(54) **Container with displaceable handle**

(57) A container (1) comprising: a container body (2), a lid (3), and at least one handle (4) where the ends (5) of the at least one handle (4) are pivotally connected to opposite sides of said container body (2). At least one end (5) of the at least one handle (4) is displaceable between a first position (8) and a second position (9). In this way, a container is provided where the effective length

of the handle can be increased or decreased. Therefore, the handle can be made to assume different positions. In a first position, the handle is resting on the edge of the container whereby the handle is easily visible and accessible to the user. In another position, the handle is resting along the sides of the container allowing a user to access the contents of the container.

**ANNEX TO THE EUROPEAN SEARCH REPORT  
ON EUROPEAN PATENT APPLICATION NO.**

EP 06 38 8020

This annex lists the patent family members relating to the patent documents cited in the above-mentioned European search report. The members are as contained in the European Patent Office EDP file on  
The European Patent Office is in no way liable for these particulars which are merely given for the purpose of information.
