaryl; and

wherein all available hydrogen atoms are optionally substituted with a halogen atom and/or all available atoms are optionally substituted with an alternate isotope thereof.

[0094] The present application includes a compound of Formula (I) or a pharmaceutically acceptable salt, solvate and/or prodrug thereof:



Formula (I)

or a pharmaceutically acceptable salt, solvate and/or prodrug thereof,

wherein

R^1 is selected from hydrogen, deuterium, C_1-C_3alkyl, $CH_2P(O)(OR^6)_2$; $C(O)R^6$, CO_2R^6, $C(O)N(R^6)_2$, $S(O)R^6$ and SO_2R^6;

Q is :  ;

R^2, R^7, R^8, R^9, R^{10}, R^{11}, and R^{12} are independently selected from hydrogen, deuterium, halogen and C_1-C_6alkyl;

R^3, R^4 and R^5 are independently selected from hydrogen, deuterium, halogen, CN, OR^{18}, $N(R^{18})_2$, SR^{18}, C_1-C_6alkyl, C_1-C_6haloalkyl, C_2-C_6haloalkenyl, CO_2R^{18}, $C(O)N(R^{18})_2$, $S(O)R^{18}$, SO_2R^{18}, C_2-C_6alkenyl, C_2-C_6alkynyl, C_2-C_6haloalkynyl, C_3-C_7cycloalkyl and a 3- to 7-membered heterocyclic ring comprising 1 to 2 heteromoeities selected from O, S, S(O), SO_2, N and NR^{18}, wherein said C_1-C_6alkyl, C_1-C_6haloalkyl, C_2-C_6alkenyl, C_2-C_6haloalkenyl, C_2-C_6alkynyl, C_2-C_6haloalkynyl, C_3-C_7cycloalkyl and 3- to 7-membered heterocyclic ring groups are optionally substituted by one or more substituents independently selected from CN, OR^{18}, $N(R^{18})_2$ and SR^{18}, and wherein said C_3-C_7cycloalkyl and 3- to 7-membered heterocyclic ring are each further optionally substituted with a substituent selected from halogen, CO_2R^{18}, $C(O)N(R^{18})_2$, SO_2R^{18}, C_1-C_6alkyl, C_1-C_6haloalkyl, C_2-C_6alkenyl, C_2-C_6haloalkenyl, C_2-

C_6alkynyl, C_2-C_6haloalkynyl, C_3-C_6cycloalkyl and a 3- to 6-membered heterocyclic ring including 1 to 2 ring heteromoieties selected from O, S, S(O), SO_2, N, and NR^{18};

A is selected from selected from hydrogen, deuterium, halogen, OR^{19}, NR^{19}, SR^{19}, $S(O)R^{19}$ and $S(O_2)R^{19}$;

each R^{18} is independently selected from hydrogen, C_1-C_6alkyl, C_1-C_6haloalkyl, C_2-C_6alkenyl, C_2-C_6haloalkenyl, C_2-C_6alkynyl, C_2-C_6haloalkynyl, C_3-C_7cycloalkyl, and a 3- to 7-membered heterocyclic ring including 1 to 2 ring heteromoieties selected from O, S, S(O), SO_2, N and NR^{20}, wherein said C_1-C_6alkyl, C_1-C_6haloalkyl, C_2-C_6alkenyl, C_2-C_6haloalkenyl, C_2-C_6alkynyl, C_2-C_6haloalkynyl, C_3-C_7cycloalkyl and 3- to 7-membered heterocyclic ring groups are optionally substituted by one or more substituents independently selected from CN, OR^{20}, $N(R^{20})_2$ and SR^{20}, and wherein said C_3-C_7cycloalkyl and 3- to 7-membered heterocyclic ring are each further optionally substituted with a substituent selected from halogen, CO_2R^{20}, $C(O)N(R^{20})_2$, SO_2R^{20}, C_1-C_6alkyl, C_1-C_6haloalkyl, C_2-C_6alkenyl, C_2-C_6haloalkenyl, C_2-C_6alkynyl, C_2-C_6haloalkynyl, C_3-C_6cycloalkyl and a 3- to 6-membered heterocyclic ring including 1 to 2 ring heteromoieties selected from O, S, S(O), SO_2, N and NR^{20};

R^{19} and R^{20} are independently selected from hydrogen, deuterium, halogen, substituted or unsubstituted C_1-C_6alkyl, substituted or unsubstituted C_2-C_6alkenyl, substituted or unsubstituted C_2-C_6alkynyl, substituted or unsubstituted C_1-C_6haloalkyl, substituted or unsubstituted C_3-C_7cycloalkyl, substituted or unsubstituted C_3-C_7heterocycloalkyl, substituted or unsubstituted aryl, and substituted or unsubstituted heteroaryl; and

wherein all available hydrogen atoms are optionally substituted with a halogen atom and/or all available atoms are optionally substituted with an alternate isotope thereof.

[0095] In some embodiments, when all available hydrogen atoms in a group are optionally replaced with a halogen atom, the halogen atom is F, Cl or Br. In some embodiments, when all available hydrogen atoms in a group are optionally replaced with a halogen atom, the halogen atom is F or Br. In some embodiments, when all available hydrogen atoms are replaced with a halogen atom, the halogen atom is F or Cl. In some embodiments, when all available hydrogen atoms in a group are optionally replaced with a halogen atom, the halogen atom is F.

[0096] Therefore, in some embodiments, all available hydrogen atoms are optionally and independently substituted with a fluorine atom, chlorine atom or bromine atom and/or all available atoms are optionally substituted with an alternate isotope thereof. In some embodiments, all available hydrogen atoms are optionally and independently substituted with a fluorine atom or bromine atom and/or all available atoms are optionally substituted with an alternate isotope thereof. In some embodiments, all available hydrogen atoms are

optionally and independently substituted with a fluorine atom or chlorine atom and/or all available atoms are optionally substituted with an alternate isotope thereof. In some embodiments, all available hydrogen atoms are optionally substituted with a fluorine atom and/or all available atoms are optionally substituted with an alternate isotope thereof.

[0097] In some embodiments, all available hydrogen atoms are optionally substituted with an alternate isotope thereof. In some embodiments, the alternate isotope of hydrogen is deuterium. Therefore, in some embodiments, all available hydrogen atoms are optionally substituted with a halogen atom and/or all available hydrogen atoms are optionally substituted with deuterium. In some embodiments, all available hydrogen atoms are optionally and independently substituted with a fluorine atom and/or chlorine atom and/or all available hydrogen atoms are optionally substituted with deuterium. In some embodiments, all available atoms are optionally substituted with deuterium. Therefore, in some embodiments, all available hydrogen atoms are optionally substituted with a fluorine atom and/or all available hydrogen atoms are optionally substituted with deuterium. In some embodiments, all available hydrogen atoms are optionally substituted with deuterium.

[0098] In some embodiments, all available hydrogen atoms are optionally substituted with an alternate isotope thereof. In some embodiments, the alternate isotope of hydrogen is deuterium. Accordingly, in some embodiments, the compounds of the application are isotopically enriched with deuterium. In some embodiments, one or more of A, R^1, R^2, R^3, R^4, R^5, R^6, R^7 R^8, R^9, R^{10}, R^{11}, R^{12}, R^{18}, R^{19}, R^{19a} and R^{20} comprises one or more deuterium or one or more of A, R^1, R^2, R^3, R^4, R^5, R^6, R^7 R^8, R^9, R^{10}, R^{11}, R^{12}, R^{18}, R^{19}, R^{19a} and R^{20} is deuterium.

[0099] In some embodiments, R^1 is selected from $S(O)R^6$ and SO_2R^6, wherein all available hydrogen atoms are optionally substituted with a halogen atom and/or all available atoms are optionally substituted with an alternate isotope thereof.

[00100] In some embodiments, R^1 is selected from hydrogen, deuterium, C_1-C_3alkyl, C_1-C_3alkylene$P(O)(OR^6)_2$, C_1-C_3alkylene$OP(O)(OR^6)_2$, $C(O)R^6$, CO_2R^6 and $C(O)N(R^6)_2$, wherein all available hydrogen atoms are optionally substituted with a halogen atom and/or all available atoms are optionally substituted with an alternate isotope thereof. In some embodiments, R^1 is selected from hydrogen, deuterium, C_1-C_3alkyl, $CH_2P(O)(OR^6)_2$, $CH_2CH_2P(O)(OR^6)_2$, $CH_2CH(CH_3)P(O)(OR^6)_2$, $CH(CH_3)CH_2P(O)(OR^6)_2$, $CH(CH_3)P(O)(OR^6)_2$, $CH(CH_2CH_3)P(O)(OR^6)_2$, $(CH_2)OP(O)(OR^6)_2$, $C(O)R^6$ and CO_2R^6, wherein all available hydrogen atoms are optionally substituted with a fluorine atom and/or all available atoms are optionally substituted with an alternate isotope thereof. In some embodiments, R^1 is selected from hydrogen, deuterium, CH_3, CH_2CH_3, $CH_2P(O)(OR^6)_2$,

$CH(CH_3)P(O)(OR^6)_2$, and $(CH_2)OP(O)(OR^6)_2$ wherein all available hydrogen atoms are optionally substituted with a halogen atom and/or all available atoms are optionally substituted with an alternate isotope thereof. In some embodiments, R^1 is selected from hydrogen, deuterium, CH_3, CH_2CH_3, $CH_2P(O)(OR^6)_2$, $CH(CH_3)P(O)(OR^6)_2$ and $(CH_2)OP(O)(OR^6)_2$ wherein all available hydrogen atoms are optionally substituted with a fluorine atom and/or all available atoms are optionally substituted with an alternate isotope thereof. In some embodiments, R^1 is selected from hydrogen, deuterium, CH_3, CH_2CH_3, $CH_2P(O)(OR^6)_2$ and $(CH_2)OP(O)(OR^6)_2$. In some embodiments, R^1 is selected from hydrogen, CH_3, CH_2CH_3, $CH_2P(O)(OR^6)_2$, $(CH_2)OP(O)(OR^6)_2$, $C(O)R^6$ and CO_2R^6, wherein all available hydrogen atoms are optionally substituted with a halogen atom and/or all available atoms are optionally substituted with an alternate isotope thereof. In some embodiments, R^1 is selected from hydrogen, deuterium, CH_3, and CH_2CH_3, wherein all available hydrogen atoms are optionally substituted with a fluorine atom and/or all available atoms are optionally substituted with an alternate isotope thereof. In some embodiments, R^1 is selected from hydrogen and deuterium. In some embodiments, R^1 is hydrogen.

[00101] In some embodiments, R^2, R^7, R^8, R^9 and R^{10} are independently selected from hydrogen, deuterium, C_1-C_4alkyl and $C_{1\text{-}4}$fluoroalkyl wherein all available hydrogen atoms are optionally substituted with a halogen atom and/or all available atoms are optionally substituted with an alternate isotope thereof. In some embodiments, R^2, R^7, R^8, R^9 and R^{10} are independently selected from hydrogen, deuterium, F, Br, Cl, CH_3, CD_2H, CDH_2, CD_3, CH_2CH_3, CH_2CH_2D, CH_2CD_2H and CD_2CD_3. In some embodiments, R^2, R^7, R^8, R^9 and R^{10} are independently selected from hydrogen, deuterium, F, Br, CH_3, CD_2H, CDH_2, and CD_3. In some embodiments, R^2, R^7, R^8, R^9 and R^{10} are independently selected from hydrogen, deuterium, CH_3 and CD_3.

[00102] In some embodiments, R^2 is selected from hydrogen, deuterium, CH_3 and CD_3. some embodiments, R^2 is selected from hydrogen and deuterium.

[00103] In some embodiments, R^6 is selected from hydrogen, deuterium, C_1-C_4alkyl and $C_{1\text{-}4}$fluoroalkyl wherein all available hydrogen atoms are optionally substituted with a halogen atom and/or all available atoms are optionally substituted with an alternate isotope thereof. In some embodiments, R^6 is selected from hydrogen, deuterium, CH_3, CD_2H, CDH_2, CD_3, CF_3, CHF_2, CH_2CH_3, CH_2CH_2D, CH_2CD_2H and CD_2CD_3. In some embodiments, R^6 is from hydrogen, deuterium, CH_3, CF_3, CHF_2, CD_2H, CDH_2, and CD_3. In some embodiments, R^6 is selected from CH_3 and CD_3.

[00104] In some embodiments, at least one of R^7, R^8, R^9 and R^{10} is deuterium or at least one of R^7, R^8, R^9 and R^{10} comprises deuterium. In some embodiments, R^7, R^8, R^9 and

R^{10} are independently selected from hydrogen, deuterium, F, Br, CH_3, CF_3, CHF_2, CD_2H, CDH_2, CD_3, CH_2CH_3, CH_2CH_2D, CH_2CD_2H and CD_2CD_3. In some embodiments, R^7, R^8, R^9 and R^{10} are independently selected from hydrogen, deuterium, F, Br, CH_3, CD_2H, CDH_2, and CD_3. In some embodiments, R^7, R^8, R^9 and R^{10} are independently selected from hydrogen, deuterium, F, Br, CH_3, and CD_3. In some embodiments, R^7, R^8, R^9 and R^{10} are independently selected from hydrogen, deuterium and F. In some embodiments, at least one or two of R^7, R^8, R^9 and R^{10} is deuterium. In some embodiments, R^7, R^8, R^9 and R^{10} are all hydrogen. In some embodiments, R^7, R^8, R^9 and R^{10} are all deuterium. In some embodiments, both R^7 and R^8 are deuterium and both R^9 and R^{10} are hydrogen.

[00105] In some embodiments, R^{11} and R^{12} are independently selected from hydrogen, deuterium and C_1-C_4alkyl, wherein all available hydrogen atoms are optionally substituted with a fluorine atom and/or all available hydrogen atoms are optionally substituted with deuterium. In some embodiments, R^{11} and R^{12} are independently selected from hydrogen, deuterium, CH_3, CH_2CH_3, $CH(CH_3)_2$ and $C(CH_3)_3$, wherein all available hydrogen atoms are optionally substituted with a fluorine atom and/or all available hydrogen atoms are optionally substituted with deuterium. In some embodiments, R^{11} and R^{12} are independently selected from hydrogen, deuterium, CH_3, CD_2H, CDH_2, CD_3, CH_2CH_3, CH_2CH_2D, CH_2CD_2H and CD_2CD_3. In some embodiments, R^{11} and R^{12} are independently selected from hydrogen, deuterium, CH_3 and CD_3. In some embodiments, both R^{11} and R^{12} are CD_3 or CH_3.

[00106] In some embodiments, at least one of R^7, R^8, R^9, R^{10}, R^{11} and R^{12} is deuterium or at least one of R^7, R^8, R^9, R^{10} R^{11} and R^{12} comprises deuterium. In some embodiments, R^7, R^8, R^9 and R^{10} are independently selected from hydrogen, deuterium, F, Br, CH_3, CF_3, CHF_2, CD_2H, CDH_2, CD_3, CH_2CH_3, CH_2CH_2D, CH_2CD_2H and CD_2CD_3 and R^{11} and R^{12} are selected from selected from hydrogen, deuterium, CH_3, CD_2H, CDH_2, CD_3, CH_2CH_3, CH_2CH_2D, CH_2CD_2H and CD_2CD_3. In some embodiments, R^7, R^8, R^9 and R^{10} are all hydrogen and R^{11} and R^{12} are selected from deuterium and CD_3. In some embodiments, R^7, R^8, R^9 and R^{10} are all deuterium and R^{11} and R^{12} are selected from hydrogen and CH_3. In some embodiments, R^7, R^8, R^9 and R^{10} are all deuterium and R^{11} and R^{12} are selected from deuterium and CD_3. In some embodiments, R^7 and R^8 are deuterium and R^9 and R^{10} are hydrogen and R^{11} and R^{12} are selected from hydrogen, deuterium, CH_3 and CD_3.

[00107] In some embodiments, R^3 is selected from hydrogen, deuterium, CN, C_1-C_4alkyl, C_1-C_4haloalkyl, C_2-C_6haloalkenyl, CO_2R^{18}, $C(O)N(R^{18})_2$, C_2-C_6alkenyl, C_2-C_6alkynyl, C_2-C_6haloalkynyl, C_3-C_7cycloalkyl and a 3- to 7-membered heterocyclic ring including 1 to 2 ring heteromoieties selected from O, S, S(O), SO_2, N and NR^{18}, wherein said C_1-C_4alkyl, C_1-C_4haloalkyl, C_2-C_6alkenyl, C_2-C_6haloalkenyl, C_2-C_6alkynyl, C_2-C_6haloalkynyl, C_3-C_7cycloalkyl and 3- to 7-membered heterocyclic ring groups are optionally substituted by one or more

substituents independently selected from CN, OR^{18}, $N(R^{18})_2$ and SR^{18}, and wherein said C_3-C_7cycloalkyl and 3- to 7-membered heterocyclic ring are each further optionally substituted with a substituent selected from halogen, CO_2R^{18}, $C(O)N(R^{18})_2$, SO_2R^{18}, C_1-C_4alkyl, C_1-C_4haloalkyl, C_2-C_6alkenyl, C_2-C_6haloalkenyl, C_2-C_6alkynyl, C_2-C_6haloalkynyl, C_3-C_6cycloalkyl and a 3- to 6- membered heterocyclic ring including 1 to 2 ring heteromoeities selected from O, S, S(O), SO_2, N and NR^{18}; wherein all available hydrogen atoms are optionally substituted with a halogen atom and/or all available atoms are optionally substituted with an alternate isotope thereof.

[00108] In some embodiments, R^3 is selected from hydrogen, deuterium, CN, C_1-C_4alkyl, C_1-C_4haloalkyl, C_2-C_6haloalkenyl, CO_2R^{18}, $C(O)N(R^{18})_2$, C_2-C_6alkenyl, C_2-C_6alkynyl and C_2-C_6haloalkynyl, wherein said C_1-C_4alkyl, C_1-C_4haloalkyl, C_2-C_6alkenyl, C_2-C_6haloalkenyl, C_2-C_6alkynyl and C_2-C_6haloalkynyl groups are optionally substituted by one or more substituents independently selected from CN, OR^{18}, $N(R^{18})_2$ and SR^{18}, and wherein all available hydrogen atoms are optionally substituted with a fluorine and/or all available atoms are optionally substituted with an alternate isotope thereof. In some embodiments, R^3 is selected from hydrogen, deuterium, CN, C_1-C_4alkyl, C_1-C_4haloalkyl, C_2-C_6haloalkenyl, CO_2R^{18}, $C(O)N(R^{18})_2$, C_2-C_6alkenyl, C_2-C_6alkynyl and C_2-C_6haloalkynyl, wherein said C_1-C_4alkyl, C_1-C_4haloalkyl, C_2-C_6alkenyl, C_2-C_6haloalkenyl, C_2-C_6alkynyl and C_2-C_6haloalkynyl groups are optionally substituted by one to three substituents independently selected from CN, OR^{18}, $N(R^{18})_2$ and SR^{18}, wherein all available hydrogen atoms are optionally substituted with a fluorine atom and/or all available atoms are optionally substituted with an alternate isotope thereof. In some embodiments, R^3 is selected from hydrogen, deuterium, CN, SR^{18}, CH_3, CH_2CH_3, $CH(CH_3)_2$, $C(CH_3)_3$, C_1-C_4haloalkyl, C_2-C_6haloalkenyl, CO_2R^{18}, $C(O)N(R^{18})_2$, C_2-C_6alkenyl and C_2-C_6alkynyl, wherein said C_1-C_4alkyl, C_1-C_4haloalkyl, C_2-C_6alkenyl, C_2-C_6haloalkenyl and C_2-C_6alkynyl groups are optionally substituted by one or two substituents independently selected from CN, OR^{18}, $N(R^{18})_2$ and SR^{18}, wherein all available hydrogen atoms are optionally substituted with a fluorine atom and/or all available atoms are optionally substituted with an alternate isotope thereof. In some embodiments, R^3 is selected from hydrogen, deuterium, CN, CH_3, CH_2CH_3, $CH(CH_3)_2$, $C(CH_3)_3$, C_1-C_4haloalkyl, C_2-C_6haloalkenyl, CO_2R^{18}, and C_2-C_6alkenyl, wherein all available hydrogen atoms are optionally substituted with a fluorine atom and/or all available hydrogen atoms are optionally substituted with deuterium. In some embodiments, R^3 is selected from hydrogen and deuterium. In some embodiments, R^3 is hydrogen. In some embodiments, R^3 is deuterium.

