Abstract: A system for transmission and delivery of information/data, the system comprising a communication network having interactive means coupled with short range wireless network and worldwide web; a mobile communication device having interactive means in a short range wireless (Bluetooth) zone, configured servers connected to the World Wide Web and communication network capable of sending and receiving information/data, short range wireless (Bluetooth) central server capable of interpreting received data/content from communication network and user's mobile communication device. A method for transmission and delivery of information/data, the method comprising the steps of sending an application with content to mobile communication device, prompting the user to interact and accept the application, sending additional information if required by the application determining the best mode to send receive information, updating the additional servers on runtime with respect to the sent/received information.
