(54) Title: A LIGHT-EMITTING DEVICE MODULE WITH A SUBSTRATE AND METHODS OF FORMING IT

(57) Abstract: A light-emitting device module comprising a substrate, a light-emitting device chip and a heat-dissipating unit. The substrate has a cavity formed in the surface, has an insulator layer and metal layers, with layers of metal on the top and bottom surfaces. The light-emitting device chip is placed inside the cavity and is bonded onto the top metal layer of the substrate. The electrodes of the device chip are wired-bonded to electrodes formed on the top metal layer of the substrate. The cavity is filled with an encapsulating material to encapsulate the device chip. A heat-dissipating unit is bonded onto the bottom metal layer of the substrate.

For two-letter codes and other abbreviations, refer to the "Guidance Notes on Codes and Abbreviations" appearing at the beginning of each regular issue of the PCT Gazette.

INTERNATIONAL SEARCH REPORT
