In the field of classification search, the USPC codes D24/129 are relevant. The application includes claims that describe the design of an injection site for medical fluid lines, shown as FIG. 1 and FIG. 2. The invention provides an improved design for medical fluid injection sites, ensuring better comfort and safety for patients during medical procedures. The description includes detailed specifications and references to other patents, such as D504,745, D578,214, and D638,931, which may have been used as references in the design process. The patent is aimed at advanced medical technology and contributes to the field by offering a novel approach to injection site design.