[00109] In some embodiments, R^4 and R^5 are independently selected from hydrogen, deuterium, halogen, CN, OR^{18}, $N(R^{18})_2$, SR^{18}, C_1-C_4alkyl, C_1-C_4haloalkyl, C_2-C_6haloalkenyl, CO_2R^{18}, $C(O)N(R^{18})_2$, $S(O)R^{18}$, SO_2R^{18}, C_2-C_6alkenyl, C_2-C_6alkynyl, C_2-C_6haloalkynyl, C_3-

C_7cycloalkyl and a 3- to 7-membered heterocyclic ring including 1 to 2 ring heteromoieties selected from O, S, S(O), SO_2, N and NR^{18}, wherein said C_1-C_4alkyl, C_1-C_4haloalkyl, C_2-C_6alkenyl, C_2-C_6haloalkenyl, C_2-C_6alkynyl, C_2-C_6haloalkynyl, C_3-C_7cycloalkyl and 3- to 7-membered heterocyclic ring groups are optionally substituted by one or more substituents independently selected from CN, OR^{18}, $N(R^{18})_2$ and SR^{18}, and wherein said C_3-C_7cycloalkyl and 3- to 7-membered heterocyclic ring are each further optionally substituted with a substituent selected from halogen, CO_2R^{18}, $C(O)N(R^{18})_2$, SO_2R^{18}, C_1-C_4alkyl, C_1-C_4haloalkyl, C_2-C_6alkenyl, C_2-C_6haloalkenyl, C_2-C_6alkynyl, C_2-C_6haloalkynyl, C_3-C_6cycloalkyl and a 3- to 6- membered heterocyclic ring including 1 to 2 ring heteromoeities selected from O, S, S(O), SO_2, N and NR^{18}; wherein all available hydrogen atoms are optionally substituted with a halogen atom and/or all available atoms are optionally substituted with an alternate isotope thereof.

[00110] In some embodiments, R^4 and R^5 are independently selected from hydrogen, deuterium, halogen, CN, OR^{18}, $N(R^{18})_2$, SR^{18}, C_1-C_4alkyl, C_1-C_4haloalkyl, C_2-C_6haloalkenyl, CO_2R^{18}, $C(O)N(R^{18})_2$, $S(O)R^{18}$, SO_2R^{18}, C_2-C_6alkenyl, C_2-C_6alkynyl and C_2-C_6haloalkynyl, wherein said C_1-C_4alkyl, C_1-C_4haloalkyl, C_2-C_6alkenyl, C_2-C_6haloalkenyl, C_2-C_6alkynyl and C_2-C_6haloalkynyl groups are optionally substituted by one or more substituents independently selected from CN, OR^{18}, $N(R^{18})_2$ and SR^{18}, and wherein all available hydrogen atoms are optionally substituted with a fluorine and/or all available atoms are optionally substituted with an alternate isotope thereof. In some embodiments, R^4 and R^5 are independently selected from hydrogen, deuterium, F, Cl, Br, CN, OR^{18}, $N(R^{18})_2$, SR^{18}, C_1-C_4alkyl, C_1-C_4haloalkyl, C_2-C_6haloalkenyl, CO_2R^{18}, $C(O)N(R^{18})_2$, $S(O)R^{118}$, SO_2R^{18}, C_2-C_6alkenyl, C_2-C_6alkynyl and C_2-C_6haloalkynyl, wherein said C_1-C_4alkyl, C_1-C_4haloalkyl, C_2-C_6alkenyl, C_2-C_6haloalkenyl, C_2-C_6alkynyl and C_2-C_6haloalkynyl groups are optionally substituted by one to three substituents independently selected from CN, OR^{18}, $N(R^{18})_2$ and SR^{18}, wherein all available hydrogen atoms are optionally substituted with a fluorine atom and/or all available atoms are optionally substituted with an alternate isotope thereof. In some embodiments, R^4 and R^5 are independently selected from hydrogen, deuterium, F, Cl, Br, CN, OR^{18}, $N(R^{18})_2$, SR^{18}, CH_3, CH_2CH_3, $CH(CH_3)_2$, $C(CH_3)_3$, C_1-C_4haloalkyl, C_2-C_6haloalkenyl, CO_2R^{18}, $S(O)R^{18}$, SO_2R^{18}, $C(O)N(R^{18})_2$, C_2-C_6alkenyl and C_2-C_6alkynyl, wherein said C_1-C_4alkyl, C_1-C_4haloalkyl, C_2-C_6alkenyl, C_2-C_6haloalkenyl and C_2-C_6alkynyl groups are optionally substituted by one or two substituents independently selected from CN, OR^{18}, $N(R^{18})_2$ and SR^{18}, wherein all available hydrogen atoms are optionally substituted with a fluorine atom and/or all available atoms are optionally substituted with an alternate isotope thereof. In some embodiments, R^4 and R^5 are independently selected from hydrogen, deuterium, F, Cl, Br, CN, OR^{18}, $N(R^{18})_2$, SR^{18}, CH_3, CH_2CH_3, $CH(CH_3)_2$, $C(CH_3)_3$, C_1-

C_4haloalkyl, C_2-C_6haloalkenyl, CO_2R^{18}, $S(O)R^{18}$, SO_2R^{18} and C_2-C_6alkenyl, wherein all available hydrogen atoms are optionally substituted with a fluorine atom and/or all available hydrogen atoms are optionally substituted with deuterium In some embodiments, R^4 and R^5 are independently selected from hydrogen, deuterium, F, Cl and Br, wherein all available hydrogen atoms are optionally substituted with a fluorine atom and/or all available atoms are optionally substituted with an alternate isotope thereof. In some embodiments, R^4 and R^5 are independently selected from hydrogen, deuterium, F, Cl and Br. In some embodiments, R^4 and R^5 are independently selected from hydrogen and deuterium. In some embodiments, both R^4 and R^5 are hydrogen. In some embodiments, both R^4 and R^5 are deuterium.

[00111] In some embodiments, R^3, R^4 and R^5 are independently selected from hydrogen and deuterium. In some embodiments, R^3, R^4 and R^5 are all hydrogen. In some embodiments, R^3, R^4 and R^5 are all deuterium.

[00112] In some embodiments, the C_3-C_7cycloalkyl in R^3, R^4 and R^5 is independently selected from cyclopropyl, cyclobutyl, cyclopentyl and cyclohexyl, wherein all available hydrogen atoms are optionally substituted with a halogen atom and/or all available atoms are optionally substituted with an alternate isotope thereof.

[00113] In some embodiments, the 3- to 7-membered heterocyclic ring in R^3, R^4 and R^5 is, independently, a saturated or unsaturated heterocycle. In some embodiments, the 3- to 7-membered heterocyclic ring in R^3, R^4 and R^5 is, independently, a saturated or unsaturated bridged bicyclic heterocycle. In some embodiments, the saturated or unsaturated bridged bicyclic heterocycle is independently selected from azabicyclohexanyl, diazabicycloheptanyl, oxobicyclohexanyl, oxobicycloheptanyl and oxobicycloheptanenyl, wherein all available hydrogen atoms are optionally substituted with a halogen atom and/or all available atoms are optionally substituted with an alternate isotope thereof.

[00114] In some embodiments, the 3- to 7-membered heterocyclic ring in R^3, R^4 and R^5 is, independently, a saturated or unsaturated heterocycle. In some embodiments, the 3- to 7-membered heterocyclic ring in R^3, R^4 and R^5 is, independently, a saturated or unsaturated bridged bicyclic heterocycle. In some embodiments, the saturated or unsaturated bridged bicyclic heterocycle is independently, selected from azabicyclohexanyl, diazabicycloheptanyl, oxobicyclohexanyl, oxobicycloheptanyl and oxobicycloheptanenyl, wherein all available hydrogen atoms are optionally substituted with a halogen atom and/or all available atoms are optionally substituted with an alternate isotope thereof.

[00115] In some embodiments, the 3- to 7-membered heterocyclic ring in R^3, R^4 and R^5 is independently selected from aziridinyl, oxiranyl, thiiranyl, oxaxiridinyl, dioxiranyl, azetidinyl, oxetanyl, theitanyl, diazetidinyl, dioxetanyl, dithietanyl, tetrahydrofuranyl,

tetrahydrothiophenyl, pyrrolidinyl, imidazolidinyl, pyrazolidinyl, isoxthiolidinyl, thiazolidinyl, isothiazolidinyl, dioxolanyl, dithiolanyl, triazolyl, furazanyl, oxadiazolyl, thiadiazolyl, dioxazolyl, dithiazolyl, tetrazolyl, oxatetrazolyl, tetrahydropyranyl, morpholinyl, thiomorpholinyl, dioxanyl, dithianyl, azepanyl, oxepanyl, thiepanyl and diazepanyl, wherein all available hydrogen atoms are optionally substituted with a halogen atom and/or all available atoms are optionally substituted with an alternate isotope thereof.

[00116] In some embodiment, each R^{18} is independently selected from hydrogen, deuterium, C_1-C_4alkyl, C_1-C_4haloalkyl, C_2-C_4alkenyl, C_2-C_4haloalkenyl, C_2-C_6alkynyl, C_2-C_6haloalkynyl, C_3-C_7cycloalkyl, and a 3- to 7-membered heterocyclic ring including 1 to 2 ring heteromoieties selected from O, S, S(O), SO_2, N and NR^{20}, wherein said C_1-C_4alkyl, C_1-C_4haloalkyl, C_2-C_6alkenyl, C_2-C_6haloalkenyl, C_2-C_6alkynyl, C_2-C_6haloalkynyl, C_3-C_7cycloalkyl and 3- to 7-membered heterocyclic ring groups are optionally substituted by one to three substituents independently selected from CN, OR^{20}, $N(R^{20})_2$ and SR^{20}, and wherein said C_3-C_7cycloalkyl and 3- to 7-membered heterocyclic ring are each further optionally substituted with a substituent selected from halogen, CO_2R^{20}, $C(O)N(R^{20})_2$, SO_2R^{20}, C_1-C_4alkyl, C_1-C_4haloalkyl, C_2-C_6alkenyl, C_2-C_6haloalkenyl, C_2-C_6alkynyl, C_2-C_6haloalkynyl, C_3-C_6cycloalkyl and a 3- to 6-membered heterocyclic ring including 1 to 2 ring heteromoieties selected from O, S, S(O), SO_2, N and NR^{20}.

[00117] In some embodiments, each R^{18} is independently selected from hydrogen, deuterium, C_1-C_4alkyl, C_1-C_4haloalkyl, C_2-C_4alkenyl, C_2-C_4haloalkenyl, C_2-C_6alkynyl, and C_2-C_6haloalkynyl wherein said C_1-C_4alkyl, C_1-C_4haloalkyl, C_2-C_6alkenyl, C_2-C_6haloalkenyl, C_2-C_6alkynyl and C_2-C_6haloalkynyl are optionally substituted by one to three substituents independently selected from CN, OR^{20}, $N(R^{20})_2$ and SR^{20}. In some embodiments, each R^{18} is independently selected from hydrogen, deuterium, C_1-C_4alkyl, C_1-C_4haloalkyl, C_2-C_4alkenyl, C_2-C_4haloalkenyl, and C_2-C_6alkynyl wherein said C_1-C_4alkyl, C_1-C_4haloalkyl, C_2-C_6alkenyl, C_2-C_6haloalkenyl and C_2-C_6alkynyl are optionally substituted by one to three substituents independently selected from CN, OR^{20}, $N(R^{20})_2$ and SR^{20}, wherein all available hydrogen atoms are optionally substituted with a fluorine atom and/or all available atoms are optionally substituted with an alternate isotope thereof. In some embodiments, each R^{18} is independently selected from hydrogen, deuterium, C_1-C_4alkyl, C_1-C_4haloalkyl, C_2-C_4alkenyl, C_2-C_4haloalkenyl, and C_2-C_6alkynyl wherein said C_1-C_4alkyl, C_1-C_4haloalkyl, C_2-C_6alkenyl, C_2-C_6haloalkenyl and C_2-C_6alkynyl are optionally substituted by one or two substituents independently selected from CN, OR^{20} and $N(R^{20})_2$, wherein all available hydrogen atoms are optionally substituted with a fluorine atom and/or all available atoms are optionally substituted with an alternate isotope thereof. In some embodiments, each R^{18} is independently selected from hydrogen, deuterium, F, Cl, CH_3, CH_2CH_3, $CH(CH_3)_2$, $C(CH_3)_3$,

C_1-C_4haloalkyl, C_2-C_4alkenyl and C_2-C_4haloalkenyl wherein said CH_3, CH_2CH_3, $CH(CH_3)_2$, $C(CH_3)_3$, C_1-C_4haloalkyl, C_2-C_6alkenyl, and C_2-C_6haloalkenyl are optionally substituted by one to three substituents independently selected from CN, OR^{20} and $N(R^{20})$, wherein all available hydrogen atoms are optionally substituted with a fluorine atom and/or all available atoms are optionally substituted with an alternate isotope thereof. In some embodiments, each R^{18} is independently selected from hydrogen, deuterium, F, Cl, CH_3, CH_2CH_3, $CH(CH_3)_2$, $C(CH_3)_3$, C_1-C_4haloalkyl, C_2-C_4alkenyl and C_2-C_4haloalkenyl wherein all available hydrogen atoms are optionally substituted with a fluorine atom and/or all available atoms are optionally substituted with an alternate isotope thereof. In some embodiments, each R^{18} is independently selected from hydrogen, deuterium, F, Cl, CH_3, CH_2CH_3, $CH(CH_3)_2$, $C(CH_3)_3$ and C_1-C_4haloalkyl wherein all available hydrogen atoms are optionally substituted with a fluorine atom and/or all available atoms are optionally substituted with an alternate isotope thereof. In some embodiments, each R^{18} is independently selected from hydrogen, deuterium, F, Cl, CH_3, CH_2CH_3, $CH(CH_3)_2$, $C(CH_3)_3$ CF_3, CHF_2, CD_2H, CDH_2, CD_3, CH_2CH_3 and CD_2CD_3. In some embodiments, each R^{18} is independently selected from hydrogen, deuterium, CH_3, CH_2CH_3, $CH(CH_3)_2$, $C(CH_3)_3$ CF_3, CHF_2, CD_2H, CDH_2, CD_3, CH_2CH_3 and CD_2CD_3.

[00118] In some embodiment, each R^{18} is independently selected from C_3-C_7cycloalkyl, and a 3- to 7-membered heterocyclic ring including 1 to 2 ring heteromoieties selected from O, S, S(O), SO_2, N and NR^{20}, wherein each C_3-C_7cycloalkyl and 3- to 7-membered heterocyclic ring groups are optionally substituted by one to three substituents independently selected from CN, OR^{20}, $N(R^{20})_2$ and SR^{20}, and further optionally substituted with a substituent selected from halogen, CO_2R^{20}, $C(O)N(R^{20})_2$, SO_2R^{20}, C_1-C_4alkyl, C_1-C_4haloalkyl, C_2-C_6alkenyl, C_2-C_6haloalkenyl, C_2-C_6alkynyl, C_2-C_6haloalkynyl, C_3-C_6cycloalkyl and a 3- to 6-membered heterocyclic ring including 1 to 2 ring heteromoieties selected from O, S, S(O), SO_2, N and NR^{20}.

[00119] In some embodiment, each R^{18} is independently selected from C_3-C_7cycloalkyl, and a 3- to 7-membered heterocyclic ring including 1 to 2 ring heteromoieties selected from O, S, N and NR^{20}, wherein each C_3-C_7cycloalkyl and 3- to 7-membered heterocyclic ring groups are optionally substituted by one to three substituents independently selected from CN, OR^{20}, $N(R^{20})_2$ and SR^{20}, and further optionally substituted with a substituent selected from halogen, CO_2R^{20}, $C(O)N(R^{20})_2$, SO_2R^{20}, C_1-C_4alkyl, C_1-C_4haloalkyl, C_2-C_6alkenyl, C_2-C_6haloalkenyl, C_2-C_6alkynyl and C_2-C_6haloalkynyl. In some embodiment, each R^{18} is independently selected from C_3-C_7cycloalkyl, and a 3- to 7-membered heterocyclic ring including 1 to 2 ring heteromoieties selected from O, S, N and NR^{20}, wherein each C_3-C_7cycloalkyl and 3- to 7-membered heterocyclic ring groups are optionally

substituted by one or two substituents independently selected from OR^{20}, $N(R^{20})_2$ and SR^{20}, and further optionally substituted with a substituent selected from halogen C_1-C_4alkyl and C_1-C_4haloalkyl.

[00120] In some embodiment, each R^{18} is independently selected from C_3-C_7cycloalkyl, and a 3- to 7-membered heterocyclic ring including 1 to 2 ring heteromoieties selected from O, S, N and NR^{20}, wherein each C_3-C_7cycloalkyl and 3- to 7-membered heterocyclic ring groups are optionally substituted by one to three substituents independently selected from CN, OR^{20}, $N(R^{20})_2$ and SR^{20}, and further optionally substituted with a substituent selected from C_3-C_6cycloalkyl and a 3- to 6-membered heterocyclic ring including 1 to 2 ring heteromoieties selected from O, S, S(O), SO_2, N and NR^{20}. In some embodiment, each R^{18} is independently selected from C_3-C_7cycloalkyl and a 3- to 7-membered heterocyclic ring including 1 to 2 ring heteromoieties selected from O, S, N and NR^{20}, wherein each C_3-C_7cycloalkyl and 3- to 7-membered heterocyclic ring groups are optionally substituted by one to three substituents independently selected from OR^{20}, $N(R^{20})_2$ and SR^{20}, and further optionally substituted with a substituent selected from C_3-C_6cycloalkyl and a 3- to 6-membered heterocyclic ring including 1 to 2 ring heteromoieties selected from O, S, N and NR^{20}.

[00121] In some embodiments, each C_3-C_7cycloalkyl or C_3-C_6cycloalkyl in R^{18} is independently selected from cyclopropyl, cyclobutyl, cyclopentyl and cyclohexyl, wherein all available hydrogen atoms are optionally substituted with a halogen atom and/or all available atoms are optionally substituted with an alternate isotope thereof.

[00122] In some embodiments, each 3- to 7-membered heterocyclic ring in R^{18} is independently selected from aziridinyl, oxiranyl, thiiranyl, oxaxiridinyl, dioxiranyl, azetidinyl, oxetanyl, theitanyl, diazetidinyl, dioxetanyl, dithietanyl, tetrahydrofuranyl, tetrahydrothiophenyl, pyrrolidinyl, imidazolidinyl, pyrazolidinyl, isoxthiolidinyl, thiazolidinyl, isothiazolidinyl, dioxolanyl, dithiolanyl, triazolyl, furazanyl, oxadiazolyl, thiadiazolyl, dioxazolyl, dithiazolyl, tetrazolyl, oxatetrazolyl, tetrahydropyranyl, morpholinyl, thiomorpholinyl, dioxanyl, dithianyl, azepanyl, oxepanyl, thiepanyl and diazepanyl, wherein all available hydrogen atoms are optionally substituted with a halogen atom and/or all available atoms are optionally substituted with an alternate isotope thereof.

[00123] In some embodiments, the 3- to 7-membered heterocyclic ring in R^{18} is independently selected from a saturated or unsaturated heterocycle. In some embodiments, the 3- to 7-membered heterocyclic ring in ring in R^{18} is independently selected from a saturated or unsaturated bridged bicyclic heterocycle. In some embodiments, the saturated or unsaturated bridged bicyclic heterocycle is independently selected from

azabicyclohexanyl, diazabicycloheptanyl, oxobicyclohexanyl, oxobicycloheptanyl and oxobicycloheptanenyl, wherein all available hydrogen atoms are optionally substituted with a halogen atom and/or all available atoms are optionally substituted with an alternate isotope thereof.

[00124] In some embodiments, each 3- to 6-membered heterocyclic ring in R^{18} is independently selected from aziridinyl, oxiranyl, thiiranyl, oxaxiridinyl, dioxiranyl, azetidinyl, oxetanyl, theitanyl, diazetidinyl, dioxetanyl, dithietanyl, tetrahydrofuranyl, tetrahydrothiophenyl, pyrrolidinyl, imidazolidinyl, pyrazolidinyl, isoxthiolidinyl, thiazolidinyl, isothiazolidinyl, dioxolanyl, dithiolanyl, triazolyl, furazanyl, oxadiazolyl, thiadiazolyl, dioxazolyl, dithiazolyl, tetrazolyl, oxatetrazolyl, tetrahydropyranyl, morpholinyl, thiomorpholinyl, dioxanyl and dithianyl, wherein all available hydrogen atoms are optionally substituted with a halogen atom and/or all available atoms are optionally substituted with an alternate isotope thereof.

[00125] In some embodiments, the 3- to 6-membered heterocyclic ring in R^{18} is independently selected from a saturated or unsaturated heterocycle. In some embodiments, the 3- to 7-membered heterocyclic ring in ring in R^{18} is independently selected from a saturated or unsaturated bridged bicyclic heterocycle. In some embodiments, the saturated or unsaturated bridged bicyclic heterocycle is independently selected from azabicyclohexanyl, diazabicycloheptanyl, oxobicyclohexanyl, oxobicycloheptanyl and oxobicycloheptanenyl, wherein all available hydrogen atoms are optionally substituted with a halogen atom and/or all available atoms are optionally substituted with an alternate isotope thereof.

[00126] In some embodiments R^{19}, R^{19a} and each R^{20} are independently selected from hydrogen, deuterium, substituted or unsubstituted C_1-C_4alkyl, substituted or unsubstituted C_2-C_6alkenyl, substituted or unsubstituted C_2-C_6alkynyl, substituted or unsubstituted C_1-C_4haloalkyl, substituted or unsubstituted C_3-C_7cycloalkyl, substituted or unsubstituted heterocycloalkyl, substituted or unsubstituted aryl and substituted or unsubstituted heteroaryl, wherein all available hydrogen atoms are optionally substituted with a halogen atom and/or all available atoms are optionally substituted with an alternate isotope thereof.

