Title: ALPHA-TRIFLUOROMETHYL ALCOHOLS OR AMINES AS GLUCOCORTICOID MIMETICS

Abstract: Compounds of Formula (I) wherein R^1, R^2, R^3, R^4, R^5, and X are as defined herein for Formula (IA) and Formula (IB), or a tautomer, prodrug, solvate, or salt thereof, pharmaceutical compositions containing such compounds, and methods of modulating the glucocorticoid receptor function and methods of treating disease-states or conditions mediated by the glucocorticoid receptor function or characterized by inflammatory, allergic, or proliferative processes in a patient using these compounds.
For two-letter codes and other abbreviations, refer to the "Guidance Notes on Codes and Abbreviations" appearing at the beginning of each regular issue of the PCT Gazette.
Related Applications
5 This application claims benefit of U.S. Serial No. 60/555,220, filed March 22, 2004, which is hereby incorporated by reference in its entirety.

Field of the Invention
The present invention relates to glucocorticoid mimetics or ligands, methods of making such compounds, their use in pharmaceutical compositions, and their use in modulating the glucocorticoid receptor function, treating disease-states or conditions mediated by the glucocorticoid receptor function in a patient in need of such treatment, and other uses.

Background of the Invention
15 Glucocorticoids, a class of corticosteroids, are endogenous hormones with profound effects on the immune system and multiple organ systems. They suppress a variety of immune and inflammatory functions by inhibition of inflammatory cytokines such as IL-1, IL-2, IL-6, and TNF, inhibition of arachidonic acid metabolites including prostaglandins and leukotrienes, depletion of T-lymphocytes, and reduction of the expression of adhesion molecules on endothelial cells (P.J. Barnes, Clin. Sci., 1998, 94, pp. 557-572; P.J. Barnes et al., Trends Pharmacol. Sci., 1993, 14, pp. 436-441). In addition to these effects, glucocorticoids stimulate glucose production in the liver and catabolism of proteins, play a role in electrolyte and water balance, reduce calcium absorption, and inhibit osteoblast function.

25 The anti-inflammatory and immune suppressive activities of endogenous glucocorticoids have stimulated the development of synthetic glucocorticoid derivatives including dexamethasone, prednisone, and prednisolone (L. Parente, Glucocorticoids, N.J. Goulding and R.J. Flowers (eds.), Boston: Birkhauser, 2001, pp. 35-54). These have found wide use in the treatment of inflammatory, immune, and allergic disorders including rheumatic diseases such as rheumatoid arthritis, juvenile arthritis, and ankylosing spondylitis, dermatological diseases including psoriasis and pemphigus, allergic disorders including allergic rhinitis, atopic dermatitis, and contact dermatitis, pulmonary conditions including asthma and chronic obstructive pulmonary disease (COPD), and other immune and inflammatory diseases including Crohn disease,

Unfortunately, in addition to the desired therapeutic effects of glucocorticoids, their use is associated with a number of adverse side effects, some of which can be severe and life-threatening. These include alterations in fluid and electrolyte balance, edema, weight gain, hypertension, muscle weakness, development or aggravation of diabetes mellitus, and osteoporosis. Therefore, a compound that exhibited a reduced side effect profile while maintaining the potent anti-inflammatory effects would be particularly desirable especially when treating a chronic disease.

The effects of glucocorticoids are mediated at the cellular level by the glucocorticoid receptor (R.H. Oakley and J. Cidlowski, *Glucocorticoids*, N.J. Goulding and R.J. Flowers (eds.), Boston: Birkhauser, 2001, pp. 55-80). The glucocorticoid receptor is a member of a class of structurally related intracellular receptors that when coupled with a ligand can function as a transcription factor that affects gene expression (R.M. Evans, Science, 1988, 240, pp. 889-895). Other members of the family of steroid receptors include the mineralocorticoid, progesterone, estrogen, and androgen receptors. In addition to the effects mentioned above for glucocorticoids, hormones that act on this receptor family have a profound influence on body homeostasis, mineral metabolism, the stress response, and development of sexual characteristics. *Glucocorticoids*, N.J. Goulding and R.J. Flowers (eds.), Boston: Birkhauser, 2001, is hereby incorporated by reference in its entirety to better describe the state of the art.

A molecular mechanism which accounts for the beneficial anti-inflammatory effects and the undesired side effects has been proposed (e.g., S. Heck et al., EMBO J, 1994, 13, pp. 4087-4095; H.M. Reichardt et al., Cell, 1998, 93, pp. 531-541; F. Tronche et al., Curr. Opin. in Genetics and Dev., 1998, 8, pp. 532-538). Many of the metabolic and cardiovascular side effects are thought to be the result of a process called transactivation. In transactivation, the translocation of the ligand-bound glucocorticoid receptor to the nucleus is followed by binding to glucocorticoid response elements (GREs) in the promoter region of side effect-associated
genes, for example, phosphoenolpyruvate carboxy kinase (PEPCK), in the case of increased glucose production. The result is an increased transcription rate of these genes which is believed to result, ultimately, in the observed side effects. The anti-inflammatory effects are thought to be due to a process called transrepression. In general, transrepression is a process independent of DNA binding that results from inhibition of NF-κB and AP-1-mediated pathways, leading to down regulation of many inflammatory and immune mediators. Additionally, it is believed that a number of the observed side effects may be due to the cross-reactivity of the currently available glucocorticoids with other steroid receptors, particularly the mineralocorticoid and progestosterone receptors.

Thus, it may be possible to discover ligands for the glucocorticoid receptor that are highly selective and, upon binding, can dissociate the transactivation and transrepression pathways, providing therapeutic agents with a reduced side effect profile. Assay systems to determine effects on transactivation and transrepression have been described (e.g., C.M. Bamberger and H.M. Schulte, Eur. J. Clin. Invest., 2000, 30 (suppl. 3), pp. 6-9). Selectivity for the glucocorticoid receptor may be determined by comparing the binding affinity for this receptor with that of other steroid family receptors including those mentioned above.

Glucocorticoids also stimulate the production of glucose in the liver by a process called gluconeogenesis and it is believed that this process is mediated by transactivation events. Increased glucose production can exacerbate type II diabetes, therefore a compound that selectively inhibits glucocorticoid mediated glucose production may have therapeutic utility in this indication (J.E. Freidman et al., J. Biol. Chem., 1997, 272, pp. 31475-31481).

Novel ligands for the glucocorticoid receptor have been described in the scientific and patent literature. For example, PCT International Publication No. WO 99/33786 discloses triphenylpropanamide compounds with potential use in treating inflammatory diseases. PCT International Publication No. WO 00/66522 describes non-steroidal compounds as selective modulators of the glucocorticoid receptor potentially useful in treating metabolic and inflammatory diseases. PCT International Publication No. WO 99/41256 describes tetracyclic modulators of the glucocorticoid receptor potentially useful in treating immune, autoimmune, and inflammatory diseases. U.S. Patent No. 5,688,810 describes various non-steroidal

A compound that is found to interact with the glucocorticoid receptor in a binding assay could be an agonist or an antagonist. The agonist properties of the compound could be evaluated in the transactivation or transrepression assays described above. Given the efficacy demonstrated by available glucocorticoid drugs in inflammatory and immune diseases and their adverse side effects, there remains a need for novel glucocorticoid receptor agonists with selectivity over other members of the steroid receptor family and a dissociation of the transactivation and transrepression activities. Alternatively, the compound may be found to have antagonist activity. As mentioned above, glucocorticoids stimulate glucose production in the liver.

Increased glucose production induced by glucocorticoid excess can exacerbate existing diabetes, or trigger latent diabetes. Thus a ligand for the glucocorticoid receptor that is found to be an antagonist may be useful, inter alia, for treating or preventing diabetes.

**Summary of the Invention**

The instant invention is directed to compounds of Formula (IA)

![Formula (IA)](image)

wherein:

R\(^1\) is an aryl, heteroaryl, heterocyclic, or C\(_3\)-C\(_8\) cycloalkyl group, each optionally independently substituted with one to three substituent groups,
wherein each substituent group of R\(^1\) is independently C\(_{1-3}\) alkyl, C\(_{2-5}\) alkenyl, C\(_{2-5}\) alkynyl, C\(_{3-6}\) cycloalkyl, heterocyclyl, aryl, heteroaryl, C\(_{1-3}\) alkoxy, C\(_{2-5}\) alkenyloxy, C\(_{2-5}\) alkynyloxy, aryloxy, acyl, C\(_{1-3}\) alkoxy carbonyl, C\(_{1-5}\) alkanoyloxy, C\(_{1-3}\) alkanoyl, aroyl, aminocarbonyl, alkylaminocarbonyl, dialkylaminocarbonyl, aminocarboxyloxy, C\(_{1-3}\) alkylaminocarboxyloxy, C\(_{1-5}\) dialkylaminocarboxyloxy, C\(_{2-5}\) cycloalkylaminocarboxyloxy, C\(_{1-3}\) alkanoylamino, C\(_{1-3}\) alkoxy carbonylamino, C\(_{1-3}\) alkylsulfonlamino, aminosulfonyl, C\(_{1-3}\) alkaninosulfonyl, C\(_{1-3}\) dialkaninosulfonyl, halogen, hydroxy, carboxy, cyano, trifluoromethyl, trifluoromethoxy, nitro, or amino wherein the nitrogen atom is optionally independently mono- or di-substituted by C\(_{1-3}\) alkyl or aryl; or ureido wherein either nitrogen atom is optionally independently substituted with C\(_{1-3}\) alkyl or C\(_{3-5}\) cycloalkyl; or C\(_{1-3}\) alkylthio wherein the sulfur atom is optionally oxidized to a sulfoxide or sulfone.

wherein each substituent group of R\(^1\) is optionally independently substituted with one to four substituent groups selected from aryl or heterocyclyl wherein the heterocycle is optionally independently substituted with hydroxyl, halogen, methyl, or dialkylamino; C\(_{1-5}\) alkoxy carbonyl, methyl, methoxy, halogen, hydroxy, oxo, cyano, aminosulfonyl, or amino wherein the nitrogen atom is optionally independently mono- or di-substituted by C\(_{1-3}\) alkyl or C\(_{1-3}\) dialkylamine or aryl; or ureido wherein either nitrogen atom is optionally independently substituted with C\(_{1-3}\) alkyl; or oxime wherein the oxygen atom is optionally substituted by C\(_{1-3}\) alkyl or benzyl;

R\(^2\) and R\(^3\) are each independently hydrogen, C\(_{1-3}\) alkyl, or C\(_{5-35}\) aryalkyl group, or R\(^2\) and R\(^3\) together with the carbon atom they are commonly attached to form a C\(_{3-5}\) spiro cycloalkyl ring, or

R\(^1\) and R\(^2\) when taken together are a chromanyl or dihydrobenzofuranyl optionally substituted with C\(_{1-3}\) alkyl, C\(_{2-5}\) alkenyl, C\(_{2-5}\) alkynyl, C\(_{3-8}\) cycloalkyl, heterocyclyl, aryl, heteroaryl, C\(_{1-3}\) alkoxy, C\(_{2-5}\) alkenyloxy, C\(_{2-5}\) alkynyloxy, aryloxy, acyl, C\(_{1-3}\) alkoxy carbonyl, C\(_{1-5}\) alkanoyloxy, aminocarbonyl, alkylaminocarbonyl,
dialkylaminocarbonyl, aminocarboxyloxy, C₃₋C₅ alkylaminocarboxyloxy, C₁₋C₅ dialkylaminocarboxyloxy, C₁₋C₅ alkanoylamino, C₁₋C₅ alkoxyaminocarbonylamino, C₁₋C₅ alkylsulfonylamino, aminosulfonyl, C₁₋C₅ alkylaminosulfonyl, C₁₋C₅ dialkylaminosulfonyl, halogen, hydroxy, carboxy, oxo, cyano, trifluoromethyl, trifluoromethoxy, trifluoromethylthio, nitro, or amino wherein the nitrogen atom is optionally independently mono- or di-substituted by C₁₋C₅ alkyl; or ureido wherein either nitrogen atom is optionally independently substituted with C₁₋C₅ alkyl; or C₁₋C₅ alkylthio wherein the sulfur atom is optionally oxidized to a sulfoxide or sulfone;
substituted by C₁-C₅ alkyl; or ureido wherein either nitrogen atom is optionally independently substituted with C₁-C₅ alkyl; or trifluoromethyl,

wherein R³ cannot be 1H-[1,5]naphthyridin-4-one; and

5

X is a hydroxy or amino wherein the nitrogen atom is optionally independently mono- or di-substituted by C₁-C₅ alkyl,

or a tautomer, prodrug, solvate, or salt thereof.

Another aspect of the invention includes compounds of Formula (IA), wherein:

R¹ is phenyl, dihydrobenzofuranyl, benzofuranyl, dihydroindolyl, indolyl, benzo[1,3]dioxol, dihydrobenzothieryl, benzothieryl, benzoazole, benzisoxazole, benzopyrazole, benzimidazole, thieryl, quinolinyl, tetrahydroquinolinone, tetrahydronaphthyridinone, dihydrochromene, pyridinyl, pyrimidinyl, or pyrazinyl, each optionally independently substituted with one to three substituent groups,

wherein each substituent group of R¹ is independently C₁-C₃ alkyl, C₂-C₃ alkenyl, C₂-C₃ alkynyl, C₁-C₃ alkoxy, C₂-C₃ alkenyloxy, C₁-C₃ alkanoyl, C₁-C₃ alkoxy carbonyl, C₁-C₃ alkanoyloxy, C₃-C₈ cycloalkyl, aryl, heteroaryl, heterocyclyl, halogen, hydroxy, carboxy, cyano, trifluoromethyl, nitro, or C₁-C₃ alkylthio wherein the sulfur atom is optionally oxidized to a sulfoxide or sulfone,

wherein each substituent group of R¹ is optionally independently substituted with a substituent group selected from methyl, methoxy, halogen, hydroxy, oxo, cyano, or amino;

R² and R³ are each independently hydrogen, C₁-C₅ alkyl, benzyl, or phenethyl, or R² and R³ together with the carbon atom they are commonly attached to form a C₃-C₆ spiro cycloalkyl ring; and
R^4 is CH₂,

or a tautomer, prodrug, solvate, or salt thereof.

Yet another aspect of the invention includes compounds of Formula (1A), wherein:

R¹ is phenyl, pyridyl, dihydrobenzofuranyl, or benzofuranyl, each optionally independently substituted with one or two substituent groups,

wherein each substituent group of R¹ is independently methyl, ethyl, methoxy, ethoxy, fluoro, chloro, bromo, hydroxy, trifluoromethyl, cyano, phenyl, pyridinyl, pyrimidinyl, pyrazinyl, pyrazinyl, imidazolyl, thiazolyl, oxazolyl, pyrazolyl, isoxazolyl, isothiazolyl, naphthyl, thienyl, pyrrolidinyl, piperidinyl, piperazinyl, or morpholinyly; 

R² and R³ are each independently methyl, or R² and R³ together with the carbon atom they are commonly attached to form a spiro cyclopropyl ring; and

R⁴ is CH₂,

or a tautomer, prodrug, solvate, or salt thereof.

Yet another aspect of the invention includes compounds of Formula (1A), wherein:

R¹ is phenyl, dihydrobenzofuranyl, or benzofuranyl, each optionally independently substituted with one to three substituent groups,

wherein each substituent group of R¹ is independently C₁₋₃ alkyl, C₂₋₃ alkenyl, C₂₋₃ alkynyl, C₁₋₃ alkoxy, C₂₋₃ alkenyloxy, C₁₋₃ alkanoyl, C₁₋₃ alkoxy carbonyl, C₁₋₃ alkanoyloxy, C₃₋₈ cycloalkyl, aryl, heteroaryl, heterocyclyl, halogen, hydroxy, carboxy, cyano, trifluoromethyl, nitro, or C₁₋₃ alkylthio wherein the sulfur atom is optionally oxidized to a sulfoxide or sulfone; and
R² and R³ are each independently hydrogen or C₁-C₃ alkyl,

or a tautomer, prodrug, solvate, or salt thereof.

An aspect of the invention includes compounds of Formula (IA), wherein:

R⁵ is 1H-pyridin-2-one or 1H-pyridin-4-one fused to a 5- to 7-membered heteroaryl or heterocyclyl ring each optionally independently substituted with one to three substituent groups,

wherein each substituent group of R⁵ is independently C₁-C₅ alkyl, C₂-C₅ alkenyl, C₂-C₅ alkynyl, C₃-C₈ cycloalkyl, heterocyclyl, aryl, heteroaryl, C₁-C₅ alkoxy, C₂-C₅ alkenyloxy, C₂-C₅ alkynyloxy, aryloxy, acyl, C₁-C₅ alkoxy carbonyl, C₁-C₅ alkanoyloxy, aminocarbonyl, alkylaminocarbonyl, dialkylaminocarbonyl, aminocarboxyloxy, C₁-C₅ alkylaminocarboxyloxy, C₁-C₅ dialkylaminocarboxyloxy, C₁-C₅ alkanoylamino, C₁-C₅ alkoxy carbonylamino, C₁-C₅ alkylsulfonylamino, C₁-C₅ alkyaminosulfonyle, C₁-C₅ dialkyaminosulfonyl, halogen, hydroxy, carboxy, oxo, cyano, trifluoromethyl, trifluoromethoxy, trifluoromethylthio, nitro, or amino wherein the nitrogen atom is optionally independently mono- or di-substituted by C₁-C₅ alkyl; or ureido wherein either nitrogen atom is optionally independently substituted with C₁-C₅ alkyl; or C₁-C₅ alkylthio wherein the sulfur atom is optionally oxidized to a sulfoxide or sulfone,

wherein each substituent group of R⁴ is optionally independently substituted with one to three substituent groups selected from C₁-C₃ alkyl, C₁-C₃ alkoxy, hydroxy, oxo, cyano, amino, or trifluoromethyl,

wherein R³ cannot be 1H-[1,5]naphthyridin-4-one,

or a tautomer, prodrug, solvate, or salt thereof.

Yet another aspect of the invention includes compounds of Formula (IA), wherein:
\(R^1\) is phenyl, dihydrobenzofuranyl, or benzofuranyl, each optionally independently substituted with one to three substituent groups,

wherein each substituent group of \(R^1\) is independently \(C_1\)-\(C_3\) alkyl, \(C_2\)-\(C_3\) alkenyl, \(C_2\)-\(C_3\) alkylnyl, \(C_1\)-\(C_3\) alkoxy, \(C_2\)-\(C_3\) alkenyloxy, \(C_1\)-\(C_3\) alkanoyl, \(C_1\)-\(C_3\) alkoxy carbonyl, \(C_1\)-\(C_3\) alkanoyloxy, \(C_2\)-\(C_3\) cycloalkyl, aryl, heteroaryl, heterocyclyl, halogen, hydroxy, carboxy, cyano, trifluoromethyl, nitro, or \(C_1\)-\(C_3\) alkylthio wherein the sulfur atom is optionally oxidized to a sulfoxide or sulfone;

\(R^2\) and \(R^3\) are each independently hydrogen or \(C_1\)-\(C_3\) alkyl; and

\(R^3\) is 1\(H\)-pyridin-2-one or 1\(H\)-pyridin-4-one fused to a pyridinyl, pyrimidyl, pyrazinyl, pyridazinyl, imidazolyl, pyrazolyl, isoxazolyl, isothiazolyl, thienyl, pyrrolyl, furanyl, oxazolyl, thiazolyl, pyrrolidinyl, piperidinyl, morpholinyl, or piperazinyl ring each optionally independently substituted with one to three substituent groups,

wherein each substituent group of \(R^3\) is independently \(C_1\)-\(C_3\) alkyl, \(C_1\)-\(C_3\) alkoxy, acyl, halogen, hydroxy, carboxy, oxo, cyano, trifluoromethyl, trifluoromethoxy, trifluoromethylthio, nitro, or amino wherein the nitrogen atom is optionally independently mono- or di-substituted by \(C_1\)-\(C_3\) alkyl; or ureido wherein either nitrogen atom is optionally independently substituted with \(C_1\)-\(C_3\) alkyl; or \(C_1\)-\(C_3\) alkylthio wherein the sulfur atom is optionally oxidized to a sulfoxide or sulfone,

wherein each substituent group of \(R^3\) is optionally independently substituted with one to three substituent groups selected from \(C_1\)-\(C_3\) alkyl, \(C_1\)-\(C_3\) alkoxy, halogen, hydroxy, oxo, cyano, amino, or trifluoromethyl,

wherein \(R^1\) cannot be 1\(H\)-[1,5]naphthyridin-4-one,

or a tautomer, prodrug, solvate, or salt thereof.

4-(4-Biphenyl-3-yl-2-hydroxy-4-methyl-2-trifluoromethylpentyl)-4H-thieno[3,2-b]pyridin-7-one,

or a tautomer, prodrug, solvate, or salt thereof.

The invention also provides a method of making a compound of Formula (IA)

\[ \text{R}^1, \text{R}^2, \text{R}^3, \text{R}^4, \text{X}, \text{R}^5 \]

where \( \text{R}^1, \text{R}^2, \text{R}^3, \text{R}^4, \) and \( X \) are as defined above and \( \text{R}^4 \) is \(-\text{CH}_2-\), the method comprising:

(a) reacting an ester of Formula (II) with a suitable reducing agent in a suitable solvent to form a diol of Formula (III)

(b) reacting the diol of Formula (III) with a sulfonic acid chloride, \( R'SO_2Cl \), to form a sulfonic acid ester of Formula (IV)
(c) reacting the intermediate of Formula (IV) with a suitable base to form the epoxide of Formula (V)

\[
\begin{align*}
\text{III} & \quad \text{R'}SO_2\text{Cl} \\
\text{IV} & \quad \text{Base} \quad \rightarrow \\
\text{V} & \\
\end{align*}
\]

; and

(d) reacting the epoxide of Formula (V) with the desired \( R^3H \) in the presence of a suitable base to form the compound of Formula (IA)

\[
\begin{align*}
\text{V} & \quad \text{R}^3\text{H} \\
\text{IA} (R^4 = \text{CH}_2, X = \text{OH}) & \\
\end{align*}
\]

In addition, the invention also provides an alternative method of making a compound of Formula (IA)

\[
\begin{align*}
\text{IA} & \\
\end{align*}
\]

where \( R^1, R^2, R^3, R^5 \), and \( X \) are as defined above and \( R^4 \) is \(-\text{CH}_2\), the method comprising:

(a) reacting a diol of Formula (III) with a suitable oxidizing agent to form a ketone of Formula (XI)

\[
\begin{align*}
\text{III} & \quad \text{Oxidative} \\
\text{Cleavage} & \quad \rightarrow \\
\text{XI} & \\
\end{align*}
\]
(b) reacting the ketone of Formula (XI) with suitable reagents to form an epoxide of Formula (V)

\[
\begin{align*}
\text{XI} & \xrightarrow{\text{Epoxidation}} \text{V} \\
\end{align*}
\]

and

(c) reacting the epoxide of Formula (V) with the desired \( R^5 \text{H} \) in the presence of a suitable base to form the compound of Formula (IA)

\[
\begin{align*}
\text{V} & \xrightarrow{\text{base}} \text{IA} (R^4 = CH_2, X = \text{OH}) \\
\end{align*}
\]

In addition, the invention also provides a method of making a compound of Formula (IA)

\[
(\text{IA})
\]

where \( R^1, R^2, R^3, R^4, \) and \( X \) are as defined above and \( R^4 \) is \(-\text{C(O)-}\), the method comprising:

(a) hydrolyzing an ester of Formula (II) to produce a carboxylic acid of Formula (X)

\[
\begin{align*}
\text{II} & \xrightarrow{\text{Hydrolysis}} \text{X} \\
\end{align*}
\]

(b) coupling the carboxylic acid of Formula (X) with \( R^5 \text{H} \) to provide the desired compound of Formula (I)
The instant invention is also directed to compounds of Formula (IB)

\[ \text{R}^1 \text{ is an aryl, heteroaryl, heterocyclyl, or C}_3\text{-C}_8\text{ cycloalkyl group, each optionally independently substituted with one to three substituent groups,} \]

\[ \text{wherein each substituent group of R}^1 \text{ is independently C}_1\text{-C}_5\text{ alkyl, C}_2\text{-C}_3\text{ alkenyl, C}_2\text{-C}_3\text{ alkynyl, C}_3\text{-C}_8\text{ cycloalkyl, heterocyclyl, aryl, heteroaryl, C}_1\text{-C}_5\text{ alkoxy, C}_2\text{-C}_3\text{ alkenyloxy, C}_2\text{-C}_3\text{ alkynyloxy, aryloxy, acyl, C}_1\text{-C}_5\text{ alkoxy carbonyl, C}_1\text{-C}_5\text{ alkanoyloxy, C}_1\text{-C}_5\text{ alkanoyl, aroyl, aminocarbonyl, alkylaminocarbonyl, dialkylaminocarbonyl, aminocarbonyloxy, C}_1\text{-C}_5\text{ alkylaminocarbonyloxy, C}_1\text{-C}_5\text{ dialkylaminocarbonyloxy, C}_1\text{-C}_5\text{ alkanoylamino, C}_1\text{-C}_5\text{ alkoxy carbonylamino, C}_1\text{-C}_5\text{ alkylsulfonlamino, aminosulfonyl, C}_1\text{-C}_5\text{ alkylaminosulfonyl, C}_1\text{-C}_5\text{ dialkylaminosulfonyl, halogen, hydroxy, carboxy, cyano, trifluoromethyl, trifluoromethoxy, nitro, or amino wherein the nitrogen atom is optionally independently mono- or di-substituted by C}_1\text{-C}_5\text{ alkyl or aryl; or ureido wherein either nitrogen atom is optionally independently substituted with C}_1\text{-C}_5\text{ alkyl; or C}_1\text{-C}_5\text{ alkylthio wherein the sulfur atom is optionally oxidized to a sulfoxide or sulfone,} \]

\[ \text{wherein each substituent group of R}^1 \text{ is optionally independently substituted with one to three substituent groups selected from aryl or heterocyclyl wherein the heterocycle is optionally independently substituted with hydroxyl, halogen, methyl, or dialkylamino; methyl, methoxy, halogen, hydroxy, oxo, cyano, aminosulfonyl, or} \]
amino wherein the nitrogen atom is optionally independently mono- or di-substituted by C_{1-3} alkyl or C_{1-3} dialkylamine or aryl; or ureido wherein either nitrogen atom is optionally independently substituted with C_{1-3} alkyl; or oxime wherein the oxygen atom is optionally substituted by C_{1-3} alkyl or benzyl;

R^2 and R^3 are each independently hydrogen, C_{1-3} alkyl, or C_{5-15} arylalkyl group, or R^2 and R^3 together with the carbon atom they are commonly attached to form a C_{3-8} spiro cycloalkyl ring, or

R^1 and R^2 when taken together are a chromanyl or dihydrobenzofuranyl optionally substituted with C_{1-3} alkyl, C_{2-3} alkenyl, C_{2-3} alkynyl, C_{3-8} cycloalkyl, heterocyclyl, aryl, heteroaryl, C_{1-3} alkoxy, C_{2-3} alkenyloxy, C_{3-8} alkynyl, aryloxy, acyl, C_{1-3} alkoxy carbonyl, C_{1-3} alkanoyloxy, aminocarbonyl, alkylaminocarbonyl, dialkylaminocarbonyl, aminocarbonyloxy, C_{1-3} alkylaminocarbonyloxy, C_{1-3} dialkylaminocarbonyloxy, C_{1-3} alkanoylamino, C_{1-3} alkoxy carbonylamino, C_{1-3} alkyl sulfonamino, aminosulfonyl, C_{1-3} alkenyloxy, C_{1-3} alkanoyloxy, halogen, hydroxy, carboxy, oxo, cyano, trifluoromethyl, trifluoromethoxy, trifluoromethylthio, nitro, or amino wherein the nitrogen atom is optionally independently mono- or di-substituted by C_{1-3} alkyl; or ureido wherein either nitrogen atom is optionally independently substituted with C_{1-3} alkyl; or C_{1-3} alkylthio wherein the sulfur atom is optionally oxidized to a sulfoxide or sulfone;

R^4 is carbonyl or methylene optionally independently substituted with one to two substituent groups selected from C_{1-3} alkyl, hydroxy, and halogen;

R^5 is a 5- to 7-membered heterocyclyl ring fused to a 5- to 7-membered heteroary1 or heterocyclyl ring optionally independently substituted with one to three substituent groups,

wherein each substituent group of R^5 is independently C_{1-3} alkyl, C_{2-3} alkenyl, C_{2-3} alkynyl, C_{3-8} cycloalkyl, heterocyclyl, aryl, heteroaryl, C_{1-3} alkoxy, C_{2-3} alkenyloxy, C_{2-3} alkynyl, aryloxy, acyl, C_{1-3} alkoxy carbonyl, C_{1-3} alkanoyloxy,
aminocarbonyl, alkyaminocarbonyl, dialkylaminocarbonyl, aminocarboxyloxy, C₁-C₅ alkylaminocarboxyloxy, C₁-C₅ dialkylaminocarboxyloxy, C₁-C₅ alkanoylamino, C₁-C₅ alkoxyaminocarbonylamino, C₁-C₅ alkyloxysulfonylamino, C₁-C₅ alkyaminosulfonyl, C₁-C₅ dialkyaminosulfonyl, halogen, hydroxy, carboxy, oxo, cyano, trifluoromethyl, trifluoromethoxy, trifluoromethylthio, nitro, or amino wherein the nitrogen atom is optionally independently mono- or di-substituted by C₁-C₅ alkyl; or ureido wherein either nitrogen atom is optionally independently substituted with C₁-C₅ alkyl; or C₁-C₅ alkylthio wherein the sulfur atom is optionally oxidized to a sulfoxide or sulfone, wherein each substituent group of R⁵ is optionally independently substituted with one to three substituent groups selected from C₁-C₅ alkyl, C₁-C₅ alkoxy, C₁-C₅ alkoxy carbonyl, acyl, aryl, benzyl, heteroaryl, heterocyclyl, halogen, hydroxy, oxo, cyano, amino wherein the nitrogen atom is optionally independently mono- or di-substituted by C₁-C₅ alkyl; or ureido wherein either nitrogen atom is optionally independently substituted with C₁-C₅ alkyl; or trifluoromethyl, wherein R⁵ cannot be 1H-[1,5]naphthyridin-4-one; R⁶ is hydrogen, C₁-C₅ alkyl, C₂-C₈ alkenyl, C₂-C₈ alkynyl, carbocycle, heterocyclyl, aryl, heteroaryl, carbocycle-C₁-C₈ alkyl, carboxy, alkoxy carbonyl, aryl-C₁-C₈ alkyl, aryl-C₁-C₈ halo alkyl, heterocyclyl-C₁-C₈ alkyl, heteroaryl-C₁-C₈ alkyl, carbocycle-C₂-C₈ alkenyl, aryl-C₂-C₈ alkenyl, heterocyclyl-C₂-C₈ alkenyl, or heteroaryl-C₂-C₈ alkenyl, each optionally independently substituted with one to three substituent groups, wherein each substituent group of R⁶ is independently C₁-C₅ alkyl, C₂-C₅ alkenyl, C₂-C₅ alkynyl, C₃-C₈ cycloalkyl, phenyl, C₁-C₅ alkoxy, phenoxy, C₁-C₅ alkanoyl, aroyl, C₁-C₅ alkoxy carbonyl, C₁-C₅ alkanoyloxy, aminocarboxyloxy, C₁-C₅ alkylaminocarboxyloxy, C₁-C₅ dialkylaminocarboxyloxy, aminocarbonyl, C₁-C₅ alkylaminocarbonyl, C₁-C₅ dialkylaminocarbonyl, C₁-C₅ alkanoylamino, C₁-C₅ alkoxy carbonylamino, C₁-C₅ alkylsulfonylamino, C₁-C₅ alkyaminosulfonyl, C₁-C₅ dialkyaminosulfonyl, halogen, hydroxy, carboxy, cyano, oxo, trifluoromethyl, nitro, or amino wherein the nitrogen atom is optionally independently mono- or di-substituted by C₁-C₅ alkyl; or ureido
wherein either nitrogen atom is optionally independently substituted with C₁-C₅ alkyl; or C₁-C₅ alkylthio wherein the sulfur atom is optionally oxidized to a sulfoxide or sulfone,

5 wherein R⁶ cannot be trifluoromethyl; and

X is a hydroxy or amino wherein the nitrogen atom is optionally independently mono- or di-substituted by C₁-C₅ alkyl,

or a tautomer, prodrug, solvate, or salt thereof.

