(54) Title: SUBSTITUTED PYRIMIDINES FOR CONTROL OF DIABETIC COMPLICATIONS

Published
With international search report.

(57) Abstract

This invention relates to methods of inhibiting sorbitol dehydrogenase, lowering fructose levels, and treating or preventing diabetic complications such as diabetic neuropathy, diabetic retinopathy, diabetic nephropathy, diabetic microangiopathy or diabetic macroangiopathy in a mammal using pyrimidine derivatives of formula (I) wherein R1, R2, R3, R4 and R5 are defined as below, and to pharmaceutical compositions containing such derivatives. It also relates to certain novel substituted pyrimidines having the above formula. It also relates to mutual prodrugs of compounds of above formula (I) and aldose reductase inhibiting compounds, and to pharmaceutical compositions comprising a compound of above formula (I) and an aldose reductase inhibitor.

SUBSTITUTED PYRIMIDINES FOR CONTROL OF DIABETIC COMPLICATIONS

Background of the Invention

This application is a continuation in part of United States Patent Application Serial No. 07/952,222, filed September 28, 1992.

The present invention relates to novel pyrimidine derivatives and to the use of such derivatives and related compounds to inhibit sorbitol dehydrogenase, lower fructose levels, or treat or prevent diabetic complications such as diabetic neuropathy, diabetic retinopathy, diabetic nephropathy, diabetic microangiopathy and diabetic macroangiopathy in mammals. This invention also relates to pharmaceutical compositions containing such pyrimidine derivatives and related compounds.

S. Ao et al., Metabolism, 40, 77-87 (1991) have shown that significant functional improvement in the nerves of diabetic rats (based on nerve conduction velocity) occurs when nerve fructose levels are pharmacologically lowered, and that such improvement correlates more closely with the lowering of nerve fructose than the lowering of nerve sorbitol. Similar results were reported by N. E. Cameron and M. A. Cotter, Diabetic Medicine, 8, Suppl. 1, 35A-36A (1991). In both of these cases, lowering of nerve fructose was achieved using relatively high doses of aldose reductase inhibitors, which inhibit the formation of sorbitol, a precursor of fructose, from glucose via the enzyme aldose reductase.

We have found that pyrimidine derivatives of the formula I, as defined below, and their pharmaceutically acceptable salts, lower fructose levels in the tissues of mammals affected by diabetes (e.g., nerve, kidney and retina tissue) and are useful in the treatment and prevention of the diabetic complications referred to above. These compounds, or their metabolites in vivo, are inhibitors of the enzyme sorbitol dehydrogenase, which catalyzes the oxidation of sorbitol to fructose.

Summary of the Invention

The present invention also relates to the use of substituted pyrimidines of the formula I, as defined below, to treat or prevent diabetic complications in mammals, and to pharmaceutical compositions containing such pyrimidines.

Compounds of the formula I are those having the formula
wherein R¹ is hydrogen, CF₃, (C₁₋C₆)alkyl, (C₁₋C₆)alkyl-S-(C₁₋C₆)alkyl, (C₁₋C₆)alkyl-SO-(C₁₋C₆)alkyl, (C₁₋C₆)alkyl-SO₂-(C₁₋C₆)alkyl, hydroxy-(C₁₋C₆)alkyl, dihydroxy-(C₁₋C₆)alkyl, (C₁₋C₆)alkoxy, (C₁₋C₆)alkoxy carbonyl-(C₁₋C₆)alkyl, aryl selected from phenyl and naphthyl, aryl-(C₁₋C₆)alkyl wherein the aryl moiety is selected from phenyl and naphthyl, (C₁₋C₆)alkoxy carbonylaryl wherein the aryl moiety is selected from phenyl and naphthyl, aryl-(C₁₋C₆)alkyl wherein the aryl moiety is selected from phenyl and naphthyl, aryl-(C₁₋C₆)alkyl oxy wherein the aryl moiety is selected from phenyl and naphthyl, heteroaryl selected from pyridyl, furyl, tetrahydrofuryl, thienyl, imidazolyl, pyrazolyl, triazolyl, thiazolyl, oxazolyl, benzothiazolyl, benzofuranyl, and benzothienyl; heteroaryl-(C₁₋C₆)alkyl wherein heteroaryl is defined as above, or heteroaryl-(C₁₋C₆)alkyl oxy wherein heteroaryl is defined as above, and wherein said aryl and heteroaryl groups, the aryl moieties of said aryl-(C₁₋C₆)alkyl, (C₁₋C₆)alkoxy carbonylaryl and aryl-(C₁₋C₆)alkyl oxy and the heteroaryl moiety of said heteroaryl-(C₁₋C₆)alkyl may optionally be substituted with one or more substituents independently selected from chloro, bromo, (C₁₋C₆)alkyl, (C₁₋C₆)alkoxy, -S-(C₁₋C₆)alkyl, -SO-(C₁₋C₆)alkyl, -SO₂-(C₁₋C₆)alkyl, hydroxy-(C₁₋C₆)alkyl and trifluoromethyl;

or R¹ is a group of the formula

wherein the dotted line represents an optional double bond, W, Q and Z are independently selected from hydrogen, (C₁₋C₆)alkyl and trifluoromethyl, phenyl, furyl, triazolyl, thiazolyl and thiényl, wherein said phenyl, furyl, triazolyl, thiazolyl and thiényl may optionally be substituted with one or more substituents independently selected from (C₁₋C₆)alkyl, (C₁₋C₆)alkoxy, trifluoromethyl and hydroxy;
or R¹ is a group of the formula -C-R², wherein R² is hydrogen, (C₁-C₆)alkyl, aryl selected from phenyl and naphthyl, or heteroaryl selected from pyridyl, furyl, thiienyl, imidazolyl, pyrazolyl, triazolyl, thiazolyl, oxazolyl, benzothiazolyl, benzofuranyl and benzothienyl, wherein said aryl and heteroaryl groups may optionally be substituted with one or more substituents independently selected from chloro, bromo, nitro, trifluoromethyl, (C₁-C₆)alkoxy, -S-(C₁-C₆)alkyl, -SO-(C₁-C₆)alkyl and -SO₂-(C₁-C₆)alkyl;

or R¹ is a group of the formula

Y-O-CH-R², wherein R² is aryl selected from phenyl and naphthyl, or heteroaryl selected from pyridyl, furyl, thiienyl, imidazolyl, pyrazolyl, triazolyl, thiazolyl, oxazolyl, benzothiazolyl, benzofuranyl, benzothienyl and quinolyl, wherein said aryl and heteroaryl groups may optionally be substituted with one or more substituents, preferably with from zero to two substituents, independently selected from chloro, bromo, (C₁-C₆)alkyl, (C₁-C₆)alkoxy, -S-(C₁-C₆)alkyl, -SO-(C₁-C₆)alkyl, -SO₂-(C₁-C₆)alkyl and trifluoromethyl, and Y is hydrogen, benzyl, acetyl, benzoyl, aryl selected from phenyl and naphthyl, heteroaryl selected from furyl, thiienyl, thiazolyl and oxazolyl, wherein said aryl and heteroaryl groups may optionally be substituted with one or more substituents independently selected from chloro, bromo, nitro, trifluoromethyl, (C₁-C₆)alkyl, (C₁-C₆)alkoxy, -S-(C₁-C₆)alkyl, -SO-(C₁-C₆)alkyl and -SO₂-(C₁-C₆)alkyl;

R² and R³ are independently selected from hydrogen, (C₁-C₆)alkyl, phenyl and phenyl-(C₁-C₄)alkyl, wherein said phenyl and the phenyl moiety of said phenyl -(C₁-C₆)alkyl may optionally be substituted with one or more substituents independently selected from (C₁-C₆)alkyl, (C₁-C₆)alkoxy, chloro, bromo and trifluoromethyl;

or R² and R³ form, together with the nitrogen to which they are attached, a cyclic group selected from azetidino, pyrrolidino, piperidino, piperazino and morpholino, wherein said cyclic group may optionally be substituted with from zero to two substituents, independently selected from (C₁-C₆)alkyl, -CONH₂, -SO₂NH₂, N-(C₁-C₆)alkylsulfamoyl, N,N-di-(C₁-C₄)alkylsulfamoyl, (C₁-C₆)alkoxycarbonyl, N,N-di-(C₁-C₄)alkylcarbamoyl, N-(C₁-C₆)alkylcarbamoyl, N-phenylcarbamoyl, (C₁-C₆)alkylcarbonyl, phenylcarbonyl, (C₁-C₆)alkylsulfonyl, (C₁-C₆)alkylsulfanyl, phenylsulfonyl, heteroaryl sulfonfyl and heteroaryl carbonyl, wherein the heteroaryl moieties of said heteroaryl carbonyl and heteroaryl sulfonfyl are selected from furyl, thiienyl, thiazolyl, and
oxazolyl, and wherein the phenyl moieties of said phenylcarbonyl, N-phenylcarbamoyl, phenylcarbonyl and phenylsulfonyl may optionally be substituted with one or more substituents independently selected from (C₁₋₅)alkyl, (C₁₋₃)alkoxy, chloro, bromo, nitro, amino, cyano and trifluoromethyl;

R⁴ is hydrogen, chloro, bromo, cyano, nitro, trifluoromethyl, amino, (C₁₋₅)alkyl, (C₁₋₅)hydroxyalkyl, (C₁₋₃)alkoxy, phenyl, naphthyl or furyl, wherein said phenyl, naphthyl and furyl may optionally be substituted with one or more substituents independently selected from chloro, bromo, trifluoromethyl, (C₁₋₅)alkyl, (C₁₋₃)alkoxy, -S-(C₁₋₅)alkyl, -SO-(C₁₋₅)alkyl, -SO₂-(C₁₋₅)alkyl and hydroxy; and

R⁵ is hydrogen, (C₁₋₅)alkyl, (C₁₋₅)alkoxy, trifluoromethyl, (C₁₋₅)hydroxyalkyl, -S-(C₁₋₅)alkyl, -SO-(C₁₋₅)alkyl, -SO₂-(C₁₋₅)alkyl, phenyl or furyl, wherein said phenyl and furyl may optionally be substituted with one or more substituents independently selected from chloro, bromo, trifluoromethyl, (C₁₋₅)alkyl, (C₁₋₅)alkoxy, -SO-(C₁₋₅)alkyl, -SO₂-(C₁₋₅)alkyl and hydroxy.

More specifically, this invention relates to a pharmaceutical composition comprising a sorbitol dehydrogenase inhibiting effective amount of a compound of the formula I, or a pharmaceutically acceptable salt thereof, and a pharmaceutically acceptable carrier.

This invention also relates to a method of inhibiting the enzyme sorbitol dehydrogenase in a mammal, including a human, comprising administering to said mammal a sorbitol dehydrogenase inhibiting effective amount of a compound of the formula I, or a pharmaceutically acceptable salt thereof.

This invention also relates to a pharmaceutical composition comprising an amount of a compound of the formula I, or a pharmaceutically acceptable salt thereof, effective in lowering the level of fructose in one or more of the tissues of a mammal, including a human, that are affected by diabetes, and a pharmaceutically acceptable carrier.

This invention also relates to a method of lowering the level of fructose in one or more of the tissues of a mammal, including a human, that are affected by diabetes,
comprising administering to said mammal a fructose lowering effective amount of a compound of the formula I, or a pharmaceutically acceptable salt thereof.

This invention also relates to a pharmaceutical composition comprising an amount of a compound of the formula I, or a pharmaceutically acceptable salt thereof, effective in treating or preventing a diabetic complication such as diabetic neuropathy, diabetic retinopathy, diabetic nephropathy, or diabetic microangiopathy or macroangiopathy in a mammal, including a human, and a pharmaceutically acceptable carrier.

This invention also relates to a method of treating or preventing a diabetic complication such as diabetic neuropathy, diabetic retinopathy, diabetic nephropathy, or diabetic microangiopathy or macroangiopathy in a mammal, including a human, comprising administering to said mammal an amount of a compound of the formula I, or a pharmaceutically acceptable salt thereof, effective in treating or preventing such complication.

This invention also relates to those compounds of the formula I wherein R\(^1\) is (C\(_1\)-C\(_8\))alkoxycarbonyl-(C\(_1\)-C\(_8\))alkyl, (C\(_1\)-C\(_8\))alkyl-S-(C\(_1\)-C\(_8\))alkyl, (C\(_1\)-C\(_8\))alkyl-SO-(C\(_1\)-C\(_8\))alkyl, (C\(_1\)-C\(_8\))alkyl-SO\(_2\)-(C\(_1\)-C\(_8\))alkyl, dihydroxy-(C\(_1\)-C\(_8\))alkyl, aryl, heteroaryl, heteroaryloxy-(C\(_1\)-C\(_8\))alkyl, aryl-(C\(_1\)-C\(_8\))alkyl, (C\(_1\)-C\(_8\))alkoxycarbonylaryl, aryl-(C\(_1\)-C\(_8\))alkyloxy or heteroaryl-(C\(_1\)-C\(_8\))alkyloxy, wherein said aryl and the arylo moieties of said aryl-(C\(_1\)-C\(_8\))alkyl, (C\(_1\)-C\(_8\))alkoxycarbonylaryl, and aryl-(C\(_1\)-C\(_8\))alkyloxy are independently selected from phenyl and naphthyl, and wherein said heteroaryl and the heteroarylo moieties of said heteroaryl-(C\(_1\)-C\(_8\))alkyl and heteroaryl-(C\(_1\)-C\(_8\))alkyloxy are independently selected from wherein the aryl moiety is selected from phenyl and naphthyl, heteroaryl selected from pyridyl, furyl, tetrahydrofuryl, thienyl, imidazolyl, pyrazolyl, triazolyl, thiazolyl, oxazolyl and benzothiazolyl, and wherein said aryl and heteroaryl and the aryl and heteroarylo moieties of said heteroaryl-(C\(_1\)-C\(_8\))alkyl, aryl-(C\(_1\)-C\(_8\))alkyl, (C\(_1\)-C\(_8\))alkoxycarbonylaryl, aryl-(C\(_1\)-C\(_8\))alkyloxy and heteroaryl-(C\(_1\)-C\(_8\))alkyloxy may optionally be substituted with one or more substituents, preferably with one or two substituents, independently selected from chloro, bromo, (C\(_1\)-C\(_8\))alkyl, (C\(_1\)-C\(_8\))alkoxy, S-(C\(_1\)-C\(_8\))alkyl, SO-(C\(_1\)-C\(_8\))alkyl, SO\(_2\)-(C\(_1\)-C\(_8\))alkyl, hydroxy-(C\(_1\)-C\(_8\))alkyl and trfluoromethyl; or R\(^1\) is a group of the formula.
wherein the dotted line represents an optional double bond, W, Q and Z are independently selected from hydrogen, \((C_1-C_6)\)alkyl and trifluoromethyl, phenyl, furyl, triazolyl, thiazolyl and thienyl, wherein said phenyl, furyl, triazolyl, thiazolyl and thienyl may optionally be substituted with one or more substituents, preferably with from zero to two substituents, independently selected from \((C_1-C_6)\)alkyl, \((C_1-C_6)\)alkoxy, trifluoromethyl and hydroxy;

or \(R^1\) is a group of the formula \(-C-R^6\), wherein \(R^6\) is hydrogen, \((C_1-C_6)\)alkyl, aryl selected from phenyl and naphthyl, or heteroaryl selected from pyridyl, furyl, thienyl, imidazolyl, pyrazolyl, triazolyl, thiazolyl, oxazolyl, benzothiazolyl, benzofuranyl and benzothienyl, wherein said aryl and heteroaryl groups may optionally be substituted with one or more substituents, preferably with from zero to two substituents, independently selected from chloro, bromo, nitro, trifluoromethyl, \((C_1-C_6)\)alkoxy, \(-S-(C_1-C_6)\)alkyl, \(-SO-(C_1-C_6)\)alkyl and \(-SO_2-(C_1-C_6)\)alkyl;

or \(R^1\) is a group of the formula \(Y-O-CH-R^7\), wherein \(R^7\) is aryl selected from phenyl and naphthyl, or heteroaryl selected from pyridyl, furyl, thienyl, imidazolyl, pyrazolyl, triazolyl, thiazolyl, oxazolyl, benzothiazolyl, benzofuranyl and benzothienyl and quinolinyl, wherein said aryl and heteroaryl groups may optionally be substituted with one or more substituents, preferably with from zero to two substituents, independently selected from chloro, bromo, \((C_1-C_6)\)alkyl, \((C_1-C_6)\)alkoxy, \(-S-(C_1-C_6)\)alkyl, \(-SO-(C_1-C_6)\)alkyl, \(-SO_2-(C_1-C_6)\)alkyl and trifluoromethyl, and \(Y\) is hydrogen, benzyl, acetyl, benzoyl, aryl selected from phenyl and naphthyl, heteroaryl selected from furyl, thienyl, thiazolyl and oxazolyl, wherein said aryl and heteroaryl groups may optionally be substituted with one or more substituents, preferably with from zero to two substituents, independently selected from chloro, bromo, nitro, trifluoromethyl, \((C_1-C_6)\)alkyl, \((C_1-C_6)\)alkoxy, \(-S-(C_1-C_6)\)alkyl, \(-SO-(C_1-C_6)\)alkyl and \(-SO_2-(C_1-C_6)\)alkyl.
These novel compounds are hereinafter referred to, collectively, as compounds of the formula I A. This invention also relates to the pharmaceutically acceptable acid addition and base salts of the novel compounds of formula I A.

This invention also relates to mutual prodrugs of a compound of the formula I and an aldose reductase inhibiting compound.