[00127] In some embodiments R^{19}, R^{19a} and each R^{20} are independently selected from hydrogen, deuterium, substituted or unsubstituted C_1-C_4alkyl, substituted or unsubstituted C_2-C_6alkenyl, substituted or unsubstituted C_2-C_6alkynyl, substituted or unsubstituted C_1-C_4haloalkyl, substituted or unsubstituted C_3-C_7cycloalkyl, substituted or unsubstituted heterocycloalkyl, substituted or unsubstituted aryl and substituted or unsubstituted

heteroaryl, wherein all available hydrogen atoms are optionally substituted with a halogen atom and/or all available atoms are optionally substituted with an alternate isotope thereof.

[00128] In some embodiments R^{19}, R^{19a} and each R^{20} are independently selected from hydrogen, deuterium, substituted or unsubstituted C_1-C_4alkyl, substituted or unsubstituted C_2-C_6alkenyl, substituted or unsubstituted C_2-C_6alkynyl, substituted or unsubstituted C_1-C_4haloalkyl, substituted or unsubstituted C_3-C_7cycloalkyl, substituted or unsubstituted heterocycloalkyl, substituted or unsubstituted aryl and substituted or unsubstituted heteroaryl.

[00129] In some embodiments, the C_3-C_7cycloalkyl in R^{19}, R^{19a} and each R^{20} is independently selected from cyclopropyl, cyclobutyl, cyclopentyl and cyclohexyl, wherein all available hydrogen atoms are optionally substituted with a halogen atom and/or all available atoms are optionally substituted with an alternate isotope thereof.

[00130] In some embodiments, the 3- to 7-membered heterocyclic ring in R^{19}, R^{19a} and each R^{20} is independently selected from aziridinyl, oxiranyl, thiiranyl, oxaxiridinyl, dioxiranyl, azetidinyl, oxetanyl, theitanyl, diazetidinyl, dioxetanyl, dithietanyl, tetrahydrofuranyl, tetrahydrothiophenyl, pyrrolidinyl, imidazolidinyl, pyrazolidinyl, isoxthiolidinyl, thiazolidinyl, isothiazolidinyl, dioxolanyl, dithiolanyl, triazolyl, furazanyl, oxadiazolyl, thiadiazolyl, dioxazolyl, dithiazolyl, tetrazolyl, oxatetrazolyl, tetrahydropyranyl, morpholinyl, thiomorpholinyl, dioxanyl, dithianyl, azepanyl, oxepanyl, thiepanyl and diazepanyl, wherein all available hydrogen atoms are optionally substituted with a halogen atom and/or all available atoms are optionally substituted with an alternate isotope thereof.

[00131] In some embodiments, the 3- to 7-membered heterocyclic ring R^{19}, R^{19a} and each R^{20} is independently selected from a saturated or unsaturated heterocycle. In some embodiments, the 3- to 7-membered heterocyclic ring in ring R^{19}, R^{19a} and each R^{20} is independently selected from a saturated or unsaturated bridged bicyclic heterocycle. In some embodiments, the saturated or unsaturated bridged bicyclic heterocycle is independently selected from azabicyclohexanyl, diazabicycloheptanyl, oxobicyclohexanyl, oxobicycloheptanyl and oxobicycloheptanenyl, wherein all available hydrogen atoms are optionally substituted with a halogen atom and/or all available atoms are optionally substituted with an alternate isotope thereof.

[00132] In some embodiments, the heteroaryl in R^{19}, R^{19a} and each R^{20} is independently selected from, azepinyl, benzisoxazolyl, benzofurazanyl, benzopyranyl, benzothiopyranyl, benzofuryl, benzothiazolyl, benzothienyl, benzoxazolyl, chromanyl, cinnolinyl, dihydrobenzofuryl, dihydrobenzothienyl, dihydrobenzothiopyranyl, dihydrobenzothiopyranyl sulfone, 1,3-dioxolanyl, furyl, imidazolidinyl, imidazolinyl,

imidazolyl, indolinyl, indolyl, isochromanyl, isoindolinyl, isoquinolinyl, isothiazolidinyl, isothiazolyl, isothiazolidinyl, morpholinyl, naphthyridinyl, oxadiazolyl, 2-oxoazepinyl, oxazolyl, 2-oxopiperazinyl, 2-oxopiperdinyl, 2-oxopyrrolidinyl, piperidyl, piperazinyl, pyridyl, pyrazinyl, pyrazolidinyl, pyrazolyl, pyridazinyl, pyrimidinyl, pyrrolidinyl, pyrrolyl, quinazolinyl, quinolinyl, quinoxalinyl, tetrahydrofuryl, tetrahydroisoquinolinyl, tetrahydroquinolinyl, thiamorpholinyl, thiamorpholinyl sulfoxide, thiazolyl, thiazolinyl, thienofuryl, thienothienyl, triazolyl and thienyl, wherein all available hydrogen atoms are optionally substituted with a halogen atom and/or all available atoms are optionally substituted with an alternate isotope thereof.

[00133] In some embodiments R^{19}, R^{19a} and each R^{20} are independently selected from hydrogen, deuterium, substituted or unsubstituted C_1-C_4alkyl, substituted or unsubstituted C_2-C_6alkenyl, substituted or unsubstituted C_2-C_6alkynyl and substituted or unsubstituted C_1-C_4haloalkyl, wherein all available hydrogen atoms are optionally substituted with a fluorine atom and/or all available atoms are optionally substituted with an alternate isotope thereof. In some embodiments R^{19}, R^{19a} and each R^{20} are independently selected from hydrogen, deuterium, C_1-C_4alkyl, C_2-C_6alkenyl, C_2-C_6alkynyl and C_1-C_4haloalkyl, wherein all available hydrogen atoms are optionally substituted with a fluorine atom and/or all available atoms are optionally substituted with an alternate isotope thereof. In some embodiments R^{19}, R^{19a} and each R^{20} are independently selected from hydrogen, deuterium, C_1-C_4alkyl and C_2-C_6alkenyl, wherein all available hydrogen atoms are optionally substituted with a fluorine atom and/or all available atoms are optionally substituted with an alternate isotope thereof. In some embodiments R^{19}, R^{19a} and each R^{20} are independently selected from hydrogen, deuterium and C_1-C_4alkyl, wherein all available hydrogen atoms are optionally substituted with a fluorine atom and/or all available hydrogen atoms are optionally substituted with deuterium. In some embodiments, R^{19}, R^{19a} and each R^{20} are independently selected from hydrogen, deuterium, CH_3, CF_3, CHF_2, CD_2H, CDH_2, CD_3, CH_2CH_3 and CD_2CD_3. In some embodiments, R^{19}, R^{19a} and R^{20} are independently selected from selected from hydrogen, deuterium, CH_3, CF_3, CHF_2 and CD_3.

[00134] When R^{19}, R^{19a} and each R^{20} are substituted, in some embodiments, the substituents are independently selected from one or more of Cl, F, Br, CO_2H, CO_2CH_3, $C(O)NH_2$, $C(O)N(CH_3)_2$, $C(O)NHCH_3$, SO_2CH_3, C_1-C_4alkyl, C_1-C_4fluoralkyl, C_2-C_6alkenyl, C_2-C_6fluoroalkenyl, C_2-C_6alkynyl, C_2-C_6fluoroalkynyl, C_3-C_6cycloalkyl and a 3- to 6-membered heterocyclic ring including 1 to 2 ring members selected from O, S, S(O), SO_2, N, NH and NCH_3. In some embodiments, the substituents on R^{19}, R^{19a} and each R^{20} are independently selected from one to three of Cl, F, C_1-C_4alkyl, C_1-C_4fluoralkyl, C_2-C_6alkenyl, C_2-C_6fluoroalkenyl, C_2-C_6alkynyl and C_2-C_6fluoroalkynyl. In some embodiments, the

substituents on R^{19}, R^{19a} and each R^{20} are independently selected from one or two of Cl, F, Br, CH_3, and CF_3.

[00135] In some embodiments, A is selected from C_3-C_7cycloalkyl, C_4-C_7cycloalkenyl, heterocycloalkyl, aryl and heteroaryl, wherein all available hydrogen atoms are optionally substituted with a halogen atom and/or all available atoms are optionally substituted with an alternate isotope thereof.

[00136] In some embodiments, A is selected from hydrogen, deuterium, C_{1-6}alkyl, OR^{19}, NHR^{19} and SR^{19}, wherein all available hydrogen atoms are optionally substituted with a fluorine atom and/or all available atoms are optionally substituted with an alternate isotope thereof. In some embodiments, A is selected from hydrogen, deuterium, C_{1-6}alkyl, or OR^{19}, wherein all available hydrogen atoms are optionally substituted with a fluorine atom and/or all available atoms are optionally substituted with an alternate isotope thereof. In some embodiments, A is selected from hydrogen, deuterium and OR^{19}. In some embodiments, A is selected from hydrogen, deuterium, OCH_3, OCD_3, $OCHD_2$, $OCDH_2$, OCF_3, $OCFH_2$, and $OCHF_2$. In some embodiments, A is selected from hydrogen, deuterium, OCH_3, OCD_3, OCF_3, and $OCHF_2$. In some embodiments, A is selected from hydrogen, deuterium, OCH_3 and OCD_3.

[00137] In some embodiments, A is selected from O-C_{1-6}alkyl, O-C_3-C_7cycloalkyl, O-C_4-C_7cycloalkenyl, O-heterocycloalkyl, O-aryl and O-heteroaryl, wherein all available hydrogen atoms are optionally substituted with a halogen atom and/or all available atoms are optionally substituted with an alternate isotope thereof. In some embodiments, A is selected from O-C_{1-6}alkyl, O-C_3-C_7cycloalkyl, O-C_4-C_7cycloalkenyl, O-heterocycloalkyl, O-aryl and O-heteroaryl, wherein all available hydrogen atoms are optionally substituted with a halogen atom and/or all available hydrogen atoms are optionally substituted with deuterium.

[00138] In some embodiments, the C_3-C_7cycloalkyl in A is selected from cyclopropyl, cyclobutyl, cyclopentyl and cyclohexyl, wherein all available hydrogen atoms are optionally substituted with a halogen atom and/or all available atoms are optionally substituted with an alternate isotope thereof.

[00139] In some embodiments, the C_4-C_7cycloalkenyl in A is selected from cyclobutenyl, cyclopentenyl and cyclohexenyl, wherein all available hydrogen atoms are optionally substituted with a halogen atom and/or all available atoms are optionally substituted with an alternate isotope thereof.

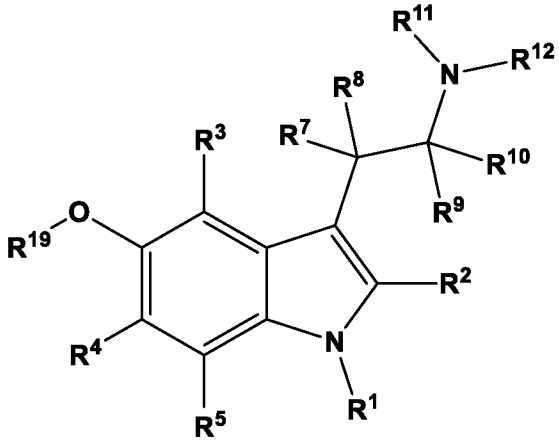
[00140] In some embodiments, the 3- to 7-membered heterocyclic ring in A is selected from aziridinyl, oxiranyl, thiiranyl, oxaxiridinyl, dioxiranyl, azetidinyl, oxetanyl, theitanyl, diazetidinyl, dioxetanyl, dithietanyl, tetrahydrofuranyl, tetrahydrothiophenyl, pyrrolidinyl,

imidazolidinyl, pyrazolidinyl, isoxthiolidinyl, thiazolidinyl, isothiazolidinyl, dioxolanyl, dithiolanyl, triazolyl, furazanyl, oxadiazolyl, thiadiazolyl, dioxazolyl, dithiazolyl, tetrazolyl, oxatetrazolyl, tetrahydropyranyl, morpholinyl, thiomorpholinyl, dioxanyl, dithianyl, azepanyl, oxepanyl, thiepanyl and diazepanyl, wherein all available hydrogen atoms are optionally substituted with a halogen atom and/or all available atoms are optionally substituted with an alternate isotope thereof.

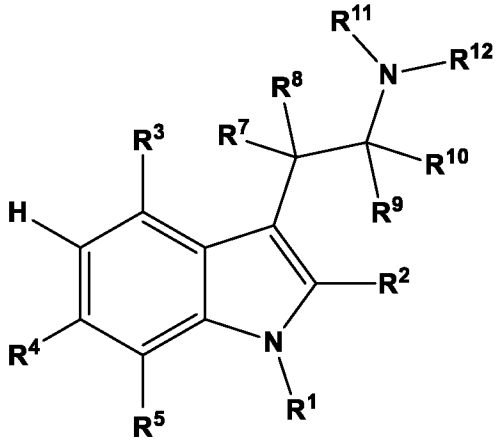
[00141] In some embodiments, the 3- to 7-membered heterocyclic ring in A is a saturated or unsaturated heterocycle. In some embodiments, the 3- to 7-membered heterocyclic ring in A is a saturated or unsaturated bridged bicyclic heterocycle. In some embodiments, the saturated or unsaturated bridged bicyclic heterocycle is selected from azabicyclohexanyl, diazabicycloheptanyl, oxobicyclohexanyl, oxobicycloheptanyl and oxobicycloheptanenyl, wherein all available hydrogen atoms are optionally substituted with a halogen atom and/or all available atoms are optionally substituted with an alternate isotope thereof.

[00142] In some embodiments, the heteroaryl in A is selected from, azepinyl, benzisoxazolyl, benzofurazanyl, benzopyranyl, benzothiopyranyl, benzofuryl, benzothiazolyl, benzothienyl, benzoxazolyl, chromanyl, cinnolinyl, dihydrobenzofuryl, dihydrobenzothienyl, dihydrobenzothiopyranyl, dihydrobenzothiopyranyl sulfone, 1,3-dioxolanyl, furyl, imidazolidinyl, imidazolinyl, imidazolyl, indolinyl, indolyl, isochromanyl, isoindolinyl, isoquinolinyl, isothiazolidinyl, isothiazolyl, isothiazolidinyl, morpholinyl, naphthyridinyl, oxadiazolyl, 2-oxoazepinyl, oxazolyl, 2-oxopiperazinyl, 2-oxopiperdinyl, 2-oxopyrrolidinyl, piperidyl, piperazinyl, pyridyl, pyrazinyl, pyrazolidinyl, pyrazolyl, pyridazinyl, pyrimidinyl, pyrrolidinyl, pyrrolyl, quinazolinyl, quinolinyl, quinoxalinyl, tetrahydrofuryl, tetrahydroisoquinolinyl, tetrahydroquinolinyl, thiamorpholinyl, thiamorpholinyl sulfoxide, thiazolyl, thiazolinyl, thienofuryl, thienothienyl, triazolyl and thienyl, wherein all available hydrogen atoms are optionally substituted with a halogen atom and/or all available atoms are optionally substituted with an alternate isotope thereof.

[00143] In some embodiments, A is hydrogen or OR^{19} and the compound of Formula (I-A) is a compound of Formula (I-A1) or Formula (I-A2). Accordingly, in some embodiments, the present application includes a compound of Formula (I-A1) or Formula (I-A2) or a pharmaceutically acceptable salt, solvate and/or prodrug thereof:



Formula (I-A1)



Formula (I-A2)

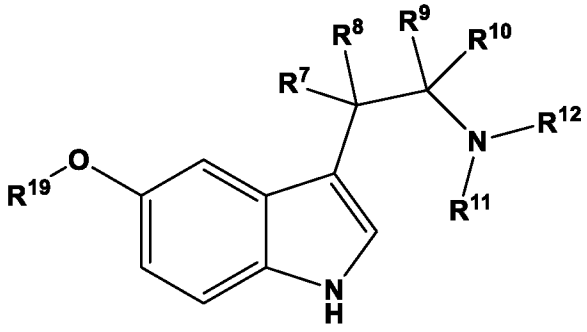
wherein:

R^1, R^2, R^3, R^4, R^5, R^6, R^7, R^8, R^9, R^{11} and R^{12} are as defined in Formula (I-A); and

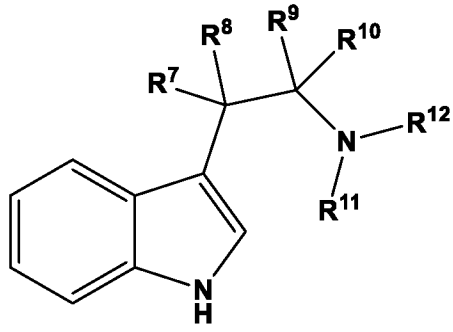
R^{19} is $C_{1\text{-}6}$alkyl,

wherein all available hydrogen atoms are optionally substituted with a halogen atom and/or all available atoms are optionally substituted with an alternate isotope thereof. In some embodiments, all available hydrogen atoms are optionally substituted with fluorine or deuterium.

[00144] In some embodiments, R^1, R^2, R^3, R^4 and R^5 are all H and A is H or $OC_{1\text{-}6}$alkyl and the compound of Formula (I-A) is a compound of Formula (I-A3) or Formula (I-A4), . Accordingly, in some embodiments, the present application includes a compound of Formula (I-A3) or Formula (I-A4) or a pharmaceutically acceptable salt, solvate and/or prodrug thereof:



Formula (I-A3)



Formula (I-A4)

wherein:

R^7, R^8, R^9, R^{10}, R^{11} and R^{12}, are as defined in Formula (I-A); and

R^{19} is $C_{1\text{-}6}$alkyl,

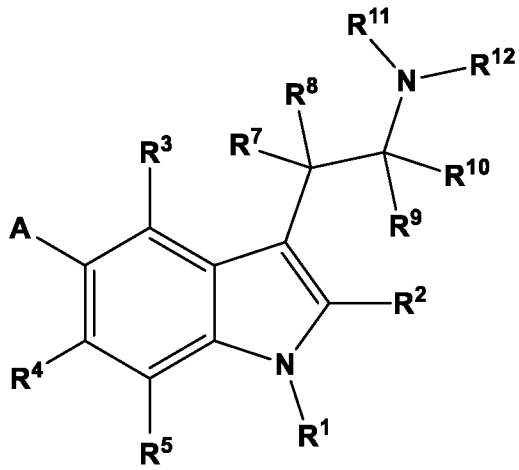
wherein all available hydrogen atoms are optionally substituted with a deuterium atom and/or all available atoms are optionally substituted with an alternate isotope thereof. In some embodiments, all available hydrogen atoms are optionally substituted with fluorine or deuterium.

[00145] In some embodiments, in the compounds of Formula (I-A), (I-A1), (I-A2), (I-A3) and (I-A4), at least one of R^7, R^8, R^9, R^{10}, R^{11} and R^{12} comprises deuterium or at least one R^7, R^8, R^9, R^{10}, R^{11} and R^{12} is deuterium. In some embodiments, in the compounds of Formula (I-A), (I-A1), (I-A2), (I-A3) and (I-A4), at least one of R^7, R^8, R^9 and R^{10} is deuterium or comprises deuterium. In some embodiments, in the compounds of Formula (I-A), (I-A1), (I-A2), (I-A3) and (I-A4), R^7, R^8, R^9 and R^{10} are independently selected from hydrogen and deuterium. In some embodiments, in the compounds of Formula (I-A), (I-A1), (I-A2), (I-A3) and (I-A4), at least one of R^7, R^8, R^9 and R^{10} is deuterium. In some embodiments, in the compounds of Formula (I-A), (I-A1), (I-A2), (I-A3) and (I-A4), R^7 and R^8 or R^9 and R^{10} are both hydrogen or are both deuterium. In some embodiments, in the compounds of Formula (I-A), (I-A1), (I-A2), (I-A3) and (I-A4), R^7 and R^8 are both deuterium and R^9 and R^{10} are both hydrogen. In some embodiments, in the compounds of Formula (I-A), (I-A1), (I-A2), (I-A3) and (I-A4), R^7 and R^8 are both hydrogen and R^9 and R^{10} are both deuterium. In some embodiments, in the compounds of Formula (I-A), (I-A1), (I-A2), (I-A3) and (I-A4), R^7, R^8, R^9 and R^{10} are all deuterium. In some embodiments, in the compounds of Formula (I-A), (I-A1), (I-A2), (I-A3) and (I-A4), R^7, R^8, R^9 and R^{10} are all hydrogen.

