(54) Title: GRIT AND FOAM DISPENSER

FIG. 1

(57) Abstract: One embodiment discloses a dispenser having a liquid container for holding a liquid, a liquid pump for moving the liquid from the liquid container to a first outlet, a grit container for holding grit, and an air pump for moving the grit from the container to a second outlet. The dispenser includes an actuator for actuating the liquid pump and the air pump. During operation, the liquid pump dispenses a liquid and the air pump causes air to flow through a first passageway into the grit container causing at least some grit to flow through a second passageway, out of the second outlet and into the liquid.

* Special categories of cited documents :

"A" document defining the general state of the art which is not considered to be of particular relevance

"E" earlier application or patent but published on or after the international filing date

"L" document which may throw doubts on priority claim(s) or which is cited to establish the publication date of another citation or other special reason (as specified)

"O" document referring to an oral disclosure, use, exhibition or other means

"P" document published prior to the international filing date but later than the priority date claimed

"T" later document published after the international filing date or priority date and not in conflict with the application but cited to understand the principle or theory underlying the invention

"X" document of particular relevance; the claimed invention cannot be considered novel or cannot be considered to involve an inventive step when the document is taken alone

"Y" document of particular relevance; the claimed invention cannot be considered to involve an inventive step when the document is combined with one or more other such documents, such combination being obvious to a person skilled in the art

"&" document member of the same patent family
