(54) Title: SYSTEM AND METHOD FOR MANAGING CONTENT BETWEEN DEVICES IN VARIOUS DOMAINS

(57) Abstract: A system and method for managing content between different client devices in various domains (such as vehicle, home, and person) (Fig. 1). The system and method include receiving an input from a user on the first client device to delay the content. After receiving the input, the first client device determines whether the first client device is connected to a wireless communication system. If the first client device is connected to the wireless communication system, the first client device sends a data message to a host system. In one embodiment, the host system will then obtain the content (in whole or in part after receiving the data message) to permit the user to resume playback of the content on the first client device or another client device (fig. 8).
