# UNITED STATES PATENT OFFICE.

ANATOLE PANALLE, OF WASHINGTON, DISTRICT OF COLUMBIA, ASSIGNOR OF ONE-THIRD TO SAM L. NEEDLE, OF WASHINGTON, DISTRICT OF COLUMBIA.

## MEDICINE FOR BRONCHIAL AFFECTIONS.

No Drawing. Application filed June 29, 1927. Serial No. 202,464.

My present invention pertains to medicines and it contemplates the provision of compounding a number of harmless ingredients so as to produce a remedy for bronchial affections.

The remedy comprises South Carolina yellow pine tar, creosote, and carbon disulphide. The ingredients in the following quantities and manner of compounding are as follows:

South Carolina yellow pine tar, four drams; creosote (beechwood), one ounce; and carbon disulphide one pound.

I take the tar and dissolve therein the creosote and after this has become thoroughly mixed I then add the carbon disulphide until it is thoroughly mixed with the first two ingredients.

The remedy is immediately bottled and sealed and when used the patient merely removes the seal and inhales the fumes that arise from the ingredients.

I would distinctly have it understood that the remedy is not to be taken internally and I have found by experience that immediate and permanent relief may be obtained and expected from those suffering from bronchial troubles and allied maladies, and that there are absolutely no after effects from using my remedy.

What I claim is:—

1. A remedy for the purpose specified comprising a compound of yellow pine tar four drams, creosote one ounce and carbon disulphide one-half pound, compounded in substantially the proportions stated.

2. A remedy for the purpose specified comprising South Carolina yellow pine tar four drams in which creosote (beechwood) one ounce has been dissolved and carbon disulphide one-half pound has been thoroughly mixed, and compounded in substantially the proportions stated.

In testimony whereof I have hereunto set my hand.

ANATOLE PANALLE.
