 (54) Title: Screen arrangement for withdrawing treatment liquors in treatment vessels
 (56) Cited documents: US 2163437 A · WO 9419533 A1 · US 4637878 A
 (57) Abstract:

The invention relates to an improved treatment vessel screen (SC) for continuous treatment vessels. In order to obtain an easy cleaning of the withdrawal space behind screens in treatment vessels is the screen designed such that it may slide vertically into an upper recess of the screen frame and thereafter dropped into a mounting position wherein the lower part of the screen is locked radially in a lower recess of the screen frame. Exposing the withdrawal chamber for cleaning is simply a reversal of the mounting procedure, i.e. sliding the screen upwards and then swinging the lower part of the screen out from mounting position. This inexpensive design prevents chip disturbance of column while allowing full access for cleaning of lower part of withdrawal space.
