(54) Title: BINGO GAME APPARATUS WITH ENTERTAINMENT FEATURE

(57) Abstract: A bingo game apparatus (1) comprises a number of player stations (3), a random event generator capable of generating a number of random events upon which an outcome of the bingo game is based. Each player station (3) is operable by a player to place a wager on a turn of the game of bingo. The outcome of the turn of the game of bingo is either an unfavorable outcome in which the player forfeits the wager, and at least one favorable outcome in which the player wins a corresponding prize. The turn of the different entertainment game has an outcome that is an unfavorable outcome when the outcome of the turn of the game of bingo is an unfavourable outcome, and an outcome that causes the player to win the same corresponding prize as the game of bingo when the outcome of the turn of the game of bingo is a favorable outcome.