This invention also relates to compounds of the formula

![Chemical structure](image)

wherein R²⁸ is Y³-C-O-Y²⁻ or O₂N₃H₂₂₃O⁻R²⁸⁻H-N⁺CO₂⁻, and R²⁸ is aryl selected from phenyl and naphthyl, wherein said aryl may optionally be substituted with one or more substituents, preferably with one or two substituents, independently selected from chloro, bromo, (C₁₋₃₃)alkyl, (C₁₋₃₃)alkoxy, -(C₁₋₃₃)alkyl, -(SO₂⁻(C₁₋₃₃)alkyl, -(SO₂⁻(C₁₋₃₃)alkyl, hydroxy-(C₁₋₃₃)alkyl and trifluoromethyl;

R² and R³ are independently selected from hydrogen, (C₁₋₃₃)alkyl, phenyl and phenyl-(C₁₋₃₃)alkyl, wherein said phenyl and the phenyl moiety of said phenyl -(C₁₋₃₃)alkyl may optionally be substituted with one or more substituents, preferably with from zero to two substituents, independently selected from (C₁₋₃₃)alkyl, (C₁₋₃₃)alkoxy, chloro, bromo and trifluoromethyl;

or R² and R³ form, together with the nitrogen to which they are attached, a cyclic group selected from azetidino, pyrrolidino, piperidino, piperazino and morpholino,

wherein said cyclic group may optionally be substituted with from zero to two substituents independently selected from (C₁₋₃₃)alkyl, -(CONH₂), -(SO₂⁻NH₂), N-(C₁₋₃₃)alkylsulfamoyl, N,N-di-(C₁₋₃₃)alkylsulfamoyl, (C₁₋₃₃)alkoxycarbonyl, N,N-di-(C₁₋₃₃)alkylcarbamoyl, N-(C₁₋₃₃)alkylcarbamoyl, N-phenylcarbamoyl, (C₁₋₃₃)alkylcarbonyl, phenylcarbonyl, (C₁₋₃₃)alkylsulfonyl, (C₁₋₃₃)alkylsulfanyl, phenylsulfonyl, heteroaryl sulfonyl and heteroaryl carbonyl, wherein the heteroaryl moieties of said heteroaryl carbonyl and heteroaryl sulfonyl are selected from furyl,
thienyl, thiazolyl and oxazolyl, and wherein the phenyl moiety of said phenylcarbonyl, N-phenylcarbamoyl, phenylcarbonyl and phenylsulfonyl may optionally be substituted with one or more substituents, preferably with from zero to two substituents, independently selected from (C₁₋C₄)alkyl, (C₁₋C₆)alkoxy, chloro, bromo, nitro, amino, cyano and trifluoromethyl;

R¹ is hydrogen, chloro, bromo, cyano, nitro, trifluoromethyl, amino, (C₁₋C₆)alkyl, (C₁₋C₆)hydroxyalkyl, (C₁₋C₆)alkoxy, phenyl, naphthyl or furyl, wherein said phenyl, naphthyl and furyl may optionally be substituted with one or more substituents, preferably with from zero to two substituents, independently selected from chloro, bromo, trifluoromethyl, (C₁₋C₆)alkyl, (C₁₋C₆)alkoxy, -S-(C₁₋C₆)alkyl, -SO₂-(C₁₋C₆)alkyl and hydroxy;

R⁶ is hydrogen, (C₁₋C₆)alkyl, (C₁₋C₆)alkoxy, trifluoromethyl, (C₁₋C₆)hydroxyalkyl, -S-(C₁₋C₆)alkyl, -SO₂-(C₁₋C₆)alkyl, -SO₂-(C₁₋C₆)alkyl, phenyl or furyl, wherein said phenyl and furyl may optionally be substituted with one or more substituents, preferably with from zero to two substituents, independently selected from chloro, bromo, trifluoromethyl, (C₁₋C₆)alkyl, (C₁₋C₆)alkoxy, -S-(C₁₋C₆)alkyl, -SO₂-(C₁₋C₆)alkyl, -SO₂-(C₁₋C₆)alkyl and hydroxy;

R⁷ is hydrogen or R¹;

R⁷ is aryl selected from phenyl and naphthyl, or heteroaryl selected from pyridyl,
furyl, thienyl, imidazolyl, pyrazolyl, triazolyl, thiazolyl, oxazolyl, benzothiazolyl, benzo[1,3]dioxolanyl, benzothienyl and quinolyl, wherein said aryl and heteroaryl groups may optionally be substituted with one or more substituents, preferably with from zero to two substituents, independently selected from chloro, bromo, (C₁₋C₆)alkyl, (C₁₋C₆)alkoxy, -S-(C₁₋C₆)alkyl, -SO₂-(C₁₋C₆)alkyl, -SO₂-(C₁₋C₆)alkyl and trifluoromethyl, and Y is hydrogen, benzyl, acetyl, benzoyl, aryl selected from phenyl and naphthyl, or heteroaryl selected from furyl, thienyl, thiazolyl and oxazolyl, wherein said aryl and heteroaryl groups may optionally be substituted with one or more substituents, preferably with from zero to two substituents, independently selected from chloro, bromo, nitro, trifluoromethyl, (C₁₋C₆)alkyl, (C₁₋C₆)alkoxy, -S-(C₁₋C₆)alkyl, -SO₂-(C₁₋C₆)alkyl and -SO₂-(C₁₋C₆)alkyl;
-9-

\[
\begin{array}{c}
\text{Y}^5 \text{ is } -\text{C}-\text{O}, -\text{CH}-\text{C}-\text{O}, \text{ or } \text{Y}^3 \text{ is absent (i.e., the carbon to which } \text{R}^8 \text{ is attached is directly bonded to } \text{Y}^2-\text{C}-\text{O});
\end{array}
\]

5 \quad \text{Y}^4 \text{ is hydrogen or (C}_1-\text{C}_6\text{)alkyl; and}

\text{Y}^3 \text{ is selected from the following groups:}
and

wherein A is CH₂, CH₃CH₂, CH(CH₃) or CH₂-C-NH;
B is oxygen or sulfur;
R⁹ is selected from phenyl, benzothiazol-2-yl, benzoxazol-2-yl, benzofuran-2-yl, benzo thiophen-2-yl, thiazolopyridin-2-yl, oxazolopyridin-2-yl, 3-phenyl-1,2,4-oxadiazol- 5-yl, and 5-phenyl-1,2,4-oxadiazol-3-yl, and R⁹ may optionally be substituted with from one to three substituents independently selected from fluorine, chlorine, bromine, methyl, methylthio, methoxy, hydroxy and trifluoromethyl;
R¹⁰ and R¹¹ are independently selected from hydrogen, fluorine, chlorine, bromine, (C₁-C₄)alkyl, (C₁-C₄)alkylthio, (C₁-C₄)alkoxy and trifluoromethyl;
or R¹⁰ and R¹¹ together, with the carbons to which they are attached, form a group of the formula

wherein p is 1 or 2; D and E are independently selected from -CH₂-, oxygen and sulfur, except that D and E cannot both be oxygen and cannot both be sulfur; R¹² and R¹³ are independently selected from hydrogen, fluorine, chlorine, bromine, (C₁-C₄)alkyl, (C₁-C₄)alkylthio, (C₁-C₄)alkoxy and trifluoromethyl; and F and G are independently selected from -CH₂- and nitrogen;
R¹² and R¹³ are independently selected from hydrogen, fluorine, chlorine, bromine, (C₁-C₄)alkyl, (C₁-C₄)alkylthio, (C₁-C₄)alkoxy and trifluoromethyl;
K is oxygen, sulfur, SO or SO₂;

R¹⁴ is hydrogen, fluoro, chloro, bromo, methyl, nitro, cyano, methanesulfonyl or benzoyl;

R¹⁵ is hydrogen, fluoro, chloro, bromo, carboxy, (C₁-C₃)alkyl, (C₁-C₃)alkoxy or benzyloxy;

R¹⁶ is hydrogen, fluoro, chloro, bromo or (C₁-C₃)alkyl;

or R¹⁵ and R¹⁶, together with the carbon atoms to which they are attached, form a 7,8-benzo ring;

R¹⁷ is (C₁-C₄)alkyl, trifluoromethyl or (CH₂)nAr, wherein n is 0, 1 or 2 and Ar is phenyl optionally substituted with one or two substituents independently selected from methoxy, fluoro, chloro and bromo;

R¹⁸ is hydrogen, methyl or ethyl;

or R¹⁷ and R¹⁸, together with the carbon to which they are attached, form a saturated 4 or 5 membered carbocyclic spiro ring; and

R¹⁹ is hydrogen or methyl;

with the proviso that: (a) when K is other than oxygen, R¹⁴ is fluoro, chloro, cyano or nitro, and R¹⁵ and R¹⁶ do not form a 7,8-benzo ring; and (b) when K is other than oxygen or R¹⁷ is other than methyl, ethyl or trifluoromethyl, both R¹⁸ and R¹⁹ are hydrogen; and (c) when Y² is a group of the formula XIVA, R⁹ is benzo[b]thiazol-2-yl or substituted benzo[b]thiazol-2-yl;

and the pharmaceutically acceptable salts of such compounds.

Compounds of the formula Y³-C-OH wherein Y³ is one of the above groups VII to XIV are known aldose reductase inhibitors. Compounds of the formula VI wherein

R²⁵ is Y³-C-O-Y²- are conjugates and mutual prodrugs of such aldose reductase inhibitors and the pharmaceutically active compounds of the formula I wherein R¹ is -CH₂OH, -CHR²OH or hydroxy-(C₁-C₃)alkyl. As mutual prodrugs, they are expected to release in vivo both pharmaceutically active agents - a compound of the formula I wherein R¹ is -CH₂OH, -CHR²OH or hydroxy-(C₁-C₃)alkyl and an aldose reductase
inhibitor of the formula $Y^2\text{C-OH}$.  

Compounds of the formula $O_2N-\text{CH}_2-\text{SO}_2-R^{25}-\text{NH}_2$, wherein $R^{25}$ is defined as above, are also known aldose reductase inhibitors. Compounds of the formula $\text{VI}$ wherein $R^{25}$ is $O_2\text{NH}_2\text{CO}_2\text{S}-R^{25}-\text{HN-C}$ are conjugates and mutual prodrugs of such aldose reductase inhibitors and the pharmaceutically active compounds of the formula I wherein $R^1$ is $-\text{CH}_2\text{OH}$, $-\text{CHR}^7\text{OH}$ or hydroxy-$(\text{C}_1-\text{C}_6)$alkyl. As mutual prodrugs, they are expected to release in vivo both pharmaceutically active agents - a compound of the formula I wherein $R^1$ is $-\text{CH}_2\text{OH}$, $-\text{CHR}^7\text{OH}$ or hydroxy-$(\text{C}_1-\text{C}_6)$alkyl and an aldose reductase inhibitor of the formula $O_2N-\text{CH}_2-\text{SO}_2-R^{25}-\text{NH}_2$.

Preferred embodiments of this invention include those compounds of the formula $\text{VI}$, and pharmaceutically acceptable salts thereof, wherein $R^{25}$ is $Y^2\text{C-O-Y}^2$, $Y^2$ is not absent and: (a) $Y^3$ is a group of the formula VII, $R^9$ is phenyl, substituted phenyl, benzo-thiazol-2-yl or benzoaxazol-2-yl, $A$ is $-\text{CH}_2\gamma$, and $R^{12}$ and $R^{13}$ are either both methyl or they form, together with the carbons to which they are attached, a group of the formula

(b) $Y^3$ is a group of the formula VIII, $R^9$ is phenyl, substituted phenyl, benzo-thiazol-2-yl or benzoaxazol-2-yl, $A$ is $-\text{CH}_2\gamma$, and $R^{12}$ and $R^{13}$ are independently selected from bromo and chloro; (c) $Y^3$ is a group of the formula IX and each of $R^{12}$ and $R^{13}$ is hydrogen; (d) $Y^3$ is a group of the formula X and $R^{12}$ and $R^{13}$ are independently selected from $(\text{C}_1-\text{C}_6)$alkoxy and trifluoromethyl; (e) $Y^3$ is a group of the formula XI and $R^{12}$ and $R^{13}$ are independently selected from $(\text{C}_1-\text{C}_6)$alkyl; (f) $Y^3$ is a group of the formula XII, $R^9$ is phenyl, substituted phenyl or benzothiazol-2-yl, $A$ is $-\text{CH}_2\gamma$ and $R^{12}$ and $R^{13}$ are independently selected from chloro and bromo; or (g) $Y^3$ is a group of the formula XIII,
each of R\textsuperscript{14} and R\textsuperscript{18} is hydrogen, each of R\textsuperscript{17} and R\textsuperscript{18} is methyl, R\textsuperscript{15} is 6-chloro or 6-fluoro and R\textsuperscript{16} is 7-chloro or 7-fluoro.

Preferred embodiments of this invention also include those compounds of the formula VI that are mutual prodrugs of a compound of the formula I and an aldose reductase inhibitor of the formula Y\textsuperscript{3}-C-OH, wherein such aldose reductase inhibitor is selected from:

3,4-dihydro-4-oxo-3-[[[5-trifluoromethyl]-2-benzothiazolyl]-methyl]-1-phthalazineacetic acid;

3,4-dihydro-4-oxo-3-[[[5,7-difluoro]-2-benzothiazolyl]-methyl]-1-phthalazineacetic acid;

2-[4-(4,5,7-trifluorobenzothiazol-2-yl)]methyl-3,4-dihydro-3-oxo-2H-1,4-benzothiazin-2-yl] acetic acid;

[4,5-dimethyl-6-oxo-1-((5-trifluoromethyl-benzothiazolyl)methyl)-1,6-dihydropyridazin-3-yl]-acetic acid;

[4,5-dimethyl-6-oxo-1-((5,7-difluoro-benzothiazolyl)methyl)-1,6-dihydropyridazin-3-yl]-acetic acid;

[4,5-dimethyl-6-oxo-1-((5,7-dichlorobenzothiazol-2-yl)methyl)-1,6-dihydropyridazin-3-yl]-acetic acid;

4-oxo-3-[[[5-trifluoromethyl]-benzothiazol-2-ylmethyl]3,4,5,6,7,8-hexahydrophthalalizin-1-yl]-acetic acid;

4-oxo-3-[[[5,7-difluoro]-benzothiazol-2-ylmethyl]-3,4,5,6,7,8-hexahydrophthalazin-1-yl]-acetic acid;

4-oxo-3-[[[5,7-dichloro]-benzothiazol-2-ylmethyl]-3,4,5,6,7,8-hexahydrophthalazin-1-yl]-acetic acid;

N-[[5-trifluoromethyl]-6-methoxy-1-naphthalenyl]thioxomethyl]-N-methylglycine;

3,4-dihydro-4-oxo-3-[(4-bromo-2-fluorobenzyl)-1-phthalazineacetic acid;

(Z)-3-(carboxymethyl)-[[2E]-methylphenylpropenylidene]-rhodanine;

2-[3-(4-bromo-2-fluorobenzyl)-7-chloro-1,2,3,4-tetrahydro-2,4-dioxo-1-quinazoliny1]-acetic acid;
2R,4R-6,7-dichloro-4-hydroxy-2-methylchroman-4-acetic acid;
2R,4R-7-chloro-6-fluoro-4-hydroxy-2-methylchroman-4-acetic acid; and
3,4-dihydro-2,8-diisopropyl-3-oxo-2H-1,4-benzoxazine-4-acetic acid.
This invention also relates to a pharmaceutical composition comprising: (a) an
amount of a mutual prodrug of a compound of the formula I and an aldose reductase
inhibiting compound, or a pharmaceutically acceptable salt of such a prodrug, effective
in lowering the level of fructose in one or more of the tissues of a mammal, including
a human, that are affected by diabetes; and (b) a pharmaceutically acceptable carrier.
This invention also relates to a method of lowering the level of fructose in one
or more of the tissues of a mammal, including a human, that are affected by diabetes,
comprising administrating to said mammal a fructose lowering effective amount of a
mutual prodrug of a compound of the formula I and an aldose reductase inhibiting
compound, or a pharmaceutically acceptable salt of such a prodrug.
This invention also relates to a pharmaceutical composition comprising: (a) an
amount of a mutual prodrug of a compound of the formula I and an aldose reductase
inhibiting compound, or a pharmaceutically acceptable salt of such a prodrug, effective
in treating or preventing a diabetic complication such as diabetic neuropathy, diabetic
retinopathy, diabetic nephropathy, or diabetic microangiopathy or macroangiopathy in
a mammal, including a human; and (b) a pharmaceutically acceptable carrier.
This invention also relates to a method of treating or preventing a diabetic
complication such as diabetic neuropathy, diabetic retinopathy, diabetic nephropathy,
or diabetic microangiopathy or macroangiopathy in a mammal, including a human,
comprising administrating to said mammal an amount of a mutual prodrug of a
compound of the formula I and an aldose reductase inhibiting compound, or a
pharmaceutically acceptable salt of such a prodrug, effective in treating or preventing
such complication.
This invention relates to a pharmaceutical composition comprising an amount
of a compound of the formula VI, or a pharmaceutically acceptable salt thereof, effective
in lowering the level of fructose in one or more of the tissues of a mammal, including
a human, that are affected by diabetes, and a pharmaceutically acceptable carrier.
This invention also relates to a method of lowering the level of fructose in one
or more of the tissues of a mammal, including a human, that are affected by diabetes,
comprising administering to said mammal a fructose lowering effective amount of a compound of the formula VI, or a pharmaceutically acceptable salt thereof.

This invention also relates to a pharmaceutical composition comprising an amount of a compound of the formula VI, or a pharmaceutically acceptable salt thereof, effective in treating or preventing a diabetic complication such as diabetic neuropathy, diabetic retinopathy, diabetic nephropathy, or diabetic microangiopathy or macroangiopathy in a mammal, including a human, and a pharmaceutically acceptable carrier.

This invention also relates to a method of treating or preventing a diabetic complication such as diabetic neuropathy, diabetic retinopathy, diabetic nephropathy, or diabetic microangiopathy or macroangiopathy in a mammal, including a human, comprising administering to said mammal an amount of a compound of the formula VI, or a pharmaceutically acceptable salt thereof, effective in treating or preventing such complication.