Another aspect of the invention includes compounds of Formula (IB), wherein:

R¹ is phenyl, dihydrobenzofuranyl, benzofuranyl, dihydroindolyl, indolyl, benzo[1,3]dioxole, dihydrobenzothienyl, benzothienyl, benzoxazole, benzisoxazole, benzopyrazole, benzimidazole, thienyl, quinolinyl, tetrahydroquinolinone, tetrahydroanaphththyridinone, dihydrochromene, pyridinyl, pyrimidinyl, or pyrazinyl, each optionally independently substituted with one to three substituent groups,

15 wherein each substituent group of R¹ is independently C₁-C₃ alkyl, C₂-C₃ alkenyl, C₂-C₃ alkynyl, C₁-C₃ alkoxy, C₂-C₃ alkenyloxy, C₁-C₃ alkanoyl, C₁-C₃ alkoxy carbonyl, C₁-C₃ alkanoyloxy, C₃-C₈ cycloalkyl, aryl, heteroaryl, heterocyclyl, halogen, hydroxy, carboxy, cyano, trifluoromethyl, nitro, or C₁-C₃ alkylthio wherein the sulfur atom is optionally oxidized to a sulfoxide or sulfone,

20 wherein each substituent group of R¹ is optionally independently substituted with a substituent group selected from methyl, methoxy, halogen, hydroxy, oxo, cyano, or amino;

25 R² and R³ are each independently hydrogen, C₁-C₃ alkyl, benzyl, or phenethyl, or R² and R³ together with the carbon atom they are commonly attached to form a C₃-C₆ spiro cycloalkyl ring;
R^4 is CH₂; and

R^6 is C₁-C₄ alkyl, C₂-C₅ alkenyl, C₃-C₆ cycloalkyl, phenyl, C₃-C₆ cycloalkyl-C₁-C₃ alkyl, phenyl-C₁-C₃ alkyl, phenyl-C₁-C₅ haloalkyl, C₃-C₆ cycloalkyl-C₂-C₃ alkenyl, phenyl-C₂-C₃ alkenyl, each optionally independently substituted with one to three substituent groups,

wherein each substituent group of R^6 is independently C₁-C₃ alkyl, C₂-C₅ alkenyl, C₁-C₃ alkynyl, C₁-C₃ alkoxy, aminocarbonyl, C₁-C₃ alkylaminocarbonyl, C₁-C₃ dialkylaminocarbonyl, halogen, hydroxy, oxo, carboxy, cyano, trifluoromethyl, nitro, or C₁-C₃ alkylthio wherein the sulfur atom is optionally oxidized to a sulfoxide or sulfone,

wherein R^6 cannot be trifluoromethyl,

or a tautomer, prodrug, solvate, or salt thereof.

Yet another aspect of the invention includes compounds of Formula (IB), wherein:

R¹ is phenyl, pyridyl, dihydrobenzofuranyl, or benzofuranyl, each optionally independently substituted with one or two substituent groups,

wherein each substituent group of R¹ is independently methyl, ethyl, methoxy, ethoxy, fluoro, chloro, bromo, hydroxy, trifluoromethyl, cyano, phenyl, pyridinyl, pyrimidinyl, pyrazinyl, pyrazinyl, imidazolyl, thiazolyl, oxazolyl, pyrazolyl, isoxazolyl, isothiazolyl, naphthyl, thienyl, pyrrolidinyl, piperidinyl, piperazinyl, or morpholinyl;

R² and R³ are each independently methyl, or R² and R³ together with the carbon atom they are commonly attached to form a spiro cyclopropyl ring; and

R⁴ is CH₂,
or a tautomer, prodrug, solvate, or salt thereof.

Yet another aspect of the invention includes compounds of Formula (IB), wherein:

5 \( R^1 \) is phenyl, dihydrobenzofuranyl, or benzofuranyl, each optionally independently substituted with one to three substituent groups,

wherein each substituent group of \( R^1 \) is independently \( C_1-2 \) alkyl, \( C_2-2 \) alkenyl, \( C_2-2 \) alkynyl, \( C_2-2 \) alkoxy, \( C_2-2 \) alkenyloxy, \( C_2-2 \) alkanoyl, \( C_2-2 \) alkoxycarbonyl, \( C_2-2 \) alkanoyloxy, \( C_2-2 \) cycloalkyl, ary1, heteroaryl, heterocycl1, halogen, hydroxy, carboxy, cyano, trifluoromethyl, nitro, or \( C_1-2 \) alkylthio wherein the sulfur atom is optionally oxidized to a sulfoxide or sulfone; and

\( R^2 \) and \( R^3 \) are each independently hydrogen or \( C_1-2 \) alkyl,

or a tautomer, prodrug, solvate, or salt thereof.

An aspect of the invention includes compounds of Formula (IB), wherein:

20 \( R^5 \) is 1H-pyridin-2-one or 1H-pyridin-4-one fused to a 5- to 7-membered heteroaryl or heterocycl1 ring each optionally independently substituted with one to three substituent groups,

wherein each substituent group of \( R^5 \) is independently \( C_1-2 \) alkyl, \( C_2-2 \) alkenyl, \( C_2-2 \) alkynyl, \( C_2-2 \) cycloalkyl, heteroaryl, heterocycl1, ary1, heteroaryl, \( C_1-2 \) alkoxy, \( C_2-2 \) alkenyloxy, \( C_2-2 \) alkynlyoxy, \( C_2-2 \) aryloxy, \( C_2-2 \) acyl, \( C_1-2 \) alkoxycarbonyl, \( C_1-2 \) alkanoyloxy, aminocarbonyl, alkyaminocarbonyl, dialkylaminocarbonyl, aminocarbonyl, \( C_1-2 \) alkylaminocarbonyloxy, \( C_1-2 \) dialkylaminocarbonyloxy, \( C_1-2 \) alkanoylamin0, \( C_1-2 \) alkoxycarbonylamino, \( C_1-2 \) alkylsulfonlamino, \( C_1-2 \) alkylaminosulfonyl, \( C_1-2 \) dialkylaminosulfonyl, halogen, hydroxy, carboxy, oxo, cyano, trifluoromethyl, trifluromethoxy, trifluoromethythio, nitro, or amino wherein the nitrogen atom is optionally independently mono- or di-substituted by \( C_1-2 \) alkyl; or ureido wherein
either nitrogen atom is optionally independently substituted with C₁-C₃ alkyl; or C₁-C₃ alkylthio wherein the sulfur atom is optionally oxidized to a sulfoxide or sulfone,

wherein each substituent group of R⁵ is optionally independently substituted with one to three substituent groups selected from C₁-C₃ alkyl, C₁-C₃ alkoxy, C₁-C₃ alkoxy carbonyl, acyl, aryl, benzyl, heteroaryl, heterocyclyl, halogen, hydroxy, oxo, cyano, amino wherein the nitrogen atom is optionally independently mono- or di-substituted by C₁-C₅ alkyl; or ureido wherein either nitrogen atom is optionally independently substituted with C₁-C₅ alkyl; or trifluoromethyl,

wherein R⁵ cannot be 1H-[1,5]naphthyridin-4-one; and

R⁶ is C₁-C₅ alkyl, C₃-C₆ cycloalkyl, C₃-C₆ cycloalkylmethyl, or benzyl, each optionally independently substituted with one to three substituent groups,

wherein each substituent group of R⁶ is independently methyl, methoxy, fluoro, chloro, bromo, cyano, trifluoromethyl, or hydroxy,

wherein R⁶ cannot be trifluoromethyl,

or a tautomer, prodrug, solvate, or salt thereof.

Yet another aspect of the invention includes compounds of Formula (Ib), wherein:

R¹ is phenyl, dihydrobenzofuranyl, or benzofuranyl, each optionally independently substituted with one to three substituent groups,

wherein each substituent group of R¹ is independently C₁-C₃ alkyl, C₂-C₃ alkenyl, C₂-C₃ alkynyl, C₁-C₃ alkoxy, C₂-C₃ alkenyloxy, C₁-C₃ alkanoyl, C₁-C₃ alkoxy carbonyl, C₁-C₃ alkanoyloxy, C₃-C₈ cycloalkyl, aryl, heteroaryl, heterocyclyl, halogen, hydroxy, carboxy, cyano, trifluoromethyl, nitro, or C₁-C₃ alkylthio wherein the sulfur atom is optionally oxidized to a sulfoxide or sulfone; and
\(R^2\) and \(R^3\) are each independently hydrogen or \(C_1-C_3\) alkyl; and

\(R^5\) is \(1H\)-pyridin-2-one or \(1H\)-pyridin-4-one fused to a pyridinyl, pyrimidyl, pyrazinyl, pyridazinyl, imidazolyl, pyrazolyl, isoxazolyl, isothiazolyl, thienyl, pyrrolyl, furanyl, oxazolyl, thiazolyl, pyrrolidinyl, piperidinyl, morpholinyl, or piperazinyl ring each optionally independently substituted with one to three substituent groups,

wherein each substituent group of \(R^5\) is independently \(C_1-C_3\) alkyl, \(C_1-C_3\) alkoxy, acyl, halogen, hydroxy, carboxy, oxo, cyano, trifluoromethyl, trifluoromethoxy, trifluoromethylthio, nitro, or amino wherein the nitrogen atom is optionally independently mono- or di-substituted by \(C_1-C_5\) alkyl; or ureido wherein either nitrogen atom is optionally independently substituted with \(C_1-C_5\) alkyl; or \(C_1-C_3\) alkylthio wherein the sulfur atom is optionally oxidized to a sulf oxide or sulfone,

wherein each substituent group of \(R^5\) is optionally independently substituted with one to three substituent groups selected from \(C_1-C_3\) alkyl, \(C_1-C_3\) alkoxy, halogen, hydroxy, oxo, cyano, amino, or trifluoromethyl,

wherein \(R^5\) cannot be \(1H\)-[1,5]naphthyridin-4-one,

or a tautomer, prodrug, solvate, or salt thereof.

or a tautomer, prodrug, solvate, or salt thereof.
The invention also provides a method of making a compound of Formula (IB)

\[
\begin{align*}
\text{(IB)} \\
R_1^3 & \quad R_2^4 \quad R_3^5 \\
\text{R}^1 & \quad \text{R}^2 & \quad \text{X} & \quad \text{R}^3 & \quad \text{R}^4 & \quad \text{R}^5
\end{align*}
\]

where \( R_1^1, R_2^2, R_3^3, R_4^4, R_5^5, \) and \( X \) are as defined above and \( R_1^4 \) is \( \text{CH}_2 \)-, the method comprising:

(a) reacting a compound of Formula (IA) with a suitable base in a suitable solvent to form a ketone of Formula (IIB)

\[
\begin{align*}
\text{IA} & \quad \text{base} \quad \rightarrow \quad \text{IIB} \\
R_1^1 & \quad \text{R}^2 & \quad \text{HO} & \quad \text{CF}^3 & \quad \text{R}^5 \\
\text{R}^1 & \quad \text{R}^2 & \quad \text{R}^3 & \quad \text{O} & \quad \text{R}^5 \\
\text{R}^1 & \quad \text{R}^2 & \quad \text{R}^3 & \quad \text{R}^5 & \quad \text{R}^1
\end{align*}
\]

and

(b) reacting the ketone of Formula (IIB) with a organometallic reagent to form a compound of Formula (IB)

\[
\begin{align*}
\text{IIB} & \quad \text{R}^6 & \quad \text{MX} \quad \rightarrow \quad \text{IB} \\
\text{R}^1 & \quad \text{R}^2 & \quad \text{O} & \quad \text{R}^3 & \quad \text{HO} & \quad \text{R}^6 & \quad \text{R}^5 \\
\text{R}^1 & \quad \text{R}^2 & \quad \text{R}^3 & \quad \text{R}^5 & \quad \text{R}^1 & \quad \text{R}^6
\end{align*}
\]

\( \text{IB (R}^4 \text{ is CH}_2 \text{ and X is OH)} \)

A second method of making a compound of Formula (IB) comprises:

(a) epoxidizing a ketone of Formula (IIIB) with suitable reagents to form an epoxide of Formula (VB)

\[
\begin{align*}
\text{IIIB} & \quad \text{epoxidation} \quad \rightarrow \quad \text{VB} \\
\text{R}^1 & \quad \text{R}^2 & \quad \text{R}^3 & \quad \text{R}^6 & \quad \text{O} & \quad \text{R}^6 \\
\text{R}^1 & \quad \text{R}^2 & \quad \text{R}^3 & \quad \text{R}^6 & \quad \text{R}^1
\end{align*}
\]

and

(b) reacting the epoxide of Formula (VB) with \( \text{R}^3 \text{H} \) in the presence of a suitable base to form the compound of Formula (IB)
A third method of making a compound of Formula (IB) comprises:
(a) olefinating a ketone of Formula (III B) with suitable reagents to form an alkene of Formula (IV B)

(b) epoxidizing the alkene of Formula (IV B) with suitable reagents to form an epoxide of Formula (VB)

(c) reacting the epoxide of Formula (VB) with R^5 H in the presence of a suitable base to form a compound of Formula (IB)

In another aspect of the invention, the compounds according to the invention are formulated into pharmaceutical compositions comprising an effective amount, preferably a pharmaceutically effective amount, of a compound according to the invention or a tautomer, prodrug, solvate, or salt thereof, and a pharmaceutically acceptable excipient or carrier.
The invention also provides a method of modulating the glucocorticoid receptor function in a patient, the method comprising administering to the patient an effective amount of a compound according to the invention or a tautomer, prodrug, solvate, or salt thereof.

The invention further provides a method of treating a disease-state or condition mediated by the glucocorticoid receptor function in a patient in need of such treatment, the method comprising administering to the patient an effective amount of a pharmaceutically acceptable compound according to the invention or a tautomer, prodrug, solvate, or salt thereof.

In addition, the invention also provides a method of treating a disease-state or condition selected from: type II diabetes, obesity, cardiovascular diseases, hypertension, arteriosclerosis, neurological diseases, adrenal and pituitary tumors, and glaucoma, in a patient in need of such treatment, the method comprising administering to the patient an effective amount of a pharmaceutically acceptable compound according to the invention or a tautomer, prodrug, solvate, or salt thereof.

The invention provides a method of treating a disease characterized by inflammatory, allergic, or proliferative processes, in a patient in need of such treatment, the method comprising administering to the patient an effective amount of a pharmaceutically acceptable compound according to the invention or a tautomer, prodrug, solvate, or salt thereof. In a preferred embodiment of the invention, the disease characterized by inflammatory, allergic, or proliferative processes is selected from: (i) lung diseases; (ii) rheumatic diseases or autoimmune diseases or joint diseases; (iii) allergic diseases; (iv) vasculitis diseases; (v) dermatological diseases; (vi) renal diseases; (vii) hepatic diseases; (viii) gastrointestinal diseases; (ix) proctological diseases; (x) eye diseases; (xi) diseases of the ear, nose, and throat (ENT) area; (xii) neurological diseases; (xiii) blood diseases; (xiv) tumor diseases; (xv) endocrine diseases; (xvi) organ and tissue transplantations and graft-versus-host diseases; (xvii) severe states of shock; (xviii) substitution therapy; and (xix) pain of inflammatory genesis. In another preferred embodiment of the invention, the disease characterized by inflammatory, allergic, or proliferative processes is selected from: type I diabetes, osteoarthritis, Guillain-Barre syndrome, restenosis following percutaneous transluminal coronary angioplasty, Alzheimer disease, acute and chronic pain, arteriosclerosis, reperfusion injury, bone resorption.
diseases, congestive heart failure, myocardial infarction, thermal injury, multiple organ injury secondary to trauma, acute purulent meningitis, necrotizing enterocolitis, and syndromes associated with hemodialysis, leukopheresis, and granulocyte transfusion.

The invention further provides methods of treating the disease-states or conditions mentioned above, in a patient in need of such treatment, the methods comprising sequentially or simultaneously administering to the patient: (a) an effective amount of a pharmaceutically acceptable compound according to the invention or a tautomer, prodrug, solvate, or salt thereof; and (b) a pharmaceutically acceptable glucocorticoid.

The invention further provides a method of assaying the glucocorticoid receptor function in a sample, comprising: (a) contacting the sample with a selected amount of a compound according to the invention or a tautomer, prodrug, solvate, or salt thereof; and (b) detecting the amount of the compound according to the invention or a tautomer, prodrug, solvate, or salt thereof bound to glucocorticoid receptors in the sample. In a preferred embodiment of the invention, the compound according to the invention or a tautomer, prodrug, solvate, or salt thereof is labeled with a detectable marker selected from: a radiolabel, fluorescent tag, a chemiluminescent tag, a chromophore, and a spin label.

The invention also provides a method of imaging the glucocorticoid receptor distribution in a sample or patient, the method comprising: (a) contacting the sample or administering to a patient a compound according to the invention or a tautomer, prodrug, solvate, or salt thereof having a detectable marker; (b) detecting the spatial distribution and amount of the compound according to the invention or a tautomer, prodrug, solvate, or salt thereof having a detectable marker bound to glucocorticoid receptors in the sample or patient using an imaging means to obtain an image; and (c) displaying an image of the spatial distribution and amount of the compound according to the invention or a tautomer, prodrug, solvate, or salt thereof having a detectable marker bound to glucocorticoid receptors in the sample. In a preferred embodiment of the invention, the imaging means is selected from: radioscintigraphy, nuclear magnetic resonance imaging (MRI), computed tomography (CT scan), or positron emission tomography (PET).
The invention also provides a kit for the *in vitro* diagnostic determination of the glucocorticoid receptor function in a sample, comprising: (a) a diagnostically effective amount of a compound according to the invention or a tautomer, prodrug, solvate, or salt thereof; and (b) instructions for use of the diagnostic kit.

**Detailed Description of the Invention**

**Definition of Terms and Conventions Used**

Terms not specifically defined herein should be given the meanings that would be given to them by one of skill in the art in light of the disclosure and the context. As used in the specification and appended claims, however, unless specified to the contrary, the following terms have the meaning indicated and the following conventions are adhered to.

**A. Chemical Nomenclature, Terms, and Conventions**

In the groups, radicals, or moieties defined below, the number of carbon atoms is often specified preceding the group, for example, C<sub>1</sub>-C<sub>10</sub> alkyl means an alkyl group or radical having 1 to 10 carbon atoms. The term “lower” applied to any carbon-containing group means a group containing from 1 to 8 carbon atoms, as appropriate to the group (i.e., a cyclic group must have at least 3 atoms to constitute a ring). In general, for groups comprising two or more subgroups, the last named group is the radical attachment point, for example, “alkylaryl” means a monovalent radical of the formula Alk-Ar-, while “arylalkyl” means a monovalent radical of the formula Ar-Alk- (where Alk is an alkyl group and Ar is an aryl group). Furthermore, the use of a term designating a monovalent radical where a divalent radical is appropriate shall be construed to designate the respective divalent radical and *vice versa*. Unless otherwise specified, conventional definitions of terms control and conventional stable atom valences are presumed and achieved in all formulas and groups.

The terms “alkyl” or “alkyl group” mean a branched or straight-chain saturated aliphatic hydrocarbon monovalent radical. This term is exemplified by groups such as methyl, ethyl, *n*-propyl, 1-methylethyl (isopropyl), *n*-butyl, *n*-pentyl, 1,1-dimethylethyl (*tert*-butyl), and the like. It may be abbreviated “Alk”.

47
The terms “alkenyl” or “alkenyl group” mean a branched or straight-chain aliphatic hydrocarbon monovalent radical containing at least one carbon-carbon double bond. This term is exemplified by groups such as ethenyl, propenyl, \( n \)-butenyl, isobutenyl, \( 3 \)-methylbut-2-enyl, \( n \)-pentenyl, heptenyl, octenyl, decenyl, and the like.

The terms “alkynyl” or “alkynyl group” mean a branched or straight-chain aliphatic hydrocarbon monovalent radical containing at least one carbon-carbon triple bond. This term is exemplified by groups such as ethynyl, propynyl, \( n \)-butynyl, 2-butynyl, \( 3 \)-methylbutynyl, \( n \)-pentynyl, heptynyl, octynyl, decynyl, and the like.

The terms “alkylene” or “alkylene group” mean a branched or straight-chain saturated aliphatic hydrocarbon divalent radical having the specified number of carbon atoms. This term is exemplified by groups such as methylene, ethylene, propylene, \( n \)-butylene, and the like, and may alternatively and equivalently be denoted herein as -(alkyl)-.

The terms “alkenylene” or “alkenylene group” mean a branched or straight-chain aliphatic hydrocarbon divalent radical having the specified number of carbon atoms and at least one carbon-carbon double bond. This term is exemplified by groups such as ethenylene, propenylene, \( n \)-butenylene, and the like, and may alternatively and equivalently be denoted herein as -(alkenyl)-.

The terms “alkynylene” or “alkynylene group” mean a branched or straight-chain aliphatic hydrocarbon divalent radical containing at least one carbon-carbon triple bond. This term is exemplified by groups such as ethynylene, propynylene, \( n \)-butynylene, 2-butynylene, \( 3 \)-methylbutynylene, \( n \)-pentynylene, heptynylene, octynylene, decynylene, and the like, and may alternatively and equivalently be denoted herein as -(alkynyl)-.

The terms “alkoxy” or “alkoxy group” mean a monovalent radical of the formula \( \text{AlkO}\_\text{-} \), where \( \text{Alk} \) is an alkyl group. This term is exemplified by groups such as methoxy, ethoxy, propoxy, isopropoxy, butoxy, \( \text{sec-} \)-butoxy, \( \text{tert-} \)-butoxy, pentoxy, and the like.
The terms “aryloxy”, “aryloxy group”, mean a monovalent radical of the formula ArO-, where Ar is aryl. This term is exemplified by groups such as phenoxy, naphthoxy, and the like.

The term “oxo” means a double-bonded divalent oxygen radical of the formula (=O), For instance, one example of an alkyl group substituted by an “oxo” would be a group of the formula Alk-C(O)-Alk, wherein each Alk is an alkyl.

The terms “alkylcarbonyl”, “alkylcarbonyl group”, “alkanoyl”, or “alkanoyl group” mean a monovalent radical of the formula AlkC(O)-, where Alk is alkyl or hydrogen.

The terms “arylcarbonyl”, “arylcarbonyl group”, “aryloyl” or “aryloyl group” mean a monovalent radical of the formula ArC(O)-, where Ar is aryl.

The terms “acyl” or “acyl group” mean a monovalent radical of the formula RC(O)-, where R is a substituent selected from hydrogen or an organic substituent. Exemplary substituents include alkyl, aryl, arylalkyl, cycloalkyl, heterocyclyl, heteroaryl, heteroarylalkyl, and the like. As such, the terms comprise alkylcarbonyl groups and arylcarbonyl groups.

The terms “acylamino” or “acylamino group” mean a monovalent radical of the formula RC(O)N(R)-, where each R is a substituent selected from hydrogen or a substituent group.

The terms “alkoxycarbonyl” or “alkoxycarbonyl group” mean a monovalent radical of the formula AlkO-C(O)-, where Alk is alkyl. Exemplary alkoxy carbonyl groups include methoxycarbonyl, ethoxycarbonyl, tert-butoxy carbonyl, and the like.

The terms “aryloxycarbonyl” or “aryloxycarbonyl group” mean a monovalent radical of the formula ArO-C(O)-, where Ar is aryl.

The terms “alkylcarbonyloxy” or “alkylcarbonyloxy group” or “alkanoyloxy” or “alkanoyloxy group” mean a monovalent radical of the formula AlkC(O)O-, where Alk is alkyl.
The terms “arylcarboxyloxy” or “arylcarboxyloxy group” or “aroyloxy” or “aroyloxy group” mean a monovalent radical of the formula ArC(O)O-, where Ar is aryl.

The terms “alkylaminocarbonyloxy” or “alkylaminocarbonyloxy group” mean a monovalent radical of the formula R₂NC(O)O-, where each R is independently hydrogen or lower alkyl.

The term “alkoxycarbonylamino” or “alkoxycarbonylamino group” mean a monovalent radical of the formula ROC(O)NH₂, where R is lower alkyl.

The terms “alkylcarbonylamino” or “alkylcarbonylamino group” or “alkanoylamino” or “alkanoylamino groups” mean a monovalent radical of the formula AlkC(O)NH₂, where Alk is alkyl. Exemplary alkylcarbonylamino groups include acetamido (CH₃C(O)NH₂).

The terms “alkylaminocarbonyloxy” or “alkylaminocarbonyloxy group” mean a monovalent radical of the formula AlkNHC(O)O-, where Alk is alkyl.

The terms “amino” or “amino group” mean an -NH₂ group.

The terms “alkylamino” or “alkylamino group” mean a monovalent radical of the formula (Alk)NH₂, where Alk is alkyl. Exemplary alkylamino groups include methy lamino, ethylamino, propylamino, butylamino, tert-butylamino, and the like.

The terms “dialkylamino” or “dialkylamino group” mean a monovalent radical of the formula (Alk)(Alk)N₂, where each Alk is independently alkyl. Exemplary dialkylamino groups include dimethylamino, methylethylamino, diethylamino, dipropylamino, ethylpropylamino, and the like.

The terms “substituted amino” or “substituted amino group” mean a monovalent radical of the formula -NR₂, where each R is independently a substituent selected from hydrogen or the specified substituents (but where both Rs cannot be hydrogen). Exemplary substituents include alkyl, alkanoyl, aryl, arylalkyl, cycloalkyl, heterocyclyl, heteroaryl, heteroarylalkyl, and the like.
The terms “alkoxycarbonylamino” or “alkoxycarbonylamino group” mean a monovalent radical of the formula AlkOC(O)NH-, where Alk is alkyl.

The terms “ureido” or “ureido group” mean a monovalent radical of the formula R₂NC(O)NH-, where each R is independently hydrogen or alkyl.

The terms “halogen” or “halogen group” mean a fluoro, chloro, bromo, or iodo group.

The term “halo” means one or more hydrogen atoms of the group are replaced by halogen groups.

The terms “haloalkyl” or “haloalkyl group” mean a branched or straight-chain saturated aliphatic hydrocarbon monovalent radical, wherein one or more hydrogen atoms thereof are each independently replaced with halogen atoms. This term is exemplified by groups such as chloromethyl, 1,2-dibromoethyl, 1,1,1-trifluoropropyl, 2-iodobutyl, 1-chloro-2-bromo-3-fluoropentyl, and the like.

The terms “sulfanyl”, “sulfanyl group”, “thioether”, or “thioether group” mean a divalent radical of the formula -S-. 

