UNITED STATES PATENT OFFICE.

LLEWELLYN M. MARR, OF BOSTON, MASSACHUSETTS.

IMPROVEMENT IN SHIRTS.

Specification forming part of Letters Patent No. 149,049, dated March 31, 1874; application filed February 19, 1874.

To all whom it may concern :

Be it known that I, LLEWELLYN M. MARR, of Boston, in the county of Suffolk, Commonwealth of Massachusetts, have invented certain new and useful Improvements in Shirts; and I do hereby declare that the following is a full, clear, and exact description thereof, that will enable others skilled in the art to which it appertains to make and use the same, reference being had to the accompanying drawings, and to the letters of reference marked thereon, which form a part of this specification.

Figure 1 is a front view, with one of the bosoms turned down. Fig. 2 is a side view, partly in section, showing where the bosoms are attached to the shirt.

Same letters show like parts.

The object of my invention is to produce a shirt or like garment which shall be provided with two or more bosoms or fronts, in order that when the outer bosom becomes soiled or worn it can be turned down, and another clean front exposed to view.

It may be thus described: A shows the shirt; B, the bosom attached thereto in the ordinary manner. C and D show supplemental bosoms or fronts fastened just below the lower end of the front B. These are attached in the manner shown—that is to say, one is fastened a short distance below the fastenings

of the preceding one, (see Fig. 2.) On the other or opposite ends of these supplemental fronts are holes, E, into which fit the buttons F, on either side of the collar, when said fronts are thrown upward, as shown at D, Fig. 1.

When the outer bosom C becomes soiled from wear or otherwise, it is released from the buttons F, and allowed to drop downward, as illustrated in Fig. 1, where it remains hidden from view by the clothing of the wearer, and allows the next and clean front D to be exposed for wear. When this front becomes soiled, it is released from the buttons F, and dropped down in the same manner as the one just above described.

A shirt of this description is exceedingly convenient and handy for travelers.

What I claim as my invention, and desire to secure by Letters Patent, is—

A shirt or like garment provided with one or more supplemental bosoms or fronts C D, when said fronts are attached and applied, substantially in the manner and for the purposes herein set forth.

In testimony that I claim the foregoing I have hereunto set my hand.

LLEWELLYN M. MARR.