Compounds of the formulae XV-XIX, which are defined below, and their pharmaceutically acceptable salts, are also known compounds that exhibit activity as aldose reductase inhibitors. These compounds have the following structures:
wherein L is oxygen, CH$_2$ sulfur or -C-$\cdot$-$\cdot$;

J is hydrogen, methyl or -CNH$_2$;

G is CH or N;

R$^{20}$ and R$^{21}$ are independently selected from hydrogen, fluorine, chlorine, (C$_1$-$C_6$)alkyl, (C$_1$-$C_6$)alkoxy, -S-(C$_1$-$C_6$)alkyl, -SO$_2$-(C$_1$-$C_6$)alkyl or -SO$_3$-(C$_1$-$C_6$)alkyl;

M is phenyl, naphthyl or a heteroaryl group selected from furan, morpholine, pyrrolidine, tetrahydroisoquinoline, thiophene, thiazole, oxazole, benzofuran,
benzothiophene, benzothiazole, benzoxazole and indole, wherein said phenyl, naphthyl and heteroaryl groups may optionally be substituted with up to three substituents independently selected from chloro, fluoro, bromo, cyano, nitro, hydroxy, carboxy, amino (C₁₋₇₆)alkylamino, (C₁₋₇₆)dialkylamino, (C₁₋₇₆)alkanoylamino, (C₁₋₇₆)alkanoyl, (C₁₋₇₆)alkyl, (C₂₋₇₆)alkenyl, (C₂₋₇₆)alkoxy, fluoro-(C₁₋₇₆)alkyl, (C₁₋₇₆)alkoxy, fluoro-(C₁₋₇₆)alkoxy, (C₁₋₇₆)hydroxyalkyl, carbamoyl, (C₁₋₇₆)alkylcarbamoyl, (C₁₋₇₆)dialkylcarbamoyl, sulfamoyl, (C₁₋₇₆)alkysulfamoyl, (C₁₋₇₆)dialkylsulfamoyl, (C₁₋₇₆)alkoxycarbonyl,(C₁₋₇₆)alkylenedioxy,(C₁₋₇₆)alkanesulfonamido,-S-(C₁₋₇₆)alkyl,-SO₂-(C₁₋₇₆)alkyl, phenyl, phenoxy, benzylxoy, benzylxoycarbonyl, benzamido, and benzenesulfonamido, and wherein said phenyl and the phenyl moieties of said phenoxy, benzylxoy, benzylxoycarbonyl, benzamido and benzenesulfonamido may optionally be substituted with a substituent selected from chlorine, fluorine, (C₁₋₇₆)alkyl (C₁₋₇₆)alkoxy and

\[
\begin{align*}
R^{22} & \quad \text{O} \\
R^{23} & \quad \text{N}-\text{C}-\text{C}-Y^5-
\end{align*}
\]

wherein Y^5 is oxygen or sulfur, or Y^5 is absent (i.e., the phenyl ring is bonded to the carbon to which R^{22} and R^{23} are attached), and R^{22} and R^{23} are independently selected from hydrogen and (C₁₋₇₆)alkyl, and the phenyl moiety to which the -NHCOC(R^{22})(R^{23})-Y^5- sidechain is attached may optionally be substituted with from one to three substituents independently selected from hydrogen, halo, trifluoromethyl, nitro, cyano, (C₁₋₇₆)alkyl, (C₁₋₇₆)alkoxy and (C₁₋₇₆)alkanoyl, or any adjacent pair of substituents may form, together with the carbons to which they are attached, a benzo ring which may optionally be substituted with a substituent independently selected from halo, (C₁₋₇₆)alkyl and (C₁₋₇₆)alkoxy;

with the proviso that: (a) when J is -CNH₂, G is CH and L is oxygen; and (b) M is not 2-carboxyphenyl.

This invention also relates to a pharmaceutical composition comprising: (a) an amount of a compound of the formula I, or a pharmaceutically acceptable salt thereof,
that is effective in lowering the level of fructose in one or more of the tissues of a mammal, including a human, that are affected by diabetics; (b) an amount of an aldose reductase inhibiting compound, or a pharmaceutically acceptable salt thereof, that is effective in lowering the level of fructose in one or more of the tissues of a mammal, including a human, that are affected by diabetes and (c) a pharmaceutically acceptable carrier.

This invention also relates to a method of lowering the level of fructose in one or more of the tissues of a mammal, including a human, that are affected by diabetes, comprising administering to said mammal a fructose lowering effective amount of a compound of the formula I, or a pharmaceutically acceptable salt thereof, in combination with a fructose lowering effective amount of an aldose reductase inhibiting compound, or a pharmaceutically acceptable salt thereof.

This invention also relates to a pharmaceutical composition comprising: (a) an amount of a compound of the formula I, or a pharmaceutically acceptable salt thereof, effective in treating or preventing a diabetic complication such as diabetic neuropathy, diabetic retinopathy, diabetic nephropathy, or diabetic microangiopathy or macroangiopathy in a mammal, including a human; (b) an amount of an aldose reductase inhibiting compound, or a pharmaceutically acceptable salt thereof, effective in treating or preventing a diabetic complication such as diabetic neuropathy, diabetic retinopathy, diabetic nephropathy or diabetic microangiopathy or macroangiopathy in a mammal, including a human; and (c) a pharmaceutically acceptable carrier.

This invention also relates to a method of treating or preventing a diabetic complication such as diabetic neuropathy, diabetic retinopathy, diabetic nephropathy, or diabetic microangiopathy or macroangiopathy in a mammal, including a human, comprising administering to said mammal an amount of a compound of the formula I, or a pharmaceutically acceptable salt thereof, effective in treating or preventing such complication, in combination with an amount of an aldose reductase inhibiting compound, or a pharmaceutically acceptable salt thereof, effective in treating or preventing such complication.

This invention also relates to a pharmaceutical composition comprising: (a) an amount of a compound of the formula I, or a pharmaceutically acceptable salt thereof, that is effective in lowering the level of fructose in one or more of the tissues of a mammal, including a human, that are affected by diabetics; (b) an amount of a
compound of the formula XV, XVI, XVII, XVIII or XIX, or a pharmaceutically acceptable salt thereof, that is effective in lowering the level of fructose in one or more of the tissues of a mammal, including a human, that are affected by diabetes and (c) a pharmaceutically acceptable carrier.

This invention also relates to a method of lowering the level of fructose in one or more of the tissues of a mammal, including a human, that are affected by diabetes, comprising administering to said mammal a fructose lowering effective amount of a compound of the formula I, or a pharmaceutically acceptable salt thereof, in combination with a fructose lowering effective amount of a compound of the formula XV, XVI, XVII, XVIII or XIX, or a pharmaceutically acceptable salt thereof.

This invention also relates to a pharmaceutical composition comprising: (a) an amount of a compound of the formula I, or a pharmaceutically acceptable salt thereof, effective in treating or preventing a diabetic complication such as diabetic neuropathy, diabetic retinopathy, diabetic nephropathy, or diabetic microangiopathy or macroangiopathy in a mammal, including a human; (b) an amount of a compound of the formula XV, XVI, XVII, XVIII or XIX, or a pharmaceutically acceptable salt thereof, effective in treating or preventing a diabetic complication such as diabetic neuropathy, diabetic retinopathy, diabetic nephropathy or diabetic microangiopathy or macroangiopathy in a mammal, including a human; and (c) a pharmaceutically acceptable carrier.

This invention also relates to a method of treating or preventing a diabetic complication such as diabetic neuropathy, diabetic retinopathy, diabetic nephropathy, or diabetic microangiopathy or macroangiopathy in a mammal, including a human, comprising administering to said mammal an amount of a compound of the formula I, or a pharmaceutically acceptable salt thereof, effective in treating or preventing such complication, in combination with an amount of a compound of the formula XV, XVI, XVII, XVIII or XIX, or a pharmaceutically acceptable salt thereof, effective in treating or preventing such complication.

Preferred embodiments of this invention include those pharmaceutical compositions and methods set forth above, wherein the compound of formula I, or pharmaceutically acceptable salt thereof, that is employed is a compound wherein $R'$ is $(C_1-C_6)$-hydroxyalkyl, $(C_1-C_6)$-alkoxy, imidazolyl, furyl, pyrazolyl, tetrahydrofuryl, thieryl
or triazolyl, or R¹ is Y-O-CH-R⁷ wherein R⁷ is benzothiazolyl, furyl, imidazolyl, pyrazolyl, thienyl, triazolyl, (C₁₋₅₆)alkyl or trifluoromethyl, and Y is hydrogen or (C₁₋₅₆)alkyl, and R² and R³ form, together with the nitrogen to which they are attached, a group of the formula

\[
\begin{array}{c}
\text{N} \\
\text{N} \\
\text{X} = 0 \\
\text{R}^{24}
\end{array}
\]

wherein X is carbon or -SO₂- and R²⁴ is amino, (C₁₋₅₆)alkylamino, di-(C₁₋₅₆)alkylamino or pyridyl.

Particularly preferred embodiments of this invention are those pharmaceutical compositions and methods referred to above, wherein the compound of formula I, or pharmaceutically acceptable salt thereof, that is employed is a compound wherein R¹ is (C₁₋₅₆)alkyl, (C₁₋₅₆)hydroxyalkyl, (C₁₋₅₆)alkoxy, furyl, triazolyl, or tetrahydrofuryl, or

\[
\begin{array}{c}
\text{N} \\
\text{N} \\
\text{R}^{27}
\end{array}
\]

wherein R²⁷ and R²⁸ are, independently, methyl or ethyl.

Other particularly preferred embodiments of this invention are those pharmaceutical compositions and methods referred to above, wherein the compound of formula I, or pharmaceutically acceptable salt thereof, that is employed is a

\[
\begin{array}{c}
\text{N} \\
\text{N} \\
\text{SO₂} \\
\text{R}^{28}
\end{array}
\]

compound wherein R¹ is (C₁₋₅₆)hydroxyalkyl, furyl or triazolyl, or R¹ is Y-O-CH-R⁷ wherein R⁷ is furyl, thienyl or trifluoromethyl and Y is hydrogen, each of R⁴ and R⁵ is hydrogen, and R² and R³ form, together with the nitrogen to which they are attached, a group of the formula
wherein $R^{27}$ and $R^{28}$ are, independently, hydrogen, methyl or ethyl.

Preferred embodiments of this invention also include the pharmaceutical compositions and methods set forth above, wherein the compound of formula I, or pharmaceutically acceptable salt thereof, that is employed is selected from:

- 4-[4-(N-methylsulfamoyl)-piperazino]-2-methylpyrimidine;
- 4-[4-(N-sulfamoyl)-piperazino]-2-methylpyrimidine;
- 4-[4-(N,N-dimethylsulfamoyl)-piperazino]-2-methylpyrimidine;
- 4-[4-(N-methylsulfamoyl)-piperizino]-2-hydroxymethylpyrimidine;
- 4-[4-(N-sulfamoyl)-piperizino]-2-hydroxymethylpyrimidine; and
- 4-[4-(N,N-dimethylsulfamoyl)-piperizino]-2-hydroxymethylpyrimidine.

Preferred embodiments of this invention also include those pharmaceutical compositions and methods set forth above that comprise or employ a composition comprising an aldose reductase inhibitor selected from:

- (4-amino-2,6-dimethylphylsulfonyl)nitromethane;
- N,N-diisopropyl-N-[3,5-dimethyl-4-(nitromethylsulfonyl)phenyl]oxamide;
- N-[3,5-dimethyl-4-(nitromethylsulfonyl)phenyl]-2-(piperidino)glyoxamide;
- [2,6-dimethyl-4-(phenylacetamido)phenylsulfonyl]nitromethane;
- [2,6-dimethyl-4-(2-phenoxyacetamido)phenylsulfonyl]nitromethane;
- [2,6-dimethyl-4-(2-3-methylphenoxyacetamido)phenyl)sulfonyl]nitromethane;
- [2,6-dimethyl-4-(2-[3-chlorophenoxyacetamido]phenyl)sulfonyl]nitromethane;
- [2,6-dimethyl-1-((2,4,6-trimethylphenyl)acetamido)phenylsulfonyl]nitromethane;
- 2,6-dimethyl-4-((2-methylphenyl)acetamido)phenylsulfonyl nitromethane;
- 2,6-dimethyl-4-((2-fluorophenyl)acetamido)phenylsulfonyl nitromethane;
- 2-(nitromethylsulfonyl)thiophene;
- 2-chloro-5-(nitromethylsulfonyl)thiophene;
- N-(nitromethylsulfonyl)morpholine;
- N-(nitromethylsulfonyl)piperidine;
- N-(nitromethylsulfonyl)indoline;
- d-6-fluoro-spiro(chroman-4,4'-imidazolidine)-2',5'-dione;
2-fluoro-spiro(9H-fluorene-9,4'-imidazolidine)-2',5'-dione;  
2,7-difluoro-spiro(9H-fluorene-9,4'-imidazolidine)-2',5'-dione;  
2,7'-difluoro-5-methoxy-spiro(9H-fluorene-9,4'-imidazolidine)-2',5'-dione;  
7-fluoro-spiro(5H-indenol[1,2-b]pyridine-5,3'-pyrroolidine)2,5'-dione;  
d-cis-6'-chloro-2',3'-dihydro-2'-methyl-spiro-(imidazolidine-4,4'-4'H-pyran(2,3- 
b)pyridine)-2,5'-dione;  
spiro[imidazolidine-4,5'(6H)-quinoline]2,5-dione-3'-chloro-7',8'-dihydro-7'-methyl- ,  
(5'S-cis); and  
(2S,4S)-6-fluoro-2',5'-dioxospiro(chroman-4,4'-imidazolidine)-2-carboxamide.  

"A sorbitol dehydrogenase inhibiting effective amount of a compound of the 
formula I, or a pharmaceutically acceptable salt thereof," as used herein, refers to an 
amount of a compound of the formula I, or a pharmaceutically acceptable salt thereof, 
that exhibits sorbitol dehydrogenase inhibiting activity, or an amount of such compound 
or salt that yields a metabolite in vivo that exhibits sorbitol dehydrogenase inhibiting 
activity.

The term "alkyl", as used herein, unless otherwise indicated, includes saturated 
monovalent hydrocarbon radicals having straight, branched or cyclic moieties or 
combinations thereof.

The term "alkoxy", as used herein, includes O-alkyl groups wherein "alkyl" is 
defined as above.

The term "one or more substituents," as used herein, includes from one to the 
maximum number of substituents possible based on the number of available bonding 
sites.

The acids that may be used to prepare pharmaceutically acceptable acid 
addition salts of those compounds of formulae I and VI that are basic in nature are 
those which form non-toxic acid addition salts, i.e., salts containing pharmacologically 
acceptable anions, such as the hydrochloride, hydrobromide, hydroiodide, nitrate, 
sulfate, bisulfate, phosphate, acid phosphate, acetate, lactate, citrate, acid citrate, 
tartrate, bitartrate, succinate, maleate, fumarate, gluconate, saccharate, benzoate, 
methanesulfonate, ethanesulfonate, benzene-sulfonate, p-toluenesulfonate and pamoate 
[i.e., 1,1'-methylene-bis-(2-hydroxy-3-naphthoate)] salts. The chemical bases that may 
be used as reagents to prepare pharmaceutically acceptable base salts of those 
compounds of formulae I and VI that are acidic in nature are those that form non-toxic
base salts with such compounds. Such non-toxic base salts include, but are not limited
to those derived from such pharmacologically acceptable cations such as alkali metal
cations (e.g., potassium and sodium) and alkaline earth metal cations (e.g., calcium
and magnesium), ammonium or water-soluble amine addition salts such as N-
methylglucamine-(meclumine), and the lower alkanolammonium and other base salts
of pharmaceutically acceptable organic amines.

**Description of the Drawings**

Figure 1 illustrates the dose dependent lowering of erythrocyte fructose by 4-[4-
(N,N-dimethylsulfamoyl)piperizino]-2-methylpyrimidine (referred to in Figure 1 as
"Compound 1") in diabetic rats.

Figure 2 illustrates the dose dependent elevation of erythrocyte sorbitol by 4-[4-
(N,N-dimethylsulfamoyl)piperizino]-2-methylpyrimidine (referred to in Figure 2 as
"Compound 1") in diabetic rats.

Figure 3 illustrates the dose dependent lowering of nerve fructose by 4-[4-(N,N-
dimethylsulfamoyl)piperizino]-2-methylpyrimidine (referred to in Figure 3 as "Compound
1") in diabetic rats.

Figure 4 illustrates the dose dependent elevation of nerve sorbitol by 4-[4-(N,N-
dimethylsulfamoyl)piperizino]-2-methylpyrimidine (referred to in Figure 4 as "Compound
1") in diabetic rats.

Figure 5 illustrates the dose dependent in vitro inhibition of sorbitol
dehydrogenase by sera from rats dosed with 4-[4-(N,N-dimethylsulfamoyl)piperizino]-2-
methylpyrimidine (referred to in Figure 5 as "Compound 1").

Figure 6 illustrates the dose dependent in vitro inhibition of sorbitol
dehydrogenase by urine from rats dosed with 4-[4-(N,N-dimethylsulfamoyl)piperizino]-2-
methylpyrimidine (referred to in Figure 6 as "Compound 1").

**Detailed Description of the Invention**

Many of the substituted pyrimidines of the formula I are known compounds.
These may be prepared from commercially available or known starting materials by the
procedures set forth in European Patent Application 470616A2, published February 12,

Compounds of the formula XV may be prepared as described in United States
Patent 4,130,714, which issued to Reinhard Sarges on December 19, 1978, United
States Patent 5,066,659 which issued to Christopher A. Lipinski on November 19, 1991,

\[ Y^3-C-OH \]

Compounds of the formula \( Y^3-C-OH \), wherein \( Y^3 \) is a group of the formula VII, as defined above, may be prepared as described in United States Patent 4,251,528, which issued to Brittain et al. on February 17, 1981, United States Patent 4,996,204, which issued to Mylari et al. on February 26, 1991, United States Patent 4,939,140, which issued to Larsen et al. on July 3, 1990, PCT Patent Application PCT/US 92/01603, which was filed on March 9, 1992, European Patent Application EP 436307, which was published on March 10, 1991, and French Patent Application FR 2647676A1, which was published on December 7, 1990. Compounds of the formula \( Y^3-C-OH \), wherein \( Y^3 \) is a group of the formula IX, as defined above, may be prepared as described in United States Patent 4,464,382, United States Patent 4,791,126 and United States Patent 4,831,045, which issued to Tanouchi et al. on, respectively, August 7, 1984, December
13, 1988 and May 16, 1989. All of the foregoing documents are incorporated herein by reference in their entirety.

