Title: DOSAGE FORMS FOR ADMINISTERING COMBINATIONS OF DRUGS

Abstract: The present invention is directed to dosage forms that can be used in therapeutic methods involving the oral co-administration of a combination of at least two drugs, one of which impairs gastrointestinal absorption and one of which does not. The dosage forms are designed so that the drug impairing absorption is not released into the gastrointestinal tract of a patient until after the drugs that do not impair absorption have been released and substantially absorbed. The invention may be used in treatment of migraine using a combination of triptans and NSAIDs or in the treatment of pain using a combination of NSAIDs and opioid analgesics.
INTERNATIONAL SEARCH REPORT

International application No PCT/US 07/05266

A CLASSIFICATION OF SUBJECT MATTER
IPC(S) A61K 9/24 (2007 01)
USPC 424/472

According to International Patent Classification (IPC) or to both national classification and IPC

B FIELDS SEARCHED

Minimum documentation searched (classification system followed by classification symbols)
USPC 424/472

Documentation searched other than minimum documentation to the extent that such documents are included in the fields searched

Electronic data base consulted during the international search (name of data base and where practicable search terms used)
WEST and Google Scholar NSAID, opioid analgesic, sumatriptan, pharmaceutical, sustained release absorption, multilayer bilayer
