Title: CREDIT ALLOCATION IN AN OPEN ORDER MANAGER

Abstract: The technology described in this application allows a system to manage entities/players and associated Financial Articles of Trade ("FAT") with different trading systems, institutions and entities. In particular, an Open Order Manager ("OOM") manages a plurality of users in a user group, and preferably in real-time, monitors FAT transactions initiated and executed by the users. The OOM enables allocation and dynamic reallocation of the FAT amounts between and among "nodes" (e.g., a financial system or financial institution) which can include any subcomponent arrangement that has internal permission privileges which are not shared among other nodes but all of which are under control or ownership of a common party in interest.
