UNITED STATES PATENT OFFICE.

CHARLES H. MORSE, OF MINNEAPOLIS, MINNESOTA, ASSIGNOR OF ONE-HALF HIS RIGHT TO CHAS. A. FULLER AND GEORGE H. SIMPSON, OF SAME PLACE.

IMPROVEMENT IN REVERSIBLE CUFFS.

Specification forming part of Letters Patent No. **201,818**, dated March 26, 1878; application filed February 16, 1878.

To all whom it may concern:

Be it known that I, CHAS. H. MORSE, of Minneapolis, in the county of Hennepin, and in the State of Minnesota, have invented certain new and useful Improvements in Reversible Cuffs; and do hereby declare that the following is a full, clear, and exact description thereof, reference being had to the accompanying drawings, and to the letters of reference marked thereon, making a part of this specification.

My invention relates to reversible cuffs made of linen, paper, or other suitable material; and it consists in providing such cuff with a reversible fly attached to it lengthwise at or near the middle, whereby the cuff can be worn four ways, as will be hereinafter more fully set forth.

In order to enable others skilled in the art to which my invention appertains to make and use the same, I will now proceed to describe its construction and operation, referring to the annexed drawing, in which—

Figure 1 is a perspective view of a cuff embodying my invention in position as it is while being worn. Fig. 2 is a similar view, showing the cuff opened.

A represents an ordinary reversible cuff of any desired form and size, and made of linen, paper, or any other suitable material. This cuff is provided with a fly, B, attached to it lengthwise at or near the middle.

When the cuff is made of linen the main part A thereof is, as usual, made of different quality of material on the inside than on the

outside—that is to say, the outside is always of the finest material. This outside finer linen is made in such a manner as to extend from one end of the cuff A to the center, then covering one side of the fly B. It then covers the other side of the fly, and out to the other end of the cuff.

This finer linen may be of one or more pieces, as desired; but in all cases it will be seen that the fly B has such finer material on both sides, while the main cuff A has it only on one side.

In cuffs made of paper or other material it should also be made so that either side of the fly B can be used outwardly.

By the addition of this fly to an ordinary reversible cuff, it will readily be seen that the cuff can be worn in four ways.

Having thus fully described my invention, what I claim as new, and desire to secure by Letters Patent, is—

1. The central reversible fly B, attached to and forming an integral part of a reversible cuff, for the purposes set forth.

2. As a new article of manufacture, a reversible cuff, A, provided with a central reversible fly, B, substantially as and for the purposes herein set forth.

In testimony that I claim the foregoing I have hereunto set my hand this 24th day of January, 1878.

CHAS. H. MORSE.
