(54) Title: MULTI-CHANNEL WIRELESS BROADCAST PROTOCOL FOR A SELF-ORGANIZING NETWORK

(57) Abstract: The disclosed embodiments of a media access control (MAC) scheme (12) are devised to solve the hidden node problem for channel-hopping broadcast (24) operations in wireless communication networks. The multi-channel broadcast MAC may be adapted to sense and hop around channel interference, and to perform concurrent sensing and load balancing across a set of channels. A multi-hop routing engine using this packet broadcast operator may allow a plurality of network nodes to organize themselves reliably into a communications network. By routing packets around the troubled areas, the routing engine may heal nodal and link failures. When a node changes location, the routing engine may reorganize the network topology automatically and restore the connectivity between communicating peers.

Box No. II Observations where certain claims were found unsearchable (Continuation of item 2 of first sheet)

This international search report has not been established in respect of certain claims under Article 17(2)(a) for the following reasons:

1. Claims Nos.:
because they relate to subject matter not required to be searched by this Authority, namely:

2. Claims Nos.:
because they relate to parts of the international application that do not comply with the prescribed requirements to such an extent that no meaningful international search can be carried out, specifically:

3. Claims Nos.:
because they are dependent claims and are not drafted in accordance with the second and third sentences of Rule 6.4(a).

Box No. III Observations where unity of invention is lacking (Continuation of item 3 of first sheet)

This International Searching Authority found multiple inventions in this international application, as follows:
Please See Continuation Sheet

1. As all required additional search fees were timely paid by the applicant, this international search report covers all searchable claims.
2. As all searchable claims could be searched without effort justifying an additional fee, this Authority did not invite payment of any additional fee.
3. As only some of the required additional search fees were timely paid by the applicant, this international search report covers only those claims for which fees were paid, specifically claims Nos.:

4. No required additional search fees were timely paid by the applicant. Consequently, this international search report is restricted to the invention first mentioned in the claims; it is covered by claims Nos.:

Remark on Protest The additional search fees were accompanied by the applicant's protest.
 No protest accompanied the payment of additional search fees.

BOX III. OBSERVATIONS WHERE UNITY OF INVENTION IS LACKING

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1. In order for all inventions to be examined, the appropriate additional examination fees must be paid.

Group I, claim(s) 1-7, drawn to channel selection between the first node and the second node, classified in class 370, subclass 437

Group II, claim(s) 8-13, drawn to retransmission of packets until the ACK message is received from the receiver, classified in class 714, subclass 749 .

Group III, claim(s) 14-17, drawn to updating the routing table in a network having a plurality of nodes, classified in class 370, subclass 392.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1. In order for all inventions to be examined, the appropriate additional examination fees must be paid.