[00146] In some embodiments, in the compounds of Formula (I-A), (I-A1), (I-A2), (I-A3) and (I-A4), R^{11} and R^{12} are both deuterium or R^{11} and R^{12} comprises deuterium. In some embodiments, in the compounds of Formula ((I-A), (I-A1), (I-A2), (I-A3) and (I-A4), R^{11} and R^{12} comprise deuterium. In some embodiments, in the compounds of Formula (I-A), (I-A1), (I-A2), (I-A3) and (I-A4), R^{11} and R^{12} are both hydrogen, deuterium, CH_3, CD_2H, CDH_2, CD_3, CH_2CH_3, CH_2CH_2D, CH_2CD_2H or CD_2CD_3. In some embodiments, in the compounds of Formula (I-A), (I-A1), (I-A2), (I-A3) and (I-A4), R^{11} and R^{12} are both deuterium, CH_3, CD_2H, CDH_2, CD_3, CH_2CH_3, CH_2CH_2D, CH_2CD_2H or CD_2CD_3. In some embodiments, in the compounds of Formula (I-A), (I-A1), (I-A2), (I-A3) and (I-A4), R^{11} and R^{12} are both CH_3, CD_2H, CDH_2, CD_3, CH_2CH_3, CH_2CH_2D, CH_2CD_2H or CD_2CD_3. In some embodiments, in the compounds of Formula (I-A), (I-A1), (I-A2), (I-A3) and (I-A4), R^{11} and R^{12} are both CH_3 or both CD_3. In some embodiments, in the compounds of Formula (I-A), (I-A1), (I-A2), (I-A3) and (I-A4), one of R^{11} and R^{12} is hydrogen and the other is selected from hydrogen, deuterium, CH_3, CD_2H, CDH_2, CD_3, CH_2CH_3, CH_2CH_2D, CH_2CD_2H and CD_2CD_3. In some embodiments, in the compounds of Formula (I-A), (I-A1), (I-A2), (I-A3) and (I-A4), one of R^{11} and R^{12} is hydrogen and the other is selected from deuterium, CH_3, CD_2H, CDH_2, CD_3,

CH_2CH_3, CH_2CH_2D, CH_2CD_2H and CD_2CD_3. In some embodiments, in the compounds of Formula (I-A), (I-A1), (I-A2), (I-A3) and (I-A4), one of R^{11} and R^{12} is hydrogen and the other is selected from CH_3, CD_2H, CDH_2, CD_3, CH_2CH_3, CH_2CH_2D, CH_2CD_2H and CD_2CD_3. In some embodiments, in the compounds of Formula (I-A), (I-A1), (I-A2), (I-A3) and (I-A4), one of R^{11} and R^{12} is hydrogen and the other is selected from CH_3 and CD_3.

[00147] In some embodiments, the present application includes a compound of Formula (I-A):



Formula (I-A)

or a pharmaceutically acceptable salt, solvate and/or prodrug thereof,

wherein

R^1 is selected from hydrogen, deuterium, C_1-C_3alkyl, C_1-C_3deuteroalkyl, C_1-C_3fluoroalkyl, C_1-C_6alkyleneP(O)$(OR^6)_2$, C_1-C_6alkyleneOP(O)$(OR^6)_2$, C(O)R^6, CO_2R^6, C(O)N$(R^6)_2$, S(O)R^6 and SO_2R^6;

R^2, R^3, R^4 and R^5 are independently selected from hydrogen and deuterium;

R^7, R^8, R^9 and R^{10} are independently selected from hydrogen, deuterium, C_1-C_6alkyl, C_1-C_6deuteroalkyl and C_1-C_6fluoroalkyl;

A is selected from selected from hydrogen, deuterium and OR^{19};

R^6 is selected from hydrogen, deuterium, C_1-C_6alkyl, C_1-C_6deuteroalkyl and C_1-C_6fluoroalkyl;

R^{11} and R^{12} are independently selected from hydrogen, deuterium, C_1-C_6alkyl, C_1-C_6deuteroalkyl and C_1-C_6fluoroalkyl; and

R^{19} is selected from C_1-C_6alkyl, C_1-C_6deuteroalkyl and C_1-C_6fluoroalkyl;

with the proviso that either

(3) R^2, R^3, R^4 and R^5 are all D and A, R^1, R^6-R^{12} and R^{19} are as defined above the proviso; or

(4) A is OR^{19} wherein R^{19} is selected from C_1-C_6deuteroalkyl and C_1-C_6fluoroalkyl and R^1-R^{12} are as defined above the proviso.

[00148] In some embodiments, R^1 is selected from hydrogen, deuterium, C_1-C_3deuteroalkyl, C_1-C_3fluoroalkyl, fluoro-substituted C_1-C_3alkyl, C_1-C_3alkyleneP(O)$(OR^6)_2$, C_1-C_3alkyleneOP(O)$(OR^6)_2$, C(O)R^6, CO_2R^6 and C(O)N(R^6). In some embodiments, R^1 selected from hydrogen, deuterium, CH_3, CF_3, CD_3, CH_2CH_3, CF_2CF_3, CD_2CD_3, $CH_2P(O)(OR^6)_2$, $CH(CH_3)P(O)(OR^6)_2$ and $(CH_2)OP(O)(OR^6)_2$.

[00149] In some embodiments, R^6 is selected from selected from hydrogen, deuterium, CH_3, CF_3, CHF_2, CD_2H, CDH_2, and CD_3. In some embodiments, R^6 is selected from selected from CH_3 and CD_3.

[00150] In some embodiments, R^1 is selected from hydrogen, deuterium, CH_3, CF_3, CD_3, CH_2CH_3, CF_2CF_3 and CD_2CD_3. In some embodiments, R^1 is hydrogen or deuterium.

[00151] In some embodiments, R^7, R^8, R^9 and R^{10} are independently selected from hydrogen, deuterium, C_1-C_4alkyl, C_1-C_4deuteroalkyl and C_1-C_4fluoroalkyl. In some embodiments, R^7, R^8, R^9 and R^{10} are independently selected from hydrogen, deuterium, CH_3, CD_2H, CDH_2, CD_3, CH_2CH_3, CH_2CH_2D, CH_2CD_2H and CD_2CD_3. In some embodiments, R^7, R^8, R^9 and R^{10} are independently selected from hydrogen, deuterium, CH_3, CF_3, CHF_2, CD_2H, CDH_2, CD_3, CH_2CH_3, CH_2CH_2D, CH_2CD_2H and CD_2CD_3.

[00152] In some embodiments, at least one of R^7, R^8, R^9 and R^{10} is deuterium or at least one of R^7, R^8, R^9 and R^{10} comprises deuterium. In some embodiments, at least one or two of R^7, R^8, R^9 and R^{10} are deuterium. In some embodiments, R^7, R^8, R^9 and R^{10} are all hydrogen or R^7, R^8, R^9 and R^{10} are all deuterium.

[00153] In some embodiments, R^{11} and R^{12} are independently selected from hydrogen, deuterium, C_1-C_4alkyl, C_1-C_4deuteroalkyl and C_1-C_4fluoroalkyl.

[00154] In some embodiments, R^{11} and R^{12} are independently selected from hydrogen, deuterium, CH_3, CD_2H, CDH_2, CD_3, CH_2CH_3, CH_2CH_2D, CH_2CD_2H and CD_2CD_3.

[00155] In some embodiments, wherein R^7, R^8, R^9 and R^{10} are all hydrogen and R^{11} and R^{12} are independently selected from deuterium and CD_3.

[00156] In some embodiments, R^7, R^8, R^9 and R^{10} are all deuterium and R^{11} and R^{12} are independently selected from hydrogen and CH_3.

[00157] In some embodiments, R^7, R^8, R^9 and R^{10} are all deuterium and R^{11} and R^{12} are selected from deuterium and CD_3.

[00158] In some embodiments, A, R^2, R^3, R^4 and R^5 are all deuterium.

[00159] In some embodiments, R^{19} is selected from CF_3, CHF_2, CD_2H, CDH_2, CD_3, and CD_2CD_3. In some embodiments, R^{19} is CHF_2 and CD_3.

[00160] In some embodiments, A is selected from hydrogen, deuterium, OCH_3, OCD_3, OCF_3, and $OCHF_2$. In some embodiments, A is selected from deuterium, OCD_3 and $OCHF_2$.

[00161] In some embodiments, the compounds of Formula (I-A) are selected from:

2-(1H-indol-3-yl)-N,N-bis(methyl-d3)ethan-1-amine-1,1,2,2-d4;

2-(1H-indol-3-yl-2,4,5,6,7-d5)-N,N-dimethylethan-1-amine;

2-(1H-indol-3-yl-2,4,5,6,7-d5)-N,N-dimethylethan-1-amine-1,1,2,2-d4;

2-(1H-indol-3-yl-2,4,5,6,7-d5)-N,N-dimethylethan-1-amine-2,2-d2;

2-(1H-indol-3-yl-2,4,5,6,7-d5)-N,N-bis(methyl-d3)ethan-1-amine-1,1,2,2-d4;

2-(5-(methoxy-d3)-1H-indol-3-yl)-N,N-bis(methyl-d3)ethan-1-amine-1,1,2,2-d4;

2-(5-methoxy-1H-indol-3-yl-2,4,6,7-d4)-N,N-dimethylethan-1-amine;

2-(5-(methoxy-d3)-1H-indol-3-yl-2,4,6,7-d4)-N,N-dimethylethan-1-amine;

2-(5-methoxy-1H-indol-3-yl-2,4,6,7-d4)-N,N-bis(methyl-d3)ethan-1-amine;

2-(5-(methoxy-d3)-1H-indol-3-yl-2,4,6,7-d4)-N,N-bis(methyl-d3)ethan-1-amine-1,1,2,2-d4;

2-(5-(difluoromethoxy)-1H-indol-3-yl)-N,N-bis(methyl-d3)ethan-1-amine-1,1,2,2-d4; and

2-(5-(difluoromethoxy)-1H-indol-3-yl)-N,N-dimethylethan-1-amine-1,1,2,2-d4;

or a pharmaceutically acceptable salt, solvate and/or prodrug thereof.

[00162] In some embodiments, the compounds of Formula (I-A) are selected from the compounds listed below or a pharmaceutically acceptable salt, solvate and/or prodrug thereof:

Compound ID #	IUPAC Name	Chemical Formula/ Molecular Weight	Chemical Structure
I-A-1	2-(1H-indol-3-yl)-N,N-bis(methyl-d3)ethan-1-amine-1,1,2,2-d4	C12H6D10N2 198.34	I-A-2	2-(1H-indol-3-yl-2,4,5,6,7-d5)-N,N-dimethylethan-1-amine	C12H11D5N2 193.30	I-A-3	22-(1H-indol-3-yl-2,4,5,6,7-d5)-N,N-dimethylethan-1-amine-1,1,2,2-d4	C12H7D9N2 197.33	I-A-4	2-(1H-indol-3-yl-2,4,5,6,7-d5)-N,N-dimethylethan-1-amine-2,2-d2	C12H9D7N2 195.32	I-A-5	2-(1H-indol-3-yl-2,4,5,6,7-d5)-N,N-bis(methyl-d3)ethan-1-amine-1,1,2,2-d4	C12HD15N2 203.37	I-A-6	2-(5-(methoxy-d3)-1H-indol-3-yl)-N,N-bis(methyl-d3)ethan-1-amine-1,1,2,2-d4	C13H5D13N2O 231.38	I-A-7	2-(5-methoxy-1H-indol-3-yl-2,4,6,7-d4)-N,N-dimethylethan-1-amine	C13H14D4N2O 222.32	
I-A-8	2-(5-(methoxy-d3)-1H-indol-3-yl-2,4,6,7-d4)-N,N-dimethylethan-1-amine	C13H11D7N2O 225.34	I-A-9	2-(5-methoxy-1H-indol-3-yl-2,4,6,7-d4)-N,N-bis(methyl-d3)ethan-1-amine	C13H8D10N2O 228.36	I-A-10	2-(5-(methoxy-d3)-1H-indol-3-yl-2,4,6,7-d4)-N,N-bis(methyl-d3)ethan-1-amine-1,1,2,2-d4	C13HD17N2O 235.40	I-A-11	2-(5-(difluoromethoxy)-1H-indol-3-yl)-N,N-bis(methyl-d3)ethan-1-amine-1,1,2,2-d4	C13H6D10F2N2O 264.34	 and

[00163] In some embodiments, the compounds of Formula (I-A) are selected from the compounds listed below or a pharmaceutically acceptable salt, solvate and/or prodrug thereof:

Compound ID #	IUPAC Name	Chemical Formula/ Molecular Weight	Chemical Structure
I-A-1	2-(1H-indol-3-yl)-N,N-bis(methyl-d3)ethan-1-amine-1,1,2,2-d4	C12H6D10N2 198.34	I-A-2	2-(1H-indol-3-yl-2,4,5,6,7-d5)-N,N-dimethylethan-1-amine	C12H11D5N2 193.30	 and
I-A-6	2-(5-(methoxy-d3)-1H-indol-3-yl)-N,N-bis(methyl-d3)ethan-1-amine-1,1,2,2-d4	C13H5D13N2O 231.38	
[00164] In some embodiments, the pharmaceutically acceptable salt is an acid addition salt or a base addition salt. The selection of a suitable salt may be made by a person skilled in the art. Suitable salts include acid addition salts that may, for example, be formed by mixing a solution of a compound with a solution of a pharmaceutically acceptable acid such as hydrochloric acid, sulfuric acid, acetic acid, trifluoroacetic acid, or benzoic acid. Additionally, acids that are generally considered suitable for the formation of pharmaceutically useful salts from basic pharmaceutical compounds are discussed, for example, by P. Stahl et al, Camille G. (eds.) and Handbook of Pharmaceutical Salts. Properties, Selection and Use. (**2002**) Zurich: Wiley VCH; S. Berge et al, Journal of Pharmaceutical Sciences **1977** 66(1) 1-19; P. Gould, International J. of Pharmaceutics (**1986**) 33 201-217; Anderson et al, The Practice of Medicinal Chemistry (**1996**), Academic Press, New York; and in The Orange Book (Food & Drug Administration, Washington, D.C. on their website).

[00165] An acid addition salt suitable for, or compatible with, the treatment of subjects is any non-toxic organic or inorganic acid addition salt of any basic compound. Basic compounds that form an acid addition salt include, for example, compounds comprising an amine group. Illustrative inorganic acids which form suitable salts include hydrochloric, hydrobromic, sulfuric, nitric and phosphoric acids, as well as acidic metal salts such as

sodium monohydrogen orthophosphate and potassium hydrogen sulfate. Illustrative organic acids which form suitable salts include mono-, di- and tricarboxylic acids. Illustrative of such organic acids are, for example, acetic, trifluoroacetic, propionic, glycolic, lactic, pyruvic, malonic, succinic, glutaric, fumaric, malic, tartaric, citric, ascorbic, maleic, hydroxymaleic, benzoic, hydroxybenzoic, phenylacetic, cinnamic, mandelic, salicylic, 2-phenoxybenzoic, p-toluenesulfonic acid and other sulfonic acids such as methanesulfonic acid, ethanesulfonic acid and 2-hydroxyethanesulfonic acid. In some embodiments, exemplary acid addition salts also include acetates, ascorbates, benzoates, benzenesulfonates, bisulfates, borates, butyrates, citrates, camphorates, camphorsulfonates, fumarates, hydrochlorides, hydrobromides, hydroiodides, lactates, maleates, methanesulfonates ("mesylates"), naphthalenesulfonates, nitrates, oxalates, phosphates, propionates, salicylates, succinates, sulfates, tartarates, thiocyanates, toluenesulfonates (also known as tosylates) and the like. In some embodiments, the mono- or di-acid salts are formed and such salts exist in either a hydrated, solvated or substantially anhydrous form. In general, acid addition salts are more soluble in water and various hydrophilic organic solvents and generally demonstrate higher melting points in comparison to their free base forms. The selection criteria for the appropriate salt will be known to one skilled in the art. Other non-pharmaceutically acceptable salts such as but not limited to oxalates may be used, for example in the isolation of compounds of the application for laboratory use, or for subsequent conversion to a pharmaceutically acceptable acid addition salt.

[00166] A base addition salt suitable for, or compatible with, the treatment of subjects is any non-toxic organic or inorganic base addition salt of any acidic compound. Acidic compounds that form a basic addition salt include, for example, compounds comprising a carboxylic acid group. Illustrative inorganic bases which form suitable salts include lithium, sodium, potassium, calcium, magnesium or barium hydroxide as well as ammonia. Illustrative organic bases which form suitable salts include aliphatic, alicyclic or aromatic organic amines such as isopropylamine, methylamine, trimethylamine, picoline, diethylamine, triethylamine, tripropylamine, ethanolamine, 2-dimethylaminoethanol, 2-diethylaminoethanol, dicyclohexylamine, lysine, arginine, histidine, caffeine, procaine, hydrabamine, choline, betaine, ethylenediamine, glucosamine, methylglucamine, theobromine, purines, piperazine, piperidine, N-ethylpiperidine, polyamine resins and the like. Exemplary organic bases are isopropylamine, diethylamine, ethanolamine, trimethylamine, dicyclohexylamine, choline and caffeine. The selection of the appropriate salt may be useful, for example, so that an ester functionality, if any, elsewhere in a compound is not hydrolyzed. The selection criteria for the appropriate salt will be known to one skilled in the art. In some embodiments, exemplary basic salts also include ammonium

salts, alkali metal salts such as sodium, lithium and potassium salts, alkaline earth metal salts such as calcium and magnesium salts, salts with organic bases (for example, organic amines) such as dicyclohexylamine, Abutyl amine, choline and salts with amino acids such as arginine, lysine and the like. Basic nitrogen containing groups may be quarternized with agents such as lower alkyl halides (e.g., methyl, ethyl and butyl chlorides, bromides and iodides), dialkyl sulfates (e.g., dimethyl, diethyl and dibutyl sulfates), long chain halides (e.g., decyl, lauryl and stearyl chlorides, bromides and iodides), aralkyl halides (e.g., benzyl and phenethyl bromides) and others. Compounds carrying an acidic moiety can be mixed with suitable pharmaceutically acceptable salts to provide, for example, alkali metal salts (e.g., sodium or potassium salts), alkaline earth metal salts (e.g., calcium or magnesium salts) and salts formed with suitable organic ligands such as quaternary ammonium salts. Also, in the case of an acid (-COOH) or alcohol group being present, pharmaceutically acceptable esters can be employed to modify the solubility or hydrolysis characteristics of the compound.

[00167] All such acid salts and base salts are intended to be pharmaceutically acceptable salts within the scope of the application and all acid and base salts are considered equivalent to the free forms of the corresponding compounds for purposes of the application. In addition, when a compound of the application contains both a basic moiety, such as, but not limited to an aliphatic primary, secondary, tertiary or cyclic amine, an aromatic or heteroaryl amine, pyridine or imidazole and an acidic moiety, such as, but not limited to tetrazole or carboxylic acid, zwitterions ("inner salts") may be formed and are included within the terms "salt(s)" as used herein. It is understood that certain compounds of the application may exist in zwitterionic form, having both anionic and cationic centers within the same compound and a net neutral charge. Such zwitterions are included within the application.

[00168] Solvates of compounds of the application include, for example, those made with solvents that are pharmaceutically acceptable. Examples of such solvents include water (resulting solvate is called a hydrate) and ethanol and the like. Suitable solvents are physiologically tolerable at the dosage administered.

[00169] It is understood and appreciated that in some embodiments, compounds of the present application may have at least one chiral center and therefore can exist as enantiomers and/or diastereomers. It is to be understood that all such isomers and mixtures thereof in any proportion are encompassed within the scope of the present application. It is to be further understood that while the stereochemistry of the compounds may be as shown in any given compound listed herein, such compounds may also contain certain amounts (for example, less than 20%, suitably less than 10%, more suitably less than 5%) of compounds of the present application having an alternate stereochemistry. It is intended that

any optical isomers, as separated, pure or partially purified optical isomers or racemic mixtures thereof are included within the scope of the present application.

[00170] In some embodiments, the compounds of the present application can also include tautomeric forms, such as keto-enol tautomers and the like. Tautomeric forms can be in equilibrium or sterically locked into one form by appropriate substitution. It is intended that any tautomeric forms which the compounds form, as well as mixtures thereof, are included within the scope of the present application.

[00171] The compounds of the present application may further exist in varying amorphous and polymorphic forms and it is contemplated that any amorphous forms, polymorphs, or mixtures thereof, which form are included within the scope of the present application.

[00172] The compounds of the present application may further be radiolabeled and accordingly all radiolabeled versions of the compounds of the application are included within the scope of the present application. There the compounds of the application also include those in which one or more radioactive atoms are incorporated within their structure.

III. Compositions

[00173] The compounds of the present application are suitably formulated in a conventional manner into compositions using one or more carriers. Accordingly, the present application also includes a composition comprising one or more compounds of the application and a carrier. The compounds of the application are suitably formulated into pharmaceutical compositions for administration to subjects in a biologically compatible form suitable for administration in vivo. Accordingly, the present application further includes a pharmaceutical composition comprising one or more compounds of the application and a pharmaceutically acceptable carrier. In embodiments of the application the pharmaceutical compositions are used in the treatment of any of the diseases, disorders or conditions described herein.

[00174] The compounds of the application are administered to a subject in a variety of forms depending on the selected route of administration, as will be understood by those skilled in the art. For example, a compound of the application is administered by oral, inhalation, parenteral, buccal, sublingual, insufflation, epidurally, nasal, rectal, vaginal, patch, pump, minipump, topical or transdermal administration and the pharmaceutical compositions formulated accordingly. In some embodiments, administration is by means of a pump for periodic or continuous delivery. Conventional procedures and ingredients for the selection and preparation of suitable compositions are described, for example, in Remington's

Pharmaceutical Sciences (2000 - 20th edition) and in The United States Pharmacopeia: The National Formulary (USP 24 NF19) published in 1999.

[00175] Parenteral administration includes systemic delivery routes other than the gastrointestinal (GI) tract and includes, for example intravenous, intra-arterial, intraperitoneal, subcutaneous, intramuscular, transepithelial, nasal, intrapulmonary (for example, by use of an aerosol), intrathecal, rectal and topical (including the use of a patch or other transdermal delivery device) modes of administration. Parenteral administration may be by continuous infusion over a selected period of time.

