(54) **Apparatus for physical exercise**

(57) The apparatus for physical exercises features a principal tubular support (1) designed to rest on the floor at one end and having at the other end a crossbeam (3) destined to receive the user's hands and a second shorter tubular support (6), joined close to the lower end of the principal tubular support, by an articulation

(7), having at its upper end a crossbeam (8) destined to receive the user's feet and elastic means (9) of connection between the crossbeam (8) for the feet and the crossbeam (3) for the hands, to permit physical exercise by counteracting the resistance to traction of these said elastic elements.