Compounds of the formula \( Y^1 \cdot C \cdot OH \) wherein \( Y^3 \) is a group of the formula \( X \), as defined above, may be prepared as described in United States Patent 4,391,825, which issued to Bellini et al. on July 5, 1983, and in United States Patent 4,568,693, United States Patent 4,600,724 and United States Patent 4,705,882, which issued to Sestanj et al. on, respectively, February 4, 1986, July 15, 1986 and November 10, 1987.

Compounds of the formula \( Y^3 \cdot C \cdot OH \) wherein \( Y^3 \) is a group of the formula \( XI \), as defined above, may be prepared as described in United States Patent 4,771,050, which issued to Meguro et al. on September 13, 1988. Compounds of the formula \( Y^3 \cdot C \cdot OH \) wherein \( Y^3 \) is a group of the formula \( XII \), as defined above, may be prepared as described by Billon et al., Eur. J. Med. Chem., 25, 121 (1990). All of the foregoing documents are incorporated herein by reference in their entirety.

Compounds of the formula \( Y^3 \cdot C \cdot OH \) wherein \( Y^3 \) is a group of the formula \( XIII \), as defined above, may be prepared as described in United States Patent 4,883,410, which issued to Christopher A. Lipinski on August 1, 1989. Compounds of the formula \( Y^3 \cdot C \cdot OH \) wherein \( Y^3 \) is a group of the formula \( XIV \), as defined above, may be prepared as described in European Patent Application 325375, which was published on July 26, 1989. Compounds of the formula \( Y^3 \cdot C \cdot OH \) wherein \( Y^3 \) is a group of the formula \( XIVA \), as defined above, may be prepared as described in European Patent Application 492667A1, which was published on July 1, 1992. All of the foregoing documents are incorporated herein by reference in their entirety.
Methods of preparing the various compounds and compositions of this invention are described below. Unless otherwise noted, in the reaction schemes and discussion that follow, R^1 through R^{28}, Q, W, Y, Y^2, Y^3, Y^4, Y^5, A, B, D, E, G, J, L, and M are defined as above.

5 Reaction schemes 1-3 below illustrate methods of preparing the novel compounds of the formula IA.
**SCHEME 3**

\[ R^1 \text{ optionally substituted aryl, optionally substituted heteroaryl, dihydroxy-(C}_1{\text{-C}}_6{\text{)alkyl,}} \]
\[ \text{(C}_1{\text{-C}}_6{\text{)alkyl-S-(C}_1{\text{-C}}_6{\text{)alkyl})}}, \]
\[ \text{aryl-(C}_1{\text{-C}}_6{\text{)alkyloxy wherein the aryl moiety is optionally substituted,}} \]
\[ \text{aryl-(C}_1{\text{-C}}_6{\text{)alkyl wherein the aryl moiety is optionally substituted, or}} \]
\[ \text{heteroaryl-(C}_1{\text{-C}}_6{\text{)alkyl wherein the heteroaryl moiety is optionally substituted)} \]
Referring to scheme 1, compounds of the formula IA wherein \( R^1 \) is \(-CR^6 \) and \( R^6 \) is hydrogen may be prepared by oxidizing the corresponding compounds wherein \( R^1 \) is hydroxymethyl (\(-CH_2OH\)). Oxidizing agents that may be used include chromic acid, silver oxide, and activated manganese dioxide, with activated manganese dioxide being preferred. When chromic acid is used, the preferred solvent is water or an aqueous (\( C_3-C_6 \)) alkyl ketone (e.g., acetone) and the reaction temperature, which can range from about -78°C to about 25°C, is preferably from about -10°C to about 0°C. When silver oxide or activated manganese dioxide is used, the solvent is preferably a halocarbon solvent such as chloroform or methylene chloride, and the reaction temperature, which can range from about 0°C to about 100°C, is preferably between about 20°C and the reflux temperature of the solvent.

Compounds of the formula IA wherein \( R^1 \) is \(-CR^6 \) and \( R^6 \) is other than hydrogen may be prepared by first reacting the corresponding compound wherein \( R^1 \) is formyl (\( CHO \)) with an organolithium reagent of the formula \( R^6Li \) or an appropriate Grignard reagent of the formula \( R^6MgX \) wherein \( X \) is chloro, bromo, or iodo, and then oxidizing the reaction product. The initial reaction with the Grignard or organolithium reagent is generally conducted in a hydrocarbon solvent such as n-pentane, n-hexane, or n-heptane, at a temperature from about -70°C to about 0°C, preferably from about -70°C to about -20°C. The subsequent oxidation step may be carried out as described above for the oxidation of compounds wherein \( R^1 \) is hydroxymethyl.

Compounds of the formula IA wherein \( R^1 \) is \( YOCHR^7 \) and \( Y \) is hydrogen may be prepared by reacting the corresponding compounds wherein \( R^1 \) is \(-CH \) with an organolithium reagent of the formula \( R^7Li \) or an appropriate Grignard reagent of the formula \( R^7MgX \), in the manner described above for preparing compounds of the formula

\[ \text{O} \]

wherein \( R^1 \) is \(-CR^6 \) and \( R^6 \) is other than hydrogen. Treatment of the resulting
compounds with an appropriate reagent of the formula Y-L, wherein Y is other than hydrogen and L is a leaving group, in the presence of a strong base yields the corresponding compounds wherein R^1 is YOCHR^7 and Y is other than hydrogen. Examples of bases that may be used are sodium hydride in dimethylformamide and a (C_1-C_6)alkyllithium in a hydrocarbon solvent (e.g. n-pentane or n-hexane). Suitable leaving groups include chloro, bromo, iodo and OSO_2-(C_1-C_6)-alkyl. The reaction temperature can range from about -20°C to about 100°C, and is preferably from about 0°C to about 60°C.

Scheme 2 illustrates the preparation of compounds of the formula IA wherein R^1 is a group of the formula

![Diagram]

Referring to scheme 2, such compounds may be prepared by reacting the corresponding compounds wherein R^1 is -C-W with a Wittig reagent of the formula (C_6H_5)_3P=C-Z. Typically, this reaction is carried out in a nonprotic solvent such as dimethylformamide or a (C_6-C_8)alkylether, preferably tetrahydrofuran, at a temperature from about 0°C to about 100°C, preferably from about 25°C to about 100°C. The reactants in which R^1 is -C-W may be obtained by oxidation of the corresponding compounds wherein R^1 is -CHOHW as described above for the oxidation of compounds wherein R^1 is -CHOHR^6. Similarly, those compounds wherein R^1 is -CHOHW may be obtained by the procedure described above and depicted in scheme 1 for preparing the analogous compounds wherein R^1 is -CHOHR^6 or -CHOHR^7.

Compounds of the formula IA wherein R^1 is a group of the formula
may be formed by hydrogenation of the corresponding compounds wherein \( R^1 \) is

in the presence of a metal containing catalyst. Suitable hydrogenation catalysts include palladium, platinum, nickel, platinum oxide and rhodium. The preferred catalyst for hydrogenation is platinum on carbon. The reaction temperature may range from about 10°C to about 50°C, with about 25°C being preferred. The hydrogenation is generally carried out at a pressure from about 1.5 to about 4 atmospheres, preferably at about 3.0 atmospheres, in a suitable inert solvent such as acetic acid or a lower alcohol, preferably methanol, with about a stoichiometric quantity of hydrogen chloride present.

Compounds of the formula IA wherein \( R^1 \) is optionally substituted aryl, optionally substituted heteroaryl, dihydroxy-(C\(_1\)C\(_6\))alkyl or (C\(_1\)-C\(_6\))alkyl-S-(C\(_1\)-C\(_6\))alkyl may be prepared according to the reaction sequence illustrated and scheme 3. This reaction sequence is the same as that described in European Patent Applications 470616A2 and 384370A1, referred to above, with the exception that a compound of the formula \( R^1'C=\text{NHNH}_2 \), wherein \( R^1' \) is defined as above, is used as a starting material. The conditions, reagents and catalysts, etc. used in the reactions of scheme 3 are set forth in detail in the foregoing patent applications, which, as indicated above, have been incorporated herein by reference in their entirety.

Referring to scheme 3, a compound of formula II or its acid addition salt is reacted with a compound of formula III to give a compound of formula IV. The reaction is generally conducted or an alcoholic solvent such as methanol, ethanol or tert-butanol, at a temperature from about 25°C to about 100°C, preferably from about 25°C to about 50°C. When an acid addition salt of a compound of formula II is employed, the reaction is generally conducted as above in the presence of an alkali
metal or alkaline earth metal hydroxide (e.g., sodium, potassium, or calcium hydroxide) or an alkali metal alkoxide (e.g., sodium or potassium ethoxide or tert-butoxide) at temperatures ranging from about 10°C to about 80°C, preferably at temperatures between 30° and 60°C.

The compound of formula IV is converted into a pyrimidine derivative of the formula V by reacting it with an inorganic acid chloride, e.g., phosphorus oxychloride, thienyl chloride, phosphorus pentachloride or phosphorous trichloride. This reaction is usually conducted in an aromatic hydrocarbon solvent, e.g., benzene, toluene or xylene, at a temperature from about 30° to about 100°C. The preferred temperature range is between 30° and 60°C.

Reaction of the compound of formula V with the appropriate compound of formula NHRR'R' yields a compound of formula IA. Suitable solvents for this reaction include ethereal solvents such as ethyl ether, tetrahydrofuran, or dioxane and halocarbon solvents such as methylene chloride or chloroform. The reaction temperature may range from about 0°C to about 80°C. Preferably, the solvent is a halocarbon solvent and the temperature is between 0°C and 50°C.

Compounds of the formula IA wherein R¹ is (C₁-C₆)alkoxycarbonyl-(C₁-C₆)alkyl may be prepared by reacting the corresponding compounds wherein R¹ is hydroxy-(C₁-C₆)alkyl with the appropriate (C₁-C₆)alkanoic acid chloride in the presence of an organic base. Examples of suitable organic bases are (C₄-C₁₀)alkylamines and dialkylamines, pyridine, quinoline and isoquinoline. Generally, this reaction is carried out in another or halocarbon solvent such as diethyl ether, tetrahydrofuran (THF), methylene chloride or chloroform, at a temperature from about 0°C to about 50°C, preferably from about 0°C to about room temperature.

Compounds of the formula IA wherein R¹ is (C₁-C₆)alkoxycarbonylaryl can be prepared in a similar manner, using the appropriate aryl chloride in place of a (C₁-C₆)alkanoic acid chloride.

Compounds of the formula IA wherein R¹ is (C₁-C₆)alkyl-SO-(C₁-C₆)alkyl may be prepared by oxidation of the corresponding compounds wherein R¹ is (C₁-C₆)alkyl-S-(C₁-C₆)alkyl using methods well known to those skilled in the art. For example, these oxidations may be conducted using m-chloroperbenzoic acid as the oxidizing agent in a halocarbon solvent such as methylene chloride or chloroform, at a temperature from about -10°C to about 10°C, preferably about 0°C. Similarly, compounds of the
formula Ia wherein R¹ is (C₁₋C₆)alkyl-SO₂-(C₁₋C₆)alkyl may be prepared by oxidation of the corresponding compounds wherein R¹ is (C₁₋C₆)alkyl-SO-(C₁₋C₆)alkyl using methods known in the art. Such oxidations may be conducted, for example, in the manner specified above, but at a temperature ranging from about room temperature to about 60°C, preferably at about the reflux temperature of the solvent.

Compounds of the formula VI can be prepared using methods that are well known in peptide chemistry. Some of these procedures are described below.

Compounds of the formula VI wherein R²⁻ is Y²⁻-C-O⁻ and Y²⁻ is absent can be prepared as follows. A compound of the formula Y²⁻-C-OH is first converted into its corresponding acid chloride, Y²⁻-C-Cl, by reacting it with thionyl chloride in a suitable aromatic or halocarbon solvent (e.g., benzene, toluene, xylene, methylene chloride or chloroform), at a temperature from about 0°C to about 130°C, preferably from about 20°C to about 100°C. The acid chloride is then reacted with a compound having the following formula

![Chemical Structure Image]

To produce the corresponding compound of formula VI wherein Y²⁻ is absent. This reaction is generally carried out in a halocarbon, aromatic hydrocarbon or ethereal solvent at a temperature from about 0°C to about 150°C, preferably from about 0°C and about 100°C. Preferred solvents include benzene, toluene, xylene, methylene chloride, chloroform, ether, tetrahydrofuran and dioxane.
Alternatively, compounds of the formula VI wherein Y² is absent can be prepared by reacting a compound of the formula Y³\(-\cdot\)C\(-\cdot\)OH with a (C₅\(-\cdot\)C₉)alkylchloroformate in the presence of any organic base, and then adding a compound of the formula XX, as depicted and defined above, to the reaction mixture. Examples of bases that may be used are (C₂\(-\cdot\)C₉)alkylamines and aromatic amines such as pyridine, quinoline or isoquinoline. This reaction is typically conducted in a halocarbon solvent, preferably methylene chloride or chloroform, at a temperature from about -70°C to about 50°C, preferably from about -70°C to about 20°C.

The addition of the compound of formula XX is typically carried out at temperatures ranging from about -70°C to about 50°C, preferably from about -70°C and about 30°C.

Compounds for the formula VI wherein R²⁵ is Y³\(-\cdot\)C\(-\cdot\)O\(-\cdot\)Y²- and Y² is -C\(-\cdot\)O- can be prepared by the following procedure. A compound of the formula XX, as depicted and defined above, is reacted with phosgene, to obtain a compound of the formula

![Chemical structure](image)

This reaction is conducted in the presence of a base (e.g., a (C₃\(-\cdot\)C₁₀)alkylamine or an aromatic amine such as pyridine, quinoline or isoquinoline) at a temperature from about -70°C to about 0°C, preferably from about -30°C to about 0°C. Appropriate solvents include ethereal, halocarbon and (C₅\(-\cdot\)C₉) hydrocarbon solvents. Ether, dioxane, tetrahydrofuran, pentane, hexane, methylene chloride and chloroform are preferred. The compound of formula XXI formed in the above reaction is then reacted with a compound of the formula Y³\(-\cdot\)C\(-\cdot\)OH in the presence of a base (e.g., a (C₃\(-\cdot\)C₁₀)alkylamine
or an aromatic amine such as pyridine, quinoline or isoquinoline). The reaction is generally conducted at a temperature ranging from about -20°C to about room temperature, preferably between about -10°C and about room temperature, in a halocarbon or ether solvent, preferably in methylene chloride or chloroform.

Compounds of the formula VI wherein R²⁵ is Y³-C-O-Y² and Y² is -CH₂-C-O- may be prepared in the following manner. First, a compound of the formula Y³-C-OH is contacted with an Ameberlite® IRA-904 resin containing quaternary ammonium groups in the hydroxide form to yield a salt of the formula

\[ \text{Resin} \quad Y³-C-O⁻ \cdot N(CH₃)₃ \quad \text{(hereinafter referred to as a salt of the formula XXII).} \]

Usually, the compound of formula Y³-C-OH is dissolved in a lower alcohol or hydrocarbon solvent such as ethanol, diethyl ether or hexane and the reaction is carried out at a temperature from about 10°C to about 50°C, preferably at about room temperature. Then, a compound having a formula identical to formula VI except that R²⁵ is replaced by a hydroxy group is reacted with a compound of the formula

\[ \text{Cl-CH-COCl or Br-CH-COCl wherein Y⁴ is hydrogen or (C₁₋₂₅)alkyl, in the presence of an organic base. Bases that may be used include (C₅₋₁₄)alkylamines and dialkylamines, pyridine, quinoline and isoquinoline. Suitable solvents include ether and hydrocarbon solvents such as diethyl ether, methylene chloride, tetrahydrofuran and chloroform. Reaction temperatures may range from about 0°C to about 50°C, and are preferably between about 0°C and about room temperature.} \]

The foregoing reaction produces a compound of the formula VI wherein R²⁵ is -O-C-CH₂Cl or -O-C-CH₂-Cl, which is then reacted with the salt of formula XXII to produce the desired compound of formula VI. This reaction is generally conducted in an ether, halocarbon or hydrocarbon solvent (e.g., diethyl ether, hexane, methylene...
chloride or chloroform) at a temperature from about room temperature to about 60°C, preferably at about room temperature.

Compounds of the formula VI wherein R²⁵ is O₂N₂H₂CO₂S·R²⁶·HN·C·O· may be prepared by reacting a compound of the formula

\[ \text{O} \quad \text{II} \quad \text{O} \]

with a compound of the formula O₂NCH₂SO₂·R²⁶·NH₂.

Typically, this reaction is carried out in an ethereal, halocarbon or hydrocarbon solvent at temperatures from about -70°C to about 0°C. Preferably, it is carried out in ether, tetrahydrofuran, dioxane, hexane, pentane, methylene chloride or chloroform at a temperature from about -30°C to about 0°C.

Alternatively, such compounds can be prepared by reacting an isocyanate of the formula

\[ \text{H₃C} - \text{O}_\text{N} - \text{CH}_2 - \text{SO}_2 - \text{N=O} \quad \text{XXIII} \]

with a compound of the formula XX, as depicted and defined above. Suitable and preferred solvents for this reaction are similar to those specified for the preceding reaction. This reaction is usually conducted at a temperature ranging from about ambient temperature to about 150°C, preferably from about ambient temperature to about 100°C.

The starting material of the formula XXIII can be prepared from the compound
using standard methods described in the scientific literature.

