54 Domestic cookers.

57 A domestic cooker (1) consists of a cabinet (2) including two heating compartments (3, 4), control components (6, 7) situated above the heating compartments (3, 4), and an air management system for cooling the components (6, 7). The system includes a vertical duct (8) on one side of the cooker, connecting an air inlet (9) adjacent the base of the cooker to an upper location at approximately the same vertical level as the components (6, 7), where a fan (10) is mounted. The upper end of the duct (8) is closed and the fan (10) draws air up through the inlet (9) and transversely of the cooker, past the components (6, 7) to be cooled. The air then diffuses down the opposite side of the cooker and exits via an aperture adjacent the base of the cooker.
