Patented Nov. 25, 1924. 1,516,562

UNITED STATES PATENT OFFICE.

ANTONIO G. CALABRO, OF BOSTON, MASSACHUSETTS.

HAIR REMEDY.

No Drawing. Application filed July 6, 1923. Serial No. 649,972.

To all whom it may concern:

Be it known that I, ANTONIO G. CALABRO, a subject of the Kingdom of Italy, and residing at the city of Boston, in the county of Suffolk and Commonwealth of Massachusetts, have invented a certain new and useful Improvement in Hair Remedies, of which the following is a full, clear, and exact specification.

This invention has for its object the compounding of a fluid remedy by means of which the hair can be made to grow more vigorously, and the scalp to remain in a healthy condition, free from dandruff and irritation.

In compounding the remedy I take as follows:

Lemon juice.....three quarts.
Olive oil.....one quart.
Powdered sulfur.....six ounces.

These ingredients are slowly boiled together for one hour, and then permitted to cool off and stand for twenty-four hours. After shaking well, strain therefrom whatever deposits or impurities there may be therein.

Oil of bergamot, four drachms, and biborate of soda, three drachms, are then dissolved in nineteen and two-tenths ounces of 95% alcohol, by agitation, and the same intermixed with the strained solution above recited.

This produces about one wine gallon of my hair remedy ready for use.

It should be well shaken before use, and is to be applied to the scalp once a day by means of a small sponge, and then rubbed into the scalp with the tips of the fingers. After two months of this treatment, the remedy should be applied only twice a week.

Shortly after each application, the hair and scalp should be dried by means of a towel or paper napkin, and the hair brushed in the direction of its growth.

In severe cases of eczema or dandruff, the hair should be closely clipped.

After only a few applications, evidences of improvement will appear.

What I claim as my invention is:

A hair remedy consisting of three quarts of lemon juice, one quart of olive oil, six ounces of powdered sulfur, three drachms of biborate of soda, and approximately nineteen ounces of alcohol.

In testimony that I claim the foregoing invention, I have hereunto set my hand this 28th day of February, 1924.

ANTONIO G. CALABRO.
