(54) **Roof assemblies**

(57) A roof assembly for a hipped roof comprises a ridge beam, a ridge end member (14) connected to one end of the ridge beam and glazing bars (26) connected to the ridge end member via connectors (28), the ridge end member comprising a generally semi-circular plate and having a rim (22) onto which the connectors are at-

tached, the glazing bars being of generally inverted T-section having a base and stem, the base forming channels either side of the stem, characterised by a channel on the top surface of each of the connectors, leading from the connector itself to the base of the glazing bar attached to said connector, to form a continuous pas-

**ANNEX TO THE EUROPEAN SEARCH REPORT
ON EUROPEAN PATENT APPLICATION NO.**

EP 02 07 7538

This annex lists the patent family members relating to the patent documents cited in the above-mentioned European search report. The members are as contained in the European Patent Office EDP file on The European Patent Office is in no way liable for these particulars which are merely given for the purpose of information.
