(54) Title: HOST CONSOLE OF AN ELECTRONIC GAMING SYSTEM AND METHOD OF MOVING A GAME CONTROLLED BY THE SYSTEM

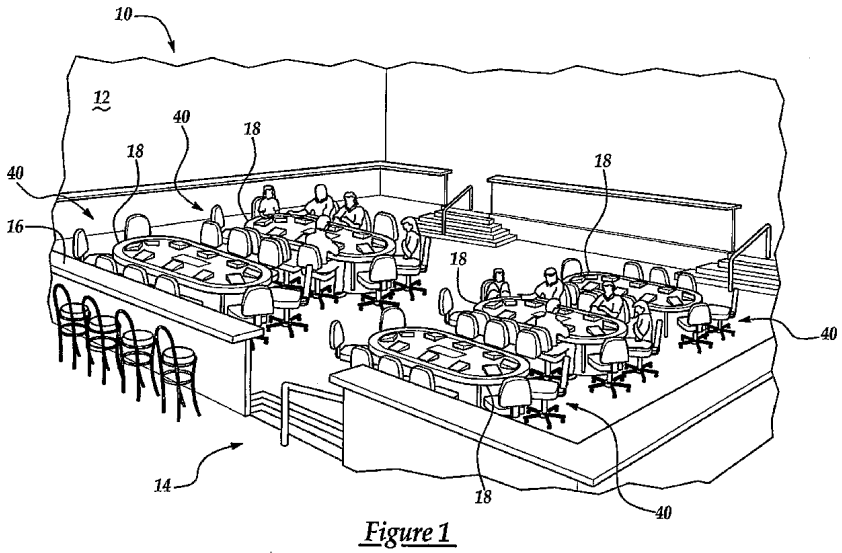

Figure 1

(57) Abstract: An electronic gaming system has a plurality of tables each having a plurality of electronic player interaction areas (EPIA's) spaced preferably about a table periphery so that a gaming player locates oneself in front of a respective EPIA to playa game. A controller of the system assigns anyone of preferably a variety of games to anyone table. The player is then free to choose what game he/she desires to play by picking a particular table. When playing of a game is being conducted by the controller at a particular table, the table is considered to be active. When a table is without players and thus a game is not being played, the table is considered to be inactive. The gaming system has a host console that communicates with each EPIA via the controller for managerial control of the plurality of tables.