The terms “alkylthio” or “alkylthio group” mean a monovalent radical of the formula AlkS-, where Alk is alkyl. Exemplary groups include methylthio, ethylthio, n-propylthio, isopropylthio, n-butylthio, and the like.

The terms “aryltthio” or “aryltthio group” mean a monovalent radical of the formula ArS-, where Ar is aryl.

The terms “sulfinyl”, “sulfinyl group”, “thionyl”, or “thionyl group” mean a divalent radical of the formula -SO-. 

The terms “sulfonyl” or “sulfonyl group” mean a divalent radical of the formula -SO₂-.
The terms “sulfonylamino” or “sulfonylamino group” mean a divalent radical of the formula -SO$_2$NR-, where R is a hydrogen or a substituent group.

The terms “aminosulfonyl” or “aminosulfonyl group” mean a monovalent radical of the formula NR$_2$SO$_2$-, where R is each independently a hydrogen or a substituent group.

The terms “carbocycle” or “carbocyclic group” mean a stable aliphatic 3- to 15-membered monocyclic or polycyclic monovalent or divalent radical consisting solely of carbon and hydrogen atoms which may comprise one or more fused or bridged ring(s), preferably a 5- to 7-membered monocyclic or 7- to 10-membered bicyclic ring. Unless otherwise specified, the carbocycle may be attached at any carbon atom which results in a stable structure and, if substituted, may be substituted at any suitable carbon atom which results in a stable structure. The term comprises cycloalkyl (including spiro cycloalkyl), cycloalkylene, cycloalkenyl, cycloalkenylene, cycloalkynyl, and cycloalkynylene, and the like.

The terms “cycloalkyl” or “cycloalkyl group” mean a stable aliphatic saturated 3- to 15-membered monocyclic or polycyclic monovalent radical consisting solely of carbon and hydrogen atoms which may comprise one or more fused or bridged ring(s), preferably a 5- to 7-membered monocyclic or 7- to 10-membered bicyclic ring. Unless otherwise specified, the cycloalkyl ring may be attached at any carbon atom which results in a stable structure and, if substituted, may be substituted at any suitable carbon atom which results in a stable structure. Exemplary cycloalkyl groups include cyclopropyl, cyclobutyl, cyclopentyl, cyclohexyl, cycloheptyl, cyclooctyl, cyclononyl, cyclodecyl, norbornanyl, adamantyl, tetrahydronaphthyl (tetralin), 1-decalinyl, bicyclo[2.2.2]octanyl, 1-methylcyclopropyl, 2-methylcyclopentyl, 2-methylcyclooctyl, and the like.

The terms “cycloalkenyl” or “cycloalkenyl group” mean a stable aliphatic 3- to 15-membered monocyclic or polycyclic monovalent radical having at least one carbon-carbon double bond and consisting solely of carbon and hydrogen atoms which may comprise one or more fused or bridged ring(s), preferably a 5- to 7-membered monocyclic or 7- to 10-membered bicyclic ring. Unless otherwise specified, the cycloalkenyl ring may be attached at any carbon atom which
results in a stable structure and, if substituted, may be substituted at any suitable carbon atom which results in a stable structure. Exemplary cycloalkenyl groups include cyclopentenyl, cyclohexenyl, cycloheptenyl, cyclooctenyl, cyclononenyenyl, cyclodecenyenyl, norbornenyenyl, 2-methylcyclopentenyl, 2-methylcyclooctenyenyl, and the like.

The terms “cycloalkynyl” or “cycloalkynyl group” mean a stable aliphatic 8- to 15-membered monocyclic or polycyclic monovalent radical having at least one carbon-carbon triple bond and consisting solely of carbon and hydrogen atoms which may comprise one or more fused or bridged ring(s), preferably a 8- to 10-membered monocyclic or 12- to 15-membered bicyclic ring. Unless otherwise specified, the cycloalkynyl ring may be attached at any carbon atom which results in a stable structure and, if substituted, may be substituted at any suitable carbon atom which results in a stable structure. Exemplary cycloalkynyl groups include, cyclooctynyl, cyclononyynyl, cyclodecynyl, 2-methylcyclooctynyl, and the like.

The terms “cycloalkylene” or “cycloalkylene group” mean a stable saturated aliphatic 3- to 15-membered monocyclic or polycyclic divalent radical consisting solely of carbon and hydrogen atoms which may comprise one or more fused or bridged ring(s), preferably a 5- to 7-membered monocyclic or 7- to 10-membered bicyclic ring. Unless otherwise specified, the cycloalkyl ring may be attached at any carbon atom which results in a stable structure and, if substituted, may be substituted at any suitable carbon atom which results in a stable structure. Exemplary cycloalkylene groups include cyclopentylene, and the like.

The terms “cycloalkenylene” or “cycloalkenylene group” mean a stable aliphatic 5- to 15-membered monocyclic or polycyclic divalent radical having at least one carbon-carbon double bond and consisting solely of carbon and hydrogen atoms which may comprise one or more fused or bridged ring(s), preferably a 5- to 7-membered monocyclic or 7- to 10-membered bicyclic ring. Unless otherwise specified, the cycloalkenylene ring may be attached at any carbon atom which results in a stable structure and, if substituted, may be substituted at any suitable carbon atom which results in a stable structure. Exemplary cycloalkenylene groups include cyclopentenylene, cyclohexenyenyl, cycloheptenylene, cyclooctenyenyl, cyclononenyenyl, cyclodecenyenyl, norbornenyenyl, 2-methylcyclopentenylene, 2-methylcyclooctenyenyl, and the like.
The terms “cycloalkynylene” or “cycloalkynylene group” mean a stable aliphatic 8- to 15-membered monocyclic or polycyclic divalent radical having at least one carbon-carbon triple bond and consisting solely of carbon and hydrogen atoms which may comprise one or more fused or bridged ring(s), preferably a 8- to 10-membered monocyclic or 12- to 15-membered bicyclic ring. Unless otherwise specified, the cycloalkynylene ring may be attached at any carbon atom which results in a stable structure and, if substituted, may be substituted at any suitable carbon atom which results in a stable structure. Exemplary cycloalkynylene groups include cyclooctynylene, cyclononylnylene, cyclodecynylene, 2-methylcyclooctynylene, and the like.

The terms “aryl” or “aryl group” mean an aromatic carbocyclic monovalent or divalent radical of from 6 to 14 carbon atoms having a single ring (e.g., phenyl or phenylene) or multiple condensed rings (e.g., naphthyl or anthranyl). Unless otherwise specified, the aryl ring may be attached at any suitable carbon atom which results in a stable structure and, if substituted, may be substituted at any suitable carbon atom which results in a stable structure. Exemplary aryl groups include phenyl, naphthyl, anthryl, phenanthryl, indanyl, indenyl, biphenyl, and the like. It may be abbreviated “Ar”.

The terms “heteroaryl” or “heteroaryl group” mean a stable aromatic 5- to 14-membered, monocyclic or polycyclic monovalent or divalent radical which may comprise one or more fused or bridged ring(s), preferably a 5- to 7-membered monocyclic or 7- to 10-membered bicyclic radical, having from one to four heteroatoms in the ring(s) independently selected from nitrogen, oxygen, and sulfur, wherein any sulfur heteroatoms may optionally be oxidized and any nitrogen heteroatom may optionally be oxidized or be quaternized. Unless otherwise specified, the heteroaryl ring may be attached at any suitable heteroatom or carbon atom which results in a stable structure and, if substituted, may be substituted at any suitable heteroatom or carbon atom which results in a stable structure. Exemplary and preferred heteroaryls include furanyl, thiophenyl, pyrrolyl, oxazolyl, thiobenzoyl, imidazolyl, pyrazolyl, isoxazolyl, isothiazolyl, oxadiazolyl, triazolyl, tetrazolyl, thiadiazolyl, pyridinyl, pyridazinyl, pyrimidinyl, pyrazinyl, triazinyl, indolizinyl, azaindolizinyl, indolyl, azaindolyl, diazaindolyl, dihydroindolyl, dihydroazaindolyl, isoindolyl, azaisoindolyl, benzo[1,2]furanyl, furanopyridinyl, furanopyrimidinyl,
furanopyrazinyl, furanopyridazinyl, dihydrobenzofuranyl, dihydrofuranopyridinyl, dihydrofuranopyrimidinyl, benzothienyl, thienopyridinyl, thienopyrimidinyl, thienopyrazinyl, thienopyridazinyl, dihydrobenzothienyl, dihydrothienopyridinyl, dihydrothienopyrimidinyl, indazolyl, azaindazolyl, diazaindazolyl, benzimidazolyl, imidazopyridinyl, benzthiazolyl, thiazolopyridinyl, thiazolopyrimidinyl, benzoxazolyl, oxazolopyridinyl, oxazolopyrimidinyl, benzisoxazolyl, purinyl, chromanyl, azachromanyl, quinolizinyl, quinolinyl, dihydroquinolinyl, tetrahydroquinolinyl, isoquinolinyl, dihydroisoquinolinyl, tetrahydroisoquinolinyl, cinnolinyl, azacinnolinyl, phthalazinyl, azaphthalazinyl, quinazolinyl, azaquinazoliny, quinoxalinyl, azaquinoxalinyl, naphthridinyl, dihydronaphthridinyl, tetrahydronaphthridinyl, pteridinyl, carbazolyl, acridinyl, phenazinyl, phenothiazinyl, phenoxazinyl, benzo[1,3]dioxane, dihydrobenzimidazolone, and the like.

The terms “heterocycle”, “heterocycle group”, “heterocyclyl”, or “heterocyclyl group” mean a stable non-aromatic 5- to 14-membered monocyclic or polycyclic, monovalent or divalent, ring which may comprise one or more fused or bridged ring(s), preferably a 5- to 7-membered monocyclic or 7- to 10-membered bicyclic ring, having from one to three heteroatoms in the ring(s) independently selected from nitrogen, oxygen, and sulfur, wherein any sulfur heteroatoms may optionally be oxidized and any nitrogen heteroatom may optionally be oxidized or be quaternized. Unless otherwise specified, the heterocyclyl ring may be attached at any suitable heteroatom or carbon atom which results in a stable structure and, if substituted, may be substituted at any suitable heteroatom or carbon atom which results in a stable structure. Exemplary and preferred heterocycles include pyrrolinyl, pyrrolidinyl, pyrazolinyl, pyrazolidinyl, piperidinyl, morpholinyl, thiomorpholinyl, piperazinyl, tetrahydropranyl, tetrahydrothiopyranyl, tetrahydrofuranyl, hexahydropyrimidinyl, hexahydropyrazidinyl, and the like.

The term “compounds of the invention” and equivalent expressions are meant to embrace compounds of Formula (I) as herein described, including the tautomers, the prodrugs, the salts, particularly the pharmaceutically acceptable salts, and the solvates and hydrates thereof, where the context so permits. In general and preferably, the compounds of the invention and the formulas designating the compounds of the invention are understood to only include the stable compounds thereof and exclude unstable compounds, even if an unstable compound might be
considered to be literally embraced by the compound formula. Similarly, reference to intermediates, whether or not they themselves are claimed, is meant to embrace their salts and solvates, where the context so permits. For the sake of clarity, particular instances when the context so permits are sometimes indicated in the text, but these instances are purely illustrative and it is not intended to exclude other instances when the context so permits.

The terms “optional” or “optionally” mean that the subsequently described event or circumstances may or may not occur, and that the description includes instances where the event or circumstance occurs and instances in which it does not. For example, “optionally substituted aryl” means that the aryl radical may or may not be substituted and that the description includes both substituted aryl radicals and aryl radicals having no substitution.

The terms “stable compound” or “stable structure” mean a compound that is sufficiently robust to survive isolation to a useful degree of purity from a reaction mixture, and formulation into an efficacious therapeutic or diagnostic agent. For example, a compound which would have a “dangling valency” or is a carbonion is not a compound contemplated by the invention.

The term “substituted” means that any one or more hydrogens on an atom of a group or moiety, whether specifically designated or not, is replaced with a selection from the indicated group of substituents, provided that the atom’s normal valency is not exceeded and that the substitution results in a stable compound. If a bond to a substituent is shown to cross the bond connecting two atoms in a ring, then such substituent may be bonded to any atom on the ring. When a substituent is listed without indicating the atom via which such substituent is bonded to the rest of the compound, then such substituent may be bonded via any atom in such substituent. For example, when the substituent is piperazinyl, piperidinyl, or tetrazolyl, unless specified otherwise, such piperazinyl, piperidinyl, or tetrazolyl group may be bonded to the rest of the compound of the invention via any atom in such piperazinyl, piperidinyl, or tetrazolyl group. Generally, when any substituent or group occurs more than one time in any constituent or compound, its definition on each occurrence is independent of its definition at every other occurrence. Thus, for example, if a group is shown to be substituted with 0 to 2 R^5, then such group is optionally substituted with up to two R^5 groups and R^5 at each occurrence is selected.
independently from the defined list of possible R\(^5\). Such combinations of substituents and/or
variables, however, are permissible only if such combinations result in stable compounds.

In a specific embodiment, the term "about" or "approximately" means within 20%, preferably
within 10%, and more preferably within 5% of a given value or range.

The yield of each of the reactions described herein is expressed as a percentage of the
theoretical yield.

10 B. Salt, Prodrug, Derivative, and Solvate Terms and Conventions

The terms "prodrug" or "prodrug derivative" mean a covalently-bonded derivative or carrier of
the parent compound or active drug substance which undergoes at least some biotransformation
prior to exhibiting its pharmacological effect(s). In general, such prodrugs have metabolically
cleavable groups and are rapidly transformed \textit{in vivo} to yield the parent compound, for
example, by hydrolysis in blood, and generally include esters and amide analogs of the parent
compounds. The prodrug is formulated with the objectives of improved chemical stability,
improved patient acceptance and compliance, improved bioavailability, prolonged duration of
action, improved organ selectivity, improved formulation (e.g., increased hydrosolubility),
and/or decreased side effects (e.g., toxicity). In general, prodrugs themselves have weak or no
biological activity and are stable under ordinary conditions. Prodrugs can be readily prepared
from the parent compounds using methods known in the art, such as those described in \textit{A
Gordon & Breach, 1991, particularly Chapter 5: "Design and Applications of Prodrugs";
pp. 172-178 and pp. 949-982; \textit{Pro-Drugs as Novel Delivery Systems}, T. Higuchi and V. Stella
Elsevier, 1987, each of which is incorporated herein by reference in their entireties.
The term “pharmaceutically acceptable prodrug” as used herein means a prodrug of a compound of the invention which is, within the scope of sound medical judgment, suitable for use in contact with the tissues of humans and lower animals without undue toxicity, irritation, allergic response, and the like, commensurate with a reasonable benefit/risk ratio, and effective for their intended use, as well as the zwitterionic forms, where possible.

The term “salt” means an ionic form of the parent compound or the product of the reaction between the parent compound with a suitable acid or base to make the acid salt or base salt of the parent compound. Salts of the compounds of the present invention can be synthesized from the parent compounds which contain a basic or acidic moiety by conventional chemical methods. Generally, the salts are prepared by reacting the free base or acid parent compound with stoichiometric amounts or with an excess of the desired salt-forming inorganic or organic acid or base in a suitable solvent or various combinations of solvents.

The term “pharmaceutically acceptable salt” means a salt of a compound of the invention which is, within the scope of sound medical judgment, suitable for use in contact with the tissues of humans and lower animals without undue toxicity, irritation, allergic response, and the like, commensurate with a reasonable benefit/risk ratio, generally water or oil-soluble or dispersible, and effective for their intended use. The term includes pharmaceutically-acceptable acid addition salts and pharmaceutically-acceptable base addition salts. As the compounds of the present invention are useful in both free base and salt form, in practice, the use of the salt form amounts to use of the base form. Lists of suitable salts are found in, e.g., S.M. Birge et al., J. Pharm. Sci., 1977, 66, pp. 1-19, which is hereby incorporated by reference in its entirety.

The term “pharmaceutically-acceptable acid addition salt” means those salts which retain the biological effectiveness and properties of the free bases and which are not biologically or otherwise undesirable, formed with inorganic acids such as hydrochloric acid, hydrobromic acid, hydroiodic acid, sulfuric acid, sulfamic acid, nitric acid, phosphoric acid, and the like, and organic acids such as acetic acid, trichloroacetic acid, trifluoroacetic acid, adipic acid, alginic acid, ascorbic acid, aspartic acid, benzenesulfonic acid, benzoic acid, 2-acetoxybenzoic acid, butyric acid, camphoric acid, camphorsulfonic acid, cinnamic acid, citric acid, digluconic acid, ethanesulfonic acid, glutamic acid, glycolic acid, glycerophosphoric acid, hemisulfic acid,
heptanoic acid, hexanoic acid, formic acid, fumaric acid, 2-hydroxyethanesulfonic acid (isethionic acid), lactic acid, maleic acid, hydroxymaleic acid, malic acid, malonic acid, mandelic acid, mesitylenesulfonic acid, methanesulfonic acid, naphthalenesulfonic acid, nicotinic acid, 2-naphthalenesulfonic acid, oxalic acid, pamoic acid, pectinic acid, phenylacetic acid, 3-phenylpropionic acid, picric acid, pivalic acid, propionic acid, pyruvic acid, pyruvic acid, salicylic acid, stearic acid, succinic acid, sulfanilic acid, tartaric acid, p-toluenesulfonic acid, undecanoic acid, and the like.

The term “pharmaceutically-acceptable base addition salt” means those salts which retain the biological effectiveness and properties of the free acids and which are not biologically or otherwise undesirable, formed with inorganic bases such as ammonia or hydroxide, carbonate, or bicarbonate of ammonium or a metal cation such as sodium, potassium, lithium, calcium, magnesium, iron, zinc, copper, manganese, aluminum, and the like. Particularly preferred are the ammonium, potassium, sodium, calcium, and magnesium salts. Salts derived from pharmaceutically-acceptable organic nontoxic bases include salts of primary, secondary, and tertiary amines, quaternary amine compounds, substituted amines including naturally occurring substituted amines, cyclic amines and basic ion-exchange resins, such as methylamine, dimethylamine, trimethylamine, ethylamine, diethylamine, triethylamine, isopropylamine, tripropylamine, tributylamine, ethanolamine, diethanolamine, 2-dimethylaminoethanol, 2-diethylaminoethanol, dicyclohexylamine, lysine, arginine, histidine, caffeine, hydabamine, choline, betaine, ethylenediamine, glucosamine, methylglucamine, theobromine, purines, piperazine, piperidine, N-ethylpiperidine, tetramethylammonium compounds, tetraethylammonium compounds, pyridine, N,N-dimethylaniline, N-methylpiperidine, N-methylmorpholine, dicyclohexylamine, dibenzylamine, N,N-dibenzylphenethylamine, 1-ephenamine, N,N'-dibenzylethlenediamine, polyamine resins, and the like. Particularly preferred organic nontoxic bases are isopropylamine, diethylamine, ethanolamine, trimethylamine, dicyclohexylamine, choline, and caffeine.

The term “solvate” means a physical association of a compound with one or more solvent molecules or a complex of variable stoichiometry formed by a solute (for example, a compound of Formula (I)) and a solvent, for example, water, ethanol, or acetic acid. This physical association may involve varying degrees of ionic and covalent bonding, including hydrogen
bonding. In certain instances, the solvate will be capable of isolation, for example, when one or more solvent molecules are incorporated in the crystal lattice of the crystalline solid. In general, the solvents selected do not interfere with the biological activity of the solute. Solvates encompasses both solution-phase and isolatable solvates. Representative solvates include hydrates, ethanolates, methanolates, and the like.

The term “hydrate” means a solvate wherein the solvent molecule(s) is/are H₂O.

The compounds of the present invention as discussed below include the free base or acid thereof, their salts, solvates, and prodrugs and may include oxidized sulfur atoms or quaternized nitrogen atoms in their structure, although not explicitly stated or shown, particularly the pharmaceutically acceptable forms thereof. Such forms, particularly the pharmaceutically acceptable forms, are intended to be embraced by the appended claims.

C. Isomer Terms and Conventions

The term “isomers” means compounds having the same number and kind of atoms, and hence the same molecular weight, but differing with respect to the arrangement or configuration of the atoms in space. The term includes stereoisomers and geometric isomers.

The terms “stereoisomer” or “optical isomer” mean a stable isomer that has at least one chiral atom or restricted rotation giving rise to perpendicular dissymmetric planes (e.g., certain biphenyls, allenes, and spiro compounds) and can rotate plane-polarized light. Because asymmetric centers and other chemical structure exist in the compounds of the invention which may give rise to stereoisomerism, the invention contemplates stereoisomers and mixtures thereof. The compounds of the invention and their salts include asymmetric carbon atoms and may therefore exist as single stereoisomers, racemates, and as mixtures of enantiomers and diastereomers. Typically, such compounds will be prepared as a racemic mixture. If desired, however, such compounds can be prepared or isolated as pure stereoisomers, i.e., as individual enantiomers or diastereomers, or as stereoisomer-enriched mixtures. As discussed in more detail below, individual stereoisomers of compounds are prepared by synthesis from optically active starting materials containing the desired chiral centers or by preparation of mixtures of enantiomeric products followed by separation or resolution, such as conversion to a mixture of
diastereomers followed by separation or recrystallization, chromatographic techniques, use of chiral resolving agents, or direct separation of the enantiomers on chiral chromatographic columns. Starting compounds of particular stereochemistry are either commercially available or are made by the methods described below and resolved by techniques well-known in the art.

The term "enantiomers" means a pair of stereoisomers that are non-superimposable mirror images of each other.

The terms "diastereoisomers" or "diastereomers" mean optical isomers which are not mirror images of each other.

The terms "racemic mixture" or "racemate" mean a mixture containing equal parts of individual enantiomers.

The term "non-racemic mixture" means a mixture containing unequal parts of individual enantiomers.

The term "geometrical isomer" means a stable isomer which results from restricted freedom of rotation about double bonds (e.g., cis-2-butene and trans-2-butene) or in a cyclic structure (e.g., cis-1,3-dichlorocyclobutane and trans-1,3-dichlorocyclobutane). Because carbon-carbon double (olefinic) bonds, C=O double bonds, cyclic structures, and the like may be present in the compounds of the invention, the invention contemplates each of the various stable geometric isomers and mixtures thereof resulting from the arrangement of substituents around these double bonds and in these cyclic structures. The substituents and the isomers are designated using the cis/trans convention or using the E or Z system, wherein the term "E" means higher order substituents on opposite sides of the double bond, and the term "Z" means higher order substituents on the same side of the double bond. A thorough discussion of E and Z isomerism is provided in J. March, Advanced Organic Chemistry: Reactions, Mechanisms, and Structure, 4th ed., John Wiley & Sons, 1992, which is hereby incorporated by reference in its entirety.

Several of the following examples represent single E isomers, single Z isomers, and mixtures of E/Z isomers. Determination of the E and Z isomers can be done by analytical methods such as x-ray crystallography, $^1$H NMR, and $^{13}$C NMR.
Some of the compounds of the invention can exist in more than one tautomeric form. As mentioned above, the compounds of the invention include all such tautomers.

It is well-known in the art that the biological and pharmacological activity of a compound is sensitive to the stereochemistry of the compound. Thus, for example, enantiomers often exhibit strikingly different biological activity including differences in pharmacokinetic properties, including metabolism, protein binding, and the like, and pharmacological properties, including the type of activity displayed, the degree of activity, toxicity, and the like. Thus, one skilled in the art will appreciate that one enantiomer may be more active or may exhibit beneficial effects when enriched relative to the other enantiomer or when separated from the other enantiomer. Additionally, one skilled in the art would know how to separate, enrich, or selectively prepare the enantiomers of the compounds of the invention from this disclosure and the knowledge of the prior art.

Thus, although the racemic form of drug may be used, it is often less effective than administering an equal amount of enantiomerically pure drug; indeed, in some cases, one enantiomer may be pharmacologically inactive and would merely serve as a simple diluent. For example, although ibuprofen had been previously administered as a racemate, it has been shown that only the S-isomer of ibuprofen is effective as an anti-inflammatory agent (in the case of ibuprofen, however, although the R-isomer is inactive, it is converted in vivo to the S-isomer, thus, the rapidity of action of the racemic form of the drug is less than that of the pure S-isomer). Furthermore, the pharmacological activities of enantiomers may have distinct biological activity. For example, S-penicillamine is a therapeutic agent for chronic arthritis, while R-penicillamine is toxic. Indeed, some purified enantiomers have advantages over the racemates, as it has been reported that purified individual isomers have faster transdermal penetration rates compared to the racemic mixture. See U.S. Patent Nos. 5,114,946 and 4,818,541.

Thus, if one enantiomer is pharmacologically more active, less toxic, or has a preferred disposition in the body than the other enantiomer, it would be therapeutically more beneficial to administer that enantiomer preferentially. In this way, the patient undergoing treatment would
be exposed to a lower total dose of the drug and to a lower dose of an enantiomer that is possibly toxic or an inhibitor of the other enantiomer.

Preparation of pure enantiomers or mixtures of desired enantiomeric excess (ee) or enantiomeric purity are accomplished by one or more of the many methods of (a) separation or resolution of enantiomers, or (b) enantioselective synthesis known to those of skill in the art, or a combination thereof. These resolution methods generally rely on chiral recognition and include, for example, chromatography using chiral stationary phases, enantioselective host-guest complexation, resolution or synthesis using chiral auxiliaries, enantioselective synthesis, enzymatic and nonenzymatic kinetic resolution, or spontaneous enantioselective crystallization. Such methods are disclosed generally in Chiral Separation Techniques: A Practical Approach (2nd Ed.), G. Subramanian (ed.), Wiley-VCH, 2000; T.E. Beesley and R.P.W. Scott, Chiral Chromatography, John Wiley & Sons, 1999; and Satinder Ahuja, Chiral Separations by Chromatography, Am. Chem. Soc., 2000. Furthermore, there are equally well-known methods for the quantitation of enantiomeric excess or purity, for example, GC, HPLC, CE, or NMR, and assignment of absolute configuration and conformation, for example, CD ORD, X-ray crystallography, or NMR.

In general, all tautomeric forms and isomeric forms and mixtures, whether individual geometric isomers or stereoisomers or racemic or non-racemic mixtures, of a chemical structure or compound is intended, unless the specific stereochemistry or isomeric form is specifically indicated in the compound name or structure.

D. Pharmaceutical Administration and Diagnostic and Treatment Terms and Conventions
The term “patient” includes both human and non-human mammals.

The term “effective amount” means an amount of a compound according to the invention which, in the context of which it is administered or used, is sufficient to achieve the desired effect or result. Depending on the context, the term effective amount may include or be synonymous with a pharmaceutically effective amount or a diagnostically effective amount.
The terms "pharmaceutically effective amount" or "therapeutically effective amount" means an amount of a compound according to the invention which, when administered to a patient in need thereof, is sufficient to effect treatment for disease-states, conditions, or disorders for which the compounds have utility. Such an amount would be sufficient to elicit the biological or medical response of a tissue, system, or patient that is sought by a researcher or clinician. The amount of a compound of according to the invention which constitutes a therapeutically effective amount will vary depending on such factors as the compound and its biological activity, the composition used for administration, the time of administration, the route of administration, the rate of excretion of the compound, the duration of treatment, the type of disease-state or disorder being treated and its severity, drugs used in combination with or coincidentally with the compounds of the invention, and the age, body weight, general health, sex, and diet of the patient. Such a therapeutically effective amount can be determined routinely by one of ordinary skill in the art having regard to their own knowledge, the prior art, and this disclosure.

The term "diagnostically effective amount" means an amount of a compound according to the invention which, when used in a diagnostic method, apparatus, or assay, is sufficient to achieve the desired diagnostic effect or the desired biological activity necessary for the diagnostic method, apparatus, or assay. Such an amount would be sufficient to elicit the biological or medical response in a diagnostic method, apparatus, or assay, which may include a biological or medical response in a patient or in a in vitro or in vivo tissue or system, that is sought by a researcher or clinician. The amount of a compound according to the invention which constitutes a diagnostically effective amount will vary depending on such factors as the compound and its biological activity, the diagnostic method, apparatus, or assay used, the composition used for administration, the time of administration, the route of administration, the rate of excretion of the compound, the duration of administration, drugs and other compounds used in combination with or coincidentally with the compounds of the invention, and, if a patient is the subject of the diagnostic administration, the age, body weight, general health, sex, and diet of the patient. Such a diagnostically effective amount can be determined routinely by one of ordinary skill in the art having regard to their own knowledge, the prior art, and this disclosure.
The term “modulate” means the ability of a compound to alter the function of the glucocorticoid receptor by, for example, binding to and stimulating or inhibiting the glucocorticoid receptor functional responses.

The term “modulator” in the context of describing compounds according to the invention means a compound that modulates the glucocorticoid receptor function. As such, modulators include, but are not limited to, agonists, partial agonists, antagonists, and partial antagonists.

The term “agonist” in the context of describing compounds according to the invention means a compound that, when bound to the glucocorticoid receptor, enhances or increases the glucocorticoid receptor function. As such, agonists include partial agonists and full agonists.

The term “full agonist” in the context of describing compounds according to the invention means a compound that evokes the maximal stimulatory response from the glucocorticoid receptor, even when there are spare (unoccupied) glucocorticoid receptors present.

The term “partial agonist” in the context of describing compounds according to the invention means a compound that is unable to evoke the maximal stimulatory response from the glucocorticoid receptor, even at concentrations sufficient to saturate the glucocorticoid receptors present.

