UNITED STATES PATENT OFFICE.

OGDEN P. PELL, OF FLUSHING, NEW YORK, ASSIGNOR TO HIMSELF, AND
ALFRED M. TREDWELL, OF MADISON, NEW JERSEY.

IMPROVED LOUNGE AND CAMP-STOOL COMBINED.

Specification forming part of Letters Patent No. 33,362, dated September 24, 1861.

To all whom it may concern:

Be it known that I, OGDEN P. PELL, of Flushing, in the county of Queens and State of New York, have invented, made, and applied to use an Improved Lounge and Camp-Stool Combined; and I do hereby declare that the following is a full, clear, and exact description of my said invention, reference being had to the annexed drawings, making part of this specification, wherein—

Figure 1 is a plan of my improved lounge. Fig. 2 is a side elevation of the same, and Fig. 3 is a perspective view of the center extension.

Similar marks of reference denote the same parts.

My invention consists in an extension-sacking applied between and combined with two camp-stools in such a manner that when put together a strong and comfortable lounge is provided that answers very well for a bedstead, in fact, becomes a camp-bedstead, and when taken apart the camp-stools are as convenient as they would be if not adapted to forming a bed.

In the drawings, *a a* are the cross or **X** legs of the camp-stools, *b b* are the upper rails, and *c* is the sacking.

At the ends of the rails *b b*, at one side of each stool, I provide metallic dovetail sockets 1 1, adapted to receive the dovetail ribs 2 2 on two ends of the rails *d d*, between which

rails is the sacking or webbing *c*. It will be now seen that by the introduction of this center extension a camp-bedstead is produced from two camp-stools, and that these camp-stools are not in any manner injured for other purposes, and when not required as a bedstead the center section is disconnected and rolled up on one of the rails *d d*. It will be seen that the dovetails 1 and 2 afford great facility for connecting and disconnecting, and that they are reliable in use, not being easily broken. However, I do not limit myself to these dovetail connections.

The center extension may be provided with holes in the side pieces *d d* to receive the ends of long **X**-pieces, so as to form a table when disconnected from the stools.

What I claim, and desire to secure by Letters Patent, is—

The extension center piece formed of sacking or equivalent material between two side pieces that are provided with dovetails or other connections at their ends taking the parts of the camp-stools, in the manner and for the purposes set forth.

In testimony whereof I have hereunto set my signature this 20th day of August, 1861.

OGDEN P. PELL.
