PILLOW HEAD COVER

Harold A. Easterbrooks, Providence, R. I.

Application January 21, 1944, Serial No. 519,168

1 Claim. (Cl. 5—339)

1

This application relates to a pillow for the head and more particularly to a covering for the head when resting on the pillow.

Heretofore in sleeping in a cold room the top of one's head often became so cool it was difficult to sleep, this is particularly true of those having a bald head. Caps have been worn to avoid cooling of the head but frequently a cap becomes dislodged while sleeping and the person will be awakened due to the cooling of the head.

One of the objects of this invention is to provide a pillow cover which will have attached thereto an arrangement so that the top of the head may be tucked into a pocket or cover provided on the pillow.

Another object of the invention is to provide a head covering which cannot become dislodged but will remain in place as a part of the pillow.

Another object of this invention is to provide an arrangement which will extend over either face of the pillow so that the same may be reversed.

With these and other objects in view, the invention consists of certain novel features of construction, as will be more fully described and particularly pointed out in the appended claim.

In the accompanying drawing:

Fig. 1 is a perspective view of a pillow equipped with my invention and illustrating a person using the same;

Fig. 2 is a perspective view looking at the edge of the pillow-case with the pillow removed;

Fig. 3 is a sectional view on line 3—3 of Fig. 2.

With reference to the drawing, I have provided from one piece of material, such as cotton sheeting, a pillow-case designated generally 10 which consists of a face sheet 11 and a face sheet 12 which are secured together as by folding as at 13 and secured together as at 14 such as by suitable sewing or the like. The end or edges 15 and 16 are open so as to permit a pillow to be slid into the space between the face sheets 11 and 12. A flap 17 extends from the junction of the edges of the face 11 and 12 and may be one part with either of these face sheets and is here shown being as one part with the face 11.

2

This flap 17 may be folded down over the face 12 as shown in Fig. 1 or it may be folded down over the face 11. Buttonholes 18 are provided adjacent the corners of the free edge 19 which may be engaged by the buttons 20 on the tabs 21 which are secured along the side at a point spaced from the fold 13 and at a location where they may be buttoned into the buttonholes 18 to hold the flap 19 in position.

If it is desired to fold the flap over the opposite face 11 this may be easily accomplished while the same tabs may be utilized for holding the flap in position over the face 11. Either the same button 20 may be utilized as secured to the flap by buttoning them through the buttonholes from the opposite surface or additional buttons 20' may be provided on the flap for this purpose.

In use after the flap has been secured in position the person may tuck the head between the flap and the face of the pillow so a covering for the head will be provided. The head will be tucked in only sufficiently so breathing may be readily had to facilitate which the flap will not be sufficient to extend over the full face of the pillow.

I claim:

A removable pillow-case formed of sheet fabric having two opposed rectangular portions secured together along their opposite sides and open at one end to removably receive a pillow therethrough, an extension flap also of rectangular shape having one side attached along one of said secured sides and having a continuous straight free edge along its opposite side, said flap being of a width less than the width of said rectangular portions to overlie one of the two rectangular portions but part of the width thereof to provide a pocket for the top of the head of a person with his head resting on the pillow receiving portion, and securing means comprising tabs on one of said portions having buttons thereon and buttonholes in said flap to receive said buttons.

HAROLD A. EASTERBROOKS.