The term “antagonist” in the context of describing compounds according to the invention means a compound that directly or indirectly inhibits or suppresses the glucocorticoid receptor function. As such, antagonists include partial antagonists and full antagonists.

The term “full antagonist” in the context of describing compounds according to the invention means a compound that evokes the maximal inhibitory response from the glucocorticoid receptor, even when there are spare (unoccupied) glucocorticoid receptors present.

The term “partial antagonist” in the context of describing compounds according to the invention means a compound that is unable to evoke the maximal inhibitory response from the
glucocorticoid receptor, even at concentrations sufficient to saturate the glucocorticoid receptors present.

The terms "treating" or "treatment" mean the treatment of a disease-state in a patient, and include:

(i) preventing the disease-state from occurring in a patient, in particular, when such patient is genetically or otherwise predisposed to the disease-state but has not yet been diagnosed as having it;
(ii) inhibiting or ameliorating the disease-state in a patient, i.e., arresting or slowing its development; or
(iii) relieving the disease-state in a patient, i.e., causing regression or cure of the disease-state.

**General Synthetic Methods for Making Compounds of Formula (IA) and Formula (IB)**

The invention also provides processes for making compounds of Formula (IA) and Formula (IB). In all schemes, unless specified otherwise, $R^1$ to $R^6$ in the formulas below shall have the meaning of $R^1$ to $R^6$ in the Formula (IA) and Formula (IB) of the invention described hereinabove. For synthesis of intermediates see the synthetic procedures disclosed in U.S. Patent Applications No. 2004/0023999 and No. 2004/0162321, which are hereby incorporated by reference in their entirety. Other intermediates used in the preparation of compounds of the invention are either commercially available or readily prepared by methods known to those skilled in the art.

Optimum reaction conditions and reaction times may vary depending on the particular reactants used. Unless otherwise specified, solvents, temperatures, pressures, and other reaction conditions may be readily selected by one of ordinary skill in the art. Specific procedures are provided in the Experimental Examples section. Typically, reaction progress may be monitored by thin layer chromatography (TLC) or analytical high performance liquid chromatography (HPLC), if desired, and intermediates and products may be purified by chromatography on silica gel, recrystallization, and/or other purification methods known to one of ordinary skill in the art.
Compounds of Formula (IA) in which R^4 is -CH_2- may be prepared by the method outlined in Scheme I.

As illustrated in Scheme I, an ester intermediate of Formula (II) where R' is Me or Et, is reduced with a suitable reducing agent, such as lithium aluminum hydride, in a suitable solvent, such as tetrahydrofuran (THF) or diethyl ether (Et_2O), to produce the 1,2-diol of Formula (III). The diol (III) is then reacted with a reagent, for example R'SO_2Cl (R' = methyl or p-tolyl), that will form a leaving group L with the primary alcohol of diol (III). A suitable leaving group would be, for example, a sulfonic acid ester such as a mesylate or tosylate (IV, L is -SO_2CH_3 or -SO_2 (p-tolyl)). Intermediate (IV) may be isolated or reacted in situ with a base such as potassium carbonate to produce epoxide (V). Reaction of epoxide (V) with the desired R^3H, provides the desired product of Formula (I). The reaction may take place by heating R^3H and epoxide (V) in a suitable solvent such as DMF, or by heating R^3H and epoxide (V) together in a solvent in the presence of a suitable base such as sodium ethoxide in EtOH.

Alternatively, epoxide (V) may also be prepared by the method outlined in Scheme II.

As illustrated in Scheme II, a diol intermediate (III) is oxidatively cleaved with a suitable oxidizing reagent, such as sodium periodate, in a suitable solvent, such as methanol (MeOH), to produce a ketone (XI). The ketone (XI) is then epoxidized with reagents, such as trimethylsulfoxonium iodide and NaH, in a suitable solvent, such as DMSO, to provide epoxide (V).
Intermediates of Formula (II) may be prepared by methods known in the art. Two procedures are illustrated in Scheme III.

![Scheme III](image)

**Scheme III**

For an R¹ group which will undergo a Friedel-Crafts alkylation, one may react a pyruvate (VI) bearing CF₃ and where R' is Me or Et, with a bromomethyl olefin (VII) bearing an R² and an olefin group (=CH-R'”) that will become R³, in the presence of manganese and a Lewis acid, such as zinc chloride, in a suitable solvent, such as THF, to produce a 2-hydroxy ester (VIII).

Friedel-Crafts alkylation of R¹ with this intermediate (VIII) in the presence of a suitable Lewis acid, such as aluminum chloride, provides the compound (II) (R³ = -CH₂R’”). Alternatively, one may perform a Grignard reaction with a pyruvate bearing CF₃ (VI) and an ethyl magnesium halide (IX) bearing R¹, R², and R³ to provide the desired intermediate of Formula (II).

Compounds of Formula (IA) in which R⁴ is -C(O)- may be prepared readily from intermediate (II) as illustrated in Scheme IV.

![Scheme IV](image)

**Scheme IV**
As illustrated in Scheme IV, hydrolysis of intermediate (II), for example, by refluxing with an aqueous base such as potassium hydroxide with a suitable co-solvent such as methanol, provides carboxylic acid (X). The resulting carboxylic acid (X) may be coupled with R²H under standard coupling conditions well-known in the art (see, for example, M. Bodanszky, *The Practice of Peptide Synthesis* (Springer-Verlag: 1984), which is hereby incorporated by reference in its entirety). For example, one may couple carboxylic acid (X) and R²H by treating with 1-[3-(dimethylamino)propyl]-3-ethylcarbodiimide hydrochloride (EDC) followed by 1-hydroxybenzotriazole hydrate (HOBT) in a suitable solvent such as DMF.

Compounds of Formula (IB)

![Formula IB](image)

where R¹, R², R³, R⁴, R⁵, and X are as defined above and R⁴ is -CH₂-, may be prepared by the method outlined in Scheme V.

![Scheme V](image)

As illustrated in Scheme V, a compound of Formula (IA) is reacted with a suitable base, such as potassium carbonate, in a suitable solvent, such as DMF, to provide ketone (IIB). The ketone (IIB) is then alkylated with an organometallic reagent, such as organolithium, organomagnesium or organozinc reagent, in the presence of cerium trichloride, in a suitable solvent, such as THF, to provide a compound of Formula (IB).

Compounds of Formula (IB) may also be prepared by the method outlined in Scheme VI.
Scheme VI

A ketone intermediate of Formula (IIIb) is epoxidized with reagents, such as trimethylsulfoxonium iodide and NaH, in a suitable solvent, such as DMSO, to provide epoxide of Formula (VB). The epoxide (VB) is then alkylated with the desired $R^5H$ to provide the desired product of Formula (IB). The reaction may take place by heating $R^5H$ and epoxide (VB), in a suitable solvent such as DMF, or by heating $R^5H$ and epoxide (VB), in a suitable solvent such as ethanol (EtOH), in the presence of a suitable base such as sodium ethoxide.

Alternatively, the ketone (IIIb) may be converted to the alkene (IVB) using reagents, such as triphenylphosphonium bromide, in the presence of a suitable base, such as sodium hydride or n-butyllithium, in a suitable solvent, such as diethyl ether or THF. The alkene (IVB) is then epoxidized with an oxidizing agent, such as $m$-chloroperoxybenzoic acid, in a suitable solvent, such as dichloromethane, to provide the epoxide (VB). The epoxide (VB) is then alkylated with the desired $R^5H$ to provide the desired product of Formula (IB). The reaction may take place by heating $R^5H$ and epoxide (VB), in a suitable solvent such as DMF, or by heating $R^5H$ and epoxide (VB), in a suitable solvent such as ethanol (EtOH), in the presence of a suitable base such as sodium ethoxide.

Additionally, compounds of Formula (IA) where $R^1$ is an optionally substituted aryl group may be converted by the sequence illustrated in Scheme VII to compounds of Formula (IA) where $R^1$ is further optionally functionalized.
As outlined in Scheme VII, compounds of Formula (IA) where \( R^1 \) is an optionally substituted aryl group in which one of the substituents is a suitable coupling group, such as Cl, Br, I, or OTf, may be treated with a suitable coupling partner, such as a boronic acid or a boronic ester, in a suitable solvent or a mixture of solvents, such as a mixture of DME, methanol, and DMF, in the presence of a suitable catalyst, such as tetrakis(triphenylphosphine)palladium (0), with an appropriate base, such as potassium carbonate, at a suitable temperature and under an appropriate atmospheric environment, such as argon, to give compounds of Formula (IA) where \( R^1 \) is further optionally functionalized. Alternatively, compounds of Formula (IA) where \( R^1 \) is an optionally substituted aryl group containing a suitable group, such as Cl, Br, I, or OTf, is converted to its corresponding boronic ester (XII) by reacting with an appropriate coupling partner, such as bis(pinacolato)diboron, under a suitable condition, such as heating at 100°C in DME with potassium carbonate and in the presence of [1,1′-bis(diphenylphosphino)ferrocene]dichloropalladium (II). Subsequently, the boronic ester of formula (VI) may be converted to compounds of Formula (IA) where \( R^1 \) is optionally functionalized by treating with a suitable coupling partner, such as an aryl or heteroaryl halide or triflate, and under a suitable, previously indicated, coupling condition. The choice between the two described methods depends on the commercial or synthetic availability of the coupling partner, which is up to the discretion of one skilled in the art.
In order that this invention be more fully understood, the following examples are set forth. These examples are for the purpose of illustrating embodiments of this invention, and are not to be construed as limiting the scope of the invention in any way since, as recognized by one skilled in the art, particular reagents or conditions could be modified as needed for individual compounds. Starting materials used are either commercially available or easily prepared from commercially available materials by those skilled in the art.

Experimental Examples

Example 1: Synthesis of 1-[4-(5-fluoro-2-methoxyphenyl)-2-hydroxy-4-methyl-2-trifluoromethylpentyl]-1H-[1,6]naphthyridin-4-one and 6-[4-(5-fluoro-2-methoxyphenyl)-2-hydroxy-4-methyl-2-trifluoromethylpentyl]-6H-[1,6]naphthyridin-4-one

To a suspension of 2-[2-(5-fluoro-2-methoxyphenyl)-2-methylpropyl]-2-trifluoromethylloxirane (164 mg) and [1,6]naphthyridin-4-ol (see W.W. Paudler et al., J. Heterocyclic Chem., 1965, 2, pp. 393-398; the last decarboxylation step was performed by refluxing in phenyl ether for 20 minutes) (164 mg) in anhydrous ethanol (0.8 mL) was added sodium ethoxide (21 wt.% solution in ethanol, 209 µL). After heating at 85°C for 14.5 hours, the reaction mixture was poured into aqueous saturated sodium bicarbonate solution and extracted twice with ethyl acetate. The combined organic phases were dried over sodium sulfate (Na₂SO₄), filtered, and concentrated in vacuo. The residue was purified by column chromatography with silica gel (eluted with 5% to 7% methanol-methylene chloride) to give 1-[4-(5-fluoro-2-methoxyphenyl)-2-hydroxy-4-methyl-2-trifluoromethylpentyl]-1H-[1,6]naphthyridin-4-one as a tan solid (38.6 mg), m.p. 229°C-230°C, and 6-[4-(5-fluoro-2-methoxyphenyl)-2-hydroxy-4-methyl-2-
trifluoromethylpentyl]-6H-[1,6]naphthyridin-4-one as a bright yellow solid (75.0 mg), m.p. 230°C-231°C.

**Example 2: Synthesis of 4-[4-(5-fluoro-2-methylphenyl)-2-hydroxy-4-methyl-2-trifluoromethylpentyl]-4H-thieno[3,2-b]pyridin-7-one**

![Chemical structure diagram]

To a suspension of 2-[2-(5-fluoro-2-methylphenyl)-2-methylpropyl]-2-trifluoromethyloxirane (154 mg) and thieno[3,2-b]pyridin-7-ol (118 mg) in anhydrous ethanol (0.8 mL) was added sodium ethoxide (21 wt.% solution in ethanol, 146 μL). After heating at 85°C for 17 hours, the reaction mixture was diluted with ethyl acetate, dried over magnesium sulfate, filtered, and concentrated *in vacuo*. The residue was purified by column chromatography with silica gel (eluted with 75% to 100% ethyl acetate-hexanes) to give the title compound as a white solid (80.8 mg), m.p. 175°C-176°C.

**Example 3: Synthesis of 4-[2-hydroxy-4-(5-methanesulfonyl-2,3-dihydrobenzofuran-7-y1)-4-methyl-2-trifluoromethylpentyl]-4H-thieno[3,2-b]pyridin-7-one**

![Chemical structure diagram]

To a suspension of trimethylsulfoxonium iodide (1.36 g) in anhydrous dimethylsulfoxide (7.7 mL) was added sodium hydride (60% dispersion in mineral oil, 246 mg). The resulting
solution was stirred at room temperature for 30 minutes and was then added dropwise to a solution of 1,1,1-trifluoro-4-methyl-4-(5-methylsulfanyl-2,3-dihydrobenzofuran-7-yl)pentan-2-one (1.63 g) in 6.5 mL of anhydrous dimethylsulfoxide. After 2 hours, 100 mL of water was added and the resulting mixture was extracted with three 100 mL portions of ether. The combined organic phases were washed twice with water, aqueous saturated sodium chloride, dried over magnesium sulfate, filtered, and concentrated in vacuo to afford 7-[1,1-dimethyl-2-(2-trifluoromethyloxiranyl)ethyl]-5-methylsulfanyl-2,3-dihydrobenzofuran as a clear oil (1.64 g) which was used without further purification.

To a solution of 7-[1,1-dimethyl-2-(2-trifluoromethyloxiranyl)ethyl]-5-methylsulfanyl-2,3-dihydrobenzofuran (535 mg) in 30 mL of acetonitrile and 10 mL of water was added sodium periodate (1.03 g) followed by ruthenium (III) chloride (1 mg) as catalyst. After 2 hours, the reaction mixture was diluted with water and extracted with ethyl acetate. The combined organic phases were dried over magnesium sulfate, filtered, and concentrated in vacuo to afford 7-[1,1-dimethyl-2-(2-trifluoromethyloxiranyl)ethyl]-5-methanesulfanyl-2,3-dihydrobenzofuran as a tan solid (568 mg) which was used without further purification.

To a suspension of 7-[1,1-dimethyl-2-(2-trifluoromethyloxiranyl)ethyl]-5-methanesulfanyl-2,3-dihydrobenzofuran (100 mg) and thieno[3,2-b]pyridin-7-ol (82.9 mg) in 0.75 mL of anhydrous ethanol was added sodium ethoxide (21 wt.% solution in ethanol, 102 µL). After heating at 85°C for 16 hours, the reaction mixture was diluted with ethyl acetate, dried over sodium sulfate, filtered, and concentrated in vacuo. The residue was purified by column chromatography with silica gel (eluted with 4% methanol-methylene chloride) to give the title compound as a pale yellow solid (108 mg), m.p. 163°C-165°C.

Example 4: Representative Protocol for the Synthesis of Heteroaryl-Fused 4-Hydroxypyridines: Synthesis of thieno[2,3-b]pyridin-4-ol
The starting materials required for other examples listed below may be obtained by a synthetic route analogous to the scheme shown above: (1) condensation of a heteroaryl amine (appropriately protected if necessary) with diethyl ethoxymethylenemalonate; (2) cyclization by heating in a suitable solvent, such as diphenyl ether; (3) saponification with aqueous sodium hydroxide; and (4) decarboxylation by heating in a suitable solvent, such as diphenyl ether (for literature precedents, see M.A. Khan et al., J. Heterocycl. Chem., 1977, 14, 807 and J.M. Barker et al., J. Chem. Res., Miniprint, 1984, 3, 771).

4-[4-(5-Fluoro-2-hydroxyphenyl)-2-hydroxy-4-methyl-2-trifluoromethylpentyl]-4H-thiazolo[4,5-b]pyridin-7-one;

4-[4-(5-Fluoro-2-hydroxyphenyl)-2-hydroxy-4-methyl-2-trifluoromethylpentyl]-4H-oxazolo[4,5-b]pyridin-7-one;

4-[4-(5-Fluoro-2-methylphenyl)-2-hydroxy-4-methyl-2-trifluoromethylpentyl]-4H-furo[3,2-b]pyridin-7-one;

7-[4-(5-Fluoro-2-methylphenyl)-2-hydroxy-4-methyl-2-trifluoromethylpentyl]-7H-thieno[2,3-b]pyridin-4-one;

7-[4-(5-Fluoro-2-hydroxyphenyl)-2-hydroxy-4-methyl-2-trifluoromethylpentyl]-7H-furo[2,3-b]pyridin-4-one;

4-[4-(5-Fluoro-2-hydroxyphenyl)-2-hydroxy-4-methyl-2-trifluoromethylpentyl]-4H-thiazolo[5,4-b]pyridin-7-one;
7-[4-(5-Fluoro-2-methylphenyl)-2-hydroxy-4-methyl-2-trifluoromethylpentyl]-7H-furo[2,3-b]pyridin-4-one; and

4-[4-(5-Fluoro-2-methylphenyl)-2-hydroxy-4-methyl-2-trifluoromethylpentyl]-1,4-dihydropyrrolo[3,2-b]pyridin-7-one.

The starting materials required for the examples listed below may be obtained following the literature procedures listed.

1-[4-(5-Fluoro-2-methylphenyl)-2-hydroxy-4-methyl-2-trifluoromethylpentyl]-1H-[1,8]naphthyridin-4-one (G.B. Barlin et al., Aust. J. Chem., 1984, 37, 1065); and

Example 5: Synthesis of 3-Chloro-1-[4-(2,3-dihydrobenzofuran-7-yl)-2-hydroxy-4-methyl-2-trifluoromethylpentyl]-1H-[1,6]naphthyridin-4-one

To [1,6]naphthyridin-4-ol (1.00 g) in 10 mL of 2 N aqueous sodium hydroxide solution was added 13.3 mL of aqueous sodium hypochlorite solution (4% available chlorine content) over 3 minutes. After stirring for 1 hour, the reaction mixture was brought to to pH 6 with the addition of acetic acid. The resultant precipitate was collected by filtration and dried in vacuo to afford 3-chloro-[1,6]naphthyridin-4-ol as a brown solid (820 mg).
To a suspension of 7-[1,1-dimethyl-2-(2-trifluoromethoxyiranyl)ethyl]-2,3-dihydrobenzofuran (73.2 mg) and 3-chloro-[1,6]naphthyridin-4-ol (82.3 mg) in 0.75 mL of anhydrous ethanol was added sodium ethoxide (21 wt.% solution in ethanol, 0.085 mL). After heating at 85°C for 12 hours, the reaction mixture was absorbed onto silica gel and purified by column chromatography (eluted with 7% to 10% methanol-methylene chloride) to give 3-chloro-1-[4-(2,3-dihydrobenzofuran-7-yl)-2-hydroxy-4-methyl-2-trifluoromethylpentyl]-1H-[1,6]naphthyridin-4-one as a pale orange solid (50.2 mg), m.p. 158°C-160°C.

Example 6: Synthesis of 4-(4-Benzo[1,3]dioxol-4-yl)-2-hydroxy-4-methyl-2-trifluoromethylpentyl)-6-chloro-4H-thieno[3,2-b]pyridin-7-one

To thieno[3,2-b]pyridin-7-ol (2.00 g) in 20 mL of 2 N aqueous sodium hydroxide solution was added 25.8 mL of aqueous sodium hypochlorite solution (Aldrich Chemical Co., 4% available chlorine content) over 15 minutes. After stirring for 1 hour, the reaction mixture was brought to pH 6 with the addition of acetic acid. The resultant precipitate was collected by filtration and recrystallized from methanol-ethanol to afford 3-chlorothieno[3,2-b]pyridin-7-ol as a brown solid (1.50 g).

To a suspension of 4-[1,1-dimethyl-2-(2-trifluoromethoxyiranyl)ethyl]benzo[1,3]dioxole (55.0 mg) and 3-chlorothieno[3,2-b]pyridin-7-ol (70.9 mg) in 0.75 mL of anhydrous ethanol was added sodium ethoxide (21 wt.% solution in ethanol, 0.071 mL). After heating at 85°C for 12 hours, the reaction mixture was absorbed onto silica gel and purified by column chromatography (eluted with 30% to 50% ethyl acetate-hexanes) to give 4-(4-Benzo[1,3]dioxol-4-yl)-2-hydroxy-4-methyl-2-trifluoromethylpentyl)-6-chloro-4H-thieno[3,2-b]pyridin-7-one as a foam-like solid (65.0 mg).
Example 7: Synthesis of 4-(4-Benzod1,3]dioxol-4-yl-2-hydroxy-4-methyl-2-trifluoromethylpentyl)-6-bromo-4H-thieno[3,2-b]pyridin-7-one

To thieno[3,2-b]pyridin-7-ol (2.00 g) in 30 mL of 2 N aqueous sodium hydroxide solution was added 16 mL of an aqueous solution of bromine (16% w/v) and potassium bromide (30% w/v) over 5 minutes. After stirring for 3 hours, the reaction mixture was brought to pH 5 with the addition of acetic acid. The resultant precipitate was collected by filtration and triturated with 150 mL of methanol-water (10:1) to afford 3-bromothieno[3,2-b]pyridin-7-ol as a tan solid (620 mg).

To a suspension of 4-[1,1-dimethyl-2-(2-trifluoromethylxiranyl)ethyl]benzo[1,3]dioxole (52.7 mg) and 3-bromothieno[3,2-b]pyridin-7-ol (84.2 mg) in 0.75 mL of anhydrous ethanol was added sodium ethoxide (21 wt.% solution in ethanol, 0.068 mL). After heating at 85°C for 14 hours, the reaction mixture was absorbed onto silica gel and purified by column chromatography (eluted with 30% to 50% ethyl acetate-hexanes) to give 4-(4-Benzod1,3]dioxol-4-yl-2-hydroxy-4-methyl-2-trifluoromethylpentyl)-6-bromo-4H-thieno[3,2-b]pyridin-7-one as a white solid (63.8 mg), m.p. 197°C-198°C.

Example 8: Synthesis of 6-Chloro-4-[2-hydroxy-4-methyl-4-(5-pyrimidin-5-yl-2,3-dihydrobenzofuran-7-yl)-2-trifluoromethylpentyl]-4H-thieno[3,2-b]pyridin-7-one
To a solution of 4-(5-bromo-2,3-dihydrobenzofuran-7-yl)-1,1,1-trifluoro-4-methylpentan-2-one (1.00 g) in 20 mL of DME/MeOH/DMF (2:3:1) in a sealed tube was added pyrimidine-5-boronic acid (529 mg) and potassium carbonate (787 mg) followed by tetrakis(triphenylphosphine)palladium (0) (329 mg) as catalyst. The resulting mixture was heated at 120°C for 40 minutes. After cooling to room temperature, the crude mixture was filtered through a cotton plug with the aid of EtOAc and concentrated in vacuo to remove most of the methanol. The resulting material was dissolved in 160 mL of EtOAc, washed sequentially with 80 mL of 1 N aqueous sodium hydroxide solution, 80 mL of water, and 80 mL of brine. The organic phase was dried over sodium sulfate, filtered, and concentrated in vacuo. Purification by column chromatography with silica gel (eluted with 20% to 30% ethyl acetate-hexanes) afforded 1,1,1-trifluoro-4-methyl-4-(5-pyrimidin-5-yl-2,3-dihydrobenzofuran-7-yl)pentan-2-one (620 mg).

To a suspension of trimethylsulfoxonium iodide (467 mg) in 2.6 mL of anhydrous DMSO was added sodium hydride (60% dispersion in mineral oil, 85.0 mg). The resulting solution was stirred at room temperature for 30 minutes and was then added dropwise to a solution of 1,1,1-trifluoro-4-methyl-4-(5-pyrimidin-5-yl-2,3-dihydrobenzofuran-7-yl)pentan-2-one (620 mg) in 5.0 mL of anhydrous DMSO/THF (1:1). After 2 hours, 40 mL of water was added and the resulting mixture was extracted with three 65 mL portions of ether. The combined organic
phases were washed twice with water, aqueous saturated sodium chloride, dried over magnesium sulfate, filtered, and concentrated in vacuo to afford 5-{7-[1,1-dimethyl-2-(2-trifluoromethyloxiranyl)ethyl]-2,3-dihydrobenzofuran-5-yl}pyrimidine as a pale yellow oil (651 mg) which was used without further purification.

To a suspension of 5-{7-[1,1-dimethyl-2-(2-trifluoromethyloxiranyl)ethyl]-2,3-dihydrobenzofuran-5-yl}pyrimidine (81.4 mg) and 3-chlorothieno[3,2-b]pyridin-7-ol (82.8 mg) in 1.2 mL of anhydrous ethanol was added sodium ethoxide (21 wt.% solution in ethanol, 0.083 mL). After heating at 85°C for 7 hours, the reaction mixture was diluted with 100 mL of ethyl acetate and washed with three 50 mL portions of aqueous 1 N sodium hydroxide solution. The organic phase was dried over sodium sulfate, filtered, and concentrated in vacuo. The residue was purified by column chromatography with silica gel (eluted with 3% to 5% methanol-methylene chloride) to give the title compound as a white solid (96.7 mg), m.p. 218°C-219°C.

Example 9: Synthesis of 6-Chloro-1-[2-hydroxy-4-methyl-5-(5-pyridin-3-yl-2,3-dihydrobenzofuran-7-yl)-2-trifluoromethylpentyl]-1H-[1,6]naphthyridin-4-one

![Chemical structure](image)

To a solution of 4-(5-bromo-2,3-dihydrobenzofuran-7-yl)-1,1,1-trifluoro-4-methylpentan-2-one (500 mg) in 10 mL of DME/MeOH/DMF (2:3:1) in a sealed tube was added pyridine-3-boronic acid 1,3-propanediolyclic ester (350 mg) and potassium carbonate (394 mg) followed by tetrakis(triphenylphosphine)palladium (0) (165 mg) as catalyst. The resulting mixture was heated at 120°C for 40 minutes. After cooling to room temperature, the crude mixture was
filtered through a cotton plug with the aid of EtOAc and concentrated in vacuo to remove most of the methanol. The resulting material was dissolved in 80 mL of EtOAc, washed sequentially with 40 mL of 1 N aqueous sodium hydroxide solution, 40 mL of water, and 40 mL of brine. The organic phase was dried over sodium sulfate, filtered, and concentrated in vacuo.

Purification by column chromatography with silica gel (eluted with 17% to 40% ethyl acetate-hexanes) afforded 1,1,1-trifluoro-4-methyl-4-(5-pyridin-3-yl-2,3-dihydrobenzofuran-7-yl)pentan-2-one (269 mg).

To a suspension of trimethylsulfoxonium iodide (244 mg) in 1.4 mL of anhydrous DMSO was added sodium hydride (60% dispersion in mineral oil, 44.0 mg). The resulting solution was stirred at room temperature for 30 minutes and was then added dropwise to a solution of 1,1,1-trifluoro-4-methyl-4-(5-pyridin-3-yl-2,3-dihydrobenzofuran-7-yl)pentan-2-one (323 mg) in 2.5 mL of anhydrous DMSO/THF (3:2). After 2 hours, 20 mL of water was added and the resulting mixture was extracted with three 40 mL portions of ether. The combined organic phases were washed twice with water, aqueous saturated sodium chloride, dried over magnesium sulfate, filtered, and concentrated in vacuo to afford 3-{7-[1,1-dimethyl-2-(2-trifluoromethylxiranyl)ethyl]-2,3-dihydrobenzofuran-5-yl}pyridine as a pale yellow oil (354 mg) which was used without further purification.

To a suspension of 3-[7-[1,1-dimethyl-2-(2-trifluoromethylxiranyl)ethyl]-2,3-dihydrobenzofuran-5-yl]pyridine (150 mg) and 3-chloro-[1,6]naphthyridin-4-ol (149 mg) in 1.75 mL of anhydrous ethanol was added sodium ethoxide (21 wt.% solution in ethanol, 0.154 mL). After heating at 85°C for 15 hours, the reaction mixture was diluted with 100 mL of ethyl acetate and washed with three 50 mL portions of 1 N aqueous sodium hydroxide solution. The organic phase was dried over sodium sulfate, filtered, and concentrated in vacuo. The residue was purified by column chromatography with silica gel (eluted with 3% to 4% methanol-methylene chloride) to give the title compound as a yellow solid (5.40 mg), m.p. 165°C-166°C.

Assessment of Biological Properties

Compounds of the invention were evaluated for binding to the steroid receptor by a fluorescence polarization competitive binding assay. Detailed descriptions for preparation of recombinant glucocorticoid receptor (GR) complex used in the assay is described in U.S. Patent

A. Glucocorticoid Receptor Competitive Binding Assay

Step 1. Characterization of the Fluorescent Probe

The wavelengths for maximum excitation and emission of the fluorescent probe should first be measured. An example of such a probe is rhodamine (TAMRA)-labeled dexamethasone.

The affinity of the probe for the steroid receptor was then determined in a titration experiment. The fluorescence polarization value of the probe in assay buffer was measured on an SLM-8100 fluorometer using the excitation and emission maximum values described above. Aliquots of expression vector lysate were added and fluorescence polarization was measured after each addition until no further change in polarization value was observed. Non-linear least squares regression analysis was used to calculate the dissociation constant of the probe from the polarization values obtained for lysate binding to the probe.

