(54) Title: REMOTE MOBILE TESTING PROBE

(57) Abstract: A system for testing communications between an application executed on a mobile terminal and a server seated on a remote network includes a probe concentrator for receiving a communication from the mobile terminal and transmitting the communication to a remote probe, the remote probe configured to transmit the communication to a remote server via a remote network, and receive a responsive communication from the remote server, and transmit it to the probe concentrator which transmits it further to the mobile terminal. The probe concentrator may include an analysis block to analyze captured data and generate analysis results therefrom.

Further documents are listed in the continuation of Box C.

\* Special categories of cited documents:

"A" document defining the general state of the art which is not considered to be of particular relevance

"E" earlier application or patent but published on or after the international filing date

"L" document which may throw doubts on priority claim(s) or which is cited to establish the publication date of another citation or other special reason (as specified)

"O" document referring to an oral disclosure, use, exhibition or other means

"P" document published prior to the international filing date but later than the priority date claimed

"T" later document published after the international filing date or priority date and not in conflict with the application but cited to understand the principle or theory underlying the invention

"X" document of particular relevance; the claimed invention cannot be considered novel or cannot be considered to involve an inventive step when the document is taken alone

"Y" document of particular relevance; the claimed invention cannot be considered to involve an inventive step when the document is combined with one or more other such documents, such combination being obvious to a person skilled in the art

"&" document member of the same patent family