In each of the reactions discussed or illustrated above, pressure is not critical unless otherwise indicated. Pressures from about 0.5 atmospheres to about 5.0 atmospheres are generally acceptable, and ambient pressure, i.e., about one atmosphere, is preferred as a matter of convenience. Reaction times also are not critical unless otherwise indicated. Reaction times from about 0.5 hours to about 3 hours are generally acceptable, though longer reaction times (e.g., 24 or 48 hours) may be employed as a matter of convenience. Reaction times are monitored by thin layer chromatography.

The pharmaceutically acceptable acid addition salts of the compounds of the formulae I and VI that are basic in nature may be prepared in a conventional manner by treating a solution or suspension of the free base of formula I or VI with about one chemical equivalent of a pharmaceutically acceptable acid. Conventional concentration and recrystallization techniques are employed in isolating the salts.

The pharmaceutically acceptable base addition salts of compounds of the formulae I and VI that are acidic in nature may be formed with pharmaceutically acceptable cations by conventional methods. Thus, these salts may be readily prepared by treating the compound of formula I or VI with an aqueous solution of the desired pharmaceutically acceptable cation and evaporating the resulting solution to dryness, preferably under reduced pressure. Alternatively, a lower alkyl alcohol solution of the compound of formula I or VI may be mixed with an alkoxide of the desired metal and the solution subsequently evaporated to dryness.

Compounds of the formula I, the pharmaceutically acceptable salts of such compounds, mutual prodrugs of such compounds and aldose reductase inhibitors (including the mutual prodrugs of the formula VI), the pharmaceutically acceptable salts of such mutual prodrugs, and compositions comprising a compound of the formula I
or a pharmaceutically acceptable salt thereof and an aldose reductase inhibitor or a pharmaceutically acceptable salt thereof (including compositions containing a compound of the formula I and a compound of the formula XV, XVI, XVII, XVIII or XIX) are hereinafter referred to, collectively, as "the active compounds and compositions of this invention".

The active compounds and compositions of this invention may be administered to a subject in need of treatment by a variety of conventional routes of administration, including orally, parenterally and topically. In general, compounds of the formula I and their pharmaceutically acceptable salts will be administered orally or parenterally at dosages between about 0.1 and about 50 mg/kg body weight of the subject to be treated per day, preferably from about 0.1 to 15 mg/kg, in single or divided doses. Mutual prodrugs of compounds of the formula I and aldose reductase inhibitors will generally be administered orally or parenterally at dosages between about 5 and about 100 mg/kg body weight of the subject to be treated per day, preferably from about 5 to about 25 mg/kg, in single or divided doses. Compositions containing both a compound of the formula I and an aldose reductase inhibitor will generally be administered orally or parenterally at dosages between about 1 and about 100 mg of each active component (i.e., the compound of formula I and the aldose reductase inhibitor) per kg body weight of the subject to be treated per day, preferably from about 1 to about 25 mg/kg. However, some variation in dosage will necessarily occur depending on the condition of the subject being treated. The person responsible for administration will, in any event, determine the appropriate dose for the individual subject.

The active compounds and compositions of this invention may be administered alone or in combination with pharmaceutically acceptable carriers, in either single or multiple doses. Suitable pharmaceutical carriers include inert solid diluents or fillers, sterile aqueous solutions and various organic solvents. The pharmaceutical compositions formed by combining the active compounds of this invention and the pharmaceutically acceptable carriers are then readily administered in a variety of dosage forms such as tablets, powders, lozenges, syrups, injectable solutions and the like. These pharmaceutical compositions can, if desired, contain additional ingredients such as flavorings, binders, excipients and the like. Thus, for purposes of oral administration, tablets containing various excipients such as sodium citrate, calcium
carbonate and calcium phosphate may be employed along with various disintegrants such as starch, alginic acid and certain complex silicates, together with binding agents such as polyvinylpyrrolidone, sucrose, gelatin and acacia. Additionally, lubricating agents such as magnesium stearate, sodium lauryl sulfate and talc are often useful for tablettng purposes. Solid compositions of a similar type may also be employed as fillers in soft and hard filled gelatin capsules. Preferred materials for this include lactose or milk sugar and high molecular weight polyethylene glycols. When aqueous suspensions or elixirs are desired for oral administration, the essential active ingredient therein may be combined with various sweetening or flavoring agents, coloring matter or dyes and, if desired, emulsifying or suspending agents, together with diluents such as water, ethanol, propylene glycol, glycerin and combinations thereof.

For parenteral administration, solutions of the active compounds and compositions of this invention in sesame or peanut oil, aqueous propylene glycol, or in sterile aqueous solutions may be employed. Such aqueous solutions should be suitably buffered if necessary and the liquid diluent first rendered isotonic with sufficient saline or glucose. These particular aqueous solutions are especially suitable for intravenous, intramuscular, subcutaneous and intraperitoneal administration. In this connection, the sterile aqueous media employed are all readily available by standard techniques known to those skilled in the art.

The active compounds and compositions of this invention may be more particularly employed in the preparation of ophthalmic solutions. Such ophthalmic solutions are of principal interest for the treatment of diabetic cataracts by topical administration. For the treatment of diabetic cataracts, the active compounds and compositions of this invention are administered to the eye in the form of an ophthalmic preparation prepared in accordance with conventional pharmaceutical practice. The ophthalmic preparation will contain a compound of the formula I, a mutual prodrug of a compound of the formula I and an aldose reductase inhibitor, or a pharmaceutically acceptable salt of such compound of formula I or prodrug, in a concentration from about 0.01 to about 1% by weight, preferably from about 0.05 to about 0.5%, in a pharmaceutically acceptable solution, suspension or ointment. In ophthalmic preparations containing a combination of a compound of the formula I and an aldose reductase inhibitor, each active ingredient will be present in an amount from about
0.005 to about 1% by weight, preferably from about 0.005 to about 0.25%, in a 
pharmaceutically acceptable solution, suspension or ointment.

EXAMPLES

General Experimental Procedure

Male Sprague-Dawley rats (350-400 g) were used for these experiments. 
Diabetes was induced in some of the rats by a tail vein injection of streptozocin, 85 
mg/kg. Twenty-four hours later, 4 groups of diabetic rats were given a single dose of 
4-[N,N-dimethylsulfamoyl]-piperazino]-2-methylpyrimidine (10, 50, 100, or 300 mg/kg) 
by oral gavage. Animals were sacrificed 4-6 hours after dosing and blood and sciatic 
nerve were harvested. Tissues and cells were extracted with 6% perchloric acid.

Sorbitol in erythrocytes and nerves was measured by a modification of the 
method of R. S. Clements et al. (Science, 166: 1007-8, 1969). Aliquots of tissue 
extracts were added to an assay system which had final concentrations of reagents of 
0.033 M glycine, pH 9.4, 800 μM β-nicotine adenine dinucleotide, and 4 units/ml of 
sorbitol dehydrogenase. After incubation for 30 minutes at room temperature, sample 
fluorescence was determined on a fluorescence spectrophotometer with excitation at 
366 nm and emission at 452 nm. After subtracting appropriate blanks, the amount of 
sorbitol in each sample was determined from a linear regression of sorbitol standards 
processed in the same manner as the tissue extracts.

Fructose was determined by a modification of the method described by M. 
Ameyama, Methods in Enzymology, 89: 20-25 (1982). Resazurin was substituted for 
ferricyanide. Aliquots of tissue extracts were added to the assay system, which had 
final concentrations of reagents of 1.2 M citric acid, pH 4.5, 13 μM resazurin, 3.3 
units/ml of fructose dehydrogenase and 0.068% Triton X-100. After incubation for 60 
minutes at room temperature, sample fluorescence was determined on a fluorescence 
spectrophotometer with excitation at 560 nm and emission at 580 nm. After subtracting 
appropriate blanks, the amount of fructose in each sample was determined from a 
linear regression of fructose standards processed in the same manner as the tissue 
extracts.

SDH activity was measured by a modification of the method described by U. 
Gerlach, Methodology of Enzymatic Analyses, edited by H. U. Bergmeyer, 3, 112-117 
(1983). Aliquots of sera or urine were added to the assay system, which had final 
concentrations of reagents of 0.1 M potassium phosphate buffer, pH 7.4, 5 mM NAD,
20 mM sorbitol, and 0.7 units/ml of sorbitol dehydrogenase. After incubation for 10 minutes at room temperature, the average change in sample absorbance was determined at 340 nm. SDH activity was presented as milliOD_{340} units/minute (OD_{340} = optical density at 340 nm).

RESULTS

As shown in Figure 1, 4-[4-(N,N-dimethylsulfamoyl)-piperazino]-2-methylpyrimidine ("Compound 1") dose dependently lowered erythrocyte (red blood cell -"RBC") fructose in diabetic rats. It dose dependently raised erythrocyte sorbitol in diabetic rats (Figure 2). A similar lowering of fructose with an increase in sorbitol was seen in the sciatic nerve of diabetic rats (Figures 3 and 4).

This pattern of lowered fructose coupled with elevated sorbitol is consistent with that expected of an inhibitor of sorbitol dehydrogenase (SDH), the enzyme that converts sorbitol to fructose. However, when tested directly on sorbitol dehydrogenase in vitro, 4-[4-(N,N-dimethylsulfamoyl)-piperazino]-2-methylpyrimidine exhibited an IC_{50} value of 0.5mM. On the other hand, we discovered that sera from rats dosed with 4-[4-(N,N-dimethylsulfamoyl)-piperazino]-2-methylpyrimidine potently inhibited SDH in vitro in a dose dependent manner (Figure 5).

The urine of animals dosed with 4-[4-(N,N-dimethylsulfamoyl)-piperazino]-2-methylpyrimidine also potently inhibited SDH in vitro in a dose dependent manner (Figure 6). Comparison with results for the sera (Figure 5) shows that the urine was an even more potent source of SDH inhibitory activity, with strong inhibition of SDH found with as little as 0.5 μl of urine.

EXAMPLES 1, 2 and 3

Example 1: 4-[4-(N-methylsulfamoyl)-piperazino]-2-methylpyrimidine

Example 2: 4-[4-(N-methylsulfamoyl)-piperazino]-2-hydroxy-methylpyrimidine

Example 3: 4[4-N-sulfamoyl]-piperazino]-2-methylpyrimidine

An aqueous suspension of 4-[4-(N,N-dimethylsulfamoyl)-piperazino]-2-methylpyrimidine ("Compound 1"), prepared as described in European Patent Application 384,370A1, was administered by oral gavage to male CD rats (350-430 g body weight) at a dose of 100 mg/kg. The rats were housed in appropriate cages and their urine (220 mL) was collected overnight. The urine was extracted with ethyl acetate (75 mL) and the resulting emulsion was filtered through a supercel pad and the filtrate was collected. The ethyl acetate layer was separated and the aqueous layer was
extracted again (3 x 75 mL). The ethyl acetate extracts were combined and dried over anhydrous magnesium sulfate to obtain a crude oily residue (0.8 g). This residue was dissolved in 10 mL of a 9:1 mixture of methylene chloride and ethanol and chromatographed using a Chromatotron. The Chromatotron plate was eluted with a mixture of 19:1 of methylene chloride and ethanol and fractions were collected in 5 mL portions. Evaporation of the first 20 x 5 mL portions gave the title compound of Example 1 (6.9 mg): 1H NMR (DMSO, 500 MHz) δ 2.37 (s, 3H), 2.55 (d, J=7 Hz, 3H), 3.13 (m, 4H), 3.7 (m, 4H), 6.68 (d, J=8 Hz, 1H), 7.72 (m, 1H), 8.13 (d, J=8 Hz, 1H). The next 20 x 5 mL portions yielded the title compound of Example 2 (24 mg): 1H NMR (DMSO, 500 MHz) δ 2.48 (d, J=7 Hz, 3H), 3.1 (m, 4H), 3.58 (m, 4H), 4.36 (s, 2H), 6.1 (s, 1H), 6.33 (d, J=8 Hz, 1H), 6.5 (m, 1H), 8.03 (d, J=8 Hz, 1H). The last 20 x 5 mL portions gave the title compounds of Example 3 (15 mg): 1H NMR (DMSO, 500 MHz) δ 2.34 (s, 3H), 3.04 (m, 4H), 3.65 (m, 4H), 6.35 (d, J=8 Hz, 1H), 7.93 (d, J=8 Hz, 1H).

**EXAMPLE 4**

4-[4-(N,N-Dimethylsulfamoyl)piperazin]-2-hydroxymethylpyrimidine

The title compound was prepared as described in European Patent Application 470,616A2, published February 12, 1992.

The structures and IC<sub>50</sub> values of 4-[4-(N,N-dimethylsulfamoyl)-piperazin]-2-methylpyrimidine and the title compounds of Example 1-4 are set forth in Table I below.

The IC<sub>50</sub> values indicate the concentration at which fifty percent inhibition of sorbitol dehydrogenase in vitro was observed.

Example 4: 4-[N-(1,2-dimethylhydrazinoyl)]-piperazino-2-methylpyrididine (Compound 1)
EXAMPLE 5

4-[4-(N,N-Dimethylsulfamoyl)piperizinopyrimidine-2-ylmethyl]-3,4-dihydro-4-oxo-3-
[(5-trifluoromethyl)-2-benzothiazolyl]-methyl]-1-phthalazine acetate

A solution of 3,4-dihydro-4-oxo-3-[(5-trifluoromethyl)-2-benzothiazolyl]-methyl]-
1-phthalazineacetic acid (839 mg, 2 mmol) in methylene chloride (10 mL) containing
triethylamine (0.28 mL, 2 mmol) was added to a solution of isobutyl chloroformate (0.2
mL, 2 mmol) in methylene chloride (10 mL) at a temperature between -78° and -65°C.
After 30 minutes, a solution of 4-[4-(N,N-dimethylsulfamoyl)piperizinopyrimidine-2-
hydroxymethylpyrimidine in methylene chloride (5 mL) was added to the reaction
mixture. The reaction was allowed to warm to room temperature, stirred for 2 hours
and then quenched with water (20 mL). The methylene chloride layer was collected
and was washed successively with 5% sodium bicarbonate solution and water. The
organic layer was dried, evaporated and the residue was chromatographed over silica
gel. Elution with a solution of methylene chloride in methanol (95:5) and evaporation
of the eluent gave the title compound (0.35 g). M.P. 97-99°C.
CLAIMS

1. A compound of the formula

\[
\text{R}^1\text{R}^2\text{N}^\text{R}^3\text{R}^4\text{N}\text{R}^5
\]

wherein \( \text{R}^1 \) is (C\(_1\)-C\(_6\))alkoxy carbonyl-(C\(_1\)-C\(_6\))alkyl, (C\(_1\)-C\(_6\))alkyl-S-(C\(_1\)-C\(_6\))alkyl, (C\(_1\)-C\(_6\))alkyl-SO-(C\(_1\)-C\(_6\))alkyl, (C\(_1\)-C\(_6\))alkyl-SO\(_2\)-(C\(_1\)-C\(_6\))alkyl, dihydroxy-(C\(_1\)-C\(_6\))alkyl, aryl, heteroaryl, heteroaryl-(C\(_1\)-C\(_6\))alkyl, aryl-(C\(_1\)-C\(_6\))alkyl, (C\(_1\)-C\(_6\))alkoxy carbonylaryl, aryl-(C\(_1\)-C\(_6\))alkyloxy or heteroaryl-(C\(_1\)-C\(_6\))alkyloxy, wherein said aryl and the aryl moieties of said aryl-(C\(_1\)-C\(_6\))alkyl, (C\(_1\)-C\(_6\))alkoxy carbonylaryl, and aryl-(C\(_1\)-C\(_6\))alkyloxy are independently selected from phenyl and naphthyl, and wherein said heteroaryl and the heteroaryl moieties of said heteroaryl-(C\(_1\)-C\(_6\))alkyl and heteroaryl-(C\(_1\)-C\(_6\))alkyloxy are independently selected from wherein the aryl moiety is selected from phenyl and naphthyl, heteroaryl selected from pyridyl, furyl, tetrahydrofuryl, thi enyl, imidazolyl, pyrazolyl, triazolyl, thiazolyl, oxazolyl and benzothiazolyl, and wherein said aryl and heteroaryl and the aryl and heteroaryl moieties of said heteroaryl-(C\(_1\)-C\(_6\))alkyl, aryl-(C\(_1\)-C\(_6\))alkyl, (C\(_1\)-C\(_6\))alkoxy carbonylaryl, aryl-(C\(_1\)-C\(_6\))alkyloxy and heteroaryl-(C\(_1\)-C\(_6\))alkyloxy may optionally be substituted with one or more substituents independently selected from chloro, bromo, (C\(_1\)-C\(_6\))alkyl, (C\(_1\)-C\(_6\))alkoxy, S-(C\(_1\)-C\(_6\))alkyl, -SO-(C\(_1\)-C\(_6\))alkyl, -SO\(_2\)-(C\(_1\)-C\(_6\))alkyl, hydroxy-(C\(_1\)-C\(_6\))alkyl and trifluoromethyl;

or \( \text{R}^1 \) is a group of the formula

\[
\begin{array}{c}

C₅₆alkylsulfamoyl, N,N-di-(C₅-C₆)alkylsulfamoyl, (C₅-C₆)alkoxycarbonyl, N,N-di-(C₅-C₆)alkylcarbamoyl, N-(C₅-C₆)-alkylcarbamoyl, N-phenylcarbamoyl, (C₅-C₆)alkylcarbonoyl, phenylcarbonoyl, (C₅-C₆)alkylsulfonyl, (C₅-C₆)alkylsulfinyl, phenylsulfonyl, heteroaryl sulfonyl and heteroaryl carbonyl, wherein the heteroaryl moieties of said heteroaryl carbonyl and heteroaryl sulfonyl are selected from furyl, thienyl, thiazolyl, and oxazolyl, and wherein the phenyl moieties of said phenyl carbonyl, N-phenyl carbamoyl, phenyl carbonyl and phenyl sulfonyl may optionally be substituted with one or more substituents, independently selected from (C₅-C₆)alkyl, (C₅-C₆)alkoxy, chloro, bromo, nitro, amino, cyano and trifluoromethyl;

R⁴ is hydrogen, chloro, bromo, cyano, nitro, trifluoromethyl, amino, (C₅-C₆)alkyl, (C₅-C₆)hydroxyalkyl, (C₅-C₆)alkoxy, phenyl, naphthyl or furyl, wherein said phenyl, naphthyl and furyl may optionally be substituted with one or more substituents, independently selected from chloro, bromo, trifluoromethyl, (C₅-C₆)alkyl, (C₅-C₆)alkoxy, S-(C₅-C₆)alkyl, -SO-(C₅-C₆)alkyl, -SO₂-(C₅-C₆)alkyl and hydroxy; and

R⁵ is hydrogen, (C₅-C₆)alkyl, (C₅-C₆)alkoxy, trifluoromethyl, (C₅-C₆)hydroxyalkyl, -S-(C₅-C₆)alkyl, -SO-(C₅-C₆)alkyl, -SO₂-(C₅-C₆)alkyl, phenyl or furyl, wherein said phenyl and furyl may optionally be substituted with one or more substituents, independently selected from chloro, bromo, trifluoromethyl, (C₅-C₆)alkyl, (C₅-C₆)alkoxy, -SO-(C₅-C₆)alkyl, -SO₂-(C₅-C₆)alkyl and hydroxy;

or a pharmaceutically acceptable salt of such compound.