[00176] In some embodiments, a compound of the application is orally administered, for example, with an inert diluent or with an assimilable edible carrier, or it is enclosed in hard or soft shell gelatin capsules, or it is compressed into tablets, or it is incorporated directly with the food of the diet. In some embodiments, the compound is incorporated with excipient and used in the form of ingestible tablets, buccal tablets, troches, capsules, caplets, pellets, granules, lozenges, chewing gum, powders, syrups, elixirs, wafers, aqueous solutions and suspensions and the like. In the case of tablets, carriers that are used include lactose, com starch, sodium citrate and salts of phosphoric acid. Pharmaceutically acceptable excipients include binding agents (e.g., pregelatinized maize starch, polyvinylpyrrolidone or hydroxypropyl methylcellulose); fillers (e.g., lactose, microcrystalline cellulose or calcium phosphate); lubricants (e.g., magnesium stearate, talc or silica); disintegrants (e.g., potato starch or sodium starch glycolate); or wetting agents (e.g., sodium lauryl sulphate), or solvents (e.g. medium chain triglycerides, ethanol, water). In embodiments, the tablets are coated by methods well known in the art. In the case of tablets, capsules, caplets, pellets or granules for oral administration, pH sensitive enteric coatings, such as Eudragits™ designed to control the release of active ingredients are optionally used. Oral dosage forms also include modified release, for example immediate release and timed-release, formulations. Examples of modified-release formulations include, for example, sustained-release (SR), extended-release (ER, XR, or XL), time-release or timed-release, controlled-release (CR), or continuous-release (CR or Contin), employed, for example, in the form of a coated tablet, an osmotic delivery device, a coated capsule, a microencapsulated microsphere, an agglomerated particle, e.g., as of molecular sieving type particles, or, a fine hollow permeable fiber bundle, or chopped hollow permeable fibers, agglomerated or held in a fibrous packet. Timed-release compositions are formulated, for example as liposomes or those wherein the active compound is protected with differentially degradable coatings, such as by microencapsulation, multiple coatings, etc. Liposome delivery systems include, for example, small unilamellar vesicles, large unilamellar vesicles and multilamellar vesicles. In some embodiments, liposomes are formed from a variety of phospholipids, such as

cholesterol, stearylamine or phosphatidylcholines. For oral administration in a capsule form, useful carriers, solvents or diluents include lactose, medium chain triglycerides, ethanol and dried com starch.

[00177] In some embodiments, liquid preparations for oral administration take the form of, for example, solutions, syrups or suspensions, or they are suitably presented as a dry product for constitution with water or other suitable vehicle before use. When aqueous suspensions and/or emulsions are administered orally, the compound of the application is suitably suspended or dissolved in an oily phase that is combined with emulsifying and/or suspending agents. If desired, certain sweetening and/or flavoring and/or coloring agents are added. Such liquid preparations for oral administration are prepared by conventional means with pharmaceutically acceptable additives such as suspending agents (e.g., sorbitol syrup, methyl cellulose or hydrogenated edible fats); emulsifying agents (e.g., lecithin or acacia); non-aqueous vehicles (e.g., medium chain triglycerides, almond oil, oily esters or ethyl alcohol); and preservatives (e.g., methyl or propyl p-hydroxybenzoates or sorbic acid). Useful diluents include lactose and high molecular weight polyethylene glycols.

[00178] It is also possible to freeze-dry the compounds of the application and use the lyophilizates obtained, for example, for the preparation of products for injection.

[00179] In some embodiments, a compound of the application is administered parenterally. For example, solutions of a compound of the application are prepared in water suitably mixed with a surfactant such as hydroxypropylcellulose. In some embodiments, dispersions are prepared in glycerol, liquid polyethylene glycols, DMSO and mixtures thereof with or without alcohol and in oils. Under ordinary conditions of storage and use, these preparations contain a preservative to prevent the growth of microorganisms. A person skilled in the art would know how to prepare suitable formulations. For parenteral administration, sterile solutions of the compounds of the application are usually prepared and the pH's of the solutions are suitably adjusted and buffered. For intravenous use, the total concentration of solutes should be controlled to render the preparation isotonic. For ocular administration, ointments or droppable liquids are delivered, for example, by ocular delivery systems known to the art such as applicators or eye droppers. In some embodiments, such compositions include mucomimetics such as hyaluronic acid, chondroitin sulfate, hydroxypropyl methylcellulose or polyvinyl alcohol, preservatives such as sorbic acid, EDTA or benzyl chromium chloride and the usual quantities of diluents or carriers. For pulmonary administration, diluents or carriers will be selected to be appropriate to allow the formation of an aerosol.

[00180] In some embodiments, a compound of the application is formulated for parenteral administration by injection, including using conventional catheterization techniques or infusion. Formulations for injection are, for example, presented in unit dosage form, e.g., in ampoules or in multi-dose containers, with an added preservative. In some embodiments, the compositions take such forms as sterile suspensions, solutions or emulsions in oily or aqueous vehicles and contain formulating agents such as suspending, stabilizing and/or dispersing agents. In all cases, the form must be sterile and must be fluid to the extent that easy syringability exists. Alternatively, the compounds of the application are suitably in a sterile powder form for reconstitution with a suitable vehicle, e.g., sterile pyrogen-free water, before use.

[00181] In some embodiments, compositions for nasal administration are conveniently formulated as aerosols, drops, gels and powders. For intranasal administration or administration by inhalation, the compounds of the application are conveniently delivered in the form of a solution, dry powder formulation or suspension from a pump spray container that is squeezed or pumped by the patient or as an aerosol spray presentation from a pressurized container or a nebulizer. Aerosol formulations typically comprise a solution or fine suspension of the active substance in a physiologically acceptable aqueous or non-aqueous solvent and are usually presented in single or multidose quantities in sterile form in a sealed container, which, for example, take the form of a cartridge or refill for use with an atomising device. Alternatively, the sealed container is a unitary dispensing device such as a single dose nasal inhaler or an aerosol dispenser fitted with a metering valve which is intended for disposal after use. Where the dosage form comprises an aerosol dispenser, it will contain a propellant which is, for example, a compressed gas such as compressed air or an organic propellant such as fluorochlorohydrocarbon. Suitable propellants include but are not limited to dichlorodifluoromethane, trichlorofluoromethane, dichlorotetrafluoroethane, heptafluoroalkanes, carbon dioxide or another suitable gas. In the case of a pressurized aerosol, the dosage unit is suitably determined by providing a valve to deliver a metered amount. In some embodiments, the pressurized container or nebulizer contains a solution or suspension of the active compound. Capsules and cartridges (made, for example, from gelatin) for use in an inhaler or insufflator are, for example, formulated containing a powder mix of a compound of the application and a suitable powder base such as lactose or starch. The aerosol dosage forms can also take the form of a pump-atomizer.

[00182] Compositions suitable for buccal or sublingual administration include tablets, lozenges and pastilles, wherein a compound of the application is formulated with a carrier such as sugar, acacia, tragacanth, or gelatin and glycerine. Compositions for rectal

administration are conveniently in the form of suppositories containing a conventional suppository base such as cocoa butter.

[00183] Suppository forms of the compounds of the application are useful for vaginal, urethral and rectal administrations. Such suppositories will generally be constructed of a mixture of substances that is solid at room temperature but melts at body temperature. The substances commonly used to create such vehicles include but are not limited to theobroma oil (also known as cocoa butter), glycerinated gelatin, other glycerides, hydrogenated vegetable oils, mixtures of polyethylene glycols of various molecular weights and fatty acid esters of polyethylene glycol. See, for example: Remington's Pharmaceutical Sciences, 16th Ed., Mack Publishing, Easton, PA, 1980, pp. 1530-1533 for further discussion of suppository dosage forms.

[00184] In some embodiments a compound of the application is coupled with soluble polymers as targetable drug carriers. Such polymers include, for example, polyvinylpyrrolidone, pyran copolymer, polyhydroxypropylmethacrylamide-phenol, polyhydroxy-ethylaspartamide-phenol, or polyethyleneoxide-polylysine substituted with palmitoyl residues. Furthermore, in some embodiments, a compound of the application is coupled to a class of biodegradable polymers useful in achieving controlled release of a drug, for example, polylactic acid, polyglycolic acid, copolymers of polylactic and polyglycolic acid, polyepsilon caprolactone, polyhydroxy butyric acid, polyorthoesters, polyacetals, polydihydropyrans, polycyanoacrylates and crosslinked or amphipathic block copolymers of hydrogels.

[00185] A compound of the application including pharmaceutically acceptable salts and/or solvates thereof is suitably used on their own but will generally be administered in the form of a pharmaceutical composition in which the one or more compounds of the application (the active ingredient) is in association with a pharmaceutically acceptable carrier. Depending on the mode of administration, the pharmaceutical composition will comprise from about 0.05 wt% to about 99 wt% or about 0.10 wt% to about 70 wt%, of the active ingredient and from about 1 wt% to about 99.95 wt% or about 30 wt% to about 99.90 wt% of a pharmaceutically acceptable carrier, all percentages by weight being based on the total composition.

[00186] In some embodiments, the compounds of the application including pharmaceutically acceptable salts, solvates and/or prodrugs thereof are used are administered in a composition comprising an additional therapeutic agent. Therefore the present application also includes a pharmaceutical composition comprising one of more compounds of the application, or pharmaceutically acceptable salts, solvates and/or

prodrugs thereof and an additional therapeutic agent, and optionally one or more pharmaceutically acceptable excipients. In some embodiments, the additional therapeutic agent is another known agent useful for treatment of a disease, disorder or condition by activation of a serotonin receptor, for example those listed in the Methods and Uses section below. In some embodiments, the additional therapeutic agent is a psychoactive drug.

[00187] In the above, the term "a compound" also includes embodiments wherein one or more compounds are referenced.

IV. Methods and Uses of the Application

[00188] The compounds of the application are serotonergic binding agents that act as agonists or partial agonists at a serotonin receptor.

[00189] Accordingly, the present application includes a method for activating a serotonin receptor in a cell, either in a biological sample or in a patient, comprising administering an effective amount of one or more compounds of the application to the cell. The application also includes a use of one or more compounds of the application for activating a serotonin receptor in a cell as well as a use of one or more compounds of the application for the preparation of a medicament for activating a serotonin receptor in a cell. The application further includes one or more compounds of the application for use in activating a serotonin receptor in a cell.

[00190] As the compounds of the application are capable of activating a serotonin receptor, the compounds of the application are useful for treating diseases, disorders or conditions by activating a serotonin receptor. Therefore, the compounds of the present application are useful as medicaments. Accordingly, the application also includes a compound of the application for use as a medicament.

[00191] The present application also includes a method of treating a disease, disorder or condition by activation of a serotonin receptor comprising administering a therapeutically effective amount of one or more compounds of the application to a subject in need thereof.

[00192] The present application also includes a use of one or more compounds of the application for treatment of a disease, disorder or condition by activation of a serotonin receptor as well as a use of one or more compounds of the application for the preparation of a medicament for treatment of a disease, disorder or condition by activation of a serotonin receptor. The application further includes one or more compounds of the application for use in treating a disease, disorder or condition by activation of a serotonin receptor.

[00193] In some embodiments, the serotonin receptor is 5-HT_{2A}. Accordingly, the present application includes a method for activating 5-HT_{2A} in a cell, either in a biological

sample or in a patient, comprising administering an effective amount of one or more compounds of the application to the cell. The application also includes a use of one or more compounds of the application for activating 5-HT_{2A} in a cell as well as a use of one or more compounds of the application for the preparation of a medicament for activating 5-HT_{2A} in a cell. The application further includes one or more compounds of the application for use in activating 5-HT_{2A} in a cell.

[00194] The present application also includes a method of treating a disease, disorder or condition by activation of 5-HT_{2A} comprising administering a therapeutically effective amount of one or more compounds of the application to a subject in need thereof. The present application also includes a use of one or more compounds of the application for treatment of a disease, disorder or condition by activation of 5-HT_{2A} as well as a use of one or more compounds of the application for the preparation of a medicament for treatment of a disease, disorder or condition by activation of 5-HT_{2A}. The application further includes one or more compounds of the application for use in treating a disease, disorder or condition by activation of 5-HT_{2A}.

[00195] In some embodiments, the compounds of the application are useful for preventing, treating and/or reducing the severity of a mental illness disorder and/or condition in a subject. Therefore, in some embodiments, the disease, disorder or condition that is treated by activation of a serotonin receptor is a mental illness. Accordingly, the present application also includes a method of treating a mental illness comprising administering a therapeutically effective amount of one or more compounds of the application to a subject in need thereof. The present application also includes a use of one or more compounds of the application for treatment a mental illness, as well as a use of one or more compounds of the application for the preparation of a medicament for treatment of a mental illness. The application further includes one or more compounds of the application for use in treating a mental illness.

[00196] In some embodiments, the mental illness is selected from anxiety disorders such as generalized anxiety disorder, panic disorder, social anxiety disorder and specific phobias; depression such as, hopelessness, loss of pleasure, fatigue and suicidal thoughts; mood disorders, such as depression, bipolar disorder, cancer-related depression, anxiety and cyclothymic disorder; psychotic disorders, such as hallucinations, delusions, schizophrenia; impulse control and addiction disorders, such as pyromania (starting fires), kleptomania (stealing) and compulsive gambling; alcohol addiction; drug addiction, such as opioid addiction; personality disorders, such as antisocial personality disorder, obsessive-compulsive personality disorder and paranoid personality disorder; obsessive-compulsive disorder (OCD), such as thoughts or fears that cause a subject to perform certain rituals or routines; post-traumatic stress

disorder (PTSD); stress response syndromes (formerly called adjustment disorders); dissociative disorders, formerly called multiple personality disorder, or "split personality," and depersonalization disorder; factitious disorders; sexual and gender disorders, such as sexual dysfunction, gender identity disorder and the paraphilia's; somatic symptom disorders, formerly known as a psychosomatic disorder or somatoform disorder; and combinations thereof.

[00197] In some embodiments, the disease, disorder or condition that is treated by activation of a serotonin receptor comprises cognitive impairment; ischemia including stroke; neurodegeneration; refractory substance use disorders; sleep disorders; pain, such as social pain, acute pain, cancer pain, chronic pain, breakthrough pain, bone pain, soft tissue pain, nerve pain, referred pain, phantom pain, neuropathic pain, cluster headaches and migraine; obesity and eating disorders; epilepsies and seizure disorders; neuronal cell death; excitotoxic cell death; or a combination thereof.

[00198] In some embodiments, the mental illness is selected from hallucinations and delusions and a combination thereof.

[00199] In some embodiments, the hallucinations are selected from visual hallucinations, auditory hallucinations, olfactory hallucinations, gustatory hallucinations, tactile hallucinations, proprioceptive hallucinations, equilibrioceptive hallucinations, nociceptive hallucinations, thermoceptive hallucinations and chronoceptive hallucinations, and a combination thereof.

[00200] In some embodiments, the disease, disorder or condition that is treated by activation of a serotonin receptor is psychosis or psychotic symptoms. Accordingly, the present application also includes a method of treating psychosis or psychotic symptoms comprising administering a therapeutically effective amount of one or more compounds of the application to a subject in need thereof.

[00201] The present application also includes a use of one or more compounds of the application for treatment of psychosis or psychotic symptoms, as well as a use of one or more compounds of the application for the preparation of a medicament for treatment of psychosis or psychotic symptoms. The application further includes one or more compounds of the application for use in treating psychosis or psychotic symptoms.

[00202] In some embodiments, administering to said subject in need thereof a therapeutically effective amount of the compounds of the application does not result in a worsening of psychosis or psychotic symptoms such as, but not limited to, hallucinations and delusions. In some embodiments, administering to said subject in need thereof a therapeutically effective amount of the compounds of the application results in an improvement of psychosis or psychotic symptoms such as, but not limited to, hallucinations

and delusions. In some embodiments, administering to said subject in need thereof a therapeutically effective amount of the compounds of the application results in an improvement of psychosis or psychotic symptoms.

[00203] In some embodiments, the compounds of the application are useful for treating a central nervous system (CNS) disorder in a subject in need of therapy, comprising administering a therapeutically effective amount of a compound of general formula (I-A), or a pharmaceutically acceptable salt thereof to the subject.

[00204] Therefore, in some embodiments, the disease, disorder or condition that is treated by activation of a serotonin receptor is a central nervous system (CNS) disease, disorder or condition and/or a neurological disease, disorder or condition. Accordingly, the present application also includes a method of treating a CNS disease, disorder or condition and/or a neurological disease, disorder or condition comprising administering a therapeutically effective amount of one or more compounds of the application to a subject in need thereof. The present application also includes a use of one or more compounds of the application for treatment a CNS disease, disorder or condition and/or a neurological disease, disorder or condition, as well as a use of one or more compounds of the application for the preparation of a medicament for treatment of a CNS disease, disorder or condition and/or a neurological disease, disorder or condition. The application further includes one or more compounds of the application for use in treating a CNS disease, disorder or condition and/or a neurological disease, disorder or condition.In some embodiments the CNS disease, disorder or condition and/or neurological disease, disorder or condition is selected from neurological diseases including neurodevelopmental diseases and neurodegenerative diseases such as Alzheimer's disease; presenile dementia; senile dementia; vascular dementia; Lewy body dementia; cognitive impairment, Parkinson's disease and Parkinsonian related disorders such as Parkinson dementia, corticobasal degeneration, and supranuclear palsy; epilepsy; CNS trauma; CNS infections; CNS inflammation; stroke; multiple sclerosis; Huntington's disease; mitochondrial disorders; Fragile X syndrome; Angelman syndrome; hereditary ataxias; neuro-otological and eye movement disorders; neurodegenerative diseases of the retina amyotrophic lateral sclerosis; tardive dyskinesias; hyperkinetic disorders; attention deficit hyperactivity disorder and attention deficit disorders; restless leg syndrome; Tourette's syndrome; schizophrenia; autism spectrum disorders; tuberous sclerosis; Rett syndrome; cerebral palsy; disorders of the reward system including eating disorders such as anorexia nervosa ("AN") and bulimia nervosa ("BN"); and binge eating disorder ("BED"), trichotillomania, dermotillomania, nail biting; migraine; fibromyalgia; and peripheral neuropathy of any etiology, and combinations thereof.

[00205] In some embodiments, the subject is a mammal. In another embodiment, the subject is human. In some embodiments, the subject is a non-human animal. In some embodiments, the subject is canine. In some embodiments, the subject is feline. Accordingly, the compounds, methods and uses of the present application are directed to both human and veterinary diseases, disorders and conditions.

[00206] In some embodiments, the compounds of the application are useful for treating behavioral problems in subjects that are felines or canines.

[00207] Therefore, in some embodiments, the disease, disorder or condition that is treated by activation of a serotonin receptor is behavioral problems in subjects that are felines or canines. Accordingly, the present application also includes a method of treating a behavioral problem comprising administering a therapeutically effective amount of one or more compounds of the application to a non-human subject in need thereof. The present application also includes a use of one or more compounds of the application for treatment a behavioral problem in a non-human subject, as well as a use of one or more compounds of the application for the preparation of a medicament for treatment of a behavioral problem in a non-human subject. The application further includes one or more compounds of the application for use in treating a behavioral problem in a non-human subject.

[00208] In some embodiments, the behavioral problems are selected from, but are not limited to, anxiety, fear, stress, sleep disturbances, cognitive dysfunction, aggression, excessive noise making, scratching, biting and a combination thereof.

[00209] In some embodiments, the non-human subject is canine. In some embodiments, the non-human subject is feline.

[00210] The present application also includes a method of treating a disease, disorder or condition by activation of a serotonin receptor comprising administering a therapeutically effective amount of one or more compounds of the application in combination with another known agent useful for treatment of a disease, disorder or condition by activation of a serotonin receptor to a subject in need thereof. The present application also includes a use of one or more compounds of the application in combination with another known agent useful for treatment of a disease, disorder or condition by activation of a serotonin receptor for treatment of a disease, disorder or condition by activation of a serotonin receptor, as well as a use of one or more compounds of the application in combination with another known agent useful for treatment of a disease, disorder or condition by activation of a serotonin receptor for the preparation of a medicament for treatment of a disease, disorder or condition by activation of a serotonin receptor. The application further includes one or more compounds of the application in combination with another known agent useful for treatment of a disease,

disorder or condition by activation of a serotonin receptor for use in treating a disease, disorder or condition by activation of a serotonin receptor.

[00211] In some embodiments, the disease, disorder or condition that is treated by activation of a serotonin receptor is a mental illness. In some embodiments, the mental illness is selected from hallucinations and delusions and a combination thereof. In some embodiments, the disease, disorder or condition that is treated by activation of a serotonin receptor is a central nervous system (CNS) disorder. In some embodiments, the disease, disorder or condition that is treated by activation of a serotonin receptor is psychosis or psychotic symptoms. In some embodiments, the disease, disorder or condition that is treated by activation of a serotonin receptor is behavioral problems in a non-human subject.

[00212] In some embodiments, the disease, disorder or condition that is treated by activation of a serotonin receptor is a mental illness and the one or more compounds of the application are administered in combination with one or more additional treatments for a mental illness. In some embodiments, the additional treatments for a mental illness is selected from antipsychotics, including typical antipsychotics and atypical antipsychotics; antidepressants including selective serotonin reuptake inhibitors (SSRIs) and selective norepinephrine reuptake inhibitors (SNRIs), tricyclic antidepressants and monoamine oxidase inhibitors (MAOIs) (e.g. bupropion); anti-anxiety medication including benzodiazepines such as alprazolam; mood stabilizers such as lithium and anticonvulsants such carbamazepine, divalproex (valproic acid), lamotrigine, gabapentin and topiramate.

