(54) **Radiotelephone transceiver operative over more than one frequency range**

(57) A radiotelephone wireless communication apparatus is operative in both a first radiotelephone communication system including a first base station transmitting radiotelephone signals at a first band of frequencies and in a second radiotelephone communication system including a second base station transmitting radiotelephone signals at a second band of frequencies

different in frequency from the first band of frequencies. The wireless radiotelephone communication apparatus has a common baseband circuitry (210,212,214,216,218,220,222,224) for operating with the first and second base stations along with first and second RF circuits, (200,400), to communicate with each of these same base stations.