2. A pharmaceutical composition comprising a pharmaceutically acceptable carrier and an amount of a compound of the formula

![Chemical Structure](image)

wherein R¹ is hydrogen, CF₃, (C₅-C₆)alkyl, (C₅-C₆)alkyl-S-(C₅-C₆)alkyl, (C₅-C₆)alkyl-SO-(C₅-C₆)alkyl, (C₅-C₆)alkyl-SO₂-(C₅-C₆)alkyl, hydroxy-(C₅-C₆)alkyl, dihydroxy-(C₅-C₆)alkyl, (C₅-C₆)alkoxy, (C₅-C₆)alkoxycarbonyl-(C₅-C₆)alkyl, aryl selected from phenyl and naphthyl, aryl-(C₅-C₆)alkyl wherein the aryl moiety is selected from phenyl and naphthyl, (C₅-C₆)alkoxycarbonylaryl wherein the aryl moiety is selected from phenyl and naphthyl,
aryl-(C$_1$-C$_6$)alkyl wherein the aryl moiety is selected from phenyl and naphthyl, aryl-(C$_1$-C$_6$)alkyloxy wherein the aryl moiety is selected from phenyl and naphthyl, heteroaryl selected from pyridyl, furyl, tetrahydrofuryl, thiienyl, imidazolyl, pyrazolyl, triazolyl, thiazolyl, oxazolyl, benzothiazolyl, benzofuranyl, and benzothienyl; heteroaryl-(C$_1$-C$_6$)alkyl wherein heteroaryl is defined as above, or heteroaryl-(C$_1$-C$_6$)alkyloxy wherein heteroaryl is defined as above, and wherein said aryl and heteroaryl groups, the aryl moieties of said aryl-(C$_1$-C$_6$)alkyl, (C$_1$-C$_6$)alkyloxy carbonylaryl and aryl-(C$_1$-C$_6$)alkyloxy and the heteroaryl moiety of said heteroaryl-(C$_1$-C$_6$)alkyl may optionally be substituted with one or more substituents independently selected from chloro, bromo, (C$_1$-C$_6$)alkyl, (C$_1$-C$_6$)alkoxy, -S-(C$_1$-C$_6$)alkyl, -SO-(C$_1$-C$_6$)alkyl, -SO$_2$-(C$_1$-C$_6$)alkyl, hydroxy-(C$_1$-C$_6$)alkyl and trifluoromethyl;

or R$^1$ is a group of the formula

![Diagram](https://via.placeholder.com/150)

wherein the dotted line represents an optional double bond, W, Q and Z are independently selected from hydrogen, (C$_1$-C$_6$)alkyl and trifluoromethyl, phenyl, furyl, triazolyl, thiazolyl and thiienyl, wherein said phenyl, furyl, triazolyl, thiazolyl and thiienyl may optionally be substituted with one or more substituents independently selected from (C$_1$-C$_6$)alkyl, (C$_1$-C$_6$)alkoxy, trifluoromethyl and hydroxy;

or R$^1$ is a group of the formula -C-R$^6$, wherein R$^6$ is hydrogen, (C$_1$-C$_6$)alkyl, aryl selected from phenyl and naphthyl, or heteroaryl selected from pyridyl, furyl, thiienyl, imidazolyl, pyrazolyl, triazolyl, thiazolyl, oxazolyl, benzothiazolyl, benzofuranyl and benzothienyl, wherein said aryl and heteroaryl groups may optionally be substituted with one or more substituents independently selected from chloro, bromo, nitro, trifluoromethyl, (C$_1$-C$_6$)alkoxy, -S-(C$_1$-C$_6$)alkyl, -SO-(C$_1$-C$_6$)alkyl and -SO$_2$-(C$_1$-C$_6$)alkyl;

or R$^1$ is a group of the formula

Y-O-CH-R$^7$, wherein R$^7$ is aryl selected from phenyl and naphthyl, or heteroaryl selected from pyridyl, furyl, thiienyl, imidazolyl, pyrazolyl, triazolyl, thiazolyl, oxazolyl, benzothiazolyl, benzofuranyl, benzothienyl and quinolyl, wherein said aryl and
heteroaryl groups may optionally be substituted with one or more substituents, preferably with from zero to two substituents, independently selected from chloro, bromo, (C1-C6)alkyl, (C1-C6)alkoxy, -S-(C1-C6)alkyl, -SO-(C1-C6)alkyl, -SO2-(C1-C6)alkyl and trifluoromethyl, and Y is hydrogen, benzyl, acetyl, benzoyl, aryl selected from phenyl and naphthyl, heteroaryl selected from furyl, thienyl, thiazolyl and oxazolyl, wherein said aryl and heteroaryl groups may optionally be substituted with one or more substituents independently selected from chloro, bromo, nitro, trifluoromethyl, (C1-C6)alkyl, (C1-C6)alkoxy, -S-(C1-C6)alkyl, -SO-(C1-C6)alkyl and -SO2-(C1-C6)alkyl; R2 and R3 are independently selected from hydrogen, (C1-C6)alkyl, phenyl and phenyl-(C1-C6)alkyl, wherein said phenyl and the phenyl moiety of said phenyl-(C1-C6)alkyl may optionally be substituted with one or more substituents independently selected from (C1-C6)alkyl, (C1-C6)alkoxy, chloro, bromo and trifluoromethyl;

or R2 and R3 form, together with the nitrogen to which they are attached, a cyclic group selected from azetidino, pyrrolidino, piperidino, piperazo and morpholino, wherein said cyclic group may optionally be substituted with from zero to two substituents, independently selected from (C1-C6)alkyl, -CONH2, -SO2NH2, N-(C1-C6)alkylsulfamoyl, N,N-di-(C1-C6)alkylsulfamoyl, (C1-C6)alkoxy carbonyl, N,N-di-(C1-C6)alkyl carbamoyl, N-(C1-C6)alkyl carbamoyl, N-phenyl carbamoyl, (C1-C6)alkyl carbonyl, phenyl carbonyl, (C1-C6)alkylsulfonyl, (C1-C6)alkylsulfinyl, phenyl sulfon, heteroarylsulfonyl and heteroarylcarbonyl, wherein the heteroaryl moieties of said heteroarylcarbonyl and heteroarylsulfonyl are selected from furyl, thienyl, thiazolyl, and oxazolyl, and wherein the phenyl moieties of said phenyl carbonyl, N-phenyl carbamoyl, phenyl carbonyl and phenyl sulfon may optionally be substituted with one or more substituents independently selected from (C1-C6)alkyl, (C1-C6)alkoxy, chloro, bromo, nitro, amino, cyano and trifluoromethyl;

R4 is hydrogen, chloro, bromo, cyano, nitro, trifluoromethyl, amino, (C1-C6)alkyl, (C1-C6)hydroxyalkyl, (C1-C6)alkoxy, phenyl, naphthyl or furyl, wherein said phenyl, naphthyl and furyl may optionally be substituted with one or more substituents independently selected from chloro, bromo, trifluoromethyl, (C1-C6)alkyl, (C1-C6)alkoxy, -S-(C1-C6)alkyl, -SO-(C1-C6)alkyl, -SO2-(C1-C6)alkyl and hydroxy; and

R5 is hydrogen, (C1-C6)alkyl, (C1-C6)alkoxy, trifluoromethyl, (C1-C6)hydroxyalkyl, -S-(C1-C6)alkyl, -SO-(C1-C6)alkyl, -SO2-(C1-C6)alkyl, phenyl or furyl, wherein said phenyl and furyl may optionally be substituted with one or more substituents independently
selected from chloro, bromo, trifluoromethyl, \((C_1\text{-}C_6)\text{alkyl}\), \((C_1\text{-}C_6)\text{alkoxy}\), \(-\text{SO-}(C_1\text{-}C_6)\text{alkyl}\), \(-\text{SO}_2-(C_1\text{-}C_6)\text{alkyl}\) and hydroxy;

or a pharmaceutically acceptable salt thereof, effective in (a) inhibiting the enzyme sorbitol dehydrogenase, (b) lowering the level of fructose in one or more of the tissues of a mammal that are affected by diabetes, or (c) treating or preventing a diabetic complication in a mammal.

3. A pharmaceutical composition according to claim 2, wherein the compound of formula I is a compound wherein \(R^1\) is \((C_1\text{-}C_6)\text{alkoxycarbonyl-}(C_1\text{-}C_6)\text{alkyl}\), \((C_1\text{-}C_6)\text{alkyl-S-}(C_1\text{-}C_6)\text{alkyl}\), \((C_1\text{-}C_6)\text{alkyl-SO-}(C_1\text{-}C_6)\text{alkyl}\), \((C_1\text{-}C_6)\text{alkyl-SO}_2-(C_1\text{-}C_6)\text{alkyl}\), \(\text{dihydroxy-}(C_1\text{-}C_6)\text{alkyl}\), \(\text{aryl, heteroaryl, heteroaryl-}(C_1\text{-}C_6)\text{alkyl}\), \(\text{aryl-}(C_1\text{-}C_6)\text{alkyl}\), \(\text{aryl-}(C_1\text{-}C_6)\text{alkoxycarbonylaryl}\), \(\text{aryl-}(C_1\text{-}C_6)\text{alkoxy or heteroaryl-}(C_1\text{-}C_6)\text{alkoxy}\), wherein said aryl and the aryl moieties of said aryl-\((C_1\text{-}C_6)\text{alkyl}\), \((C_1\text{-}C_6)\text{alkoxycarbonylaryl}\), and aryl-\((C_1\text{-}C_6)\text{alkoxy} are independently selected from phenyl and napthyl, and wherein said heteroaryl and the heteroaryl moieties of said heteroaryl-\((C_1\text{-}C_6)\text{alkyl}\) and heteroaryl-\((C_1\text{-}C_6)\text{alkoxy} are independently selected from wherein the aryl moiety is selected from phenyl and napthyl, heteroaryl selected from pyridyl, furyl, tetrahydrofuryl, thieryl, imidazolyl, pyrazolyl, triazolyl, thiazolyl, oxazolyl and benzothiazolyl, and wherein said aryl and heteroaryl and the aryl and heteroaryl moieties of said heteroaryl-\((C_1\text{-}C_6)\text{alkyl}\), \(\text{aryl-}(C_1\text{-}C_6)\text{alkyl}\), \((C_1\text{-}C_6)\text{alkoxycarbonylaryl}\), \(\text{aryl-}(C_1\text{-}C_6)\text{alkoxy} and heteroaryl-\((C_1\text{-}C_6)\text{alkoxy} may optionally be substituted with one or more substituents independently selected from chloro, bromo, \((C_1\text{-}C_6)\text{alkyl}\), \((C_1\text{-}C_6)\text{alkoxy}\), \(-\text{S-}(C_1\text{-}C_6)\text{alkyl}\), \(-\text{SO-}(C_1\text{-}C_6)\text{alkyl}\), \(-\text{SO}_2-(C_1\text{-}C_6)\text{alkyl}\), \(\text{hydroxy-}(C_1\text{-}C_6)\text{alkyl}\) and trifluoromethyl.

4. A pharmaceutical composition according to claim 2, comprising an amount of said compound of the formula I that is effective in inhibiting the enzyme sorbitol dehydrogenase.

5. A pharmaceutical composition according to claim 2, comprising an amount of said compound of the formula I that is effective in lowering the level of fructose in one or more of the tissues of a mammal that are affected by diabetes.

6. A pharmaceutical composition according to claim 2, comprising an amount of said compound of the formula I that is effective in treating or preventing a diabetic complication in a mammal.
7. A pharmaceutical composition according to claim 6, wherein said diabetic complication is diabetic neuropathy, diabetic retinopathy, diabetic nephropathy, diabetic microangiopathy or diabetic macroangiopathy.

8. A method of: (a) inhibiting the enzyme sorbitol dehydrogenase in a mammal; (b) lowering the level of fructose in one or more of the tissues of a mammal that are affected by diabetes; or (c) treating or preventing a diabetic complication in a mammal; comprising administering to said mammal an amount of a compound of the formula

\[
\begin{align*}
&\text{wherein } R^1 \text{ is hydrogen, CF}_3, (C_1-C_8)\text{alkyl, (C}_1-C_8)\text{alkyl-S-(C}_1-C_8)\text{alkyl, (C}_1-C_8)\text{alkyl-SO-(C}_1-C_8)\text{alkyl, (C}_1-C_8)\text{alkyl-SO}_2-(C}_1-C_8)\text{alkyl, hydroxy-(C}_1-C_8)\text{alkyl, dihydroxy-(C}_1-C_8)\text{alkyl, (C}_1-C_8)\text{alkoxy, (C}_1-C_8)\text{alkoxy carbonyl-(C}_1-C_8)\text{alkyl, aryl selected from phenyl and napththyl, aryl-(C}_1-C_8)\text{alkyl wherein the aryl moiety is selected from phenyl and napththyl, (C}_1-C_8)\text{alkoxy carbonylaryl wherein the aryl moiety is selected from phenyl and napththyl, aryl-(C}_1-C_8)\text{alkyl wherein the aryl moiety is selected from phenyl and napththyl, aryl-(C}_1-C_8)\text{alkoxy wherein the aryl moiety is selected from phenyl and napththyl, heteroaryl selected from pyridyl, furyl, tetrahydrofuryl, thieryl, imidazolyl, pyrazolyl, triazolyl, thiazolyl, oxazolyl, benzothiazolyl, benzofuranyl, and benzothienyl; heteroaryl-(C}_1-C_8)\text{alkyl wherein heteroaryl is defined as above, or heteroaryl-(C}_1-C_8)\text{alkoxy wherein heteroaryl is defined as above, and wherein said aryl and heteroaryl groups, the aryl moieties of said aryl-(C}_1-C_8)\text{alkyl, (C}_1-C_8)\text{alkoxy carbonylaryl and aryl-(C}_1-C_8)\text{alkoxy and the heteroaryl moiety of said heteroaryl-(C}_1-C_8)\text{alkyl may optionally be substituted with one or more substituents independently selected from chloro, bromo, (C}_1-C_8)\text{alkyl, (C}_1-C_8)\text{alkoxy, }-\text{S-(C}_1-C_8)\text{alkyl, }-\text{SO-(C}_1-C_8)\text{alkyl, }-\text{SO}_2-(C}_1-C_8)\text{alkyl, hydroxy-(C}_1-C_8)\text{alkyl and trifluoromethyl; or } R^1 \text{ is a group of the formula}

\end{align*}
\]
or R² and R³ form, together with the nitrogen to which they are attached, a cyclic
group selected from azetidino, pyrrolidino, piperidino, piperazino and morpholino,
wherein said cyclic group may optionally be substituted with from zero to two
substituents, independently selected from (C₁-C₅)alkyl, -CONH₂, -SO₂NH₂, N-(C₁-
C₅)alkylsulfamoyl, N,N-di-(C₁-C₅)alkylsulfamoyl, (C₁-C₅)alkoxycarbonyl, N,N-di-(C₁-
C₅)alkylcarbamoyl, N-(C₁-C₅)alkylcarbamoyl, N-phenylcarbamoyl, (C₁-C₅)alkylcar-
bonyl, phenylcarbonyl, (C₁-C₅)alkylsulfonyle, (C₁-C₅)alkylsulfinyl, phenylsulfonyle,
heteroaryl sulfonyle and heteroaryl carbonyl, wherein the heteroaryl moieties of said
heteroaryl carbonyl and heteroaryl sulfonyle are selected from furyl, thiophenyl, thiazolyl, and
oxazolyl, and wherein the phenyl moieties of said phenyl carbonyl, N-phenyl carbamoyl,
phenylcarbonyl and phenylsulfonyle may optionally be substituted with one or more
substituents independently selected from (C₁-C₅)alkyl, (C₁-C₅)alkoxy, chloro, bromo,
nitro, amino, cyano and trifluoromethyl;

R⁴ is hydrogen, chloro, bromo, cyano, nitro, trifluoromethyl, amino, (C₁-C₅)alkyl,
(C₁-C₅)hydroxyalkyl, (C₁-C₅)alkoxy, phenyl, naphtyl or furyl, wherein said phenyl,
naphtyl and furyl may optionally be substituted with one or more substituents
independently selected from chloro, bromo, trifluoromethyl, (C₁-C₅)alkyl, (C₁-C₅)alkoxy,
-S-(C₁-C₅)alkyl, -SO-(C₁-C₅)alkyl, -SO₂-(C₁-C₅)alkyl and hydroxy; and

R² is hydrogen, (C₁-C₅)alkyl, (C₁-C₅)alkoxy, trifluoromethyl, (C₁-C₅)hydroxyalkyl,
-S-(C₁-C₅)alkyl, -SO-(C₁-C₅)alkyl, -SO₂-(C₁-C₅)alkyl, phenyl or furyl, wherein said phenyl
and furyl may optionally be substituted with one or more substituents independently
selected from chloro, bromo, trifluoromethyl, (C₁-C₅)alkyl, (C₁-C₅)alkoxy, -SO-(C₁-
C₅)alkyl, -SO₂-(C₁-C₅)alkyl and hydroxy;
or a pharmaceutically acceptable salt thereof, effective in, respectively: (a)
inhibiting the enzyme sorbitol dehydrogenase; (b) lowering the level of fructose in one
or more of the tissues of a mammal that are affected by diabetes; or (c) treating or
preventing a diabetic complication.