[00213] In some embodiments, the disease, disorder or condition that is treated by activation of a serotonin receptor is selected from attention deficit hyperactivity disorder and attention deficit disorder and a combination thereof. In some embodiments, the disease, disorder or condition that is treated by activation of a serotonin receptor is attention deficit hyperactivity disorder and/or attention deficit disorder and a combination thereof and the one or more compounds of the application are administered in combination with one or more additional treatments for attention deficit hyperactivity disorder and/or attention deficit disorder and a combination thereof. In some embodiments, the additional treatments for attention deficit hyperactivity disorder and/or attention deficit disorder and a combination thereof are selected from methylphenidate, atomoxetine and amphetamine and a combination thereof.

[00214] In some embodiments, the disease, disorder or condition that is treated by activation of a serotonin receptor is dementia or Alzheimer's disease and the one or more compounds of the application are administered in combination with one or more additional treatments for dementia or Alzheimer's disease. In some embodiments, the additional

treatments for dementia and Alzheimer's disease are selected acetylcholinesterase inhibitors, NMDA antagonists and muscarinic agonists and antagonists, and nicotinic agonists.

[00215] In some embodiments, the acetylcholinesterase inhibitors are selected from donepezil, galantamine, rivastigmine, and phenserine, and combinations thereof.

[00216] In some embodiments, the NMDA antagonists are selected from MK-801, ketamine, phencyclidine, and memantine, and combinations thereof.

[00217] In some embodiments, the nicotinic agonists is nicotine, nicotinic acid, nicotinic alpha7 agonists or alpha2 beta4 agonists or combinations thereof.

[00218] In some embodiments, the muscarinic agonists is a muscarinic M1 agonist or a muscarinic M4 agonist, or combinations thereof.

[00219] In some embodiments, the muscarinic antagonist is a muscarinic M2 antagonist.

[00220] In some embodiments, the disease, disorder or condition that is treated by activation of a serotonin receptor is psychosis or psychotic symptoms and the one or more compounds of the application are administered in combination with one or more additional treatments for psychosis or psychotic symptoms. In some embodiments, the additional treatments for psychosis or psychotic symptom are selected typical antipsychotics and atypical antipsychotics.

[00221] In some embodiments, the typical antipsychotics are selected from acepromazine, acetophenazine, benperidol, bromperidol, butaperazine, carfenazine, chlorproethazine, chlorpromazine, chlorprothixene, clopenthixol, cyamemazine, dixyrazine, droperidol, fluanisone, flupentixol, fluphenazine, fluspirilene, haloperidol, levomepromazine, lenperone, loxapine, mesoridazine, metitepine, molindone, moperone, oxypertine, oxyprotepine, penfluridol, perazine, periciazine, perphenazine, pimozide, pipamperone, piperacetazine, pipotiazine, prochlorperazine, promazine, prothipendyl, spiperone, sulforidazine, thiopropazate, thioproperazine, thioridazine, thiothixene, timiperone, trifluoperazine, trifluperidol, triflupromazine and zuclopenthixol and combinations thereof.

[00222] In some embodiments, the atypical antipsychotics are selected from amoxapine, amisulpride, aripiprazole, asenapine, blonanserin, brexpiprazole, cariprazine, carpipramine, clocapramine, clorotepine, clotiapine, clozapine, iloperidone, levosulpiride, lurasidone, melperone, mosapramine, nemonapride, olanzapine, paliperidone, perospirone, quetiapine, remoxipride, reserpine, risperidone, sertindole, sulpiride, sultopride, tiapride, veralipride, ziprasidone and zotepine, and combinations thereof.

[00223] In some embodiments, the disease, disorder or condition that is treated by activation of a serotonin receptor is a mental illness and the one or more compounds of the application are administered in combination with one or more additional treatments for a mental illness. In some embodiments, the additional treatments for a mental illness is selected typical antipsychotics and atypical antipsychotics.

[00224] In some embodiments, effective amounts vary according to factors such as the disease state, age, sex and/or weight of the subject or species. In some embodiments, the amount of a given compound or compounds that will correspond to an effective amount will vary depending upon factors, such as the given drug(s) or compound(s), the pharmaceutical formulation, the route of administration, the type of condition, disease or disorder, the identity of the subject being treated and the like, but can nevertheless be routinely determined by one skilled in the art.

[00225] In some embodiment, the compounds of the application are administered one, two, three or four times a year. In some embodiments, the compounds of the application are administered at least once a week. However, in another embodiment, the compounds are administered to the subject from about one time per two weeks, three weeks or one month. In another embodiment, the compounds are administered about one time per week to about once daily. In another embodiment, the compounds are administered 1, 2, 3, 4, 5 or 6 times daily. The length of the treatment period depends on a variety of factors, such as the severity of the disease, disorder or condition, the age of the subject, the concentration and/or the activity of the compounds of the application and/or a combination thereof. It will also be appreciated that the effective dosage of the compound used for the treatment may increase or decrease over the course of a particular treatment regime. Changes in dosage may result and become apparent by standard diagnostic assays known in the art. In some instances, chronic administration is required. For example, the compounds are administered to the subject in an amount and for duration sufficient to treat the subject.

[00226] In some embodiments, the compounds of the application are administered at doses that are hallucinogenic or psychotomimetic and taken in conjunction with psychotherapy or therapy and may occur once, twice, three, or four times a year. However, in some embodiments, the compounds are administered to the subject once daily, once every two days, once every 3 days, once a week, once every two weeks, once a month, once every two months, or once every three months at doses that are not hallucinogenic or psychotomimetic.

[00227] A compound of the application is either used alone or in combination with other known agents useful for treating diseases, disorders or conditions by activation of a

serotonin receptor, such as the compounds of the application. When used in combination with other known agents useful in treating diseases, disorders by activation of a serotonin receptor, it is an embodiment that a compound of the application is administered contemporaneously with those agents. As used herein, "contemporaneous administration" of two substances to a subject means providing each of the two substances so that they are both active in the individual at the same time. The exact details of the administration will depend on the pharmacokinetics of the two substances in the presence of each other and can include administering the two substances within a few hours of each other, or even administering one substance within 24 hours of administration of the other, if the pharmacokinetics are suitable. Design of suitable dosing regimens is routine for one skilled in the art. In particular embodiments, two substances will be administered substantially simultaneously, i.e., within minutes of each other, or in a single composition that contains both substances. It is a further embodiment of the present application that a combination of agents is administered to a subject in a non-contemporaneous fashion. In some embodiments, a compound of the present application is administered with another therapeutic agent simultaneously or sequentially in separate unit dosage forms or together in a single unit dosage form. Accordingly, the present application provides a single unit dosage form comprising one or more compounds of the application, an additional therapeutic agent and a pharmaceutically acceptable carrier.

[00228] The dosage of a compound of the application varies depending on many factors such as the pharmacodynamic properties of the compound, the mode of administration, the age, health and weight of the recipient, the nature and extent of the symptoms, the frequency of the treatment and the type of concurrent treatment, if any and the clearance rate of the compound in the subject to be treated. One of skill in the art can determine the appropriate dosage based on the above factors. In some embodiments, one or more compounds of the application are administered initially in a suitable dosage that is adjusted as required, depending on the clinical response. Dosages will generally be selected to maintain a serum level of the one or more compounds of the application from about 0.01 µg/cc to about 1000 µg/cc, or about 0.1 µg/cc to about 100 µg/cc. As a representative example, oral dosages of one or more compounds of the application will range between about 10 µg per day to about 1000 mg per day for an adult, suitably about 10 µg per day to about 500 mg per day, more suitably about 10 µg per day to about 200 mg per day. For parenteral administration, a representative amount is from about 0.0001 mg/kg to about 10 mg/kg, about 0.0001 mg/kg to about 1 mg/kg, about 0.01 mg/kg to about 0.1 mg/kg or about 0.0001 mg/kg to about 0.01 mg/kg will be administered. For oral administration, a representative amount is from about 0.001 µg/kg to about 10 mg/kg, about 0.1 µg/kg to about

10 mg/kg, about 0.01 µg/kg to about 1 mg/kg or about 0.1 µg/kg to about 1 mg/kg. For administration in suppository form, a representative amount is from about 0.1 mg/kg to about 10 mg/kg or about 0.1 mg/kg to about 1 mg/kg. In some embodiments of the application, compositions are formulated for oral administration and the one or more compounds are suitably in the form of tablets containing 0.1, 0.25, 0.5, 0.75, 1.0, 5.0, 10.0, 20.0, 25.0, 30.0, 40.0, 50.0, 60.0, 70.0, 75.0, 80.0, 90.0, 100.0, 150, 200, 250, 300, 350, 400, 450, 500, 550, 600, 650, 700, 750, 800, 850, 900, 950 or 1000 mg of active ingredient (one or more compounds of the application) per tablet. In some embodiments of the application the one or more compounds of the application are administered in a single daily, weekly or monthly dose or the total daily dose is divided into two, three or four daily doses.

[00229] In some embodiments, the compounds of the application are used or administered in an effective amount which comprises administration of doses or dosage regimens that are devoid of clinically meaningful psychedelic/ psychotomimetic actions. In some embodiments, the compounds of the application are used or administered in an effective amount which comprises administration of doses or dosage regimens that provide clinical effects similar to those exhibited by a human plasma psilocin Cmax of 4 ng/mL or less and/or human 5-HT_{2A} human CNS receptor occupancy of 40% or less or those exhibited by a human plasma psilocin Cmax of 1 ng/mL or less and/or human 5-HT_{2A} human CNS receptor occupancy of 30% or less. In some embodiments, the compounds of the application are used or administered in an effective amount which comprises administration of doses or dosage regimens that provide clinical effects similar to those exhibited by a human plasma psilocin Tmax in excess of 60 minutes, in excess of 120 minutes or in excess of 180 minutes.

[00230] To be clear, in the above, the term “a compound” also includes embodiments wherein one or more compounds are referenced. Likewise, the term “compounds of the application” also includes embodiments wherein only one compound is referenced.

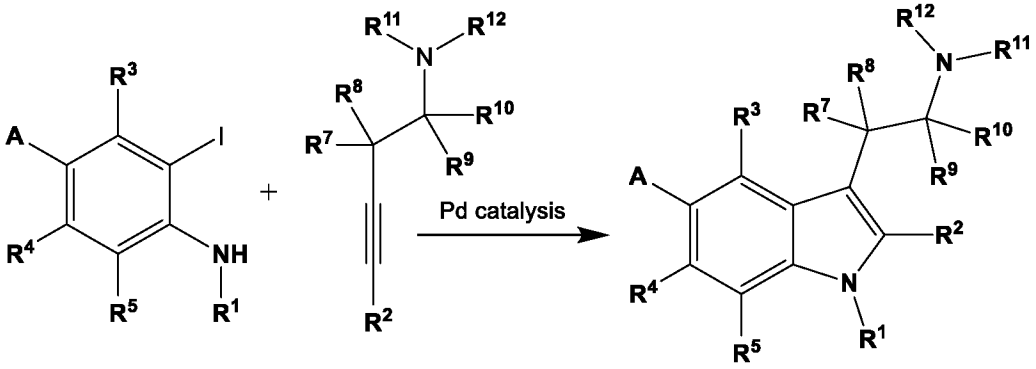
[00231]

V. Preparation of Compounds

[00232] Compounds of the present application can be prepared by various synthetic processes. The choice of particular structural features and/or substituents may influence the selection of one process over another. The selection of a particular process to prepare a given compound of the application is within the purview of the person of skill in the art. Some starting materials for preparing compounds of the present application are available from commercial chemical sources or may be extracted from cells, plants, animals or fungi. Other starting materials, for example as described below, are readily prepared from available precursors using straightforward transformations that are well known in the art. In the

Schemes below showing some embodiments of methods of preparation of compounds of the application, all variables are as defined in Formula I, unless otherwise stated.

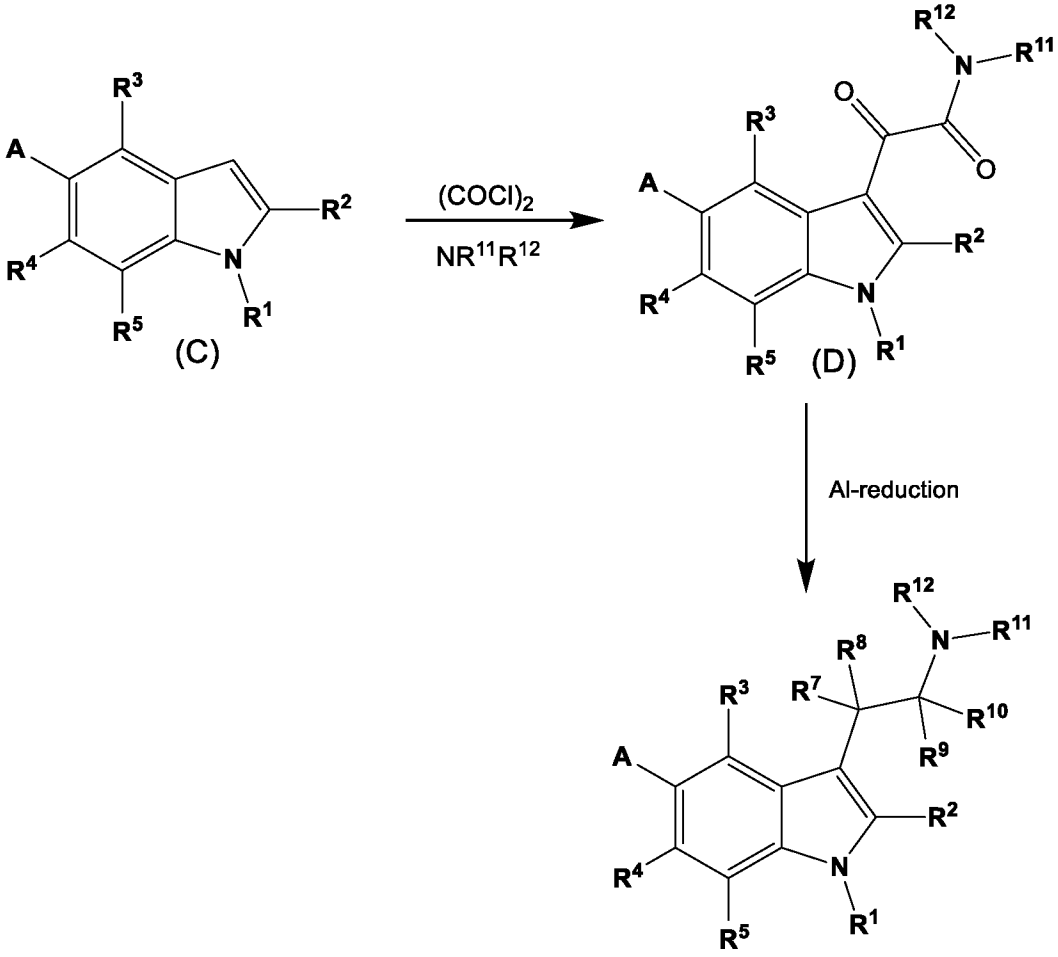
[00233] In some embodiments, the compounds of Formula I-A are prepared as shown in Schemes I-II.



(A) (B) Formula (I-A)

Scheme I

[00234] Therefore, in some embodiments, compounds of Formula (I-A) can be synthesized by treating ortho-iodoaniline (A) derivatives with suitable unsaturated precursors (B). Through this route, the compounds of Formula (I-A) were formed directly by utilizing Pd catalysis [Fricke et al., Chem. Eur. J., 2019, 25(4):897–903]. Alternatively, compounds of Formula (I-A) can be synthesized according to Scheme II:



Formula (I-A)

Scheme II

[00235] Therefore, in some embodiments, as shown in Scheme II, compounds of Formula (I-A) can be synthesized by first treating appropriately substituted indole (C) with oxalyl chloride followed by amines $NHR^{11}R^{12}$, leading to the intermediate indole (D). Subsequent Al-based reduction, for example, in the presence of lithium aluminum hydride or lithium aluminum deuteride , yields compounds of Formula I-A.

[00236] Compounds of Formula I-A, wherein one or more of R^1-R^5 and A are deuterium are available, for example, using a hydrogen-deuterium exchange reaction on a suitable starting substrate, wherein this exchange reaction is catalyzed by Pd/C in D_2O as described in Esaki, H. et al. Tetrahedron, 2006, 62:10954-10961, and modifications thereof known to a person skilled in the art.

[00237] Compounds of Formula I-A wherein A is OCD_3 are available, for example, using methods as described in Xu, Y-Z and Chen, C. J. Label Compd. Radiopharm. (2006)

49:897-902, and modifications thereof and modifications thereof known to a person skilled in the art.

[00238] A person skilled in the art would appreciate that further manipulation of the substituent groups using known chemistry can be performed on the intermediates and final compounds in the Schemes above to provide alternative compounds of the application.

[00239] For example, a person skilled in the art would appreciate that R^1 is H in compounds C and D above resulting in a compound of Formula I-A wherein R^1 is H, then the compound of Formula I-A wherein R^1 is H can be further reacted to prepare further compounds of Formula I. For example, the compound of Formula I-A wherein R^1 is H can be alkylated with an alkyl halide in the presence of suitable based such as NaH, NaOtBu or LiHMDS.

[00240] Salts of compounds of the application may be formed by methods known to those of ordinary skill in the art, for example, by reacting a compound of the application with an amount of acid or base, such as an equivalent amount, in a medium such as one in which the salt precipitates or in aqueous medium followed by lyophilization.

[00241] The formation of solvates will vary depending on the compound and the solvate. In general, solvates are formed by dissolving the compound in the appropriate solvent and isolating the solvate by cooling or using an antisolvent. The solvate is typically dried or azeotroped under ambient conditions. The selection of suitable conditions to form a particular solvate can be made by a person skilled in the art. Examples of suitable solvents are ethanol, water and the like. When water is the solvent, the molecule is referred to as a "hydrate". The formation of solvates of the compounds of the application will vary depending on the compound and the solvate. In general, solvates are formed by dissolving the compound in the appropriate solvent and isolating the solvate by cooling or using an antisolvent. The solvate is typically dried or azeotroped under ambient conditions. The selection of suitable conditions to form a particular solvate can be made by a person skilled in the art.

[00242] Isotopically-enriched compounds of the application and pharmaceutically acceptable salts, solvates and/or prodrug thereof, can be prepared without undue experimentation by conventional techniques well known to those skilled in the art or by processes analogous to those described in the Schemes and Examples herein using suitable isotopically-enriched reagents and/or intermediates.

[00243] Throughout the processes described herein it is to be understood that, where appropriate, suitable protecting groups will be added to and subsequently removed from, the various reactants and intermediates in a manner that will be readily understood by one skilled

in the art. Conventional procedures for using such protecting groups as well as examples of suitable protecting groups are described, for example, in "Protective Groups in Organic Synthesis", T.W. Green, P.G.M. Wuts, Wiley-Interscience, New York, (1999). It is also to be understood that a transformation of a group or substituent into another group or substituent by chemical manipulation can be conducted on any intermediate or final product on the synthetic path toward the final product, in which the possible type of transformation is limited only by inherent incompatibility of other functionalities carried by the molecule at that stage to the conditions or reagents employed in the transformation. Such inherent incompatibilities and ways to circumvent them by carrying out appropriate transformations and synthetic steps in a suitable order, will be readily understood to one skilled in the art. Examples of transformations are given herein and it is to be understood that the described transformations are not limited only to the generic groups or substituents for which the transformations are exemplified. References and descriptions of other suitable transformations are given in "Comprehensive Organic Transformations – A Guide to Functional Group Preparations" R.C. Larock, VHC Publishers, Inc. (1989). References and descriptions of other suitable reactions are described in textbooks of organic chemistry, for example, "Advanced Organic Chemistry", March, 4th ed. McGraw Hill (1992) or, "Organic Synthesis", Smith, McGraw Hill, (1994). Techniques for purification of intermediates and final products include, for example, straight and reversed phase chromatography on column or rotating plate, recrystallisation, distillation and liquid-liquid or solid-liquid extraction, which will be readily understood by one skilled in the art.

[00244] It is also to be understood that a transformation of a group or substituent into another group or substituent by chemical manipulation can be conducted on any intermediate or final product on the synthetic path toward the final product, in which the possible type of transformation is limited only by inherent incompatibility of other functionalities carried by the molecule at that stage to the conditions or reagents employed in the transformation. Such inherent incompatibilities, and ways to circumvent them by carrying out appropriate transformations and synthetic steps in a suitable order, will be readily understood to one skilled in the art. Examples of transformations are given herein, and it is to be understood that the described transformations are not limited only to the generic groups or substituents for which the transformations are exemplified. References and descriptions of other suitable transformations are given in "Comprehensive Organic Transformations – A Guide to Functional Group Preparations" R.C. Larock, VHC Publishers, Inc. (1989). References and descriptions of other suitable reactions are described in textbooks of organic chemistry, for example, "*Advanced Organic Chemistry*", March, 4th ed. McGraw Hill (1992) or, "*Organic Synthesis*", Smith, McGraw Hill, (1994).

[00245] Techniques for purification of intermediates and final products include, for example, straight and reversed phase chromatography on column or rotating plate, recrystallisation, distillation and liquid-liquid or solid-liquid extraction, which will be readily understood by one skilled in the art.

[00246] The products of the processes of the application may be isolated according to known methods, for example, the compounds may be isolated by evaporation of the solvent, by filtration, centrifugation, chromatography or other suitable method.