Step 2. Screening for Inhibitors of Probe Binding

This assay uses fluorescence polarization (FP) to quantitate the ability of test compounds to compete with tetramethyl rhodamine (TAMRA)-labeled dexamethasone for binding to a human glucocorticoid receptor (GR) complex prepared from an insect expression system. The assay buffer was: 10 mM TES, 50 mM KCl, 20 mM Na₂MoO₄•2H₂O, 1.5 mM EDTA, 0.04% w/v CHAPS, 10% v/v glycerol, 1 mM dithiothreitol, pH 7.4. Test compounds were dissolved to 1 mM in neat DMSO and then further diluted to 10x assay concentration in assay buffer supplemented with 10% v/v DMSO. Test compounds were serially diluted at 10x assay concentrations in 10% DMSO-containing buffer in 96-well polypropylene plates. Binding reaction mixtures were prepared in 96-well black Dynex microtiter plates by sequential addition of the following assay components to each well: 15 µL of 10x test compound solution, 85 µL of GR-containing baculovirus lysate diluted 1:170 in assay buffer, and 50 µL of 15 nM TAMRA-labeled dexamethasone. Positive controls were reaction mixtures containing no test compound; negative controls (blanks) were reaction mixtures containing 0.7 µM to 2 µM dexamethasone.
The binding reactions were incubated for 1 hour at room temperature and then read for fluorescence polarization in the LJM Analyst set to 550 nm excitation and 580 nm emission, with the Rhodamine 561 dichroic mirror installed. IC50 values were determined by iterative non-linear curve fitting of the FP signal data to a 4-parameter logistic equation.

Compounds found to bind to the glucocorticoid receptor may be evaluated for binding to the progesterone receptor (PR), estrogen receptor (ER), and mineralocorticoid receptors to evaluate the compound's selectivity for GR. The protocols for PR and MR are identical to the above GR method, with the following exceptions: PR insect cell lysate is diluted 1:7.1 and MR lysate diluted 1:9.4. PR probe is TAMRA-labeled mifepristone, used at a final concentration of 5 nM in the assay, and the negative controls (blanks) were reactions containing mifepristone at 0.7 μM to 2 μM.

The ER protocol is similar to the above protocols, but uses PanVera kit receptor, fluorescein-labeled probe. The assay components are made in the same volumes as above, to produce final assay concentrations for ER of 15 nM and ES2 probe of 1 nM. In addition, the component order of addition is modified from the above assays: probe is added to the plate first, followed by receptor and test compound. The plates are read in the LJM Analyst set to 485 nm excitation and 530 nm emission, with the Fluorescein 505 dichroic mirror installed.

Compounds found to bind to the glucocorticoid receptor may be evaluated for dissociation of transactivation and transrepression by assays cited in the Background of the Invention (C.M. Bamberger and H.M. Schulte, Eur. J. Clin. Invest., 2000, 30 (suppl. 3) 6-9) or by the assays described below.

B. Glucocorticoid Receptor Cell Assays

1. Induction of Aromatase in Fibroblasts (Cell Assay for Transactivation)

Dexamethasone, a synthetic ligand to the glucocorticoid receptor (GR), induces expression of aromatase in human foreskin fibroblast cells. The activity of aromatase is measured by the conversion of testosterone to estradiol in culture media. Compounds that exhibit binding to GR are evaluated for their ability to induce aromatase activity in human foreskin fibroblasts.
Human foreskin fibroblast cells (ATCC Cat. No. CRL-2429, designation CCD112SK) are plated on 96 well plates at 50,000 cells per well 5 days before use, in Iscove’s Modified Dulbecco’s Media (GibcoBRL Life Technologies Cat No. 12440-053) supplemented with 10% charcoal filtered FBS (Clonetech Cat No. SH30068) and Gentamycin (GibcoBRL Life Technologies Cat. No. 15710-064). On the day of the experiment, the media in the wells is replaced with fresh media. Cells are treated with test compounds to final concentrations of $10^{-5}$ M to $10^{-8}$ M, and testosterone to a final concentration of 300 ng/mL. Each well has a total volume of 100 µL. Samples are made in duplicates. Control wells include: (a) wells that receive testosterone only, and (b) wells that receive testosterone plus 2 µM of dexamethasone to provide maximum induction of aromatase. Plates are incubated at 37°C overnight (15 to 18 hours), and supernatants are harvested at the end of incubation. Estradiol in the supernatant is measured using ELISA kits for estradiol (made by ALPCO, obtained from American Laboratory Products Cat. No. 020-DR-2693) according to the manufacture’s instruction. The amount of estradiol is inversely proportional to the ELISA signals in each well. The extent of aromatase induction by test compounds is expressed as a relative percentage to dexamethasone. 

$EC_{50}$ values of test compounds are derived by non-linear curve fitting.

2. Inhibition of IL-6 Production in Fibroblasts (Cell Assay for Transrepression)

Human foreskin fibroblast cells produce IL-6 in response to stimulation by pro-inflammatory cytokine IL-1. This inflammatory response, as measured by the production of IL-6, can be effectively inhibited by dexamethasone, a synthetic ligand to the glucocorticoid receptor (GR). Compounds that exhibit binding to GR are evaluated for their ability to inhibit IL-6 production in human foreskin fibroblasts.

Human foreskin fibroblast cells (ATCC Cat. No. CRL-2429) are plated on 96 well plates at 5,000 cells per well the day before use, in Iscove’s Modified Dulbecco’s Media (GibcoBRL Life Technologies Cat. No. 12440-053) supplemented with 10% charcoal filtered FBS (Clonetech Cat. No. SH30068) and Gentamycin (GibcoBRL Life Technologies Cat. No. 15710-064). On the next day, media in the wells is replaced with fresh media. Cells are treated with IL-1 (rIL-1α, R&D Systems Cat. No. 200-LA) to a final concentration of 1 ng/mL, and with test compounds to final concentrations of $10^{-5}$ M to $10^{-8}$ M, in a total volume of 200 µL per well. Samples are done in duplicates. Background control wells do not receive test compounds.

84
or IL-1. Positive control wells receive IL-1 only and represent maximum (or 100%) amount of IL-6 production. Plates are incubated at 37°C overnight (15 to 18 hours), and supernatants are harvested at the end of incubation. IL-6 levels in the supernatants are determined by the ELISA kits for IL-6 (MedSystems Diagnostics GmbH, Vienna, Austria, Cat. No. BMS213TEN) according to manufacture's instructions. The extent of inhibition of IL-6 by test compounds is expressed in percentage relative to positive controls. IC<sub>50</sub> values of test compounds are derived by non-linear curve fitting.

Evaluation of agonist or antagonist activity of compounds binding to the glucocorticoid receptor may be determined by any of the assays.

3. Modulation of Tyrosine Aminotransferase (TAT) Induction in Rat Hepatoma Cells

Testing of compounds for agonist or antagonist activity in induction of tyrosine aminotransferase (TAT) in rat hepatoma cells.

H4-II-E-C3 cells were incubated overnight in 96 well plates (20,000 cells/100 μL/well) in MEM medium containing 10% heat inactivated FBS and 1% nonessential amino acids. On the next day, cells were stimulated with the indicated concentrations of dexamethasone or test compound (dissolved in DMSO, final DMSO concentration 0.2%) for 18 hours. Control cells were treated with 0.2% DMSO. After 18 hours, the cells were lysed in a buffer containing 0.1% Triton X-100 and the TAT activity was measured in a photometric assay using tyrosine and alpha-ketoglutarate as substrates.

For measuring antagonist activity, the hepatoma cells were pre-stimulated by addition of dexamethasone (concentration ranges from 3 x 10<sup>-9</sup> M to 3 x 10<sup>-8</sup> M) shortly before the test compound was applied to the cells. The steroidal non-selective GR/PR antagonist mifepristone was used as control.

4. Modulation of MMTV-Luc Induction in HeLa Cells

Testing of compounds for agonist or antagonist activity in stimulation of MMTV-(mouse mammary tumor virus) promoter in HeLa cells.
HeLa cells were stably co-transfected with the pHLuc-plasmid containing a fragment of the MMTV-LTR (-200 to +100 relative to the transcription start site) cloned in front of the luciferase gene (Norden, 1988) and the pcDNA3.1 plasmid (Invitrogen) constitutively expressing the resistance for the selective antibiotic GENETICIN®. Clones with best induction of the MMTV-promoter were selected and used for further experiments.

Cells were cultured overnight in DMEM medium without phenol red, supplemented with 3% CCS (charcoal treated calf serum) and then transferred to 96 well plates (15,000 cells/100 μL/well). On the next day, activation of the MMTV-promoter was stimulated by addition of test compound or dexamethasone dissolved in DMSO (final concentration 0.2%). Control cells were treated with DMSO only. After 18 hours, the cells were lysed with cell lysis reagent (Promega, Cat. No. E1531), luciferase assay reagent (Promega, Cat. No. E1501) was added and the glow luminescence was measured using a luminometer (BMG, Offenburg).

For measuring antagonist activity, the MMTV-promoter was pre-stimulated by adding dexamethasone (3 x 10⁻⁹ M to 3 x 10⁻⁸ M) shortly before the test compound was applied to the cells. The steroidal non-selective GR/PR antagonist mifepristone was used as control.

5. Modulation of IL-8 Production in U937 Cells

Testing of compounds for agonist or antagonist activity in GR-mediated inhibition of LPS-induced IL-8 secretion in U-937 cells.

U-937 cells were incubated for 2 to 4 days in RPMI1640 medium containing 10% CCS (charcoal treated calf serum). The cells were transferred to 96 well plates (40,000 cells/100 μL/well) and stimulated with 1 μg/mL LPS (dissolved in PBS) in the presence or absence of dexamethasone or test compound (dissolved in DMSO, final concentration 0.2%). Control cells were treated with 0.2% DMSO. After 18 hours, the IL-8 concentration in the cell supernatant was measured by ELISA, using the "OptEIA human IL-8 set" (Pharmingen, Cat. No. 2654K1).
For measuring antagonist activity, the LPS-induced IL-8 secretion was inhibited by adding dexamethasone (3 x 10^{-9} M to 3 x 10^{-8} M) shortly before the test compound was applied to the cells. The steroidal non-selective GR/PR antagonist mifepristone was used as control.

6. Modulation of ICAM-Luc Expression in HeLa Cells

Testing of compounds for agonist or antagonist activity in inhibition of TNF-alpha-induced activation of the ICAM-promoter in HeLa cells.

HeLa cells were stably co-transfected with a plasmid containing a 1.3 kb fragment of the human ICAM-promoter (-1353 to -9 relative to the transcription start site, Ledebur and Parks, 1995) cloned in front of the luciferase gene and the pcDNA3.1 plasmid (Invitrogen) which constitutively expresses the resistance for the antibiotic GENETICIN®. Clones with best induction of the ICAM-promoter were selected and used for further experiments. Cells were transferred to 96 well plates (15,000 cells/100 μL/well) in DMEM medium supplemented with 3% CCS. On the following day the activation of the ICAM-promoter was induced by addition of 10 ng/mL recombinant TNF-alpha (R&D System, Cat. No. 210-TA). Simultaneously the cells were treated with the test compound or dexamethasone (dissolved in DMSO, final concentration 0.2%). Control cells were treated with DMSO only. After 18 hours, the cells were lysed with cell lysis reagent (Promega, Cat. No. E1531), luciferase assay reagent (Promega, Cat. No. E1501) was added and glow luminescence was measured using a luminometer (BMG, Offenburg).

For measuring antagonist activity, the TNF-alpha-induced activation of the ICAM-promoter was inhibited by adding dexamethasone (3 x 10^{-9} M to 3 x 10^{-8} M) shortly before the test compound was applied to the cells. The steroidal non-selective GR/PR antagonist mifepristone was used as control.

Representative compounds of the invention have been tested and have shown activity as modulators of the glucocorticoid receptor function in one or more of the above assays. For example, the following compounds of the invention of Formula (IA) have demonstrated potent activity in the GR binding assay:
4-[4-(5-Fluoro-2-methoxyphenyl)-2-hydroxy-4-methyl-2-trifluoromethylpentyl]-4H-thieno[3,2-b]pyridin-7-one;

4-[4-(5-Fluoro-2-hydroxyphenyl)-2-hydroxy-4-methyl-2-trifluoromethylpentyl]-4H-thieno[3,2-b]pyridin-7-one;

4-[4-(2,3-Dihydrobenzofuran-7-yl)-2-hydroxy-4-methyl-2-trifluoromethylpentyl]-4H-thieno[3,2-b]pyridin-7-one;

1-[4-(5-Fluoro-2-methoxyphenyl)-2-hydroxy-4-methyl-2-trifluoromethylpentyl]-1H-[1,6]naphthyridin-4-one;

1-[4-(5-Fluoro-2-hydroxyphenyl)-2-hydroxy-4-methyl-2-trifluoromethylpentyl]-1H-[1,6]naphthyridin-4-one;

4-[4-(5-Fluoro-2-methylphenyl)-2-hydroxy-4-methyl-2-trifluoromethylpentyl]-4H-thieno[3,2-b]pyridin-7-one;

1-[4-(5-Fluoro-2-methylphenyl)-2-hydroxy-4-methyl-2-trifluoromethylpentyl]-1H-[1,6]naphthyridin-4-one;

4-[2-Hydroxy-4-(2-methoxy-3-methylphenyl)-4-methyl-2-trifluoromethylpentyl]-4H-thieno[3,2-b]pyridin-7-one;

4-[2-Hydroxy-4-(2-methoxyphenyl)-4-methyl-2-trifluoromethylpentyl]-4H-thieno[3,2-b]pyridin-7-one;

4-[4-(3-Bromo-2-methoxyphenyl)-2-hydroxy-4-methyl-2-trifluoromethylpentyl]-4H-thieno[3,2-b]pyridin-7-one;

4-[2-Hydroxy-4-(2-hydroxy-3-methylphenyl)-4-methyl-2-trifluoromethylpentyl]-4H-thieno[3,2-b]pyridin-7-one;
6-Chloro-4-[4-(2,3-dihydrobenzofuran-7-yl)-2-hydroxy-4-methyl-2-trifluoromethylpentyl]-4H-thieno[3,2-b]pyridin-7-one;

6-Bromo-4-[4-(2,3-dihydrobenzofuran-7-yl)-2-hydroxy-4-methyl-2-trifluoromethylpentyl]-4H-thieno[3,2-b]pyridin-7-one;

4-[2-Hydroxy-4-(2-methoxy-5-pyridin-3-ylphenyl)-4-methyl-2-trifluoromethylpentyl]-4H-thieno[3,2-b]pyridin-7-one;

4-[2-Hydroxy-4-(2-hydroxy-5-pyridin-3-ylphenyl)-4-methyl-2-trifluoromethylpentyl]-4H-thieno[3,2-b]pyridin-7-one;

4-[2-Hydroxy-4-(2-hydroxy-5-pyrimidin-5-ylphenyl)-4-methyl-2-trifluoromethylpentyl]-4H-thieno[3,2-b]pyridin-7-one;

4-[4-(2-Difluoromethoxy-3-methylphenyl)-2-hydroxy-4-methyl-2-trifluoromethylpentyl]-4H-thieno[3,2-b]pyridin-7-one;

3-Chloro-1-[4-(2,3-dihydrobenzofuran-7-yl)-2-hydroxy-4-methyl-2-trifluoromethylpentyl]-1H-[1,6]naphthyridin-4-one;

4-(4-Benzol[1,3]dioxol-4-yl-2-hydroxy-4-methyl-2-trifluoromethylpentyl)-6-bromo-4H-thieno[3,2-b]pyridin-7-one;

4-(4-Benzol[1,3]dioxol-4-yl-2-hydroxy-4-methyl-2-trifluoromethylpentyl)-6-chloro-4H-thieno[3,2-b]pyridin-7-one;

6-Chloro-4-[2-hydroxy-4-methyl-4-(5-pyridin-3-yl-2,3-dihydrobenzofuran-7-yl)-2-trifluoromethylpentyl]-4H-thieno[3,2-b]pyridin-7-one;
1-(4-Benzo[1,3]dioxol-4-yl-2-hydroxy-4-methyl-2-trifluoromethylpentyl)-3-chloro-1H-[1,6]naphthyridin-4-one;

6-Chloro-4-[2-hydroxy-4-methyl-4-(5-pyrimidin-5-yl-2,3-dihydrobenzofuran-7-yl)-2-trifluoromethylpentyl]-4H-thieno[3,2-b]pyridin-7-one;

3-Chloro-1-[2-hydroxy-4-methyl-4-(5-pyrimidin-5-yl-2,3-dihydrobenzofuran-7-yl)-2-trifluoromethylpentyl]-1H-[1,6]naphthyridin-4-one;

3-Chloro-1-[2-hydroxy-4-methyl-4-(5-pyridin-3-yl-2,3-dihydrobenzofuran-7-yl)-2-trifluoromethylpentyl]-1H-[1,6]naphthyridin-4-one;

4-[2-Hydroxy-4-methyl-4-(5-pyrimidin-5-yl-2,3-dihydrobenzofuran-7-yl)-2-trifluoromethylpentyl]-4H-thieno[3,2-b]pyridin-7-one;

1-[2-Hydroxy-4-methyl-4-(5-pyrimidin-5-yl-2,3-dihydrobenzofuran-7-yl)-2-trifluoromethylpentyl]-1H-[1,6]naphthyridin-4-one;

6-Chloro-4-[2-hydroxy-4-(2-methoxy-5-pyridin-3-ylphenyl)-4-methyl-2-trifluoromethylpentyl]-4H-thieno[3,2-b]pyridin-7-one;

6-Chloro-4-[2-hydroxy-4-(2-methoxy-5-pyrimidin-5-ylphenyl)-4-methyl-2-trifluoromethylpentyl]-4H-thieno[3,2-b]pyridin-7-one;

6-Chloro-4-[2-hydroxy-4-(2-hydroxy-5-pyrimidin-3-ylphenyl)-4-methyl-2-trifluoromethylpentyl]-4H-thieno[3,2-b]pyridin-7-one;

6-Chloro-4-[2-hydroxy-4-(2-hydroxy-5-pyrimidin-5-ylphenyl)-4-methyl-2-trifluoromethylpentyl]-4H-thieno[3,2-b]pyridin-7-one;

4-(4-Biphenyl-3-yl-2-hydroxy-4-methyl-2-trifluoromethylpentyl)-6-chloro-4H-thieno[3,2-b]pyridin-7-one;
4-(4-Biphenyl-3-yl-2-hydroxy-4-methyl-2-trifluoromethylpentyl)-4H-thieno[3,2-b]pyridin-7-one;

or a tautomer, prodrug, solvate, or salt thereof.

7. Inhibition of Osteocalcin Production from Osteoblast Cell Line MG-63

Human osteosarcoma MG-63 cells (ATCC, Cat. No. CRL-1427) are plated on 96 well plates at 20,000 cells per well the day before use in 200 μL media of 99% D-MEM/F-12 (Gibco-Invitrogen, Cat. No. 11039-021), supplemented with 1% penicillin and streptomycin (Gibco-Invitrogen, Cat. No. 15140-122), 10 μg/mL Vitamin C (Sigma, Cat. No. A-4544), and 1% charcoal filtered Fetal Bovine Serum (HyClone, Cat. No. SH30068.02). The next day, wells are replaced with fresh media. Cells are treated with Vitamin D (Sigma, Cat. No. D1530) to a final concentration of 10 nM, and with the test compounds in concentrations of 10⁻⁶ M to 10⁻⁹ M, in a total volume of 200 μL per well. Samples are done in duplicates. Background control wells do not receive Vitamin D or compounds. Positive control wells receive Vitamin D only, without compounds, and represent maximum (100%) amount of osteocalcin production. Plates are incubated at 37°C incubator for 48 hours and supernatants are harvested at the end of incubation. Amounts of osteocalcin in the supernatants are determined by the Glype osteocalcin ELISA kit (Zymed, Cat. No. 99-0054) according to manufacturer’s protocol. Inhibition of osteocalcin by test compounds is expressed in percentage relative to positive controls. IC₅₀ values of the test compounds are derived by non-linear curve fitting.

The following compounds of Formula (IA) inhibit the vitamin D stimulated production of osteocalcin:

4-[4-(5-Fluoro-2-hydroxyphenyl)-2-hydroxy-4-methyl-2-trifluoromethylpentyl]-4H-thieno[3,2-b]pyridin-7-one;

4-[2-Hydroxy-4-(2-hydroxy-5-pyridin-3-ylphenyl)-4-methyl-2-trifluoromethylpentyl]-4H-thieno[3,2-b]pyridin-7-one;
6-Chloro-4-[2-hydroxy-4-(2-hydroxy-5-pyridin-3-ylphenyl)-4-methyl-2-trifluoromethylpentyl]-
4H-thieno[3,2-b]pyridin-7-one; and

6-Chloro-4-[2-hydroxy-4-(2-hydroxy-5-pyrimidin-5-ylphenyl)-4-methyl-2-
trifluoromethylpentyl]-4H-thieno[3,2-b]pyridin-7-one.

The invention also provides methods of modulating the glucocorticoid receptor function in a
patient comprising administering to the patient a compound according to the invention. If the
purpose of modulating the glucocorticoid receptor function in a patient is to treat a disease-state
or condition, the administration preferably comprises a therapeutically or pharmaceutically
effective amount of a pharmaceutically acceptable compound according to the invention. If the
purpose of modulating the glucocorticoid receptor function in a patient is for a diagnostic or
other purpose (e.g., to determine the patient’s suitability for therapy or sensitivity to various
sub-therapeutic doses of the compounds according to the invention), the administration
preferably comprises an effective amount of a compound according to the invention, that is, the
amount necessary to obtain the desired effect or degree of modulation.

Methods of Therapeutic Use
As pointed out above, the compounds of the invention are useful in modulating the
glucocorticoid receptor function. In doing so, these compounds have therapeutic use in treating
disease-states and conditions mediated by the glucocorticoid receptor function or that would
benefit from modulation of the glucocorticoid receptor function.

As the compounds of the invention modulate the glucocorticoid receptor function, they have
very useful anti-inflammatory and antiallergic, immune-suppressive, and anti-proliferative
activity and they can be used in patients as drugs, particularly in the form of pharmaceutical
compositions as set forth below, for the treatment of disease-states and conditions.

The agonist compounds according to the invention can be used in patients as drugs for the
treatment of the following disease-states or indications that are accompanied by inflammatory,
allergic, and/or proliferative processes:
(i) Lung diseases: chronic, obstructive lung diseases of any genesis, particularly bronchial asthma and chronic obstructive pulmonary disease (COPD); adult respiratory distress syndrome (ARDS); bronchiectasis; bronchitis of various genesis; all forms of restrictive lung diseases, particularly allergic alveolitis; all forms of lung edema, particularly toxic lung edema; all forms of interstitial lung diseases of any genesis, e.g., radiation pneumonitis; and sarcoidosis and granulomatoses, particularly Boeck disease.

(ii) Rheumatic diseases or autoimmune diseases or joint diseases: all forms of rheumatic diseases, especially rheumatoid arthritis, acute rheumatic fever, and polymyalgia rheumatica; reactive arthritis; rheumatic soft tissue diseases; inflammatory soft tissue diseases of other genesis; arthritic symptoms in degenerative joint diseases (arthroses); traumatic arthritis; collagenoses of any genesis, e.g., systemic lupus erythematosus, scleroderma, polymyositis, dermatomyositis, Sjögren syndrome, Still disease, and Felty syndrome;

(iii) Allergic diseases: all forms of allergic reactions, e.g., angioneurotic edema, hay fever, insect bites, allergic reactions to drugs, blood derivatives, contrast agents, etc., anaphylactic shock (anaphylaxis), urticaria, angioneurotic edema, and contact dermatitis;

(iv) Vasculitis diseases: panarteritis nodosa, polyarteritis nodosa, arteritis temporalis, Wegner granulomatosis, giant cell arthritis, and erythema nodosum;

(v) Dermatological diseases: atopic dermatitis, particularly in children; psoriasis; pityriasis rubra pilaris; erythematous diseases triggered by various noxa, e.g., rays, chemicals, burns, etc.; bullous dermatoses; diseases of the lichenoid complex; pruritus (e.g., of allergic genesis); seborrheic dermatitis; rosacea; pemphigus vulgaris; erythema multiforme exudativum; balanitis; vulvitis; hair loss, such as occurs in alopecia areata; and cutaneous T cell lymphomas;

(vi) Renal diseases: nephrotic syndrome; and all types of nephritis, e.g., glomerulonephritis;

(vii) Hepatic diseases: acute liver cell disintegration; acute hepatitis of various genesis, e.g., viral, toxic, drug-induced; and chronically aggressive and/or chronically intermittent hepatitis;

(viii) Gastrointestinal diseases: inflammatory bowel diseases, e.g., regional enteritis (Crohn disease), colitis ulcerosa; gastritis; peptic esophagitis (refluxoesophagitis); and gastroenteritis of other genesis, e.g., nontropical sprue;
(ix) Proctological diseases: anal eczema; fissures; hemorrhoids; and idiopathic proctitis;
(x) Eye diseases: allergic keratitis, uveitis, or iritis; conjunctivitis; blepharitis; neuritis nervi optici; choroiditis; and sympathetic ophthalmia;
(xi) Diseases of the ear, nose, and throat (ENT) area: allergic rhinitis or hay fever; otitis externa, e.g., caused by contact eczema, infection, etc.; and otitis media;
(xii) Neurological diseases: brain edema, particularly tumor-related brain edema; multiple sclerosis; acute encephalomyelitis; meningitis; acute spinal cord injury; stroke; and various forms of seizures, e.g., nodding spasms;
(xiii) Blood diseases: acquired hemolytic anemia; and idiopathic thrombocytopenia;
(xiv) Tumor diseases: acute lymphatic leukemia; malignant lymphoma; lymphogranulomatoses; lymphosarcoma; extensive metastases, particularly in mammary, bronchial, and prostatic carcinoma;
(xv) Endocrine diseases: endocrine ophthalmopathy; endocrine orbitopathy; thyrotoxic crisis; Thyroiditis de Quervain; Hashimoto thyroiditis; Morbus Basedow; granulomatous thyroiditis; struma lymphomatosa; and Grave disease;
(xvi) Organ and tissue transplantations and graft-versus-host diseases;
(xvii) Severe states of shock, e.g., septic shock, anaphylactic shock, and systemic inflammatory response syndrome (SIRS);
(xviii) Substitution therapy in: congenital primary adrenal insufficiency, e.g., adrenogenital syndrome; acquired primary adrenal insufficiency, e.g., Addison disease, autoimmune adrenalitis, post-infection, tumors, metastases, etc.; congenital secondary adrenal insufficiency, e.g., congenital hypopituitarism; and acquired secondary adrenal insufficiency, e.g., post-infection, tumors, metastases, etc.;
(xix) Pain of inflammatory genesis, e.g., lumbago; and
(xx) various other disease-states or conditions including type I diabetes (insulin-dependent diabetes), osteoarthritis, Guillain-Barre syndrome, restenosis following percutaneous transluminal coronary angioplasty, Alzheimer disease, acute and chronic pain, atherosclerosis, reperfusion injury, bone resorption diseases, congestive heart failure, myocardial infarction, thermal injury, multiple organ injury secondary to trauma, acute purulent meningitis, necrotizing enterocolitis and syndromes associated with hemodialysis, leukopheresis, and granulocyte transfusion.
In addition, the compounds according to the invention can be used for the treatment of any other disease-states or conditions not mentioned above which have been treated, are treated, or will be treated with synthetic glucocorticoids (see, e.g., H.J. Hatz, Glucocorticoiden: Immunologische Grundlagen, Pharmakologie und Therapierichtlinien [Glucocorticoids: Immunological Fundamentals, Pharmacology, and Therapeutic Guidelines], Stuttgart: Verlagsgesellschaft mbH, 1998, which is hereby incorporated by reference in its entirety). Most or all of the indications (i) through (xx) mentioned above are described in detail in H.J. Hatz, Glucocorticoiden: Immunologische Grundlagen, Pharmakologie und Therapierichtlinien. Furthermore, the compounds of the invention can also be used to treat disorders other than those listed above or mentioned or discussed herein, including in the Background of the Invention.

The antagonist compounds according to the invention, whether full antagonists or partial antagonists, can be used in patients as drugs for the treatment of the following disease-states or indications, without limitation: type II diabetes (non-insulin-dependent diabetes); obesity; cardiovascular diseases; hypertension; arteriosclerosis; neurological diseases, such as psychosis and depression; adrenal and pituitary tumors; glaucoma; and Cushing syndrome based on an ACTH secreting tumor like pituitary adenoma. In particular, the compounds of the invention are useful for treating obesity and all disease-states and indications related to a deregulated fatty acids metabolism such as hypertension, atherosclerosis, and other cardiovascular diseases. Using the compounds of the invention that are GR antagonists, it should be possible to antagonize both the carbohydrate metabolism and fatty acids metabolism. Thus, the antagonist compounds of the invention are useful in treating all disease-states and conditions that involve increased carbohydrate, protein, and lipid metabolism and would include disease-states and conditions leading to catabolism like muscle frailty (as an example of protein metabolism).