9. A method according to claim 8, wherein the compound of formula I that is
employed is a compound wherein R¹ is (C₁-C₅)alkoxycarbonyl-(C₁-C₅)alkyl, (C₁-C₅)alkyl-
(S-(C₁-C₅)alkyl-(C₁-C₅)alkyl-SO-(C₁-C₅)alkyl,(C₁-C₅)alkyl-SO₂-(C₁-C₅)alkyl,dihydroxy-(C₁-
C₅)alkyl, aryl, heteroaryl, heteroaryl-(C₁-C₅)alkyl, aryl-(C₁-C₅)alkyl, (C₁-
C₅)alkoxycarbonylaryl, aryl-(C₁-C₅)alkoxy or heteroaryl-(C₁-C₅)alkoxy, wherein said
aryl and the aryl moieties of said aryl-(C₁-C₅)alkyl, (C₁-C₅)alkoxycarbonylaryl, and aryl-
(C₁-C₆)alkyloxy are independently selected from phenyl and naphthyl, and wherein said heteroaryl and the heteroaryl moieties of said heteroaryl-(C₁-C₆)alkyl and heteroaryl-(C₁-C₆)alkyloxy are independently selected from wherein the aryl moiety is selected from phenyl and naphthyl, heteroaryl selected from pyridyl, furyl, tetrahydrofuryl, thienyl, imidazolyl, pyrazolyl, triazolyl, thiazolyl, oxazolyl and benzothiazolyl, and wherein said aryl and heteroaryl and the aryl and heteroaryl moieties of said heteroaryl-(C₁-C₆)alkyl, aryl-(C₁-C₆)alkyl, (C₁-C₆)alkoxycarbonylaryl, aryl-(C₁-C₆)alkyloxy and heteroaryl-(C₁-C₆)alkyloxy may optionally be substituted with one or more substituents independently selected from chloro, bromo, (C₁-C₆)alkyl, (C₁-C₆)alkoxy, -S-(C₁-C₆)alkyl, -SO₂-(C₁-C₆)alkyl, hydroxy-(C₁-C₆)alkyl and trifluoromethyl.

10. A method according to claim 8 of inhibiting sorbitol dehydrogenase in a mammal.

11. A method according to claim 8 of lowering the level of fructose in one or more of the tissues of a mammal that are affected by diabetes.

12. A method according to claim 8 of treating or preventing a diabetic complication in a mammal.

13. A method according to claim 12, wherein said diabetic complication is diabetic neuropathy, a diabetic vascular disease, microangiopathy or diabetic macroangiopathy.

14. A pharmaceutical composition according to claim 2 in unit dosage form.

15. A pharmaceutical composition according to claim 2, in the form of a tablet suitable for oral administration.

16. A pharmaceutical composition according to claim 2, in the form of a solution suitable for parenteral administration.

17. A pharmaceutical composition according to claim 2, in the form of a solution suitable for ophthalmic administration.

18. A mutual prodrug of a compound according to claim 1 and an aldose reductase inhibiting compound.

19. A mutual prodrug of a compound of the formula I, as defined in claim 2, or a pharmaceutically acceptable salt thereof, and an aldose reductase inhibiting compound.

20. A compound of the formula
wherein $R^{25}$ is $Y^2$-C-O-$Y^2$- or $O_2$NH$_2$CO$_2$S-$R^{26}$-HNCO-, and $R^{26}$ is aryl selected from phenyl and naphthyl, wherein said aryl may optionally be substituted with one or more substituents independently selected from chloro, bromo, $(C_1$-$C_6$)alkyl, $(C_1$-$C_6$)alkoxy, -S-$(C_1$-$C_6$)alkyl, -SO$_2$-(C$_1$-$C_6$)alkyl, hydroxy-(C$_1$-$C_6$)alkyl and trifluoromethyl;

$R^2$ and $R^3$ are independently selected from hydrogen, $(C_1$-$C_6$)alkyl, phenyl and phenyl-(C$_1$-$C_4$)alkyl, wherein said phenyl and the phenyl moiety of said phenyl -(C$_1$-$C_4$)alkyl may optionally be substituted with one or more substituents independently selected from (C$_1$-$C_6$)alkyl, (C$_1$-$C_6$)alkoxy, chloro, bromo and trifluoromethyl;

or $R^2$ and $R^3$ form, together with the nitrogen to which they are attached, a cyclic group selected from azetidino, pyrrolidino, piperidino, pipеразино and morpholino,

wherein said cyclic group may optionally be substituted with from zero to two substituents independently selected from (C$_1$-$C_6$)alkyl, -CONH$_2$, -SO$_2$NH$_2$, N-(C$_1$-$C_6$)alkylsulfamoyl, N,N-di-(C$_1$-$C_6$)alkylsulfamoyl, (C$_1$-$C_6$)alkoxycarbonyl, N,N-di-(C$_1$-$C_6$)alkylcarbamoyl, N-(C$_1$-$C_6$)alkylcarbamoyl, N-phenylcarbamoyl, (C$_1$-$C_6$)alkylcarbamoyl, phenylcarbonyl, (C$_1$-$C_6$)alkylsulfonyl, (C$_1$-$C_6$)alkylsulfinyl, phenylsulfonyl, heteroarylsulfonyl and heteroarylsulfonyl, wherein the heteroaryl moieties of said heteroarylsulfonyl and heteroarylsulfonyl are selected from furyl, thienyl, thiazolyl and oxazolyl, and wherein the phenyl moieties of said phenylcarbonyl, N-phenylcarbamoyl, phenylcarbonyl and phenylsulfonyl may optionally be substituted with one or more substituents independently selected from (C$_1$-$C_6$)alkyl, (C$_1$-$C_6$)alkoxy, chloro, bromo, nitro, amino, cyano and trifluoromethyl;

$R^4$ is hydrogen, chloro, bromo, cyano, nitro, trifluoromethyl, amino, (C$_1$-$C_6$)alkyl, (C$_1$-$C_6$)hydroxyalkyl, (C$_1$-$C_6$)alkoxy, phenyl, naphthyl or furyl, wherein said phenyl, naphthyl and furyl may optionally be substituted with one or more substituents independently selected from chloro, bromo, trifluoromethyl, (C$_1$-$C_6$)alkyl, (C$_1$-$C_6$)alkoxy, -S-(C$_1$-$C_6$)alkyl, -SO$_2$-(C$_1$-$C_6$)alkyl, -SO$_3$-(C$_1$-$C_6$)alkyl and hydroxy;
R⁵ is hydrogen, (C₁-C₆)alkyl, (C₁-C₆)alkoxy, trifluoromethyl, (C₁-C₆)hydroxyalkyl, -S-(C₁-C₆)alkyl, -SO-(C₁-C₆)alkyl, -SO₂-(C₁-C₆)alkyl, phenyl or furyl, wherein said phenyl and furyl may optionally be substituted with one or more substituents independently selected from chloro, bromo, trifluoromethyl, (C₁-C₆)alkyl, (C₁-C₆)alkoxy, -S-(C₁-C₆)alkyl, -SO-(C₁-C₆)alkyl and hydroxy;

R⁶ is hydrogen or R⁷;

R⁷ is aryl selected from phenyl and naphthyl, or heteroaryl selected from pyridyl, furyl, thiophenyl, imidazolyl, pyrazolyl, triazolyl, thiazolyl, oxazolyl, benzothiazolyl, benzofuranyl, benzothienyl and quinolyl, wherein said aryl and heteroaryl groups may optionally be substituted with one or more substituents independently selected from chloro, bromo, (C₁-C₆)alkyl, (C₁-C₆)alkoxy, -S-(C₁-C₆)alkyl, -SO-(C₁-C₆)alkyl, -SO₂-(C₁-C₆)alkyl and trifluoromethyl, and Y is hydrogen, benzyl, acetyl, benzoyl, aryl selected from phenyl and naphthyl, or heteroaryl selected from furyl, thiophenyl, thiazolyl and oxazolyl, wherein said aryl and heteroaryl groups may optionally be substituted with one or more substituents independently selected from chloro, bromo, nitro, trifluoromethyl, (C₁-C₆)alkyl, (C₁-C₆)alkoxy, -S-(C₁-C₆)alkyl, -SO-(C₁-C₆)alkyl and -SO₂-(C₁-C₆)alkyl;

\[
\begin{array}{c}
\text{O} \\
\hline
\text{Y⁴} \\
\hline
\text{O} \\
\hline
\text{Y²} \\
\hline
\text{O}
\end{array}
\]

Y² is -C-O-, -CH-C-O-, or Y² is absent (i.e., the carbon to which R⁶ is attached is directly bonded to Y²-C-O-);

Y⁴ is hydrogen or (C₁-C₆)alkyl; and

Y³ is selected from the following groups:
-60-

and

wherein A is CH₂, CH₂CH₂, CH(CH₃) or CH₂-C-NH;

B is oxygen or sulfur;

R⁹ is selected from phenyl, benzothiazol-2-yl, benzoazol-2-yl, benzofuran-2-yl, benzothiophen-2-yl, thiazolopyridin-2-yl, oxazolopyridin-2-yl, 3-phenyl-1,2,4-oxadiazol-5-yl, and 5-phenyl-1,2,4-oxadiazol-3-yl, and R⁹ may optionally be substituted with from one to three substituents independently selected from fluorine, chlorine, bromine, methyl, methythio, methoxy, hydroxy and trifluoromethyl;

R¹⁰ and R¹¹ are independently selected from hydrogen, fluorine, chlorine, bromine, (C₁-C₄)alkyl, (C₁-C₄)alkythio, (C₁-C₄)alkoxy and trifluoromethyl;

or R¹⁰ and R¹¹ together, with the carbons to which they are attached, form a group of the formula

wherein p is 1 or 2; D and E are independently selected from -CH₂-, oxygen and sulfur, except that D and E cannot both be oxygen and cannot both be sulfur; R¹² and R¹³ are independently selected from hydrogen, fluorine, chlorine, bromine, (C₁-C₄)alkyl, (C₁-C₄)alkythio, (C₁-C₄)alkoxy and trifluoromethyl; and F and G are independently selected from -CH₂- and nitrogen;

R¹² and R¹³ are independently selected from hydrogen, fluorine, chlorine, bromine, (C₁-C₄)alkyl, (C₁-C₄)alkythio, (C₁-C₄)alkoxy and trifluoromethyl;
K is oxygen, sulfur, SO or SO₂;

R¹⁴ is hydrogen, fluoro, chloro, bromo, methyl, nitro, cyano, methanesulfonyl or benzoyl;

R¹⁵ is hydrogen, fluoro, chloro, bromo, carboxy, (C₁-C₃)alkyl, (C₁-C₃)alkoxy or benzyloxy;

R¹⁶ is hydrogen, fluoro, chloro, bromo or (C₁-C₃)alkyl;

or R¹⁵ and R¹⁶, together with the carbon atoms to which they are attached, form a 7,8-benzo ring;

R¹⁷ is (C₁-C₄)alkyl, trifluoromethyl or (CH₂)ₙAr, wherein n is 0, 1 or 2 and Ar is phenyl optionally substituted with one or two substituents independently selected from methoxy, fluoro, chloro and bromo;

R¹⁸ is hydrogen, methyl or ethyl;

or R¹⁷ and R¹⁸, together with the carbon to which they are attached, form a saturated 4 or 5 membered carbocyclic spiro ring; and

R¹⁹ is hydrogen or methyl;

with the proviso that: (a) when K is other than oxygen, R¹⁴ is fluoro, chloro, cyano or nitro, and R¹⁵ and R¹⁶ do not form a 7,8-benzo ring; (b) when K is other than oxygen or R¹⁷ is other than methyl, ethyl or trifluoromethyl, both R¹⁸ and R¹⁹ are hydrogen; and (c) when Y² is a group of the formula XIVA, R⁹ is benzothiazol-2-yl or substituted benzothiazol-2-yl;

or a pharmaceutically acceptable salt of such compound.

21. A compound according to claim 20 wherein R²⁶ is Y³C-O-Y², Y² is not absent and: (a) Y³ is a group of the formula VII, R⁹ is phenyl, substituted phenyl, benzothiazol-2-yl or benzoxazol-2-yl, A is -CH₂-, and R¹⁰ and R¹¹ are either both methyl or they form, together with the carbons to which they are attached, a group of the formula

\[
\begin{align*}
&\text{OR} \\
&\text{or} \\
&\text{or}
\end{align*}
\]
(b) Y² is a group of the formula VIII, R² is phenyl, substituted phenyl, benzothiazol-2-yl or benzoazol-2-yl, A is -CH₂-, and R¹² and R¹³ are independently selected from bromo and chloro; (c) Y³ is a group of the formula IX and each of R¹² and R¹³ is hydrogen; (d) Y³ is a group of the formula X and R¹² and R¹³ are independently selected from (C₁-C₆)alkoxy and trifluoromethyl; (e) Y² is a group of the formula XI and R¹² and R¹³ are independently selected from (C₁-C₆)alkyl; (f) Y³ is a group of the formula XII, R² is phenyl, substituted phenyl or benzothiazol-2-yl, A is -CH₂- and R¹² and R¹³ are independently selected from chloro and bromo; or (g) Y² is a group of the formula XIII, each of R¹⁴ and R¹⁹ is hydrogen, each of R¹⁷ and R¹⁸ is methyl, R¹⁶ is 6-chloro or 6-fluoro and R¹⁸ is 7-chloro or 7-fluoro.

22. A pharmaceutical composition comprising a pharmaceutically acceptable carrier and an amount of a mutual prodrug of a compound according to claim 1 and an aldose reductase inhibiting compound, or a pharmaceutically acceptable salt of such a prodrug, that is effective in (a) inhibiting the enzyme sorbitol dehydrogenase, (b) lowering the level of fructose in one or more of the tissues of a mammal that are affected by diabetes, or (c) treating or preventing a diabetic complication in a mammal.

23. A method of: (a) inhibiting the enzyme sorbitol dehydrogenase in a mammal; (b) lowering the level of fructose in one or more of the tissues of a mammal that are affected by diabetes; or (c) treating or preventing a diabetic complication in a mammal; comprising administering to said mammal an amount of a mutual prodrug of a compound according to claim 1 and an aldose reductase inhibiting compound, or a pharmaceutically acceptable salt of such a prodrug, that is effective in, respectively: (a) inhibiting the enzyme sorbitol dehydrogenase, (b) lowering the level of fructose in one or more of the tissues of a mammal that are affected by diabetes, or (c) treating or preventing a diabetic complication in a mammal.

24. A pharmaceutical composition comprising a pharmaceutically acceptable carrier and an amount of a mutual prodrug of an aldose reductase inhibiting compound and a compound of the formula I, as defined in claim 2, or a pharmaceutically acceptable salt of such a prodrug, that is effective in (a) inhibiting the enzyme sorbitol dehydrogenase, (b) lowering the level of fructose in one or more of the tissues of a mammal that are affected by diabetes, or (c) treating or preventing a diabetic complication in a mammal.
25. A method of: (a) inhibiting the enzyme sorbitol dehydrogenase in a mammal; (b) lowering the level of fructose in one or more of the tissues of a mammal that are affected by diabetes; or (c) treating or preventing a diabetic complication in a mammal; comprising administering to said mammal an amount of a mutual prodrug of an aldose reductase inhibiting compound and a compound of the formula I, as defined in claim 2, or a pharmaceutically acceptable salt of such a prodrug, that is effective in, respectively: (a) inhibiting the enzyme sorbitol dehydrogenase, (b) lowering the level of fructose in one or more of the tissues of a mammal that are affected by diabetes, or (c) treating or preventing a diabetic complication in a mammal.

26. A pharmaceutical composition comprising: (a) an amount of a compound of the formula I, as defined in claim 2, or a pharmaceutically acceptable salt thereof, that is effective in lowering the level of fructose in one or more of the tissues of a mammal, that are affected by diabetics; (b) an amount of an aldose reductase inhibiting compound, or a pharmaceutically acceptable salt thereof, that is effective in lowering the level of fructose in one or more of the tissues of a mammal that are affected by diabetes; and (c) a pharmaceutically acceptable carrier.

27. A method of lowering the level of fructose in one or more of the tissues of a mammal that are affected by diabetes, comprising administering to said mammal a fructose lowering effective amount of a compound of the formula I, as defined in claim 2, or a pharmaceutically acceptable salt thereof, in combination with a fructose lowering effective amount of an aldose reductase inhibiting compound, or a pharmaceutically acceptable salt thereof.

28. A pharmaceutical composition comprising (a) an amount of a compound of the formula I, as defined in claim 2, or a pharmaceutically acceptable salt thereof, effective in treating or preventing a diabetic complication such as diabetic neuropathy, diabetic retinopathy, diabetic nephropathy, or diabetic microangiopathy or macroangiopathy in a mammal; (b) an amount of an aldose reductase inhibiting compound, or a pharmaceutically acceptable salt thereof, effective in treating or preventing a diabetic complication such as diabetic neuropathy, diabetic retinopathy, diabetic nephropathy or diabetic microangiopathy or macroangiopathy in a mammal; and (c) a pharmaceutically acceptable carrier.

29. A method of treating or preventing a diabetic complication such as diabetic neuropathy, diabetic retinopathy, diabetic nephropathy, or diabetic microangiopathy or
macroangiopathy in a mammal, comprising administering to said mammal an amount of a compound of the formula I, as defined in claim 2, or a pharmaceutically acceptable salt thereof, effective in treating or preventing such complication, in combination with an amount of an aldose reductase inhibiting compound, or a pharmaceutically acceptable salt thereof, effective in treating or preventing such complication.