[00247] Prodrugs of the compounds of the present application may be, for example, conventional esters formed with available hydroxy, thiol, amino or carboxyl groups. For example, available hydroxy or amino groups may be acylated using an activated acid in the presence of a base, and optionally, in inert solvent (e.g. an acid chloride in pyridine).

[00248] One skilled in the art will recognize that where a reaction step of the present application is carried out in a variety of solvents or solvent systems, said reaction step may also be carried out in a mixture of the suitable solvents or solvent systems.

EXAMPLES

[00249] The following non-limiting examples are illustrative of the present application.

General Methods

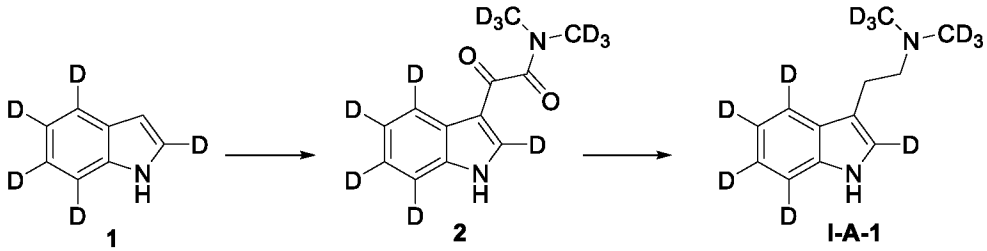
[00250] All starting materials used herein were commercially available or earlier described in the literature. The ^{1}H and ^{13}C NMR spectra were recorded either on Bruker 300, Bruker DPX400 or Varian +400 spectrometers operating at 300, 400 and 400 MHz for ^{1}H NMR respectively, using TMS or the residual solvent signal as an internal reference, in deuterated chloroform as solvent unless otherwise indicated. All reported chemical shifts are in ppm on the delta-scale, and the fine splitting of the signals as appearing in the recordings is generally indicated, for example as s: singlet, br s: broad singlet, d: doublet, t: triplet, q: quartet, m: multiplet. Unless otherwise indicated, in the tables below, ^{1}H NMR data was obtained at 400 MHz, using $CDCl_3$ as the solvent.

[00251] Purification of products was carried out using Chem Elut Extraction Columns (Varian, cat #1219-8002), Mega BE-SI (Bond Elut Silica) SPE Columns (Varian, cat # 12256018; 12256026; 12256034) or by flash chromatography in silica-filled glass columns.

[00252] The following compounds were prepared using one or more of the synthetic methods outlined in Schemes I and II.

A. Synthesis of exemplary compounds of the Application

Example 1: Synthesis of 2-(1H-Indol-3-yl-2,4,5,6,7-d5)-N,N-bis(methyl-d3)ethan-1-amine ***I-A-1***



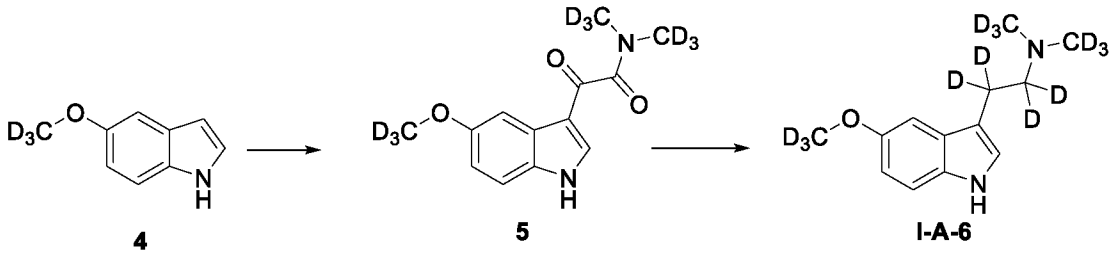
Synthesis of 2-(1H-indol-3-yl-2,4,5,6,7-d5)-N,N-bis(methyl-d3)-2-oxoacetamide

[00253] A solution of 1H-indole-2,4,5,6,7-d5 (**1**, 1.4 g, 11.368 mmol) in dry ether (30 mL) was treated with oxalyl chloride (0.75 mL, 11.368 mmol) at 0ºC. The reaction was brought to room temperature and stirred for additional 16 h. The reaction was cooled to 0ºC, treated with bis(methyl-d3)amine hydrochloride (3.48 g, 39.788 mmol, free based with Et3N in THF (80 mL)) over a period of 5 min. The reaction was brought to room temperature and stirred for 4 h. The reaction was quenched with water (100 mL) and product was extracted into ethyl acetate (2 x 75 mL). Combined ethyl acetate layer was washed with brine (25 mL) and dried (Na_2SO_4). Solvent was evaporated and crude was purified by flash column chromatography (MeOH: CH_2Cl_2, 5:95) on silica gel to obtain the title compound **2** (1.65 g, 63.9%) as light-yellow solid. ESI-MS (m/z, %): 249 (M+Na, 100)

Synthesis of 2-(1H-indol-3-yl-2,4,5,6,7-d5)-N,N-bis(methyl-d3)ethan-1-amine:

[00254] A suspension of Lithium aluminum hydride (0.82 g, 21.820 mmol) in dry THF (10 mL) was treated with 2-(1H-indol-3-yl-2,4,5,6,7-d5)-N,N-bis(methyl-d3)-2-oxoacetamide (**2**, 0.62 g, 2.727 mmol) in dry THF (20 mL) at 0 °C over a period of 10 min. The reaction was brought to room temperature, then refluxed for additional 16 hours. The reaction was cooled to 0 °C, then quenched with sequential addition of water (0.82 mL), 2 N NaOH solution (0.82 mL) and water (0.82 mL) over a period of 15 min. The reaction was brought to room temperature, stirred for additional 30 min. Solid was filtered off and washed with THF (2 x 50 mL). Combined THF layer was evaporated and crude was purified by column chromatography (2 M NH_3 in MeOH: CH_2Cl_2, 5:95) on silica gel to obtain the title compound **I-A-1** (0.48 g, 88.8%) as pale-yellow solid. ^{1}H NMR (DMSO-d6): δ 10.76 (s, 1H), 7.52-7.50 (m, 0.09H), 7.34-7.32 (m, 0.04H), 7.14 (d, 0.05H, J = 1.5 Hz), 7.07-7.05 (m, 0.16H), 6.98-6.96 (m, 0.22H), 2.83-2.79 (m, 2H), 2.53-2.49 (m, 2H); ESI-MS (m/z, %): 200 (MH^+, 100).

Example 2: 2-(5-(Methoxy-d3)-1H-indol-3-yl)-N,N-bis(methyl-d3)ethan-1-amine-1,1,2,2-d4 ***I-A-6***



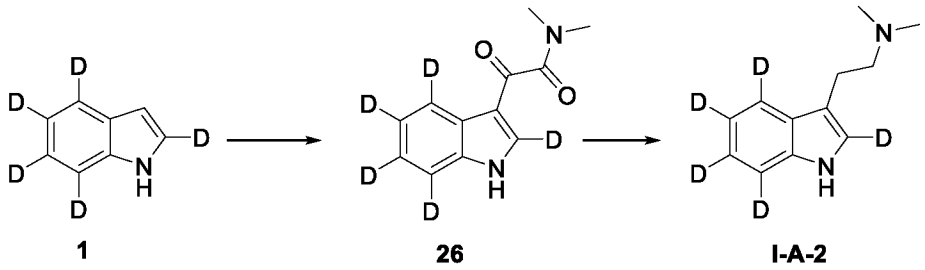
Synthesis of 2-(5-(methoxy-d3)-1H-indol-3-yl)-N,N-bis(methyl-d3)-2-oxoacetamide:

[00255] A solution of 5-(methoxy-d3)-1H-indole (**4**, 1.04 g, 6.924 mmol) in dry ether (20 mL) was treated with oxalyl chloride (0.58 mL, 6.924 mmol) at 0ºC. The reaction was brought to room temperature and stirred for additional 16 h. The reaction was cooled to 0ºC, treated with bis(methyl-d_3)amine hydrochloride (2.1 g, 24.235 mmol, free based with Et_3N in THF (50 mL)) over a period of 5 min. The reaction was brought to room temperature and stirred for 4 h. The reaction was quenched with water (100 mL), worked-up and purified as described for compound **2** to obtain the title compound **5** (1.16 g, 66%) as a pale-yellow solid. ^{1}H NMR (DMSO-d6): δ 12.19 (s, 1H), 8.03 (d, 1H, J = 3.0 Hz), 7.61 (d, 1H, J = 3.0 Hz), 7.43 (d, 1H, J = 6.0 Hz), 6.91 (dd, 1H, J = 3.0, 6.0 Hz); ESI-MS (m/z, %): 278 (M^+Na, 100), 256 (MH^+).

Synthesis of 2-(5-(methoxy-d3)-1H-indol-3-yl)-N,N-bis(methyl-d3)ethan-1-amine-1,1,2,2-d4 (**I-A-6**):

[00256] A suspension of lithium aluminum deuteride (1.0 g, 23.812 mmol) in dry THF (10 mL) was treated with 2-(5-(methoxy-d3)-1H-indol-3-yl)-N,N-bis(methyl-d3)-2-oxoacetamide (**5**, 0.76 g, 2.976 mmol) in dry THF (20 mL) at 0ºC over a period of 10 min. The reaction was brought to room temperature, then refluxed for additional 16 hours. The reaction was worked-up and purified as described for compound **I-A-1** to obtain the title compound **I-A-6** (0.59 g, 85.7%) as pale-yellow solid. 1H NMR (DMSO-d6): δ 10.59 (s, 1H), 7.22 (d, 1H, J = 6.0 Hz), 7.09 (d, 1H, J = 3.0 Hz), 6.97 (d, 1H, J = 3.0 Hz), 6.71 (dd, ^{1}H, J = 3.0, 6.0 Hz); ESI-MS (m/z, %): 232 (MH^+, 100).

*Example 3: 2-(1H-Indol-3-yl-2,4,5,6,7-d5)-N,N-dimethylethan-1-amine , **I-A-2***



Synthesis of 2-(1H-indol-3-yl-2,4,5,6,7-d5)-N,N-dimethyl-2-oxoacetamide

[00257] A solution of 1H-indole-2,4,5,6,7-d5 (**1**, 0.8 g, 6.49 mmol) in dry ether (30 mL) was treated with oxalyl chloride (0.55 mL, 6.49 mmol) at 0 °C. The reaction was brought to room temperature and stirred for additional 16 h. The reaction was cooled to 0 °C, treated with dimethylamine solution (16.22 mL, 32.45 mmol, 2 M in THF) over a period of 5 min. The reaction was brought to room temperature and stirred for 4 h. The reaction was worked-up and purified as described for compound **2** to obtain the title compound **26** (1.1 g, 76.5%) as a light brown solid. ^{1}H NMR ($CDCl_3$)10.09 (s, 1H), 8.35-8.33 (m, 0.17H), 7.76 (d, 0.05H, J = 1.5 Hz), 7.38-7.26 (m, 0.85H), 3.11 (s, 3H), 3.06 (s, 3H): δ; ESI-MS (m/z, %): 244 (M^+Na), 243 (100).

Synthesis of 2-(1H-indol-3-yl-2,4,5,6,7-d5)-N,N-dimethylethan-1-amine

[00258] A suspension of lithium aluminum hydride (1.34 g, 35.431 mmol) in dry THF (20 mL) was treated with 2-(1H-indol-3-yl-2,4,5,6,7-d5)-N,N-dimethyl-2-oxoacetamide (**26**, 0.98 g, 4.428 mmol) in dry THF (30 mL) at 0 °C over a period of 10 min. The reaction was brought to room temperature, then refluxed for additional 16 hours. The reaction was worked-up and purified as described for compound **I-A-1** to obtain the title compound **I-A-2** (0.75 g, 87.6%) as a pale-yellow solid. ^{1}H NMR (DMSO-d6): δ 10.76 (s, 1H), 7.51-7.49 (m, 0.18H), 7.34-7.32 (m, 0.04H), 7.14 (d, 0.05H, J = 1.5 Hz), 7.07-7.05 (m, 0.32H), 6.99-6.96 (m, 0.41H), 2.84-2.80 (m, 2H), 2.54-2.50 (m, 2H), 2.22 (s, 6H); ESI-MS (m/z, %): 194 (MH^+), 193 (100).

I.c. Experimental Methods and Procedures:

[00259] 1. Cells were cultured in cell culture medium (DMEM containing 10% FBS ,1× penicillin-streptomycin 300 µg/ml G418 and 100 µg/ml hygromycin B) at 37°C, 5% (v/v) CO2.

[00260] 2. One day before the assays, the cells were detached using TrypLE™ Express and cells were counted using cell counter. Only cells with >85% viability were used for the assay.

[00261] 3. 20000 cells/well were seeded in 30 µl/well culture medium to a 384-well cell plate and cells were incubated overnight at 37°C, 5% (v/v) CO2.

[00262] 4. On the assay day, 2×dye solution was prepared following the manual of the FLIPR® Calcium 6 Assay Kit: i. The dye was diluted with assay buffer (20mM HEPES in 1x HBSS, PH7.4); ii. Probenecid was added to the final concentration of 5 mM; iii. Vortexed vigorously for 1–2 minutes.

[00263] 5. Medium was removed from cell plate by flicking the cell plate on towel papers.

[00264] 6. 10 µl of assay buffer and 10 µl of 2×dye solution was added to each well of the cell plate.

[00265] 7. The cell plate was placed on plate shaker, the plate was agitated at 600rpm for 2 minutes. The plate was incubated at 37°C for 2 hours followed by additional 15-minute incubation at 25°C.

[00266] 8. 3×compound in assay buffer was prepared: a. Reference compounds were diluted to required concentration with DMSO. The compounds were added to a 384-well compound plate; b. Serial dilutions were performed; c. 10mM test compounds were added to the compound plate, and 3-fold serial dilutions were performed. d. Transfered 60 nl/well of compounds from source plate to a 384-well compound plate (Corning, 3657) by using an Echo; e. Add 20µl/well assay buffer to the compound plate; f. Mixed the plate on plate shaker for 2 mins;

[00267] 9. The cell plate, compound plate and tips were put into FLIPR, 10µl of 3x compound was transferred to the cell plate per well with FLIPR.

Data Analysis

[00268] i. The normalized fluorescence reading (RFU) was calculated as shown follow, while Fmax and Fmin stand for maximum and minimum of calcium signal during defined time window: RFU = Fmax – Fmin

[00269] ii. Calculated the percentage activation by using following equation:

$$\%\text{Activation} = \frac{(\text{RFUcompound} - \text{RFU low control})}{(\text{RFU top concentration of reference agonist} - \text{RFU low control})} \times 100\%$$

[00270] Iii. Calculated EC_{50} by fitting %activation against log of compound concentrations with Hill equation using XLfit.

[00271] The compounds of the application were found to be 5-HT2A agonists. The results of representative compounds are presented as EC50 provided in Table 1. The letter "A" indicates an EC50 <1,000 nM; "B" indicates and EC50 > 1,000 nM but < 10,000 nM; and "C" indicates and EC50 > 10,000 nM.

Table 1: Effect of exemplary compounds of Formula I-A targeting on human 5-HT2A (h5-HT2A) receptor under agonist mode:

Example ID#	**h5-HT2A** EC50 [nM]
5-MeO-DMT	A
DMT	A
I-A-1	A
I-A-2	A
I-A-6	A

Results & Discussion

[00272] Exemplary compounds of Formula I-A were evaluated functionally using FLIPR assay for their effect on h5-HT2A receptor under agonist mode. EC_{50} (nM) concentrations are illustrated in Table 5. This assay confirmed that compounds of the application are effective inhibitors of the target human 5-HT2A receptors.

II. Human 5-HT2A: Radioligand binding assay:

96 Round Well Plate	Corning	3799
96 Round Deep Well Plate	Axygen	P-DW-11-C
Echo	LABCYTE	550

II.3 Experiment Procedure:

i. Prepared the assay buffer following the table below;

Reagent	**Concentration**
Tris	50 mM
$CaCl_2$	4 mM
BSA	0.1% (w/v)
Adjust pH to 7.4 followed by 0.2 μM sterile filtration	

[00273] ii. Preparation of 8 doses of reference and test compounds starting from 10 mM stock solution as requested by 5-fold serial dilutions with 100%;

[00274] iii. Prepared (v/v) DMSO: a. 50 µl/well of 0.5% (v/v) PEI was added to UniFilter-96 GF/B plates. The plates were sealed and incubates at 4ºC for 3 hrs; b. After incubation, the plates were washed 3 times with ice-cold wash buffer (50 mM Tris, pH7.4);

[00275] iv. Preparation of assay plates: a. Cell membrane were diluted with assay buffer and 330 µl/well was added to 96 round deep well plates to reach a concentration of 20 µg/well; b. 8 concentrations of reference or test compounds were prepared and 110 µl/well wa added to 96 round deep well plates; c. [3H]-ketanserin was diluted with assay buffer to 5 nM (5X final concentration) and 110 µl/well was added to 96 round deep well plates.

[00276] v. The plate was centrifuged at 1000 rpm for 30 secs and then agitated at 600 rpm, R.T.for 5 min.

[00277] vi. The plates were sealed and incubates at 27ºC for 90 min.

[00278] vii. The incubation was stopped by vacuum filtration onto GF/B filter plates followed by 4 times washing with ice-cold wash buffer (50 mM Tris, pH7.4).

[00279] viii. The plates were dried at 37ºC for 45 min.

[00280] ix. The filter plates were sealed and 40 µl/well of scintillation cocktail was added.

[00281] x. The plate was read by using a Microbeta2 microplate counter.

Data Analysis:

[00282] For reference and test compounds, the results are expressed as % Inhibition, using the normalization equation: N = 100-100×(U-C2)/(C1-C2), where U is the unknown value, C1 is the average of high controls, and C2 is the average of low controls. The IC50 is determined by fitting percentage of inhibition as a function of compound concentrations with Hill equation using XLfit.

Results and discussion:

[00283] The results of potential competition binding properties of the representative compounds targeting on human 5-hydroxytryptamine receptors 2A (5-HT2A) are summarized in Table 2 . The results of representative compounds are presented as IC_{50} provided in Table 2. The symbol "#" indicates an IC_{50} <500nM; "# #" indicates and IC50 > 500 nM but < 5,000 nM; and "# # #" indicates IC_{50} > 5,000 nM.

Table 2: Effect of exemplary compounds of Formula I-A using Radioligand binding assay on human 5-HT2A receptor

Example ID#	h5-HT2A IC_{50} [nM]
5-MeO-DMT	#
DMT	#
1-A-1	#
I-A-2	#
I-A-6	#

Results & Discussion

[00284] Exemplary compounds of Formula I-A were evaluated using radioligand binding assay on human 5-HT2A receptor. IC_{50} (nM) concentrations are illustrated in Table 2. This assay confirms that compounds of the application are effective ligands of the target human 5-HT2A receptors.

Example 5: Human, Rat and Mouse Liver Microsomes Stability

Objective

[00285] The objective of this study was to estimate in vitro metabolic stability of representative compounds of the application in pooled human and male mouse liver microsomes. The concentrations of parent compounds in reaction systems were evaluated by LC-MS/MS for estimating the stability in pooled human and male mouse liver microsomes. The in vitro intrinsic clearances of test compounds were determined as well.

Protocol

[00286] A master solution in the “Incubation Plate” containing phosphate buffer, ultra-pure H_2O, $MgCl_2$ solution and liver microsomes was made according to Table 3. The mixture was pre-warmed at 37°C water bath for 5 minutes.

Table 3 Preparation of master solution

Reagent	Stock Concentration	Volume	Final Concentration
Phosphate buffer	200 mM	200 µL	100 mM
Ultra-pure H_2O	-	106 µL	-
$MgCl_2$ solution	50 mM	40 µL	5 mM
Microsomes	20 mg/mL	10 µL	0.5 mg/mL

[00287] 40 µL of 10 mM NADPH solution was added to each well. The final concentration of NADPH was 1 mM. The negative control samples were prepared by replacing NADPH with 40 µL of ultra-pure H_2O. Samples were prepared in duplicate. Negative controls were prepared in singlet.

[00288] The reaction was started with the addition of 4 µL of 200 µM test compounds or control compounds to each master solution to get the final concentration of 2 µM. This study was performed in duplicate.

[00289] Aliquots of 50 µL were taken from the reaction solution at 0, 15, 30, 45 and 60 minutes. The reaction solutions were stopped by the addition of 4 volumes of cold methanol with IS (100 nM alprazolam, 200 nM imipramine, 200 nM labetalol and 2 µM ketoprofen). Samples were centrifuged at 3,220 g for 40 minutes. Aliquot of 90 µL of the supernatant was mixed with 90 µL of ultra-pure H2O and then was used for LC-MS/MS analysis.

[00290] LC/MS analysis was performed for all samples from this study using a Shimadzu liquid chromatograph separation system equipped with degasser DGU-$20A_{5R}$,; solvent delivery unit LC-30AD; system controller SIL-30AC; column oven CTO-30A; CTC Analytics HTC PAL System;. Mass spectrometric analysis was performed using an Triple Quad™ 5500 instrument.

[00291] All calculations were carried out using Microsoft Excel. Peak area ratios of test compound to internal standard (listed in the below table) were determined from extracted ion chromatograms.

[00292] All calculations were carried out using Microsoft Excel. Peak areas were determined from extracted ion chromatograms. The slope value, k, was determined by linear regression of the natural logarithm of the remaining percentage of the parent drug vs. incubation time curve.