Methods of Diagnostic Use
The compounds of the invention may also be used in diagnostic applications and for commercial and other purposes as standards in competitive binding assays. In such uses, the compounds of the invention may be used in the form of the compounds themselves or they may be modified by attaching a radioisotope, luminescence, fluorescent label or the like in order to obtain a radioisotope, luminescence, or fluorescent probe, as would be known by one of skill in

**General Administration and Pharmaceutical Compositions**

When used as pharmaceuticals, the compounds of the invention are typically administered in the form of a pharmaceutical composition. Such compositions can be prepared using procedures well known in the pharmaceutical art and comprise at least one compound of the invention. The compounds of the invention may also be administered alone or in combination with adjuvants that enhance stability of the compounds of the invention, facilitate administration of pharmaceutical compositions containing them in certain embodiments, provide increased dissolution or dispersion, increased inhibitory activity, provide adjunct therapy, and the like. The compounds according to the invention may be used on their own or in conjunction with other active substances according to the invention, optionally also in conjunction with other pharmacologically active substances. In general, the compounds of this invention are administered in a therapeutically or pharmaceutically effective amount, but may be administered in lower amounts for diagnostic or other purposes.

In particular, the compounds of the invention are useful in combination with glucocorticoids or corticosteroids. As pointed out above, standard therapy for a variety of immune and inflammatory disorders includes administration of corticosteroids, which have the ability to suppress immunologic and inflammatory responses. (A.P. Truhan *et al*., Annals of Allergy, 1989, 62, pp. 375-391; J.D. Baxter, Hospital Practice, 1992, 27, pp. 111-134; R.P. Kimberly, Curr. Opin. Rheumatol., 1992, 4, pp. 325-331; M.H. Weisman, Curr. Opin. Rheumatol., 1995, 7, pp. 183-190; W. Sterry, Arch. Dermatol. Res., 1992, 284 (Suppl.), pp. S27-S29). While therapeutically beneficial, however, the use of corticosteroids is associated with a number of side effects, ranging from mild to possibly life threatening, especially with prolonged and/or high dose steroid usage. Accordingly, methods and compositions that enable the use of a lower effective dosage of corticosteroids (referred to as the "steroid sparing effect") would be highly desirable to avoid unwanted side effects. The compounds of the invention provide such a
steroid sparing effect by achieving the desired therapeutic effect while allowing the use of lower doses and less frequent administration of glucocorticoids or corticosteroids.

Administration of the compounds of the invention, in pure form or in an appropriate pharmaceutical composition, can be carried out using any of the accepted modes of administration of pharmaceutical compositions. Thus, administration can be, for example, orally, buccally (e.g., sublingually), nasally, parenterally, topically, transdermally, vaginally, or rectally, in the form of solid, semi-solid, lyophilized powder, or liquid dosage forms, such as, for example, tablets, suppositories, pills, soft elastic and hard gelatin capsules, powders, solutions, suspensions, or aerosols, or the like, preferably in unit dosage forms suitable for simple administration of precise dosages. The pharmaceutical compositions will generally include a conventional pharmaceutical carrier or excipient and a compound of the invention as the/active agent, and, in addition, may include other medicinal agents, pharmaceutical agents, carriers, adjuvants, diluents, vehicles, or combinations thereof. Such pharmaceutically acceptable excipients, carriers, or additives as well as methods of making pharmaceutical compositions for various modes or administration are well-known to those of skill in the art. The state of the art is evidenced, e.g., by Remington: The Science and Practice of Pharmacy, 20th Edition, A. Gennaro (ed.), Lippincott Williams & Wilkins, 2000; Handbook of Pharmaceutical Additives, Michael & Irene Ash (eds.), Gower, 1995; Handbook of Pharmaceutical Excipients, A.H. Kibbe (ed.), American Pharmaceutical Ass'n, 2000; H.C. Ansel and N.G. Popovich, Pharmaceutical Dosage Forms and Drug Delivery Systems, 5th ed., Lea and Febiger, 1990; each of which is incorporated herein by reference in their entireties to better describe the state of the art.

As one of skill in the art would expect, the forms of the compounds of the invention utilized in a particular pharmaceutical formulation will be selected (e.g., salts) that possess suitable physical characteristics (e.g., water solubility) that is required for the formulation to be efficacious.

Pharmaceutical compositions suitable for buccal (sub-lingual) administration include lozenges comprising a compound of the present invention in a flavored base, usually sucrose, and acacia
or tragacanth, and pastilles comprising the compound in an inert base such as gelatin and glycerin or sucrose and acacia.

Pharmaceutical compositions suitable for parenteral administration comprise sterile aqueous preparations of a compound of the present invention. These preparations are preferably administered intravenously, although administration can also be effected by means of subcutaneous, intramuscular, or intradermal injection. Injectable pharmaceutical formulations are commonly based upon injectable sterile saline, phosphate-buffered saline, oleaginous suspensions, or other injectable carriers known in the art and are generally rendered sterile and isotonic with the blood. The injectable pharmaceutical formulations may therefore be provided as a sterile injectable solution or suspension in a nontoxic parenterally acceptable diluent or solvent, including 1,3-butanediol, water, Ringer’s solution, isotonic sodium chloride solution, fixed oils such as synthetic mono- or diglycerides, fatty acids such as oleic acid, and the like. Such injectable pharmaceutical formulations are formulated according to the known art using suitable dispersing or setting agents and suspending agents. Injectable compositions will generally contain from 0.1 to 5% w/w of a compound of the invention.

Solid dosage forms for oral administration of the compounds include capsules, tablets, pills, powders, and granules. For such oral administration, a pharmaceutically acceptable composition containing a compound(s) of the invention is formed by the incorporation of any of the normally employed excipients, such as, for example, pharmaceutical grades of mannitol, lactose, starch, pregelatinized starch, magnesium stearate, sodium saccharine, talcum, cellulose ether derivatives, glucose, gelatin, sucrose, citrate, propyl gallate, and the like. Such solid pharmaceutical formulations may include formulations, as are well-known in the art, to provide prolonged or sustained delivery of the drug to the gastrointestinal tract by any number of mechanisms, which include, but are not limited to, pH sensitive release from the dosage form based on the changing pH of the small intestine, slow erosion of a tablet or capsule, retention in the stomach based on the physical properties of the formulation, bioadhesion of the dosage form to the mucosal lining of the intestinal tract, or enzymatic release of the active drug from the dosage form.
Liquid dosage forms for oral administration of the compounds include emulsions, microemulsions, solutions, suspensions, syrups, and elixirs, optionally containing pharmaceutical adjuvants in a carrier, such as, for example, water, saline, aqueous dextrose, glycerol, ethanol and the like. These compositions can also contain additional adjuvants such as wetting, emulsifying, suspending, sweetening, flavoring, and perfuming agents.

Topical dosage forms of the compounds include ointments, pastes, creams, lotions, gels, powders, solutions, sprays, inhalants, eye ointments, eye or ear drops, impregnated dressings and aerosols, and may contain appropriate conventional additives such as preservatives, solvents to assist drug penetration and emollients in ointments and creams. Topical application may be once or more than once per day depending upon the usual medical considerations. Furthermore, preferred compounds for the present invention can be administered in intranasal form via topical use of suitable intranasal vehicles. The formulations may also contain compatible conventional carriers, such as cream or ointment bases and ethanol or oleyl alcohol for lotions. Such carriers may be present as from about 1% up to about 98% of the formulation, more usually they will form up to about 80% of the formulation.

Transdermal administration is also possible. Pharmaceutical compositions suitable for transdermal administration can be presented as discrete patches adapted to remain in intimate contact with the epidermis of the recipient for a prolonged period of time. To be administered in the form of a transdermal delivery system, the dosage administration will, of course, be continuous rather than intermittent throughout the dosage regimen. Such patches suitably contain a compound of the invention in an optionally buffered, aqueous solution, dissolved and/or dispersed in an adhesive, or dispersed in a polymer. A suitable concentration of the active compound is about 1% to 35%, preferably about 3% to 15%.

For administration by inhalation, the compounds of the invention are conveniently delivered in the form of an aerosol spray from a pump spray device not requiring a propellant gas or from a pressurized pack or a nebulizer with the use of a suitable propellant, e.g., dichlorodifluoromethane, trichlorofluoromethane, dichlorotetrafluoroethane, tetrafluoroethane, heptafluoropropane, carbon dioxide, or other suitable gas. In any case, the aerosol spray dosage unit may be determined by providing a valve to deliver a metered amount so that the resulting
metered dose inhaler (MDI) is used to administer the compounds of the invention in a reproducible and controlled way. Such inhaler, nebulizer, or atomizer devices are known in the prior art, for example, in U.S. Patent Nos. 5,964,416 (particularly Figure 6 thereof, which is the basis for the commercial RESPIMAT® nebulizer); 5,911,851; 6,176,442; and 6,453,795, to which reference is hereby made and each of which is incorporated herein by reference in their entireties.

Rectal administration can be effected utilizing unit dose suppositories in which the compound is admixed with low-melting water-soluble or insoluble solids such as fats, cocoa butter, glycerinated gelatin, hydrogenated vegetable oils, mixtures of polyethylene glycols of various molecular weights, or fatty acid esters of polyethylene glycols, or the like. The active compound is usually a minor component, often from about 0.05 to 10% by weight, with the remainder being the base component.

In all of the above pharmaceutical compositions, the compounds of the invention are formulated with an acceptable carrier or excipient. The carriers or excipients used must, of course, be acceptable in the sense of being compatible with the other ingredients of the composition and must not be deleterious to the patient. The carrier or excipient can be a solid or a liquid, or both, and is preferably formulated with the compound of the invention as a unit-dose composition, for example, a tablet, which can contain from 0.05% to 95% by weight of the active compound. Such carriers or excipients include inert fillers or diluents, binders, lubricants, disintegrating agents, solution retardants, resorption accelerators, absorption agents, and coloring agents. Suitable binders include starch, gelatin, natural sugars such as glucose or β-lactose, corn sweeteners, natural and synthetic gums such as acacia, tragacanth or sodium alginate, carboxymethylcellulose, polyethylene glycol, waxes, and the like. Lubricants include sodium oleate, sodium stearate, magnesium stearate, sodium benzoate, sodium acetate, sodium chloride, and the like. Disintegrators include starch, methyl cellulose, agar, bentonite, xanthan gum, and the like.

Generally, a therapeutically effective daily dose is from about 0.001 mg to about 15 mg/kg of body weight per day of a compound of the invention; preferably, from about 0.1 mg to about 10 mg/kg of body weight per day; and most preferably, from about 0.1 mg to about 1.5 mg/kg of
body weight per day. For example, for administration to a 70 kg person, the dosage range would be from about 0.07 mg to about 1050 mg per day of a compound of the invention, preferably from about 7.0 mg to about 700 mg per day, and most preferably from about 7.0 mg to about 105 mg per day. Some degree of routine dose optimization may be required to determine an optimal dosing level and pattern.

Pharmaceutically acceptable carriers and excipients encompass all the foregoing additives and the like.

The active substance, corn starch, lactose, and polyvinylpyrrolidone are thoroughly mixed and moistened with water. The moist mass is pushed through a screen with a 1 mm mesh size, dried at about 45°C and the granules are then passed through the same screen. After the magnesium stearate has been mixed in, convex tablet cores with a diameter of 6 mm are compressed in a tablet-making machine. The tablet cores thus produced are coated in known
manner with a covering consisting essentially of sugar and talc. The finished coated tablets are polished with wax.

In Examples H, I, J, and K, the powder for inhalation is produced in the usual way by mixing the individual ingredients together.
We Claim:

1. A compound of Formula (IA)

wherein:

R¹ is an aryl, heteroaryl, heterocyclyl, or C₃-C₈ cycloalkyl group, each optionally independently substituted with one to three substituent groups,

wherein each substituent group of R¹ is independently C₁-C₅ alkyl, C₂-C₃ alkenyl, C₂-C₃ alkynyl, C₃-C₈ cycloalkyl, heterocyclyl, aryl, heteroaryl, C₁-C₅ alkoxy, C₂-C₅ alkenyloxy, C₂-C₅ alkynyloxy, aryloxy, acyl, C₁-C₃ alkoxy carbonyl, C₁-C₅ alkanoyloxy, C₁-C₅ alkanoyl, aroyl, aminocarbonyl, alkylaminocarbonyl, dialkylaminocarbonyl, aminocarbonyloxy, C₁-C₅ alkylaminocarbonyloxy, C₁-C₅ dialkylaminocarbonyloxy, C₂-C₅ cycloalkylaminocarbonyloxy, C₁-C₅ alkanoylamino, C₁-C₅ alkoxy carbonylamino, C₁-C₅ alkylsulfonlamino, aminosulfonyl, C₁-C₅ alkylaminosulfonyl, C₁-C₅ dialkylaminosulfonyl, halogen, hydroxy, carboxy, cyano, trifluoromethyl, trifluoromethoxy, nitro, or amino wherein the nitrogen atom is optionally independently mono- or di-substituted by C₁-C₅ alkyl or aryl; or ureido wherein either nitrogen atom is optionally independently substituted with C₁-C₃ alkyl or C₃-C₅ cycloalkyl; or C₁-C₃ alkythio wherein the sulfur atom is optionally oxidized to a sulfoxide or sulfone,

wherein each substituent group of R¹ is optionally independently substituted with one to four substituent groups selected from aryl or heterocyclyl wherein the heterocycle is optionally independently substituted with hydroxy, halogen, methyl, or dialkylamino; C₁-C₅ alkoxy carbonyl, methyl, methoxy, halogen, hydroxy, oxo, cyano, aminosulfonyl, or amino wherein the nitrogen atom is optionally independently mono- or di-substituted by C₁-C₅ alkyl or C₁-C₃ dialkylamine or aryl; or ureido wherein either nitrogen atom is optionally independently...
independently substituted with C₁-C₅ alkyl; or oxime wherein the oxygen atom
is optionally substituted by C₁-C₅ alkyl or benzyl;

R² and R³ are each independently hydrogen, C₁-C₅ alkyl, or C₅-C₁₅ arylalkyl group, or R²
and R³ together with the carbon atom they are commonly attached to form a C₃-C₈
spiro cycloalkyl ring, or

R¹ and R² when taken together are a chromanyl or dihydrobenzofuranyl optionally
substituted with C₁-C₅ alkyl, C₂-C₅ alkenyl, C₂-C₅ alkynyl, C₃-C₈ cycloalkyl,
hetercyclyl, aryl, heteroaryl, C₁-C₅ alkoxy, C₂-C₅ alkenyloxy, C₂-C₅ alkynyloxy,
aryloxy, acyl, C₁-C₅ alkoxycarbonyl, C₁-C₅ alkanoyloxy, aminocarbonyl,
alkylaminocarbonyl, dialkylaminocarbonyl, aminocarbonyloxy, C₁-C₅
alkylaminocarboxyloxy, C₁-C₅ dialkylaminocarboxyloxy, C₁-C₅ alkanoylamino,
C₁-C₅ alkoxycarbonylamino, C₁-C₅ alkylsulfonlamino, aminosulfonyl, C₁-C₅
alkylaminosulfon, C₁-C₅ dialkylaminosulfon, halogen, hydroxy, carboxy, oxo,
cyano, trifluoromethyl, trifluoromethoxy, trifluoromethylthio, nitro, or amino
wherein the nitrogen atom is optionally independently mono- or di-substituted by
C₁-C₅ alkyl; or ureido wherein either nitrogen atom is optionally independently
substituted with C₁-C₅ alkyl; or C₁-C₅ alkylthio wherein the sulfur atom is
optionally oxidized to a sulfoxide or sulfone;

R⁴ is carbonyl or methylene optionally independently substituted with one to two
substituent groups selected from C₁-C₅ alkyl, hydroxy, and halogen;

R⁵ is 5- to 7-membered heterocycl ring fused to a 5- to 7-membered heteroaryl or
heterocycl ring each optionally independently substituted with one to three
substituent groups,

wherein each substituent group of R⁵ is independently C₁-C₅ alkyl, C₂-C₅ alkenyl,
C₂-C₅ alkynyl, C₃-C₈ cycloalkyl, heterocyclyl, aryl, heteroaryl, C₁-C₅ alkoxy, C₂-
C₅ alkenyloxy, C₂-C₅ alkynyloxy, aryloxy, acyl, C₁-C₅ alkoxycarbonyl, C₁-C₅
alkanoyloxy, aminocarbonyl, alkylaminocarbonyl, dialkylaminocarbonyl,
aminocarbonyloxy, C₁-C₅ alkylaminocarboxyloxy, C₁-C₅ dialkylaminocarboxyloxy, C₁-C₅
alkanoylamino, C₁-C₅ alkoxycarbonylamino, C₁-C₅ alkylsulfonlamino, aminosulfonyl, C₁-C₅
alkylaminosulfon, C₁-C₅ dialkylaminosulfon, halogen, hydroxy, carboxy, oxo,
cyano, trifluoromethyl, trifluoromethoxy, trifluoromethylthio, nitro, or amino
wherein the nitrogen atom is optionally independently mono- or di-substituted by
C₁-C₅ alkyl; or ureido wherein either nitrogen atom is optionally independently
substituted with C₁-C₅ alkyl; or C₁-C₅ alkylthio wherein the sulfur atom is
optionally oxidized to a sulfoxide or sulfone;
C₃ alkylsulfonylamino, C₁-C₅ alkylaminosulfonyl, C₁-C₅ dialkylaminosulfonyl, halogen, hydroxy, carboxy, oxo, cyano, trifluoromethyl, trifluoromethoxy, trifluoromethylthio, nitro, or amino wherein the nitrogen atom is optionally independently mono- or di-substituted by C₁-C₅ alkyl; or ureido wherein either nitrogen atom is optionally independently substituted with C₁-C₅ alkyl; or C₁-C₅ alkylthio wherein the sulfur atom is optionally oxidized to a sulfoxide or sulfone,

wherein each substituent group of R⁵ is optionally independently substituted with one to three substituent groups selected from C₁-C₃ alkyl, C₁-C₃ alkoxy, C₁-C₃ alkoxy carbonyl, acyl, aryl, benzyl, heteroaryl, heterocyclyl, halogen, hydroxy, oxo, cyano, or amino wherein the nitrogen atom is optionally independently mono- or di-substituted by C₁-C₅ alkyl; or ureido wherein either nitrogen atom is optionally independently substituted with C₁-C₅ alkyl; or trifluoromethyl,

wherein R⁵ cannot be 1H-[1,5]naphthyridin-4-one; and

X is a hydroxy or amino wherein the nitrogen atom is optionally independently mono- or di-substituted by C₁-C₅ alkyl,

or a tautomer, prodrug, solvate, or salt thereof.

2. The compound of Formula (IA) according to claim 1, wherein:

R¹ is phenyl, dihydrobenzofuranyl, benzofuranyl, dihydroindolyl, indolyl, benzo[1,3]dioxole, dihydrobenzothienyl, benzothienyl, benzoxazole, benzisoxazole, benzyprazole, benzimidazole, thienyl, quinolinyl, tetrahydroquinolinone, tetrahydronaphthyridinone, dihydrochromene, pyridinyl, pyrimidinyl, or pyrazinyl, each optionally independently substituted with one to three substituent groups,

wherein each substituent group of R¹ is independently C₁-C₃ alkyl, C₂-C₃ alkenyl, C₂-C₃ alkynyl, C₁-C₃ alkoxy, C₂-C₃ alkenyloxy, C₁-C₃ alkanoyl, C₁-C₃ alkoxy carbonyl, C₁-C₃ alkenoyloxy, C₃-C₈ cycloalkyl, aryl, heteroaryl,
heterocyclyl, halogen, hydroxy, carboxy, cyano, trifluoromethyl, nitro, or C₁-C₃ alkylthio wherein the sulfur atom is optionally oxidized to a sulfoxide or sulfone,

wherein each substituent group of R¹ is optionally independently substituted with a substituent group selected from methyl, methoxy, halogen, hydroxy, oxo, cyano, or amino;

R² and R³ are each independently hydrogen, C₁-C₃ alkyl, benzyl, or phenethyl, or R² and R³ together with the carbon atom they are commonly attached to form a C₃-C₆ spirocycloalkyl ring; and

R⁴ is CH₂,

or a tautomer, prodrug, solvate, or salt thereof.

3. The compound of Formula (IA) according to claim 1, wherein:

R¹ is phenyl, pyridyl, dihydrobenzofuranyl, or benzofuranyl, each optionally independently substituted with one or two substituent groups,

wherein each substituent group of R¹ is independently methyl, ethyl, methoxy, ethoxy, fluoro, chloro, bromo, hydroxy, trifluoromethyl, cyano, phenyl, pyridinyl, pyrimidinyl, pyrazinyl, pyrazinyl, imidazolyl, thiazolyl, oxazolyl, pyrazolyl, isoxazolyl, isothiazolyl, naphthyl, thienyl, pyrrolidinyl, piperidinyl, piperazinyl, or morpholinyl;

R² and R³ are each independently methyl, or R² and R³ together with the carbon atom they are commonly attached to form a spirocyclopropyl ring; and

R⁴ is CH₂,

or a tautomer, prodrug, solvate, or salt thereof.

4. The compound of Formula (IA) according to claim 1, wherein:
Yet another aspect of the invention includes compounds of Formula (IA), wherein:

\[ R^1 \] is phenyl, dihydrobenzofuranyl, or benzofuranyl, each optionally independently substituted with one to three substituent groups,

wherein each substituent group of \( R^1 \) is independently \( C_1-C_3 \) alkyl, \( C_2-C_3 \) alkenyl, \( C_2-C_3 \) alkynyl, \( C_1-C_3 \) alkoxy, \( C_2-C_3 \) alkenyloxy, \( C_1-C_3 \) alkanoyl, \( C_1-C_3 \) alkoxy carbonyl, \( C_1-C_3 \) alkanoyloxy, \( C_3-C_8 \) cycloalkyl, aryl, heteroaryl, heterocyclyl, halogen, hydroxy, carboxy, cyano, trifluoromethyl, nitro, or \( C_1-C_3 \) alkylthio wherein the sulfur atom is optionally oxidized to a sulfoxide or sulfone; and

\[ R^2 \] and \( R^3 \) are each independently hydrogen or \( C_1-C_3 \) alkyl,

or a tautomer, prodrug, solvate, or salt thereof.

5. The compound of Formula (IA) according to claim 1, wherein:

\[ R^5 \] is 1H-pyridin-2-one or 1H-pyridin-4-one fused to a 5- to 7-membered heteroaryl or heterocyclyl ring each optionally independently substituted with one to three substituent groups,

wherein each substituent group of \( R^5 \) is independently \( C_1-C_5 \) alkyl, \( C_2-C_5 \) alkenyl, \( C_2-C_5 \) alkynyl, \( C_3-C_8 \) cycloalkyl, heterocyclyl, aryl, heteroaryl, \( C_1-C_5 \) alkoxy, \( C_2-C_5 \) alkenyloxy, \( C_2-C_5 \) alkyloxy, \( C_1-C_3 \) alkoxy carbonyl, \( C_1-C_5 \) alkenyloxy, aminocarbonyl, alkylaminocarbonyl, dialkylaminocarbonyl, aminocarboxyloxy, \( C_1-C_5 \) alkylaminocarboxyloxy, \( C_1-C_5 \) dialkylaminocarboxyloxy, \( C_1-C_5 \) alkanoylamino, \( C_1-C_5 \) alkoxy carbonylamino, \( C_1-C_5 \) alkoxy sulfonamino, \( C_1-C_5 \) alkylaminosulfonyl, \( C_1-C_5 \) dialkylaminosulfonyl, halogen, hydroxy, carboxy, oxo, cyano, trifluoromethyl, trifluoromethoxy, trifluoromethylthio, nitro, or amino wherein the nitrogen atom is optionally independently mono- or di-substituted by \( C_1-C_5 \) alkyl; or ureido wherein either
nitrogen atom is optionally independently substituted with C\textsubscript{1}-C\textsubscript{5} alkyl; or C\textsubscript{1}-C\textsubscript{3} alkylthio wherein the sulfur atom is optionally oxidized to a sulfoxide or sulfone,

wherein each substituent group of R\textsuperscript{5} is optionally independently substituted with one to three substituent groups selected from C\textsubscript{1}-C\textsubscript{3} alkyl, C\textsubscript{1}-C\textsubscript{3} alkoxy, halogen, hydroxy, oxo, cyano, amino, or trifluoromethyl,

wherein R\textsuperscript{5} cannot be 1H-[1,5]naphthyridin-4-one,

or a tautomer, prodrug, solvate, or salt thereof.

6. The compound of Formula (IA) according to claim 1, wherein:

R\textsuperscript{1} is phenyl, dihydrobenzofuranyl, or benzofuranyl, each optionally independently substituted with one to three substituent groups,

wherein each substituent group of R\textsuperscript{1} is independently C\textsubscript{1}-C\textsubscript{3} alkyl, C\textsubscript{2}-C\textsubscript{3} alkenyl, C\textsubscript{2}-C\textsubscript{3} alkynyl, C\textsubscript{1}-C\textsubscript{3} alkoxy, C\textsubscript{2}-C\textsubscript{3} alkenyloxy, C\textsubscript{1}-C\textsubscript{3} alkanoyl, C\textsubscript{1}-C\textsubscript{3} alkoxy carbonyl, C\textsubscript{1}-C\textsubscript{3} alkanoyloxy, C\textsubscript{3}-C\textsubscript{8} cycloalkyl, aryl, heteroaryl, heterocyclyl, halogen, hydroxy, carboxy, cyano, trifluoromethyl, nitro, or C\textsubscript{1}-C\textsubscript{3} alkylthio wherein the sulfur atom is optionally oxidized to a sulfoxide or sulfone;

R\textsuperscript{2} and R\textsuperscript{3} are each independently hydrogen or C\textsubscript{1}-C\textsubscript{3} alkyl; and

R\textsuperscript{5} is 1H-pyridin-2-one or 1H-pyridin-4-one fused to a pyridinyl, pyrimidyl, pyrazinyl, pyridazinyl, imidazolyl, pyrazolyl, isoxazolyl, isothiazolyl, thienyl, pyrrolyl, furanyl, oxazolyl, thiazolyl, pyrrolidinyl, piperidinyl, morpholinyl, or piperezinyl ring each optionally independently substituted with one to three substituent groups,

wherein each substituent group of R\textsuperscript{5} is independently C\textsubscript{1}-C\textsubscript{3} alkyl, C\textsubscript{1}-C\textsubscript{3} alkoxy, acyl, halogen, hydroxy, carboxy, oxo, cyano, trifluoromethyl, trifluoromethoxy, trifluoromethylthio, nitro, or amino wherein the nitrogen atom is optionally independently mono- or di-substituted by C\textsubscript{1}-C\textsubscript{3} alkyl; or ureido wherein either
nitrogen atom is optionally independently substituted with \( C_1-C_3 \) alkyl; or \( C_1-C_3 \) alkylthio wherein the sulfur atom is optionally oxidized to a sulfoxide or sulfone,

wherein each substituent group of \( R^3 \) is optionally independently substituted with one to three substituent groups selected from \( C_1-C_3 \) alkyl, \( C_1-C_3 \) alkoxy, halogen, hydroxy, oxo, cyano, amino, or trifluoromethyl,

wherein \( R^3 \) cannot be 1\( H\)-[1,5]naphthyridin-4-one,

or a tautomer, prodrug, solvate, or salt thereof.