30. A pharmaceutical composition comprising: (a) an amount of a compound of the formula I, as defined in claim 2, or a pharmaceutically acceptable salt thereof, that is effective in lowering the level of fructose in one or more of the tissues of a mammal that are affected by diabetics; (b) an amount of a compound of the formula
wherein \( L \) is oxygen, \( \text{CH}_2 \) sulfur or \(-\text{C}=-\);

\[
\text{O} \quad \quad \text{J is hydrogen, methyl or } -\text{CNH}_2; \]

\[
\text{O} \quad \quad \text{G is CH or N;}
\]

\( R^{20} \) and \( R^{21} \) are independently selected from hydrogen, fluorine, chlorine, \((\text{C}_{1-}\text{C}_6)\text{alkyl, } (\text{C}_{1-}\text{C}_6)\text{alkoxy, } \text{-S-(C}_{1-}\text{C}_6)\text{alkyl, } \text{-SO-(C}_{1-}\text{C}_6)\text{alkyl or } \text{-SO}_2-(\text{C}_{1-}\text{C}_6)\text{alkyl;}
\]

\( M \) is phenyl, naphthyl or a heteroaryl group selected from furan, morpholine, pyrrolidine, tetrahydroisoquinoline, thiophene, thiazole, oxazole, benzofuran, benzothiophene, benzothiazole, benzoazole and indole, wherein said phenyl, naphthyl and heteroaryl groups may optionally be substituted with up to three substituents independently selected from chloro, fluoro, bromo, cyano, nitro, hydroxy, carboxy, amino \((\text{C}_{1-}\text{C}_6)\text{alkylamino, } (\text{C}_{1-}\text{C}_6)\text{dialkylamino, } (\text{C}_{1-}\text{C}_6)\text{alkanoylamino, } (\text{C}_{1-}\text{C}_6)\text{alkanoyl,}
\]

\((\text{C}_{1-}\text{C}_6)\text{alkyl, } (\text{C}_{2-}\text{C}_6)\text{alkenyl, } (\text{C}_{3-}\text{C}_6)\text{alkenoyloxy, } \text{fluoro-(C}_{1-}\text{C}_6)\text{alkyl, } (\text{C}_{1-}\text{C}_6)\text{alkoxy, } \text{fluoro-(C}_{1-}\text{C}_6)\text{alkoxy, (C}_{1-}\text{C}_6)\text{hydroxyalkyl, carbamoyl, (C}_{1-}\text{C}_6)\text{alkylcarbamoyl, (C}_{1-}\text{C}_6)\text{dialkylcarbamoyl, sulfamoyl, (C}_{1-}\text{C}_6)\text{alkylsulfamoyl, (C}_{1-}\text{C}_6)\text{dialkylsulfamoyl, (C}_{1-}\text{C}_6)\text{alkoxy carbonyl, (C}_{1-}\text{C}_6)\text{alkylenedioxy, (C}_{1-}\text{C}_6)\text{alkanesulfonamido, -S-(C}_{1-}\text{C}_6)\text{alkyl, -SO-(C}_{1-}\text{C}_6)\text{alkyl, -SO}_2-(\text{C}_{1-}\text{C}_6)\text{alkyl, phenyl, phenoxy, benzyl oxy, benzyl oxy carbonyl, benzamido, and benzenesulfonamido, and wherein said phenyl and the phenyl moiety of said phenoxy, benzyl oxy, benzyl oxy carbonyl, benzamido and benzenesulfonamido may optionally be substituted with a substituent selected from chlorine, fluorine, (C}_{1-}\text{C}_6)\text{alkyl, (C}_{1-}\text{C}_6)\text{alkoxy and }
\]

\[
\begin{array}{c}

\]

wherein Y⁵ is oxygen or sulfur, or Y⁶ is absent (i.e., the phenyl ring is bonded to the carbon to which R²² and R²₃ are attached), and R²² and R²₃ are independently selected from hydrogen and (C₁-C₆)alkyl, and the phenyl moiety to which the \(-\text{NHCOC}(R²²)(R²³)\)-sidechain is attached may optionally be substituted with from one to three substituents independently selected from hydrogen, halo, trifluoromethyl, nitro, cyano, (C₁-C₆)alkyl, (C₁-C₆)alkoxy and (C₁-C₆)alkanoyl, or any adjacent pair of substituents may form, together with the carbons to which they are attached, a benzo ring which may optionally be substituted with a substituent independently selected from halo, (C₁-C₆)alkyl and (C₁-C₆)alkoxy;

\[
\begin{array}{c}
\text{O} \\
\end{array}
\]

with the proviso that: (a) when J is \(-\text{CNH}_2\), G is CH and L is oxygen; and (b) M is not 2-carboxyphenyl;
or a pharmaceutically acceptable salt thereof, that is effective in lowering the level of fructose in one or more of the tissues of a mammal that are affected by diabetes; and (c) a pharmaceutically acceptable carrier.

31. A method of lowering the level of fructose in one or more of the tissues of a mammal that are affected by diabetes, comprising administering to said mammal a fructose lowering effective amount of a compound of the formula I, as defined in claim 2, or a pharmaceutically acceptable salt thereof, in combination with a fructose lowering effective amount of a compound of the formula XV, XVI, XVII, XVIII or XIX, as defined in claim 30, or a pharmaceutically acceptable salt thereof.

32. A pharmaceutical composition comprising: (a) an amount of a compound of the formula I, as defined in claim 2, or a pharmaceutically acceptable salt thereof, effective in treating or preventing a diabetic complication such as diabetic neuropathy, diabetic retinopathy, diabetic nephropathy, or diabetic microangiopathy or macroangiopathy in a mammal; (b) an amount of a compound of the formula XV, XVI, XVII, XVIII or XIX, as defined in claim 30, or a pharmaceutically acceptable salt thereof, effective in treating or preventing a diabetic complication such as diabetic neuropathy, diabetic retinopathy, diabetic nephropathy or diabetic microangiopathy or macroangiopathy in a mammal; and (c) a pharmaceutically acceptable carrier.

33. A method of treating or preventing a diabetic complication such as diabetic neuropathy, diabetic retinopathy, diabetic nephropathy, or diabetic microangiopathy or macroangiopathy in a mammal, comprising administering to said mammal an amount of a compound of the formula I, as defined in claim 2, or a pharmaceutically acceptable salt thereof, effective in treating or preventing such complication, in combination with an amount of a compound of the formula XV, XVI, XVII, XVIII or XIX, as defined in claim 30, or a pharmaceutically acceptable salt thereof, effective in treating or preventing such complication.

34. A pharmaceutical composition according to claim 30, wherein the compound of formula I, or pharmaceutically acceptable salt thereof, that is employed is a compound wherein R1 is (C1-C6)alkoxycarbonyl-(C1-C6)alkyl, (C1-C6)alkyl-S-(C1-C6)alkyl, (C1-C6)alkyl-SO-(C1-C6)alkyl, (C1-C6)alkyl-SO2-(C1-C6)alkyl, dihydroxy-(C1-C6)alkyl, aryl, heteroaryl, heteroaryl-(C1-C6)alkyl, aryl-(C1-C6)alkyl, (C1-C6)alkoxycarbonylaryl, aryl-(C1-C6)alkyloxy or heteroaryl-(C1-C6)alkyloxy, wherein said aryl and the aryl moieties of said aryl-(C1-C6)alkyl, (C1-C6)alkoxycarbonylaryl, and aryl-
(C₁-C₆)alkyloxy are independently selected from phenyl and naphthyl, and wherein said heteroaryl and the heteroaryl moieties of said heteroaryl-(C₁-C₆)alkyl and heteroaryl-(C₁-C₆)alkyloxy are independently selected from wherein the aryl moiety is selected from phenyl and naphthyl, heteroaryl selected from pyridyl, furyl, tetrahydrofuryl, thienyl, imidazolyl, pyrazolyl, triazolyl, thiazolyl, oxazolyl and benzothiazolyl, and wherein said aryl and heteroaryl and the aryl and heteroaryl moieties of said heteroaryl-(C₁-C₆)alkyl, aryl-(C₁-C₆)alkyl, (C₁-C₆)alkoxycarbonylaryl, aryl-(C₁-C₆)alkyloxy and heteroaryl-(C₁-C₆)alkyloxy may optionally be substituted with one or more substituents independently selected from chloro, bromo, (C₁-C₆)alkyl, (C₁-C₆)alkoxy, -S-(C₁-C₆)alkyl, -SO-(C₁-C₆)alkyl, -SO₂-(C₁-C₆)alkyl, hydroxy-(C₁-C₆)alkyl and trifluoromethyl.

35. A method according to claim 31, wherein the compound of formula I, or pharmaceutically acceptable salt thereof, that is employed, is a compound wherein R¹ is (C₁-C₆)alkoxycarbonyl-(C₁-C₆)alkyl, (C₁-C₆)alkyl-S-(C₁-C₆)alkyl, (C₁-C₆)alkyl-SO-(C₁-C₆)alkyl, (C₁-C₆)alkyl-SO₂-(C₁-C₆)alkyl, dihydroxy-(C₁-C₆)alkyl, aryl, heteroaryl, heteroaryl-(C₁-C₆)alkyl, aryl-(C₁-C₆)alkyl, (C₁-C₆)alkoxycarbonylaryl, aryl-(C₁-C₆)alkyloxy or heteroaryl-(C₁-C₆)alkyloxy, wherein said aryl and the aryl moieties of said aryl-(C₁-C₆)alkyl, (C₁-C₆)alkoxycarbonylaryl, and aryl-(C₁-C₆)alkyloxy are independently selected from phenyl and naphthyl, and wherein said heteroaryl and the heteroaryl moieties of said heteroaryl-(C₁-C₆)alkyl and heteroaryl-(C₁-C₆)alkyloxy are independently selected from wherein the aryl moiety is selected from phenyl and naphthyl, heteroaryl selected from pyridyl, furyl, tetrahydrofuryl, thienyl, imidazolyl, pyrazolyl, triazolyl, thiazolyl, oxazolyl and benzothiazolyl, and wherein said aryl and heteroaryl and the aryl and heteroaryl moieties of said heteroaryl-(C₁-C₆)alkyl, aryl-(C₁-C₆)alkyl, (C₁-C₆)alkoxycarbonylaryl, aryl-(C₁-C₆)alkyloxy and heteroaryl-(C₁-C₆)alkyloxy may optionally be substituted with one or more substituents independently selected from chloro, bromo, (C₁-C₆)alkyl, (C₁-C₆)alkoxy, -S-(C₁-C₆)alkyl, -SO-(C₁-C₆)alkyl, -SO₂-(C₁-C₆)alkyl, hydroxy-(C₁-C₆)alkyl and trifluoromethyl.

36. A pharmaceutical composition according to claim 32, wherein the compound of formula I, or pharmaceutically acceptable salt thereof, that is employed, is a compound wherein R¹ is (C₁-C₆)alkoxycarbonyl-(C₁-C₆)alkyl, (C₁-C₆)alkyl-S-(C₁-C₆)alkyl, (C₁-C₆)alkyl-SO-(C₁-C₆)alkyl, (C₁-C₆)alkyl-SO₂-(C₁-C₆)alkyl, dihydroxy-(C₁-C₆)alkyl, aryl, heteroaryl, heteroaryl-(C₁-C₆)alkyl, aryl-(C₁-C₆)alkyl, (C₁-C₆)alkoxycarbonylaryl, aryl-(C₁-C₆)alkyloxy or heteroaryl-(C₁-C₆)alkyloxy, wherein said
aryl and the aryl moieties of said aryl-(C₁-C₆)alkyl, (C₁-C₆)alkoxycarbonylaryl, and aryl-(C₁-C₆)alkyloxy are independently selected from phenyl and naphthyl, and wherein said heteroaryl and the heteroaryl moieties of said heteroaryl-(C₁-C₆)alkyl and heteroaryl-(C₁-C₆)alkyloxy are independently selected from wherein the aryl moiety is selected from phenyl and naphthyl, heteroaryl selected from pyridyl, furyl, tetrahydrofuryl, thiienyl, imidazolyl, pyrazolyl, triazolyl, thiazolyl, oxazolyl and benzothiazolyl, and wherein said aryl and heteroaryl and the aryl and heteroaryl moieties of said heteroaryl-(C₁-C₆)alkyl, heteroaryl-(C₁-C₆)alkyloxy and heteroaryl-(C₁-C₆)alkyloxy may optionally be substituted with one or more substituents independently selected from chloro, bromo, (C₁-C₆)alkyl, (C₁-C₆)alkoxy, -S-(C₁-C₆)alkyl, -SO₂-(C₁-C₆)alkyl, -SO₂-(C₁-C₆)alkyl, -SO₂-(C₁-C₆)alkyl, hydroxy-(C₁-C₆)alkyl and trifluoromethyl.

37. A method according to claim 33, wherein the compound of formula I, or pharmaceutically acceptable salt thereof, that is employed, is a compound wherein R¹ is (C₁-C₆)alkoxycarbonyl-(C₁-C₆)alkyl, (C₁-C₆)alkyl-S-(C₁-C₆)alkyl, (C₁-C₆)alkyl-SO₂-(C₁-C₆)alkyl, (C₁-C₆)alkyl-SO₂-(C₁-C₆)alkyl, dihydroxy-(C₁-C₆)alkyl, aryl, heteroaryl, heteroaryl-(C₁-C₆)alkyl, (C₁-C₆)alkyloxy-(C₁-C₆)alkyl, (C₁-C₆)alkyloxy, heteroaryl-(C₁-C₆)alkyloxy, wherein said aryl and the aryl moieties of said aryl-(C₁-C₆)alkyl, (C₁-C₆)alkyloxy, and aryl-(C₁-C₆)alkyloxy are independently selected from phenyl and naphthyl, and wherein said heteroaryl and the heteroaryl moieties of said heteroaryl-(C₁-C₆)alkyl and heteroaryl-(C₁-C₆)alkyloxy are independently selected from wherein the aryl moiety is selected from phenyl and naphthyl, heteroaryl selected from pyridyl, furyl, tetrahydrofuryl, thiienyl, imidazolyl, pyrazolyl, triazolyl, thiazolyl, oxazolyl and benzothiazolyl, and wherein said aryl and heteroaryl and the aryl and heteroaryl moieties of said heteroaryl-(C₁-C₆)alkyl, aryl-(C₁-C₆)alkyl, (C₁-C₆)alkyloxy and heteroaryl-(C₁-C₆)alkyloxy may optionally be substituted with one or more substituents independently selected from chloro, bromo, (C₁-C₆)alkyl, (C₁-C₆)alkoxy, -S-(C₁-C₆)alkyl, -SO₂-(C₁-C₆)alkyl, -SO₂-(C₁-C₆)alkyl, hydroxy-(C₁-C₆)alkyl and trifluoromethyl.

INTERNATIONAL SEARCH REPORT

A. CLASSIFICATION OF SUBJECT MATTER
IPC 5 C07D239/42 C07D417/14 A61K31/505

According to International Patent Classification (IPC) or to both national classification and IPC

B. FIELDS SEARCHED
Minimum documentation searched (classification system followed by classification symbols)
IPC 5 C07D A61K

Documentation searched other than minimum documentation to the extent that such documents are included in the fields searched

C. DOCUMENTS CONSIDERED TO BE RELEVANT

Further documents are listed in the continuation of box C. Patent family members are listed in annex.

* Special categories of cited documents:
"A" document defining the general state of the art which is not considered to be of particular relevance.
"E" earlier document but published on or after the international filing date.
"L" document which may throw doubts on priority claim(s) or which is cited to establish the publication date of another document or to show a difference between two earlier documents.
"O" document referring to an oral disclosure, use, exhibition or other means.
"P" document published prior to the international filing date but later than the priority date claimed.
"T" later document published after the international filing date or priority date and not in conflict with the application but cited to understand the principle or theory underlying the invention.
"X" document of particular relevance; the claimed invention cannot be considered without it.
"Y" document of particular relevance; the claimed invention cannot be considered without it; the document is combined with one or more other such documents, such combination being obvious to a person skilled in the art.
"M" document of the same patent family.

Date of the actual completion of the international search 2 November 1993
Date of mailing of the international search report 25. 11. 93

**INTERNATIONAL SEARCH REPORT**

**Box I**  Observations where certain claims were found unsearchable (Continuation of item 1 of first sheet)

This international search report has not been established in respect of certain claims under Article 17(2)(a) for the following reasons:

1. ☐ Claims Nos.: because they relate to subject matter not required to be searched by this Authority, namely:

   Although claims 8-13, 23, 25, 27, 29, 31, 33, 35, 37 are directed to a method of treatment of the mammals, the search has been carried out and based on the attributed effects of the compounds.

2. ☐ Claims Nos.: because they relate to parts of the international application that do not comply with the prescribed requirements to such an extent that no meaningful international search can be carried out, specifically:

   The claims shall be fully supported by the description. (Art. 6 - PCT)
   Claims searched incompletely: 2-7, 14-17, 19, 24, 26, 28, 32, 36
   Claims not searched: 30 (formula missing)

3. ☐ Claims Nos.: because they are dependent claims and are not drafted in accordance with the second and third sentences of Rule 6.4(a).

**Box II**  Observations where unity of invention is lacking (Continuation of item 2 of first sheet)

This International Searching Authority found multiple inventions in this international application, as follows:

1. ☐ As all required additional search fees were timely paid by the applicant, this international search report covers all searchable claims.

2. ☐ As all searchable claims could be searched without effort justifying an additional fee, this Authority did not invite payment of any additional fee.

3. ☐ As only some of the required additional search fees were timely paid by the applicant, this international search report covers only those claims for which fees were paid, specifically claims Nos.:

4. ☐ No required additional search fees were timely paid by the applicant. Consequently, this international search report is restricted to the invention first mentioned in the claims; it is covered by claims Nos.:

**Remark on Protest**

☐ The additional search fees were accompanied by the applicant's protest.

☐ No protest accompanied the payment of additional search fees.