[00293] The in vitro half-life (in vitro $t_{1/2}$) was determined from the slope value:

$$in\ vitro\ t_{1/2} = -(0.693 / k)$$

[00294] Conversion of the in vitro $t_{1/2}$ (min) into the in vitro intrinsic clearance (in vitro CL_{int}, in µL/min/mg proteins) was done using the following equation (mean of duplicate determinations):

$$in\ vitro\ CL_{int} = \left(\frac{0.693}{(t_{1/2})}\right) * \left(\frac{\text{volume of incubation (µL)}}{\text{amount of proteins (mg)}}\right)$$

[00295] For the compound or control compound that showed an initial fast disappearance followed by a slow disappearance, only the time points that were within the initial rate were included in the calculation.

Results & Discussion

[00296] Human, rat and mouse liver microsomes contain a wide variety of drug metabolizing enzymes and are commonly used to support in vitro ADME (absorption, distribution, metabolism and excretion) studies. These microsomes are used to examine the potential first-pass metabolism by-products of orally administered drugs. Representative compounds of the application were evaluated for their stability in human, rat and mouse liver microsomes. A majority of the compounds of the application in three species, human, rat and mouse liver microsomes were recovered within a 60 minute time period indicating that the compounds were not rapidly cleared (see Table 4 for representative compounds of Formula I-A).

Table 4: Metabolic stability of representative example of Formula I-A and control compound verapamil in human, rat and mouse with NADPH

Example ID#	Remaining Percentage (%) after 60 min			Half-Life $t_{1/2}$ (min)			CL_{int} (µL/min/mg protein)		
	Human	Rat	Mouse	Human	Rat	Mouse	Human	Rat	Mouse
Verapamil	5.37	0.82	1.73	14.41	7.08	10.25	17.70	45.41	135.18
5-MeO-DMT	4.82	16.02	89.36	13.75	22.70	50.51	101.08	61.05	27.44
DMT	0.72	17.29	65.90	13.75	22.70	50.51	101.08	61.05	27.44
I-A-1	0.46	9.38	62.07	7.73	17.57	87.20	18.96	39.70	39.23
I-A-6	15.50	5.25	65.29	2.30	9.88	97.52	16.36	9.26	36.77
I-A-2	0.76	17.65	59.38	8.52	23.98	17.40	18.79	36.01	41.24

Example 6: Psychedelic-like Effect of compounds of Formula I-A

[00297] The effect of different doses of representative compounds of Formula I-A were evaluated on head-twitch response (HTR) as a behavior-based model of psychedelic activity.

Protocols

Mouse head twitch

[00298] Male, C57BL/6J mice (body weight range 20-30g) were dosed with the appropriate dose of test article, and following a 1-minute pre-treatment time, placed in individual observation chambers. Animals were visually assessed for the incidence head twitches continuously over a 1hr period. Head twitches were defined as a rapid jerk of the head which was not elicited by an external tactile stimulus (Corne and Pickering, Psychopharmacologia, 1967, 11(1): 65-78). Each head twitch was individually counted by a trained observer, and the data expressed as the mean±SEM of 6-10 mice per group. Mice were used in a single experiment only.

Rat behavioural test

[00299] Male, Sprague-Dawley rats (body weight range 250-400g) were dosed with the appropriate dose of test article and following a 1-minute pre-treatment time, placed in locomotor activity boxes (dimensions 17" W x 17" L x 12" H) and continuously monitored for a 1 hr period with data collected into 10 minute time bins. Animals were visually assessed for overt behavioural signs, including behaviours characteristic of 5-HT2A receptor activation (wet dog shakes, back muscle contractions), 5-HT2A receptor activation (yawning, penile grooming) and 5-HT1A behaviours (forepaw treading, hindlimb abduction) (Halberzettl et al, Behav Brain Res. 256: 328-345, 2013). Additional behavioural and somatic signs characteristic of 5-HT syndrome (e.g. tremor, salivation, flat body posture, core body temperature change) were also measured. Simultaneously, the spontaneous activity of the rats was measured using an automated tracking system (Med Associates, VT, USA). Activity data collected included total distance traveled, rearing counts and ambulatory episodes. All data were expressed as the mean±SEM of 6-10 rats per group.

Drug discrimination in the rat

[00300] Male Sprague-Dawley rats were initially food restricted by presentation of 18-20g food at day end (single housing). After 7 days acclimatisation to the food restriction procedure, they were trained daily to lever press for food (45mg Bioserve pellet) in standard 2-lever operant conditioning chambers controlled by Med-PC software over a period of 1 week (Med. Associates Ins., St. Albans, VT). The rats were trained to lever press for food to

an FR10 value (i.e 10 lever presses for a single food reward). Once stable food responding was acquired to both response levers, discrimination training began. Over a period of 20-50 training sessions, the rats were trained to associate one lever to a psilocybin training dose of 1 mg/kg SC, and the second lever to a neutral stimulus (saline, SC) (Winter et al, Pharmacol Biochem Behav. 87(4): 472-480, 2007). Training sessions lasted 30-min or until the delivery of 50 pellets and continued until the animals attained appropriate stimulus control (defined as six consecutive sessions where animals made no more than 16 lever presses before the delivery of the first reward, and at least 95% total responses on the appropriate lever). The rats continued to receive daily food ration in their home cage at day end.

[00301] Once trained, tests of substitution were conducted. On test days, both levers were designated active, i.e., every 10th response on either lever resulted in delivery of a food pellet. Test sessions continued until 50 pellets had been obtained or 30 min had elapsed. During these sessions response rate was also measured.

Results and discussion

[00302] Dose response (0.3-3 mg/kg SC) – 5-HT2A signs of WDS/BMC measured over 1h. Also locomotor activity and other 5-HT receptor signs measured . The effect of various doses of exemplary compound of Formula I-A, I-A-6, on head-twitch response (HTR) in male C57BL6 mice was studied. The mice were treated with compound I-A-6 (0.3, 1, 3, 10 mg/kg) by SC route in saline, and the total number of head twitches were recorded over a 1hr period. Data is expressed as mean±SEM.

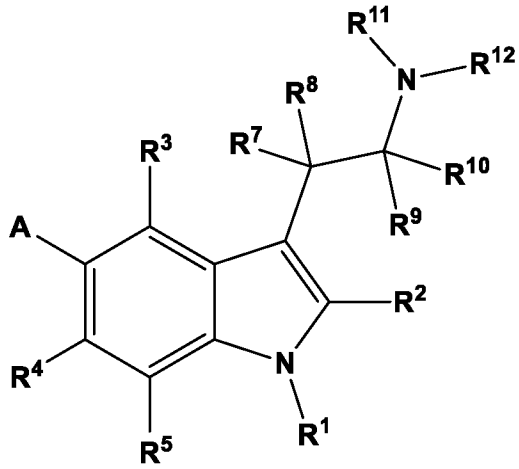
[00303] To evaluate the involvement of 5-HT2A receptor on the HTR induced by exemplary compounds of Formula I-A, mice were pretreated with the selective 5-HT2AR antagonist M100907 (also known as volinanserin) prior to the administration of compounds of Formula I-A. As expected, pretreatment with the antagonist completely blocked the effect of exemplary compounds of Formula I-A on HTR.

[00304] While the present application has been described with reference to examples, it is to be understood that the scope of the claims should not be limited by the embodiments set forth in the examples, but should be given the broadest interpretation consistent with the description as a whole.

[00305] All patents, patent applications and publications cited herein are hereby incorporated by reference in their entirety. The disclosures of these publications in their entireties are hereby incorporated by reference into this application in order to more fully describe the state of the art as known to those skilled therein as of the date of the application described and claimed herein.

Claims:

1. A compound of Formula (I-A):



Formula (I-A)

or a pharmaceutically acceptable salt, solvate and/or prodrug thereof,

wherein

R^1 is selected from hydrogen, deuterium, C_1-C_3alkyl, C_1-C_3deuteroalkyl, C_1-C_3fluoroalkyl, C_1-C_6alkyleneP(O)$(OR^6)_2$, C_1-C_6alkyleneOP(O)$(OR^6)_2$, C(O)R^6, CO_2R^6, C(O)N$(R^6)_2$, S(O)R^6 and SO_2R^6;

R^2, R^3, R^4 and R^5 are independently selected from hydrogen and deuterium;

R^7, R^8, R^9 and R^{10} are independently selected from hydrogen, deuterium, C_1-C_6alkyl, C_1-C_6deuteroalkyl and C_1-C_6fluoroalkyl;

A is selected from selected from hydrogen, deuterium and OR^{19};

R^6 is selected from hydrogen, deuterium, C_1-C_6alkyl, C_1-C_6deuteroalkyl and C_1-C_6fluoroalkyl;

R^{11} and R^{12} are independently selected from hydrogen, deuterium, C_1-C_6alkyl, C_1-C_6deuteroalkyl and C_1-C_6fluoroalkyl; and

R^{19} is selected from C_1-C_6alkyl, C_1-C_6deuteroalkyl and C_1-C_6fluoroalkyl;

with the proviso that either

(1) R^2, R^3, R^4 and R^5 are all D and A, R^1, R^6-R^{12} and R^{19} are as defined above the proviso; or

(2) A is OR^{19} wherein R^{19} is selected from C_1-C_6deuteroalkyl and C_1-C_6fluoroalkyl and R^1-R^{12} are as defined above the proviso.

2. The compound of claim 1, wherein R^1 is selected from hydrogen, deuterium, C_1-C_3deuteroalkyl, C_1-C_3fluoroalkyl, fluoro-substituted C_1-C_3alkyl, C_1-C_3alkyleneP(O)$(OR^6)_2$, C_1-C_3alkyleneOP(O)$(OR^6)_2$, C(O)R^6, CO_2R^6 and C(O)N(R^6).

3. The compound of claim 2, wherein R^1 selected from hydrogen, deuterium, CH_3, CF_3, CD_3, CH_2CH_3, CF_2CF_3, CD_2CD_3, $CH_2P(O)(OR^6)_2$, $CH(CH_3)P(O)(OR^6)_2$ and $(CH_2)OP(O)(OR^6)_2$.

4. The compound of any one of claims 1 to 3, wherein R^6 is selected from selected from hydrogen, deuterium, CH_3, CF_3, CHF_2, CD_2H, CDH_2, and CD_3.

5. The compound of claim 4, wherein R^6 is selected from selected from CH_3 and CD_3.

6. The compound of claim 3, wherein R^1 is selected from hydrogen, deuterium, CH_3, CF_3, CD_3, CH_2CH_3, CF_2CF_3 and CD_2CD_3.

7. The compound of claim 6, wherein R^1 is hydrogen or deuterium.

8. The compound of any one of claims 1 to 7, wherein R^7, R^8, R^9 and R^{10} are independently selected from hydrogen, deuterium, C_1-C_4alkyl, C_1-C_4deuteroalkyl and C_1-C_4fluoroalkyl.

9. The compound of claim 8, wherein R^7, R^8, R^9 and R^{10} are independently selected from hydrogen, deuterium, CH_3, CD_2H, CDH_2, CD_3, CH_2CH_3, CH_2CH_2D, CH_2CD_2H and CD_2CD_3.

10. The compound of claim 8, wherein R^7, R^8, R^9 and R^{10} are independently selected from hydrogen, deuterium, CH_3, CF_3, CHF_2, CD_2H, CDH_2, CD_3, CH_2CH_3, CH_2CH_2D, CH_2CD_2H and CD_2CD_3.

11. The compound claim 8, wherein at least one of R^7, R^8, R^9 and R^{10} is deuterium or at least one of R^7, R^8, R^9 and R^{10} comprises deuterium.

12. The compound of claim 11, wherein at least one or two of R^7, R^8, R^9 and R^{10} are deuterium.

13. The compound of claim 8, wherein R^7, R^8, R^9 and R^{10} are all hydrogen or R^7, R^8, R^9 and R^{10} are all deuterium.

14. The compound of any one of claims 1 to 13, wherein R^{11} and R^{12} are independently selected from hydrogen, deuterium, C_1-C_4alkyl, C_1-C_4deuteroalkyl and C_1-C_4fluoroalkyl.

15. The compound of claim 14, wherein R^{11} and R^{12} are independently selected from hydrogen, deuterium, CH_3, CD_2H, CDH_2, CD_3, CH_2CH_3, CH_2CH_2D, CH_2CD_2H and CD_2CD_3.

16. The compound of any one of claims 1 to 7, wherein R^7, R^8, R^9 and R^{10} are all hydrogen and R^{11} and R^{12} are independently selected from deuterium and CD_3.

17. The compound of any one of claims 1 to 7, wherein, R^7, R^8, R^9 and R^{10} are all deuterium and R^{11} and R^{12} are independently selected from hydrogen and CH_3.

18. The compound of any one of claims 1 to 7, wherein R^7, R^8, R^9 and R^{10} are all deuterium and R^{11} and R^{12} are selected from deuterium and CD_3.

19. The compound of any one of claims 1 to 18, wherein A, R^2, R^3, R^4 and R^5 are all deuterium.

20. The compound of any one of claims 1 to 18, wherein R^{19} is selected from CF_3, CHF_2, CD_2H, CDH_2, CD_3, and CD_2CD_3.

21. The compound of claim 20, wherein R^{19} is CHF_2 and CD_3.

22. The compound of any one of claims 1 to 18, wherein A is selected from hydrogen, deuterium, OCH_3, OCD_3, OCF_3, and $OCHF_2$.

23. The compound of claim 22, wherein A is selected from deuterium, OCD_3 and $OCHF_2$.

24. The compound of claim 1, wherein the compounds of Formula (I-A) are selected from the compounds listed below:

Compound ID #	Chemical Structure
I-A-1	I-A-2	
I-A-3	I-A-4	I-A-5	I-A-6	I-A-7	I-A-8	I-A-9	
I-A-10	I-A-11	 and
I-A-12	
or a pharmaceutically acceptable salt, solvate and/or prodrug thereof.

25. A composition comprising one or more compounds of any one of claims 1 to 24 and a carrier.

26. A pharmaceutical composition comprising one or more compounds of any one of claims 1 to 24 and pharmaceutically acceptable carrier.

27. A method for activating a serotonin receptor in a cell, either in a biological sample or in a patient, comprising administering an effective amount of one or more compounds of any one of claims 1 to 24 to the cell.

28. A method of treating a disease, disorder or condition by activation of a serotonin receptor comprising administering a therapeutically effective amount of one or more compounds of any one of claims 1 to 24 to a subject in need thereof.

29. A method for activating a 5-HT_{1A} and 5-HT2A in a cell, either in a biological sample or in a patient, comprising administering an effective amount of one or more compounds of any one of claims 1 to 24 to the cell.

30. A method of treating a mental illness comprising administering a therapeutically effective amount of any one of claims 1 to 24 to a subject in need thereof.

31. The method of claim 30, wherein the mental illness is selected from hallucinations and delusions and a combination thereof.

32. The method of claim 31, wherein the mental illness is selected anxiety disorders; depression; mood disorders; psychotic disorders; impulse control and addiction disorders; drug addiction; obsessive-compulsive disorder (OCD); post-traumatic stress disorder (PTSD); stress response syndromes; dissociative disorders; depersonalization disorder; factitious disorders; sexual and gender disorders; and somatic symptom disorders and combinations thereof.

33. A method of treating psychosis or psychotic symptoms comprising administering a therapeutically effective amount of one or more compounds of any one of claims 1 to 24 to a subject in need thereof.

34. A method of treating a central nervous system (CNS) disease, disorder or condition and/or a neurological disease, disorder or condition comprising administering a therapeutically effective amount of one or more compounds of any one of claims 1 to 24 to a subject in need thereof.

35. The method of claim 34, wherein the CNS disease, disorder or condition and/or neurological disease, disorder or condition is selected from neurological diseases including neurodevelopmental diseases and neurodegenerative diseases such as Alzheimer's disease; presenile dementia; senile dementia; vascular dementia; Lewy body dementia; cognitive impairment, Parkinson's disease and Parkinsonian related disorders such as Parkinson dementia, corticobasal degeneration, and supranuclear palsy; epilepsy; CNS trauma; CNS infections; CNS inflammation; stroke; multiple sclerosis; Huntington's disease; mitochondrial disorders; Fragile X syndrome; Angelman syndrome; hereditary ataxias; neuro-otological and eye movement disorders; neurodegenerative diseases of the retina amyotrophic lateral sclerosis; tardive dyskinesias; hyperkinetic disorders; attention deficit hyperactivity disorder and attention deficit disorders; restless leg syndrome; Tourette's syndrome; schizophrenia; autism spectrum disorders; tuberous sclerosis; Rett syndrome; cerebral palsy; disorders of the reward system including eating disorders such as anorexia nervosa ("AN") and bulimia nervosa ("BN"); and binge eating disorder ("BED"), trichotillomania, dermotillomania, nail biting; migraine; fibromyalgia; and peripheral neuropathy of any etiology, and combinations thereof.

36. A method of treating a behavioral problem comprising administering a therapeutically effective amount of one or more compounds of any one of claims 1 to 24 to a non-human subject in need thereof.

37. The method of claim 36, wherein the non-human subject is a canine or feline suffering from neurological diseases, behavioral problems, trainability problems and/or a combination thereof.

38. The method of claim 37, wherein and the neurological diseases, behavioral problems, trainability problems include, but are not limited to, anxiety, fear and stress, sleep disturbances, cognitive dysfunction, aggression, and/or a combination thereof.

39. A method of treating a disease, disorder or condition by activation of a serotonin receptor comprising administering a therapeutically effective amount of one or more compounds of any one of claims 1 to 24 in combination with another known agent useful for treatment of a disease, disorder or condition by activation of a serotonin receptor to a subject in need thereof.

40. A pharmaceutical composition comprising a compound of any one of claims 1 to 24 and an additional therapeutic agent.

41. The composition of claim 40, wherein the additional therapeutic agent is a psychoactive drug.

INTERNATIONAL SEARCH REPORT

International application No.
PCT/CA2022/050295

A. CLASSIFICATION OF SUBJECT MATTER

IPC: ***C07D 209/16*** (2006.01) , ***A61K 31/4045*** (2006.01) , ***A61P 25/00*** (2006.01)

CPC: **C07D 209/16** (2020.01) , A61K 31/4045 (2020.01) , A61P 25/00 (2020.01)

According to International Patent Classification (IPC) or to both national classification and IPC

B. FIELDS SEARCHED

Minimum documentation searched (classification system followed by classification symbols)
IPC: ***C07D 209/16*** (2006.01) , ***A61K 31/4045*** (2006.01)

Documentation searched other than minimum documentation to the extent that such documents are included in the fields searched

Electronic database(s) consulted during the international search (name of database(s) and, where practicable, search terms used)
CPC-Intellect, ORBIT-FamPat, CAplus, Google Scholar

deuterium OR deuterated, serotonin OR 5-HT OR methoxytryptamine OR dimethyltryptamine OR DMT OR tryptamine, psychedelic 9

C. DOCUMENTS CONSIDERED TO BE RELEVANT

Category*	Citation of document, with indication, where appropriate, of the relevant passages	Relevant to claim No.
X	WO2002078693A2 (ELI LILLY AND COMPANY) 10 October 2002 (10-10-2002) 5-trifluoromethoxytryptamine and 5-(2,2,2-trifluoroethoxy)-1H-Indole-3-ethanamine, p.54, l.14; p.111, l.10) , which fall within the scope of present claims 1-10, 13-15, 20, 22 and claims	1-10, 13-15, 20, 22
X	WO2013036869A2 (LANTHEUS MEDICAL IMAGING, INC) 14 March 2013 (14-03-2013) 5-(2-fluoroethoxy)-1H-Indole-3-ethanamine (RN 1427085-77-5).	1-10, 13-15
X	TW1318621B (National Bureau of Controlled Drugs, Department of Health, Taiwan) 21 December 2009 (21-12-2009) 5-(methoxy-d3)-N,N-dimethyl-1H-Indole-3-ethanamine	1-10, 13-15, 20-23.

☒ Further documents are listed in the continuation of Box C. ☒ See patent family annex.

*	Special categories of cited documents:	"T"	later document published after the international filing date or priority date and not in conflict with the application but cited to understand the principle or theory underlying the invention
"A"	document defining the general state of the art which is not considered to be of particular relevance	"X"	document of particular relevance; the claimed invention cannot be considered novel or cannot be considered to involve an inventive step when the document is taken alone
"D"	document cited by the applicant in the international application	"Y"	document of particular relevance; the claimed invention cannot be considered to involve an inventive step when the document is combined with one or more other such documents, such combination being obvious to a person skilled in the art
"E"	earlier application or patent but published on or after the international filing date	"&"	document member of the same patent family
"L"	document which may throw doubts on priority claim(s) or which is cited to establish the publication date of another citation or other special reason (as specified)		
"O"	document referring to an oral disclosure, use, exhibition or other means		
"P"	document published prior to the international filing date but later than the priority date claimed		

Date of the actual completion of the international search 11 May 2022 (11-050-2022)	Date of mailing of the international search report 20 May 2022 (20-05-2022)
Name and mailing address of the ISA/CA Canadian Intellectual Property Office Place du Portage I, C114 - 1st Floor, Box PCT 50 Victoria Street Gatineau, Quebec K1A 0C9 Facsimile No.: 819-953-2476	Authorized officer Yong-Huang Chen (819) 639-0354