7. A compound selected from:

4-[4-(5-Fluoro-2-methoxyphenyl)-2-hydroxy-4-methyl-2-trifluoromethylpentyl]-4\( H\)-thieno[3,2-\( b\)]pyridin-7-one;

4-[4-(5-Fluoro-2-hydroxyphenyl)-2-hydroxy-4-methyl-2-trifluoromethylpentyl]-4\( H\)-thieno[3,2-\( b\)]pyridin-7-one;

4-[4-(2,3-Dihydrobenzofuran-7-yl)-2-hydroxy-4-methyl-2-trifluoromethylpentyl]-4\( H\)-thieno[3,2-\( b\)]pyridin-7-one;

1-[4-(5-Fluoro-2-methoxyphenyl)-2-hydroxy-4-methyl-2-trifluoromethylpentyl]-1\( H\)-[1,6]naphthyridin-4-one;

1-[4-(5-Fluoro-2-hydroxyphenyl)-2-hydroxy-4-methyl-2-trifluoromethylpentyl]-1\( H\)-[1,6]naphthyridin-4-one;

4-[4-(5-Fluoro-2-methylphenyl)-2-hydroxy-4-methyl-2-trifluoromethylpentyl]-4\( H\)-thieno[3,2-\( b\)]pyridin-7-one;

4-[2-Hydroxy-4-(5-methanesulfonyl-2,3-dihydrobenzofuran-7-yl)-4-methyl-2-trifluoromethylpentyl]-4\( H\)-thieno[3,2-\( b\)]pyridin-7-one;
1-[2-Hydroxy-4-(5-methanesulfonyl-2,3-dihydrobenzofuran-7-y1)-4-methyl-2-trifluoromethylpentyl]-1H-[1,6]naphthyridin-4-one;

1-[4-(5-Fluoro-2-methylphenyl)-2-hydroxy-4-methyl-2-trifluoromethylpentyl]-1H-[1,6]naphthyridin-4-one;

4-[2-Hydroxy-4-(2-methoxy-3-methylphenyl)-4-methyl-2-trifluoromethylpentyl]-4H-thieno[3,2-b]pyridin-7-one;

4-[2-Hydroxy-4-(2-methoxyphenyl)-4-methyl-2-trifluoromethylpentyl]-4H-thieno[3,2-b]pyridin-7-one;

4-[4-(3-Bromo-2-methoxyphenyl)-2-hydroxy-4-methyl-2-trifluoromethylpentyl]-4H-thieno[3,2-b]pyridin-7-one;

4-[2-Hydroxy-4-(2-hydroxy-3-methylphenyl)-4-methyl-2-trifluoromethylpentyl]-4H-thieno[3,2-b]pyridin-7-one;

4-[4-(3-Bromo-2-hydroxyphenyl)-2-hydroxy-4-methyl-2-trifluoromethylpentyl]-4H-thieno[3,2-b]pyridin-7-one;

3-Bromo-1-[4-(5-chloro-2,3-dihydrobenzofuran-7-y1)-2-hydroxy-4-methyl-2-trifluoromethylpentyl]-1H-[1,6]naphthyridin-4-one;

6-Chloro-4-[4-(2,3-dihydrobenzofuran-7-y1)-2-hydroxy-4-methyl-2-trifluoromethylpentyl]-4H-thieno[3,2-b]pyridin-7-one;

6-Bromo-4-[4-(2,3-dihydrobenzofuran-7-y1)-2-hydroxy-4-methyl-2-trifluoromethylpentyl]-4H-thieno[3,2-b]pyridin-7-one;

3-Chloro-1-[4-(5-fluoro-2-hydroxyphenyl)-2-hydroxy-4-methyl-2-trifluoromethylpentyl]-1H-[1,6]naphthyridin-4-one;
1-[4-(5-Chloro-2,3-dihydrobenzofuran-7-yl)-2-hydroxy-4-methyl-2-
trifluoromethylpentyl]-3-methyl-1H-[1,6]naphthyridin-4-one;

1-[4-(5-Chloro-2,3-dihydrobenzofuran-7-yl)-2-hydroxy-4-methyl-2-
trifluoromethylpentyl]-3-methyl-1H-[1,7]naphthyridin-4-one;

1-[2-Hydroxy-4-(2-methoxy-3,5-dimethylphenyl)-4-methyl-2-trifluoromethylpentyl]-3-
methyl-1H-[1,6]naphthyridin-4-one;

1-[2-Hydroxy-4-(2-methoxy-3,5-dimethylphenyl)-4-methyl-2-trifluoromethylpentyl]-3-
methyl-1H-[1,7]naphthyridin-4-one;

1-[2-Hydroxy-4-(2-hydroxy-3,5-dimethylphenyl)-4-methyl-2-trifluoromethylpentyl]-3-
methyl-1H-[1,6]naphthyridin-4-one;

1-[4-(5-Fluoro-2-methylphenyl)-2-hydroxy-4-methyl-2-trifluoromethylpentyl]-1H-
[1,8]naphthyridin-4-one;

1-[4-(5-Fluoro-2-methylphenyl)-2-hydroxy-4-methyl-2-trifluoromethylpentyl]-1H-
[1,7]naphthyridin-4-one;

4-[4-(5-Fluoro-2-hydroxyphenyl)-2-hydroxy-4-methyl-2-trifluoromethylpentyl]-4H-
thiazolo[4,5-b]pyridin-7-one;

4-[4-(5-Fluoro-2-hydroxyphenyl)-2-hydroxy-4-methyl-2-trifluoromethylpentyl]-4H-
oxazolo[4,5-b]pyridin-7-one;

4-[4-(5-Fluoro-2-methylphenyl)-2-hydroxy-4-methyl-2-trifluoromethylpentyl]-4H-
furo[3,2-b]pyridin-7-one;

7-[4-(5-Fluoro-2-methylphenyl)-2-hydroxy-4-methyl-2-trifluoromethylpentyl]-7H-
thieno[2,3-b]pyridin-4-one;
4-[4-(5-Fluoro-2-hydroxyphenyl)-2-hydroxy-4-methyl-2-trifluoromethylpentyl]-4H-oxazolo[5,4-b]pyridin-7-one;

4-[4-(5-Fluoro-2-hydroxyphenyl)-2-hydroxy-4-methyl-2-trifluoromethylpentyl]-4H-thiazolo[5,4-b]pyridin-7-one;

7-[4-(5-Fluoro-2-methylphenyl)-2-hydroxy-4-methyl-2-trifluoromethylpentyl]-7H-furo[2,3-b]pyridin-4-one;

4-[4-(5-Fluoro-2-methylphenyl)-2-hydroxy-4-methyl-2-trifluoromethylpentyl]-1,4-dihydropyrrolo[3,2-b]pyridin-7-one;

1-[4-(5-Fluoro-2-hydroxyphenyl)-2-hydroxy-4-methyl-2-trifluoromethylpentyl]-5,6,7,8-tetrahydro-1H-[1,6]naphthyridin-4-one;

1-[4-(5-Fluoro-2-methylphenyl)-2-hydroxy-4-methyl-2-trifluoromethylpentyl]-6-methyl-5,6,7,8-tetrahydro-1H-[1,6]naphthyridin-4-one;

1-[4-(2,3-Dihydrobenzofuran-7-yl)-2-hydroxy-4-methyl-2-trifluoromethylpentyl]-1H-[1,8]naphthyridin-4-one;

1-[2-Hydroxy-4-(5-methanesulfonyl-2,3-dihydrobenzofuran-7-yl)-4-methyl-2-trifluoromethylpentyl]-1H-[1,7]naphthyridin-4-one;

4-[2-Hydroxy-4-(5-methanesulfonyl-2,3-dihydrobenzofuran-7-yl)-4-methyl-2-trifluoromethylpentyl]-4H-thiazolo[4,5-b]pyridin-7-one;

4-[2-Hydroxy-4-(5-methanesulfonyl-2,3-dihydrobenzofuran-7-yl)-4-methyl-2-trifluoromethylpentyl]-4H-oxazolo[4,5-b]pyridin-7-one;

4-[2-Hydroxy-4-(5-methanesulfonyl-2,3-dihydrobenzofuran-7-yl)-4-methyl-2-trifluoromethylpentyl]-4H-furo[3,2-b]pyridin-7-one;

4-[2-Hydroxy-4-(5-methanesulfonyl-2,3-dihydrobenzofuran-7-yl)-4-methyl-2-trifluoromethylpentyl]-4H-oxazolo[5,4-b]pyridin-7-one;

4-[2-Hydroxy-4-(5-methanesulfonyl-2,3-dihydrobenzofuran-7-yl)-4-methyl-2-trifluoromethylpentyl]-4H-thiazolo[5,4-b]pyridin-7-one;

7-[4-(2,3-Dihydrobenzofuran-7-yl)-2-hydroxy-4-methyl-2-trifluoromethylpentyl]-7H-furo[2,3-b]pyridin-4-one;

4-[4-(2,3-Dihydrobenzofuran-7-yl)-2-hydroxy-4-methyl-2-trifluoromethylpentyl]-1,4-dihydropyrrolo[3,2-b]pyridin-7-one;

1-[2-Hydroxy-4-(5-methanesulfonyl-2,3-dihydrobenzofuran-7-yl)-4-methyl-2-trifluoromethylpentyl]-5,6,7,8-tetrahydro-1H-[1,6]naphthyridin-4-one;

1-[4-(2,3-Dihydrobenzofuran-7-yl)-2-hydroxy-4-methyl-2-trifluoromethylpentyl]-6-methyl-5,6,7,8-tetrahydro-1H-[1,6]naphthyridin-4-one;

1-[4-(2,3-Dihydrobenzofuran-7-yl)-2-hydroxy-4-methyl-2-trifluoromethylpentyl]-5-methyl-5,6,7,8-tetrahydro-1H-[1,5]naphthyridin-4-one;

1-[4-(2,3-Dihydrobenzofuran-7-yl)-2-hydroxy-4-methyl-2-trifluoromethylpentyl]-5-methyl-5,6,7,8-tetrahydro-1H-[1,5]naphthyridin-4-one;

4-[2-Hydroxy-4-(4-methoxybiphenyl-3-yl)-4-methyl-2-trifluoromethylpentyl]-4H-thieno[3,2-b]pyridin-7-one;

4-[2-Hydroxy-4-(2-methoxy-5-pyridin-3-ylphenyl)-4-methyl-2-trifluoromethylpentyl]-4H-thieno[3,2-b]pyridin-7-one;
4-[2-Hydroxy-4-(2-methoxy-5-pyrimidin-5-ylphenyl)-4-methyl-2-trifluoromethylpentyl]-
4H-thieno[3,2-b]pyridin-7-one;

4-[2-Hydroxy-4-(2-methoxy-5-thiophen-3-ylphenyl)-4-methyl-2-trifluoromethylpentyl]-
4H-thieno[3,2-b]pyridin-7-one;

4-[2-Hydroxy-4-(4-hydroxybiphenyl-3-yl)-4-methyl-2-trifluoromethylpentyl]-4H-
thieno[3,2-b]pyridin-7-one;

4-[2-Hydroxy-4-(2-hydroxy-5-pyridin-3-ylphenyl)-4-methyl-2-trifluoromethylpentyl]-
4H-thieno[3,2-b]pyridin-7-one;

4-[2-Hydroxy-4-(2-hydroxy-5-pyrimidin-5-ylphenyl)-4-methyl-2-trifluoromethylpentyl]-
4H-thieno[3,2-b]pyridin-7-one;

4-[2-Hydroxy-4-(2-hydroxy-5-thiophen-3-ylphenyl)-4-methyl-2-trifluoromethylpentyl]-
4H-thieno[3,2-b]pyridin-7-one;

1-[2-Hydroxy-4-(4-methoxybiphenyl-3-yl)-4-methyl-2-trifluoromethylpentyl]-1H-
[1,6]naphthyridin-4-one;

1-[2-Hydroxy-4-(2-methoxy-5-pyrimidin-5-ylphenyl)-4-methyl-2-trifluoromethylpentyl]-
1H-[1,6]naphthyridin-4-one;

1-[2-Hydroxy-4-(2-methoxy-5-thiophen-3-ylphenyl)-4-methyl-2-trifluoromethylpentyl]-
1H-[1,6]naphthyridin-4-one;

1-[2-Hydroxy-4-(2-methoxy-5-thiophen-3-ylphenyl)-4-methyl-2-trifluoromethylpentyl]-
1H-[1,6]naphthyridin-4-one;

1-[2-Hydroxy-4-(2-methoxy-5-thiophen-3-ylphenyl)-4-methyl-2-trifluoromethylpentyl]-
1H-[1,6]naphthyridin-4-one;
1-[2-Hydroxy-4-(2-hydroxy-5-pyridin-3-ylphenyl)-4-methyl-2-trifluoromethylpenty]-1H-[1,6]naphthyridin-4-one;

1-[2-Hydroxy-4-(2-hydroxy-5-pyrimidin-5-ylphenyl)-4-methyl-2-trifluoromethylpenty]-1H-[1,6]naphthyridin-4-one;

1-[2-Hydroxy-4-(2-hydroxy-5-thiophen-3-ylphenyl)-4-methyl-2-trifluoromethylpenty]-1H-[1,6]naphthyridin-4-one;

5-[4-(5-Fluoro-2-methoxyphenyl)-2-hydroxy-4-methyl-2-trifluoromethylpenty]-5H-pyrido[3,2-d]pyrimidin-8-one;

1-[4-(5-Fluoro-2-methoxyphenyl)-2-hydroxy-4-methyl-2-trifluoromethylpenty]-1H-pyrido[2,3-d]pyridazin-4-one;

5-[4-(5-Fluoro-2-methoxyphenyl)-2-hydroxy-4-methyl-2-trifluoromethylpenty]-5H-pyrido[3,2-c]pyridazin-8-one;

4-[4-(2-Difluoromethoxy-3-methylphenyl)-2-hydroxy-4-methyl-2-trifluoromethylpenty]-4H-thieno[3,2-b]pyridin-7-one;

3-Chloro-1-[4-(2,3-dihydrobenzofuran-7-yl)-2-hydroxy-4-methyl-2-trifluoromethylpenty]-1H-[1,6]naphthyridin-4-one;

4-(4-Benzol[1,3]dioxol-4-yl-2-hydroxy-4-methyl-2-trifluoromethylpenty)-6-bromo-4H-thieno[3,2-b]pyridin-7-one;

4-(4-Benzol[1,3]dioxol-4-yl-2-hydroxy-4-methyl-2-trifluoromethylpenty)-6-chloro-4H-thieno[3,2-b]pyridin-7-one;

6-Chloro-4-[2-hydroxy-4-methyl-4-(5-pyridin-3-yl-2,3-dihydrobenzofuran-7-yl)-2-trifluoromethylpenty]-4H-thieno[3,2-b]pyridin-7-one;
1-(4-Benz[1,3]dioxol-4-yl-2-hydroxy-4-methyl-2-trifluoromethylpentyl)-3-chloro-1H-
[1,6]naphthyridin-4-one;

6-Chloro-4-[2-hydroxy-4-methyl-4-(5-pyrimidin-5-yl-2,3-dihydrobenzofuran-7-yl)-2-
trifluoromethylpentyl]-4H-thieno[3,2-b]pyridin-7-one;

3-Chloro-1-[2-hydroxy-4-methyl-4-(5-pyrimidin-5-yl-2,3-dihydrobenzofuran-7-yl)-2-
trifluoromethylpentyl]-1H-[1,6]naphthyridin-4-one;

3-Chloro-1-[2-hydroxy-4-methyl-4-(5-pyrimidin-5-yl-2,3-dihydrobenzofuran-7-yl)-2-
trifluoromethylpentyl]-1H-[1,6]naphthyridin-4-one;

4-[2-Hydroxy-4-methyl-4-(5-pyrimidin-5-yl-2,3-dihydrobenzofuran-7-yl)-2-
trifluoromethylpentyl]-4H-thieno[3,2-b]pyridin-7-one;

1-[2-Hydroxy-4-methyl-4-(5-pyrimidin-5-yl-2,3-dihydrobenzofuran-7-yl)-2-
trifluoromethylpentyl]-1H-[1,6]naphthyridin-4-one;

6-Chloro-4-[2-hydroxy-4-(2-methoxy-5-pyridin-3-ylphenyl)-4-methyl-2-
trifluoromethylpentyl]-4H-thieno[3,2-b]pyridin-7-one;

6-Chloro-4-[2-hydroxy-4-(2-methoxy-5-pyrimidin-5-ylphenyl)-4-methyl-2-
trifluoromethylpentyl]-4H-thieno[3,2-b]pyridin-7-one;

6-Chloro-4-[2-hydroxy-4-(2-hydroxy-5-pyrimidin-3-ylphenyl)-4-methyl-2-
trifluoromethylpentyl]-4H-thieno[3,2-b]pyridin-7-one;

6-Chloro-4-[2-hydroxy-4-(2-hydroxy-5-pyrimidin-5-ylphenyl)-4-methyl-2-
trifluoromethylpentyl]-4H-thieno[3,2-b]pyridin-7-one;

4-(4-Biphenyl-3-yl-2-hydroxy-4-methyl-2-trifluoromethylpentyl)-6-chloro-4H-
thieno[3,2-b]pyridin-7-one;
4-(4-Biphenyl-3-yl-2-hydroxy-4-methyl-2-trifluoromethylpentyl)-4H-thieno[3,2-b]pyridin-7-one;

3-Chloro-1-{4-[5-(5-chloropyridin-3-yl)-2,3-dihydrobenzofuran-7-yl]-2-hydroxy-4-methyl-2-trifluoromethylpentyl}-1H-[1,6]naphthyridin-4-one;

6-Chloro-4-{4-[5-(2,6-dimethylpyridin-4-yl)-2-methoxyphenyl]-2-hydroxy-4-methyl-2-trifluoromethylpentyl}-4H-thieno[3,2-b]pyridin-7-one;

4-[2-Hydroxy-4-(2-hydroxy-5-pyridin-2-ylphenyl]-4-methyl-2-trifluoromethylpentyl]-4H-thieno[3,2-b]pyridin-7-one;

6-Chloro-4-[2-hydroxy-4-methyl-4-(5-pyrazin-2-yl-2,3-dihydrobenzofuran-7-yl)-2-trifluoromethylpentyl]-4H-thieno[3,2-b]pyridin-7-one;

3-Chloro-1-[2-hydroxy-4-methyl-4-(5-pyrimidin-2-yl-2,3-dihydrobenzofuran-7-yl)-2-trifluoromethylpentyl]-1H-[1,6]naphthyridin-4-one;

5-{7-[3-(6-Chloro-7-oxo-7H-thieno[3,2-b]pyridin-4-ylmethyl]-4,4,4-trifluoro-3-hydroxy-1,1-dimethylbutyl]-2,3-dihydrobenzofuran-5-yl} nicotinonitrile;

4-{4-Methoxy-3-[4,4,4-trifluoro-3-hydroxy-1,1-dimethyl-3-(7-oxo-7H-thieno[3,2-b]pyridin-4-ylmethyl)butyl]phenyl] pyridine-2-carbonitrile;

6-Chloro-4-{4-[5-(2-fluoro-6-methylpyridin-4-yl)-2-methoxyphenyl]-2-hydroxy-4-methyl-2-trifluoromethylpentyl}-4H-thieno[3,2-b]pyridin-7-one;

3-Chloro-1-[2-hydroxy-4-[5-(1H-imidazol-4-yl)-2,3-dihydrobenzofuran-7-yl]-4-methyl-2-trifluoromethylpentyl]-1H-[1,6]naphthyridin-4-one;

6-Chloro-4-{2-hydroxy-4-methyl-4-[5-morpholin-4-yl-2,3-dihydrobenzofuran-7-yl]-2-trifluoromethylpentyl}-4H-thieno[3,2-b]pyridin-7-one; and
1-[2-Hydroxy-4-methyl-4-(5-piperidin-1-yl-2,3-dihydrobenzofuran-7-yl)-2-trifluoromethylpentyl]-1H-[1,6]naphthyridin-4-one,

or a tautomer, prodrug, solvate, or salt thereof.

8. A compound selected from:

4-[4-(5-Fluoro-2-methoxyphenyl)-2-hydroxy-4-methyl-2-trifluoromethylpentyl]-4H-thieno[3,2-b]pyridin-7-one;

4-[4-(5-Fluoro-2-hydroxyphenyl)-2-hydroxy-4-methyl-2-trifluoromethylpentyl]-4H-thieno[3,2-b]pyridin-7-one;

4-[4-(2,3-Dihydrobenzofuran-7-yl)-2-hydroxy-4-methyl-2-trifluoromethylpentyl]-4H-thieno[3,2-b]pyridin-7-one;

1-[4-(5-Fluoro-2-methoxyphenyl)-2-hydroxy-4-methyl-2-trifluoromethylpentyl]-1H-[1,6]naphthyridin-4-one;

1-[4-(5-Fluoro-2-hydroxyphenyl)-2-hydroxy-4-methyl-2-trifluoromethylpentyl]-1H-[1,6]naphthyridin-4-one;

4-[4-(5-Fluoro-2-methylphenyl)-2-hydroxy-4-methyl-2-trifluoromethylpentyl]-4H-thieno[3,2-b]pyridin-7-one;

1-[4-(5-Fluoro-2-methylphenyl)-2-hydroxy-4-methyl-2-trifluoromethylpentyl]-1H-[1,6]naphthyridin-4-one;

4-[2-Hydroxy-4-(2-methoxy-3-methylphenyl)-4-methyl-2-trifluoromethylpentyl]-4H-thieno[3,2-b]pyridin-7-one;

4-[2-Hydroxy-4-(2-methoxyphenyl)-4-methyl-2-trifluoromethylpentyl]-4H-thieno[3,2-b]pyridin-7-one;
4-[4-(3-Bromo-2-methoxyphenyl)-2-hydroxy-4-methyl-2 trifluoromethylpentyl]-4H-thieno[3,2-b]pyridin-7-one;

4-[2-Hydroxy-4-(2-hydroxy-3-methylphenyl)-4-methyl-2 trifluoromethylpentyl]-4H-thieno[3,2-b]pyridin-7-one;

6-Chloro-4-[4-(2,3-dihydrobenzofuran-7-yl)-2-hydroxy-4-methyl-2 trifluoromethylpentyl]-4H-thieno[3,2-b]pyridin-7-one;

6-Bromo-4-[4-(2,3-dihydrobenzofuran-7-yl)-2-hydroxy-4-methyl-2 trifluoromethylpentyl]-4H-thieno[3,2-b]pyridin-7-one;

4-[2-Hydroxy-4-(2-methoxy-5-pyridin-3-ylphenyl)-4-methyl-2 trifluoromethylpentyl]-4H-thieno[3,2-b]pyridin-7-one;

4-[2-Hydroxy-4-(2-hydroxy-5-pyridin-3-ylphenyl)-4-methyl-2 trifluoromethylpentyl]-4H-thieno[3,2-b]pyridin-7-one;

4-[2-Hydroxy-4-(2-hydroxy-5-pyrimidin-5-ylphenyl)-4-methyl-2 trifluoromethylpentyl]-4H-thieno[3,2-b]pyridin-7-one;

4-[4-(2-Difluoromethoxy-3-methylphenyl)-2-hydroxy-4-methyl-2 trifluoromethylpentyl]-4H-thieno[3,2-b]pyridin-7-one;

3-Chloro-1-[4-(2,3-dihydrobenzofuran-7-yl)-2-hydroxy-4-methyl-2 trifluoromethylpentyl]-1H-[1,6]naphthyridin-4-one;

4-(4-Benzof[1,3]dioxol-4-yl-2-hydroxy-4-methyl-2 trifluoromethylpentyl)-6-bromo-4H-thieno[3,2-b]pyridin-7-one;

4-(4-Benzof[1,3]dioxol-4-yl-2-hydroxy-4-methyl-2 trifluoromethylpentyl)-6-chloro-4H-thieno[3,2-b]pyridin-7-one;
6-Chloro-4-[2-hydroxy-4-methyl-4-(5-pyridin-3-yl-2,3-dihydrobenzofuran-7-yl)-2-trifluoromethylpentyl]-4H-thieno[3,2-b]pyridin-7-one;

1-(4-Benzoyl-1,3-dioxol-4-yl-2-hydroxy-4-methyl-2-trifluoromethylpentyl)-3-chloro-1H-[1,6]naphthyridin-4-one;

6-Chloro-4-[2-hydroxy-4-methyl-4-(5-pyrimidin-5-yl-2,3-dihydrobenzofuran-7-yl)-2-trifluoromethylpentyl]-4H-thieno[3,2-b]pyridin-7-one;

3-Chloro-1-[2-hydroxy-4-methyl-4-(5-pyrimidin-5-yl-2,3-dihydrobenzofuran-7-yl)-2-trifluoromethylpentyl]-1H-[1,6]naphthyridin-4-one;

3-Chloro-1-[2-hydroxy-4-methyl-4-(5-pyrimidin-3-yl-2,3-dihydrobenzofuran-7-yl)-2-trifluoromethylpentyl]-1H-[1,6]naphthyridin-4-one;

4-[2-Hydroxy-4-methyl-4-(5-pyrimidin-5-yl-2,3-dihydrobenzofuran-7-yl)-2-trifluoromethylpentyl]-4H-thieno[3,2-b]pyridin-7-one;

1-[2-Hydroxy-4-methyl-4-(5-pyrimidin-5-yl-2,3-dihydrobenzofuran-7-yl)-2-trifluoromethylpentyl]-1H-[1,6]naphthyridin-4-one;

6-Chloro-4-[2-hydroxy-4-(2-methoxy-5-pyridin-3-ylphenyl)-4-methyl-2-trifluoromethylpentyl]-4H-thieno[3,2-b]pyridin-7-one;

6-Chloro-4-[2-hydroxy-4-(2-methoxy-5-pyrimidin-5-ylphenyl)-4-methyl-2-trifluoromethylpentyl]-4H-thieno[3,2-b]pyridin-7-one;

6-Chloro-4-[2-hydroxy-4-(2-hydroxy-5-pyridin-3-ylphenyl)-4-methyl-2-trifluoromethylpentyl]-4H-thieno[3,2-b]pyridin-7-one;

6-Chloro-4-[2-hydroxy-4-(2-hydroxy-5-pyrimidin-5-ylphenyl)-4-methyl-2-trifluoromethylpentyl]-4H-thieno[3,2-b]pyridin-7-one;
4-(4-Biphenyl-3-yl-2-hydroxy-4-methyl-2-trifluoromethylpentyl)-6-chloro-4H-thieno[3,2-b]pyridin-7-one; and

4-(4-Biphenyl-3-yl-2-hydroxy-4-methyl-2-trifluoromethylpentyl)-4H-thieno[3,2-b]pyridin-7-one,

or a tautomer, prodrug, solvate, or salt thereof.

9. A pharmaceutical composition comprising an effective amount of a compound according to one of claims 1 to 8, or a tautomer, prodrug, solvate, or salt thereof, and a pharmaceutically acceptable excipient or carrier.

10. A method of modulating the glucocorticoid receptor function in a patient, the method comprising administering to the patient an effective amount of a pharmaceutically acceptable compound according to one of claims 1 to 8, or a tautomer, prodrug, solvate, or salt thereof.

11. A method of treating a disease-state or condition mediated by the glucocorticoid receptor function in a patient in need of such treatment, the method comprising administering to the patient an effective amount of a pharmaceutically acceptable compound according to one of claims 1 to 8, or a tautomer, prodrug, solvate, or salt thereof.

12. A method of treating a disease-state or condition selected from: type II diabetes, obesity, cardiovascular diseases, hypertension, arteriosclerosis, neurological diseases, adrenal and pituitary tumors, and glaucoma, in a patient in need of such treatment, the method comprising administering to the patient an effective amount of a pharmaceutically acceptable compound according to one of claims 1 to 8, or a tautomer, prodrug, solvate, or salt thereof.

13. A method of treating a disease characterized by inflammatory, allergic, or proliferative processes, in a patient in need of such treatment, the method comprising administering to the patient an effective amount of a pharmaceutically acceptable...
compound according to one of claims 1 to 8, or a tautomeric, prodrug, solvate, or salt thereof.

14. The method according to claim 13, wherein the disease is selected from: (i) lung diseases; (ii) rheumatic diseases/autoimmune diseases/joint diseases; (iii) allergic diseases; (iv) vasculitis diseases; (v) dermatological diseases; (vi) renal diseases; (vii) hepatic diseases; (viii) gastrointestinal diseases; (ix) proctological diseases; (x) eye diseases; (xi) diseases of the ear, nose, and throat (ENT) area; (xii) neurological diseases; (xiii) blood diseases; (xiv) tumor diseases; (xv) endocrine diseases; (xvi) organ and tissue transplantations and graft-versus-host diseases; (xvii) severe states of shock; (xviii) substitution therapy; and (xix) pain of inflammatory genesis.

15. The method according to claim 13, wherein the disease is selected from: type I diabetes, osteoarthritis, Guillain-Barre syndrome, restenosis following percutaneous transluminal coronary angioplasty, Alzheimer disease, acute and chronic pain, atherosclerosis, reperfusion injury, bone resorption diseases, congestive heart failure, myocardial infarction, thermal injury, multiple organ injury secondary to trauma, acute purulent meningitis, necrotizing enterocolitis, and syndromes associated with hemodialysis, leukopheresis, and granulocyte transfusion.

16. A method of treating a disease-state or condition mediated by the glucocorticoid receptor function in a patient in need of such treatment, the method comprising sequentially or simultaneously administering to the patient: (a) an effective amount of a pharmaceutically acceptable compound according to one of claims 1 to 8 or a tautomer, prodrug, solvate, or salt thereof; and (b) a pharmaceutically acceptable glucocorticoid.

17. A kit for the in vitro diagnostic determination of the glucocorticoid receptor function in a sample, comprising:

(a) a diagnostically effective amount of a compound according to one of claims 1 to 8 or a tautomer, prodrug, solvate, or salt thereof; and

(b) instructions for use of the diagnostic kit.

18. A method of making a compound of Formula (IA)
where $R^1$, $R^2$, $R^3$, $R^4$, and $X$ are as defined in one of claims 1 to 8 and $R^4$ is -CH$_2$-, the method comprising:

(a) reacting an ester of Formula (II) with a suitable reducing agent in a suitable solvent to form a diol of Formula (III)

(b) reacting the diol of Formula (III) with a sulfonic acid chloride, $R'SO_2Cl$, to form a sulfonic acid ester of Formula (IV)

(c) reacting the intermediate of Formula (IV) with a suitable base to form the epoxide of Formula (V)

(d) reacting the epoxide of Formula (V) with the desired $R^5H$ in the presence of a suitable base to form the compound of Formula (IA)

IA ($R^4 = CH_2$, $X = OH$).
19. A method of making a compound of Formula (IA)

\[
\text{R}^1 \text{R}^2 \text{R}^3 \text{R}^4 \text{X} \text{CF}_3
\]

where \(\text{R}^1, \text{R}^2, \text{R}^3, \text{R}^4, \text{X}\) and \(X\) are as defined in one of claims 1 to 8 and \(\text{R}^4\) is \(-\text{CH}_2-\), the method comprising:

(a) reacting a diol of Formula (III) with a suitable oxidizing agent to form the ketone of Formula (XI)

\[
\text{R}^1 \text{R}^2 \text{R}^3 \text{HO} \text{CF}_3 \text{OH} \xrightarrow{\text{Oxidative Cleavage}} \text{R}^1 \text{R}^2 \text{R}^3 \text{O} \text{CF}_3
\]

(b) reacting the ketone of Formula (XI) with suitable reagents to form the epoxide of Formula (V)

\[
\text{R}^1 \text{R}^2 \text{R}^3 \text{OH} \xrightarrow{\text{Epoxidation}} \text{R}^1 \text{R}^2 \text{R}^3 \text{O}
\]

(c) reacting the epoxide of Formula (V) with the desired \(\text{R}^5\)H in the presence of a suitable base to form the compound of Formula (IA)

\[
\text{R}^1 \text{R}^2 \text{R}^3 \text{O} \xrightarrow{\text{R}^5\text{H base}} \text{R}^1 \text{R}^2 \text{R}^3 \text{HO} \text{CF}_3 \text{R}^5
\]

IA \((\text{R}^4 = \text{CH}_2, X = \text{OH})\).

20. A method of making a compound of Formula (IA)

\[
\text{R}^1 \text{R}^2 \text{R}^3 \text{X} \text{CF}_3 \text{R}^4 \text{R}^5
\]
where \( R^1, R^2, R^3, R^5, \) and \( X \) are as defined in one of claims 1 to 8 and \( R^4 \) is \(-C(O)-\), the method comprising:

(a) hydrolyzing an ester of Formula (II) to produce a carboxylic acid of Formula (X)

(b) coupling the carboxylic acid of Formula (X) with \( R^5H \) to provide the desired compound of Formula (I)

21. A compound of Formula (IB)

wherein:

\( R^1 \) is an aryl, heteroaryl, heterocyclyl, or C\(_2\)-C\(_8\) cycloalkyl group, each optionally independently substituted with one to three substituent groups,

wherein each substituent group of \( R^1 \) is independently C\(_1\)-C\(_3\) alkyl, C\(_2\)-C\(_3\) alkenyl, C\(_2\)-C\(_3\) alkynyl, C\(_3\)-C\(_8\) cycloalkyl, heterocyclyl, aryl, heteroaryl, C\(_1\)-C\(_5\) alkoxy, C\(_2\)-C\(_3\) alkenyloxy, C\(_2\)-C\(_3\) alkynyloxy, aryloxy, acyl, C\(_1\)-C\(_5\) alkoxycarbonyl, C\(_1\)-C\(_3\) alkanoyloxy, C\(_1\)-C\(_3\) alkanoyl, aryl, aminocarbonyl, alkylaminocarbonyl, dialkylaminocarbonyl, aminocarbonyloxy, C\(_1\)-C\(_3\) alkylaminocarbonyloxy, C\(_1\)-C\(_3\) dialkylaminocarbonyloxy, C\(_1\)-C\(_3\) alkanoylamino, C\(_1\)-C\(_3\) alkoxy carbonylamino, C\(_1\)-C\(_3\) alkylsulfonylamino, aminosulfonyl, C\(_1\)-C\(_3\) alkylaminosulfonyl, C\(_1\)-C\(_3\) dialkylaminosulfonyl, halogen, hydroxy, carboxy, cyano, trifluoromethyl,
trifluoromethoxy, nitro, or amino wherein the nitrogen atom is optionally independently mono- or di-substituted by C₁-C₅ alkyl or aryl; or ureido wherein either nitrogen atom is optionally independently substituted with C₁-C₅ alkyl; or C₁-C₅ alkythio wherein the sulfur atom is optionally oxidized to a sulfoxide or sulfone,

wherein each substituent group of R¹ is optionally independently substituted with one to three substituent groups selected from aryl or heterocyclyl wherein the heterocycle is optionally independently substituted with hydroxyl, halogen, methyl, or dialkylamino; methyl, methoxy, halogen, hydroxy, oxo, cyano, aminosulfonyl, or amino wherein the nitrogen atom is optionally independently mono- or di-substituted by C₁-C₅ alkyl or C₁-C₃ dialkylamine or aryl; or ureido wherein either nitrogen atom is optionally independently substituted with C₁-C₅ alkyl; or oxime wherein the oxygen atom is optionally substituted by C₁-C₅ alkyl or benzyl;

R² and R³ are each independently hydrogen, C₁-C₅ alkyl, or C₅-C₁₅ arylalkyl group, or R² and R³ together with the carbon atom they are commonly attached to form a C₅-C₈ spiro cycloalkyl ring, or

R¹ and R² when taken together are a chromanyl or dihydrobenzofurananyl optionally substituted with C₁-C₅ alkyl, C₂-C₅ alkenyl, C₂-C₅ alkynyl, C₃-C₅ cycloalkyl, heterocyclyl, aryl, heteroaryl, C₁-C₅ alkoxy, C₂-C₅ alkenyloxy, C₂-C₅ alkynyloxy, aryloxy, acyl, C₁-C₅ alkoxycarbonyl, C₁-C₅ alkanoyloxy, aminocarbonyl, alkylaminocarbonyl, dialkylaminocarbonyl, aminocarbonyloxy, C₁-C₅ alkylaminocarbonyloxy, C₁-C₅ dialkylaminocarbonyloxy, C₁-C₅ alkanoylaminocarbonyl, C₁-C₅ alkoxycarbonylamino, C₁-C₅ alkylsulfonylamino, aminosulfonyl, C₁-C₅ alkylaminosulfonyl, C₁-C₅ dialkylaminosulfonyl, halogen, hydroxy, carboxy, oxo, cyano, trifluoromethyl, trifluoromethoxy, trifluoromethylthio, nitro, or amino wherein the nitrogen atom is optionally independently mono- or di-substituted by C₁-C₅ alkyl; or ureido wherein either nitrogen atom is optionally independently substituted with C₁-C₅ alkyl; or C₁-C₅ alkythio wherein the sulfur atom is optionally oxidized to a sulfoxide or sulfone;
R^4 is carbonyl or methylene optionally independently substituted with one to two substituent groups selected from C_1-C_3 alkyl, hydroxy, and halogen;

R^5 is a 5- to 7-membered heterocyclyl ring fused to a 5- to 7-membered heteroaryl or heterocyclyl ring optionally independently substituted with one to three substituent groups,

wherein each substituent group of R^5 is independently C_1-C_3 alkyl, C_2-C_5 alkenyl, C_2-C_5 alkynyl, C_3-C_8 cycloalkyl, heterocyclyl, aryl, heteroaryl, C_1-C_3 alkoxy, C_2-C_5 alkenyloxy, C_2-C_5 alkynloxy, arlyloxy, acyl, C_1-C_5 alkoxy carbonyl, C_1-C_5 alkanoyloxy, aminocarbonyl, alkylaminocarbonyl, dialkylaminocarbonyl, aminocarbonyloxy, C_1-C_5 alklyaminocarbonyloxy, C_1-C_5 dialkylaminocarbonyloxy, C_1-C_5 alkanoylamino, C_1-C_5 alkoxy carbonylamino, C_1-C_5 alkylsulfonylamino, C_1-C_5 alkylaminosulfonyl, C_1-C_5 dialkylaminosulfonyl, halogen, hydroxy, carboxy, oxo, cyano, trifluoromethyl, trifluoromethoxy, trifluoromethylthio, nitro, or amino wherein the nitrogen atom is optionally independently mono- or di-substituted by C_1-C_5 alkyl; or ureido wherein either nitrogen atom is optionally independently substituted with C_1-C_5 alkyl; or C_1-C_5 alkylthio wherein the sulfur atom is optionally oxidized to a sulfoxide or sulfone,

wherein each substituent group of R^5 is optionally independently substituted with one to three substituent groups selected from C_1-C_3 alkyl, C_1-C_3 alkoxy, C_1-C_3 alkoxy carbonyl, acyl, aryl, benzyl, heteroaryl, heterocyclyl, halogen, hydroxy, oxo, cyano, amino wherein the nitrogen atom is optionally independently mono- or di-substituted by C_1-C_3 alkyl; or ureido wherein either nitrogen atom is optionally independently substituted with C_1-C_3 alkyl; or trifluoromethyl,

wherein R^5 cannot be 1H-[1,5]naphthyridin-4-one;

R^6 is hydrogen, C_1-C_8 alkyl, C_2-C_8 alkenyl, C_2-C_8 alkynyl, carbocycle, heterocyclyl, aryl, heteroaryl, carbocycle-C_1-C_8 alkyl, carboxy, alkoxy carbonyl, aryl-C_1-C_8 alkyl, aryl-C_1-C_8 haloalkyl, heterocyclyl-C_1-C_8 alkyl, heteroaryl-C_1-C_8 alkyl, carbocycle-C_2-C_8 alkenyl, aryl-C_2-C_8 alkenyl, heterocyclyl-C_2-C_8 alkenyl, or heteroaryl-C_2-C_8
alkenyl, each optionally independently substituted with one to three substituent groups,

wherein each substituent group of R⁶ is independently C₁-C₅ alkyl, C₂-C₅ alkenyl, C₂-C₅ alkynyl, C₃-C₈ cycloalkyl, phenyl, C₁-C₅ alkoxy, phenoxy, C₁-C₅ alkanoyl, aroyl, C₁-C₅ alkoxy carbonyl, C₁-C₅ alkanoyloxy, aminocarbonyloxy, C₁-C₅ alkylaminocarboxyloxy, C₁-C₅ dialkylaminocarboxyloxy, aminocarboxyl, C₁-C₅ alkylaminocarboxyl, C₁-C₅ dialkylaminocarboxyl, C₁-C₅ alkanoylamino, C₁-C₅ alkoxy carbonylamino, C₁-C₅ alkylsulfonylamino, C₁-C₅ alkylaminosulfonyl, C₁-C₅ dialkylaminosulfonyl, halo gen, hydroxy, carboxy, cyano, oxo, trifluoromethyl, nitro, or amino wherein the nitrogen atom is optionally independently mono- or di-substituted by C₁-C₅ alkyl; or ureido wherein either nitrogen atom is optionally independently substituted with C₁-C₅ alkyl; or C₁-C₅ alkylthio wherein the sulfur atom is optionally oxidized to a sulfide or sulfone,

wherein R⁶ cannot be trifluoromethyl; and

X is a hydroxy or amino wherein the nitrogen atom is optionally independently mono- or di-substituted by C₁-C₅ alkyl,

or a tautomer, prodrug, solvate, or salt thereof.

22. The compound of Formula (IB) according to claim 21, wherein:

R¹ is phenyl, dihydrobenzofuranyl, benzofuranyl, dihydroindolyl, indolyl, benzofuran[1,3]dioxole, dihydrobenzothienyl, benzothienyl, benzoxazole, benzisoxazole, benzopyrazole, benzimidazole, thienyl, quinolinyl, tetrahydroquinolinone, tetrahydro naphthyridinone, dihydrochromene, pyridinyl, pyrimidinyl, or pyrazinyl, each optionally independently substituted with one to three substituent groups,

wherein each substituent group of R¹ is independently C₁-C₅ alkyl, C₂-C₅ alkenyl, C₂-C₅ alkynyl, C₁-C₅ alkoxy, C₂-C₅ alkenyloxy, C₁-C₅ alkanoyl, C₁-C₅ alkoxy carbonyl, C₁-C₅ alkanoyloxy, C₃-C₈ cycloalkyl, aryl, heteroaryl,
heterocyclyl, halogen, hydroxy, carboxy, cyano, trifluoromethyl, nitro, or C₁-C₃ alkylthio wherein the sulfur atom is optionally oxidized to a sulfoxide or sulfone,

wherein each substituent group of R¹ is optionally independently substituted with a substituent group selected from methyl, methoxy, halogen, hydroxy, oxo, cyano, or amino;

R² and R³ are each independently hydrogen, C₁-C₃ alkyl, benzyl, or phenethyl, or R² and R³ together with the carbon atom they are commonly attached to form a C₃-C₆ spirocycloalkyl ring;

R⁴ is CH₂; and

R⁵ is C₁-C₅ alkyl, C₂-C₅ alkenyl, C₃-C₆ cycloalkyl, phenyl, C₃-C₆ cycloalkyl-C₁-C₃ alkyl, phenyl-C₁-C₃ alkyl, phenyl-C₁-C₃ haloalkyl, C₂-C₆ cycloalkyl-C₂-C₃ alkenyl, phenyl-C₂-C₃ alkenyl, each optionally independently substituted with one to three substituent groups,

wherein each substituent group of R⁵ is independently C₁-C₃ alkyl, C₂-C₃ alkenyl, C₂-C₃ alkynyl, C₁-C₃ alkoxy, aminocarbonyl, C₁-C₃ alkylaminocarbonyl, C₁-C₃ dialkylaminocarbonyl, halogen, hydroxy, oxo, carboxy, cyano, trifluoromethyl, nitro, or C₁-C₃ alkylthio wherein the sulfur atom is optionally oxidized to a sulfoxide or sulfone,

wherein R⁵ cannot be trifluoromethyl,

or a tautomer, prodrug, solvate, or salt thereof.

23. The compound of Formula (IB) according to claim 21, wherein:

R¹ is phenyl, pyridyl, dihydrobenzofuranyl, or benzofuranyl, each optionally independently substituted with one or two substituent groups,
wherein each substituent group of $R^1$ is independently methyl, ethyl, methoxy, ethoxy, fluoro, chloro, bromo, hydroxy, trifluoromethyl, cyano, phenyl, pyridinyl, pyrimidinyl, pyrazolyl, pyrazinyl, imidazolidinyl, thiazolyl, oxazolyl, pyrazolyl, isoxazolyl, isothiazolyl, naphthyl, thiophenyl, pyrrolidinyl, piperidinyl, piperazinyl, or morpholinyl;

$R^2$ and $R^3$ are each independently methyl, or $R^2$ and $R^3$ together with the carbon atom they are commonly attached to form a spiro cyclopropyl ring; and

$R^4$ is $\text{CH}_3$,

or a tautomer, prodrug, solvate, or salt thereof.

24. The compound of Formula (IB) according to claim 21, wherein:

$R^1$ is phenyl, dihydrobenzofuranyl, or benzofuranyl, each optionally independently, substituted with one to three substituent groups,

wherein each substituent group of $R^1$ is independently $C_1-C_3$ alkyl, $C_2-C_3$ alkenyl, $C_2-C_3$ alkynyl, $C_1-C_3$ alkoxy, $C_2-C_3$ alkenyloxy, $C_1-C_3$ alkanoyl, $C_1-C_3$ alkoxy carbonyl, $C_1-C_3$ alkanoyloxy, $C_3-C_8$ cycloalkyl, aryl, heteroaryl, heterocyclyl, halogen, hydroxy, carboxy, cyano, trifluoromethyl, nitro, or $C_1-C_3$ alkylthio wherein the sulfur atom is optionally oxidized to a sulfoxide or sulfone; and

$R^2$ and $R^3$ are each independently hydrogen or $C_1-C_3$ alkyl,

or a tautomer, prodrug, solvate, or salt thereof.

25. The compound of Formula (IB) according to claim 21, wherein:

$R^5$ is 1H-pyridin-2-one or 1H-pyridin-4-one fused to a 5- to 7-membered heteroaryl or heterocyclyl ring each optionally independently substituted with one to three substituent groups,
wherein each substituent group of $R^1$ is independently $C_1$-$C_5$ alkyl, $C_2$-$C_5$ alkenyl, $C_2$-$C_3$ alkynyl, $C_3$-$C_8$ cycloalkyl, heterocyclyl, aryl, heteroaryl, $C_1$-$C_5$ alkoxy, $C_2$-$C_5$ alkenyloxy, $C_2$-$C_5$ alkynyloxy, aryloxy, acyl, $C_1$-$C_5$ alkoxy carbonyl, $C_1$-$C_5$ alkanoyloxy, aminocarbonyl, alkylaminocarbonyl, dialkylaminocarbonyl, aminocarboxyloxy, $C_1$-$C_5$ alkylaminocarboxyloxy, $C_1$-$C_5$ dialkylaminocarboxyloxy, $C_1$-$C_5$ alkanoylamino, $C_1$-$C_5$ alkoxy carbonylamino, $C_1$-$C_5$ alkylsulfonylamino, $C_1$-$C_5$ alkylaminosulfonyl, $C_1$-$C_5$ dialkylaminosulfonyl, halogen, hydroxy, carboxy, oxo, cyano, trifluoromethyl, trifluoromethoxy, trifluoromethylthio, nitro, or amino wherein the nitrogen atom is optionally independently mono- or di-substituted by $C_1$-$C_5$ alkyl; or ureido wherein either nitrogen atom is optionally independently substituted with $C_1$-$C_5$ alkyl; or $C_1$-$C_5$ alkylthio wherein the sulfur atom is optionally oxidized to a sulfoxide or sulfone,

wherein each substituent group of $R^3$ is optionally independently substituted with one to three substituent groups selected from $C_1$-$C_3$ alkyl, $C_1$-$C_3$ alkoxy, $C_1$-$C_3$ alkoxy carbonyl, acyl, aryl, benzyl, heteroaryl, heterocyclyl, halogen, hydroxy, oxo, cyano, amino wherein the nitrogen atom is optionally independently mono- or di-substituted by $C_1$-$C_3$ alkyl; or ureido wherein either nitrogen atom is optionally independently substituted with $C_1$-$C_3$ alkyl; or trifluoromethyl,

wherein $R^5$ cannot be 1H-[1,5]naphthyridin-4-one; and

$R^6$ is $C_1$-$C_5$ alkyl, $C_3$-$C_6$ cycloalkyl, $C_3$-$C_6$ cycloalkylmethyl-, or benzyl, each optionally independently substituted with one to three substituent groups,

wherein each substituent group of $R^6$ is independently methyl, methoxy, fluoro, chloro, bromo, cyano, trifluoromethyl, or hydroxy,

wherein $R^6$ cannot be trifluoromethyl,

or a tautomer, prodrug, solvate, or salt thereof.
26. The compound of Formula (IB) according to claim 21, wherein:

\[ R^1 \] is phenyl, dihydrobenzofuranyl, or benzofuranyl, each optionally independently substituted with one to three substituent groups,

wherein each substituent group of \( R^1 \) is independently \( C_1-C_3 \) alkyl, \( C_2-C_3 \) alkenyl, \( C_2-C_3 \) alkynyl, \( C_1-C_3 \) alkoxy, \( C_2-C_3 \) alkenyloxy, \( C_1-C_3 \) alkanoyl, \( C_1-C_3 \) alkoxy carbonyl, \( C_1-C_3 \) alkanoyloxy, \( C_3-C_8 \) cycloalkyl, aryl, heteroaryl, heterocyclyl, halogen, hydroxy, carboxy, cyano, trifluoromethyl, nitro, or \( C_1-C_3 \) alkylthio wherein the sulfur atom is optionally oxidized to a sulfoxide or sulfone; and

\[ R^2 \text{ and } R^3 \text{ are each independently hydrogen or } C_1-C_3 \text{ alkyl; and} \]

\[ R^5 \text{ is } 1H\text{-pyridin-2-one or } 1H\text{-pyridin-4-one fused to a pyridinyl, pyrimidyl, pyrazinyl, pyridazinyl, imidazolyl, pyrazolyl, isoxazolyl, isothiazolyl, thienyl, pyrrolyl, furanyl, oxazolyl, thiazolyl, pyrrolidinyl, piperidinyl, morpholinyl, or piperazinyl ring each optionally independently substituted with one to three substituent groups,} \]

wherein each substituent group of \( R^5 \) is independently \( C_1-C_5 \) alkyl, \( C_1-C_3 \) alkoxy, acyl, halogen, hydroxy, carboxy, oxo, cyano, trifluoromethyl, trifluoromethoxy, trifluoromethylthio, nitro, or amino wherein the nitrogen atom is optionally independently mono- or di-substituted by \( C_1-C_5 \) alkyl; or ureido wherein either nitrogen atom is optionally independently substituted with \( C_1-C_3 \) alkyl; or \( C_1-C_3 \) alkylthio wherein the sulfur atom is optionally oxidized to a sulfoxide or sulfone,

wherein each substituent group of \( R^5 \) is optionally independently substituted with one to three substituent groups selected from \( C_1-C_3 \) alkyl, \( C_1-C_3 \) alkoxy, halogen, hydroxy, oxo, cyano, amino, or trifluoromethyl,

wherein \( R^5 \) cannot be \( 1H\text{-}[1,5]\text{naphthyridin-4-one}, \)

or a tautomer, prodrug, solvate, or salt thereof.
27. A compound selected from:

4-[2-Difluoromethyl-4-(5-fluoro-2-methoxyphenyl)-2-hydroxy-4-methylpentyl]-4H-thieno[3,2-b]pyridin-7-one;

4-[4-(5-Fluoro-2-methoxyphenyl)-2-hydroxy-4-methylpentyl]-4H-thieno[3,2-b]pyridin-7-one;

4-[4-(5-Fluoro-2-methoxyphenyl)-2-hydroxy-2,4-dimethylpentyl]-4H-thieno[3,2-b]pyridin-7-one;

4-[2-Cyclopropyl-4-(5-fluoro-2-methoxyphenyl)-2-hydroxy-4-methylpentyl]-4H-thieno[3,2-b]pyridin-7-one;

1-[2-Difluoromethyl-4-(5-fluoro-2-methoxyphenyl)-2-hydroxy-4-methylpentyl]-1H-[1,6]naphthyridin-4-one;

1-[4-(5-Fluoro-2-methoxyphenyl)-2-hydroxy-4-methylpentyl]-1H-[1,6]naphthyridin-4-one;

1-[4-(5-Fluoro-2-methoxyphenyl)-2-hydroxy-2,4-dimethylpentyl]-1H-[1,6]naphthyridin-4-one;

1-[2-Cyclopropyl-4-(5-fluoro-2-methoxyphenyl)-2-hydroxy-4-methylpentyl]-1H-[1,6]naphthyridin-4-one;

6-Chloro-4-[2-difluoromethyl-4-(2,3-dihydrobenzofuran-7-yl)-2-hydroxy-4-methylpentyl]-4H-thieno[3,2-b]pyridin-7-one;

6-Bromo-4-[4-(5-fluoro-2-methoxyphenyl)-2-hydroxy-4-methylpentyl]-4H-thieno[3,2-b]pyridin-7-one;

3-Chloro-1-[4-(2,3-dihydrobenzofuran-7-yl)-2-hydroxy-2,4-dimethylpentyl]-1H-[1,6]naphthyridin-4-one;
3-Bromo-1-[2-cyclopropyl-4-(2,3-dihydrobenzofuran-7-yl)-2-hydroxy-4-methylpentyl]-1H-[1,6]naphthyridin-4-one;

4-[2-Difluoromethyl-2-hydroxy-4-(2-methoxy-5-pyridin-3-ylphenyl)-4-methylpentyl]-4H-thieno[3,2-b]pyridin-7-one;

6-Chloro-4-[2-difluoromethyl-2-hydroxy-4-(2-methoxy-5-pyrimidin-5-ylphenyl)-4-methylpentyl]-4H-thieno[3,2-b]pyridin-7-one;

6-Chloro-4-[2-difluoromethyl-2-hydroxy-4-methyl-4-(5-pyridin-3-yl-2,3-dihydrobenzofuran-7-yl)pentyl]-4H-thieno[3,2-b]pyridin-7-one;

3-Chloro-1-{4-[5-(5-chloropyridin-3-yl)-2,3-dihydrobenzofuran-7-yl]-2-hydroxy-2,4-dimethylpentyl}-1H-[1,6]naphthyridin-4-one;

1-{2-Cyclopropyl-4-[5-(2,6-dimethylpyridin-4-yl)-2-methoxyphenyl]-2-hydroxy-4-methylpentyl}-1H-[1,6]naphthyridin-4-one;

4-[2-Hydroxy-4-methyl-4-(5-pyrazin-2-yl-2,3-dihydrobenzofuran-7-yl)pentyl]-4H-thieno[3,2-b]pyridin-7-one; and

3-Chloro-1-{2-difluoromethyl-2-hydroxy-4-methyl-4-[5-(6-methylpyridin-2-yl)-2,3-dihydrobenzofuran-7-yl]pentyl}-1H-[1,6]naphthyridin-4-one,

or a tautomer, prodrug, solvate, or salt thereof.

28. A pharmaceutical composition comprising an effective amount of a compound according to one of claims 21 to 27, or a tautomer, prodrug, solvate, or salt thereof, and a pharmaceutically acceptable excipient or carrier.

29. A method of modulating the glucocorticoid receptor function in a patient, the method comprising administering to the patient an effective amount of a pharmaceutically
acceptable compound according to one of claims 21 to 27, or a tautomer, prodrug, solvate, or salt thereof.

30. A method of treating a disease-state or condition mediated by the glucocorticoid receptor function in a patient in need of such treatment, the method comprising administering to the patient an effective amount of a pharmaceutically acceptable compound according to one of claims 21 to 27, or a tautomer, prodrug, solvate, or salt thereof.

31. A method of treating a disease-state or condition selected from: type II diabetes, obesity, cardiovascular diseases, hypertension, arteriosclerosis, neurological diseases, adrenal and pituitary tumors, and glaucoma, in a patient in need of such treatment, the method comprising administering to the patient an effective amount of a pharmaceutically acceptable compound according to one of claims 21 to 27, or a tautomer, prodrug, solvate, or salt thereof.

32. A method of treating a disease characterized by inflammatory, allergic, or proliferative processes, in a patient in need of such treatment, the method comprising administering to the patient an effective amount of a pharmaceutically acceptable compound according to one of claims 21 to 27, or a tautomer, prodrug, solvate, or salt thereof.

33. The method according to claim 32, wherein the disease is selected from: (i) lung diseases; (ii) rheumatic diseases/autoimmune diseases/joint diseases; (iii) allergic diseases; (iv) vasculitis diseases; (v) dermatological diseases; (vi) renal diseases; (vii) hepatic diseases; (viii) gastrointestinal diseases; (ix) proctological diseases; (x) eye diseases; (xi) diseases of the ear, nose, and throat (ENT) area; (xii) neurological diseases; (xiii) blood diseases; (xiv) tumor diseases; (xv) endocrine diseases; (xvi) organ and tissue transplantations and graft-versus-host diseases; (xvii) severe states of shock; (xviii) substitution therapy; and (xix) pain of inflammatory genesis.

34. The method according to claim 32, wherein the disease is selected from: type I diabetes, osteoarthritis, Guillain-Barre syndrome, restenosis following percutaneous transluminal coronary angioplasty, Alzheimer disease, acute and chronic pain,
atherosclerosis, reperfusion injury, bone resorption diseases, congestive heart failure, myocardial infarction, thermal injury, multiple organ injury secondary to trauma, acute purulent meningitis, necrotizing enterocolitis, and syndromes associated with hemodialysis, leukopheresis, and granulocyte transfusion.

35. A method of treating a disease-state or condition mediated by the glucocorticoid receptor function in a patient in need of such treatment, the method comprising sequentially or simultaneously administering to the patient: (a) an effective amount of a pharmaceutically acceptable compound according to one of claims 21 to 27 or a tautomer, prodrug, solvate, or salt thereof; and (b) a pharmaceutically acceptable glucocorticoid.

36. A kit for the in vitro diagnostic determination of the glucocorticoid receptor function in a sample, comprising:
   (a) a diagnostically effective amount of a compound according to one of claims 21 to 27 or a tautomer, prodrug, solvate, or salt thereof; and
   (b) instructions for use of the diagnostic kit.

37. A method of making a compound of Formula (IB)

\[
R^3 \quad X \quad R^5
\]

(IB)

where \( R^1, R^2, R^3, R^5, \) and \( X \) are as defined in one of claims 21 to 27 and \( R^4 \) is \(-\text{CH}_2-\), the method comprising:
(a) reacting a compound of Formula (IA) with a suitable base in a suitable solvent to form a ketone of Formula (IIB)

\[
\text{base}
\]

IA

\[
\text{IIB}
\]

(b) reacting the ketone of Formula (IIB) with a organometallic reagent to form a compound of Formula (IB)

139
38. A method of making a compound of Formula (IB)

\[
\text{(IB)}
\]

where \( R^1, R^2, R^3, R^4, R^5, R^6 \), and \( X \) are as defined in one of claims 21 to 27, the method comprising:

(a) epoxidizing a ketone of Formula (IIIB) with suitable reagents to form an epoxide of Formula (VB)

\[
\text{IIIIB} \xrightarrow{\text{epoxidation}} \text{VB}
\]

(b) reacting the epoxide of Formula (VB) with \( R^5H \) in the presence of a suitable base to form the compound of Formula (IB)

\[
\text{VB} \xrightarrow{\text{base}} \text{IB} \quad \text{\( R^4 \) is CH}_2\text{ and } X \text{ is OH)}
\]

39. A method of making a compound of Formula (IB)

\[
\text{(IB)}
\]
where $R^1, R^2, R^3, R^4, R^5, R^6$, and $X$ are as defined in one of claims 21 to 27, the method comprising:

(a) olefinating a ketone of Formula (IIIb) with suitable reagents to form an alkene of Formula (IVb)

(b) epoxidizing the alkene of Formula (IVb) with suitable reagents to form an epoxide of Formula (VB)

(c) reacting the epoxide of Formula (VB) with $R^5H$ in the presence of a suitable base to form a compound of Formula (IB)

\[ \text{IVB} \xrightarrow{\text{olefination}} \text{IVB} \]

\[ \text{IVB} \xrightarrow{\text{epoxidation}} \text{VB} \]

\[ \text{VB} \xrightarrow{R^5H \text{ base}} \text{IB} \]

(R$^4$ is CH$_2$ and X is OH)

Further documents are listed in the continuation of box C.

### Patent family members are listed in annex.

**Special categories of cited documents:**

- **A** document defining the general state of the art which is not considered to be of particular relevance
- **E** earlier document but published on or after the international filing date
- **L** document which may throw doubts on priority claim(s) or which is cited to establish the publication date of another citation or other special reason (as specified)
- **O** document referring to an oral disclosure, use, exhibition or other means
- **P** document published prior to the international filing date but later than the priority date claimed

**T** document published after the international filing date or priority date and not in conflict with the application but cited to understand the principle or theory underlying the invention

**X** document of particular relevance; the claimed invention cannot be considered novel or cannot be considered to involve an inventive step when the document is taken alone

**Y** document of particular relevance; the claimed invention cannot be considered to involve an inventive step when the document is combined with one or more other such documents, such combination being obvious to a person skilled in the art

**&** document member of the same patent family
