Abstract:
The invention relates to the use of succinate dehydrogenase SDH inhibitors (SDHIs), in particular bixafen, penflufen or fluyropyram for controlling wood diseases in grape, to a method for treating plants or plant parts for controlling wood diseases in grape and to a method for controlling wood diseases in grape plants and plant parts, and in plants which grow from the seedlings, grafts and cuttings, by treating them with SDHIs.
Use of succinate dehydrogenase inhibitors (SDHIs) for controlling wood diseases in grape.

The invention relates to the use of succinate dehydrogenase SDH inhibitors (SDHIs), in particular bixafen, penflufen or fluopyram for controlling wood diseases in grape, to a method for treating plants or plant parts for controlling wood diseases in grape and to a method for controlling wood diseases in grape plants and plant parts, in particular roots and in plants which grow from the seedlings, grafts and cuttings, by treating them with SDHIs.

Prior Art

Wood diseases includes a complex of diseases provoked by the presence of fungal species including Acremonium spp., Botryosphaeria spp, Botryosphaeria obtuse, Botryosphaeria dothisidea, Cephalosporium spp., Eutypa lata, Formitiporia mediterranea, Phaeoniella chlamydospora, Phaeoacremonium aleophilum, Phialophora spp., Phomopsis viticola. Phomopsis viticola is responsible for the disease excoriosis, Eutypa lata for the disease Eutypa, Botryosphaeria spp are responsible for Black dead arm disease. Esca is a disease which is caused by at least three fungal species including Phaeonomiella chlamydospora, Phaeoacremonium aleophilum, and Fomitiporia mediterranea. These pathogens were localized in the woody tissues of perennial organs and in lesser proportions in annual canes but never in leaves where symptoms express. The epidemiology is also specific because two forms of symptoms may be distinguished. Chronic symptoms consist of light-green and chlorotic, irregular areas between the veins or along the leaf margin, which gradually spread from the basal to the distal part of the shoot, whereas a more severe form, so-called apoplexy, corresponds to a sudden leaf wilting that leads to death of canes or the whole plant within a few days (Larignon et al, Comptes Rendus Biologies (2009), 332 (9), pp 765-783). Due to the suddenness of the latter, the causes of the apoplectic form of wood diseases are difficult to investigate and, therefore, less documented. However, the speed of visible symptom development suggests that apoplexy results from early events affecting plant physiology linked to the presence of esca fungi in the wood (P. Letousey et al, Phytopathology (2010), Vol 100 (5), pp 424). Several fungicides and application methods have been described for treating Esca, for example fosetyl-aluminium, penconazole, cyproconazole, tetraconazole (Di Marco et al., Phytopathol. Mediterr., (2000) 39, 232-240). Fluopyram in combination with tebuconazole (Tradename Luna Experience) against Eutypa lata is not recommended by the University of California (J Adaskaveg, Report Efficacy and timing of fungicides, bactericides and biologicals for deciduous tree fruit, nut, strawberry, and vine crops (2011)). Wood diseases are difficult to treat as the fungus grows in the woody parts of plant and is therefore not easily accessible for the fungicide. Also systemic fungicides are only of limited use as in most cases they are not evenly distributed throughout the plant. Therefore currently protective treatments, in particular of wounds serving as the entry point for the fungi, are recommended (M Fischer, Der badische Winzer, Oct 2007, pp 17 - 19). Consequently there is a need for more efficient treatment of wood diseases in grape.
Invention

It has now been found that, surprisingly, SDHIs, in particular bixafen, penflufen or fluopyram being root, trunk and leaf systemic fungicides are outstandingly suitable for control of wood diseases in grape.

The present inventions relates to the use of SDHIs for the control of wood diseases in grape.

In one embodiment the present inventions relates to the use of bixafen, penflufen or fluopyram for the control of wood diseases in grape.

In one embodiment the present inventions relates to the use of fluopyram for the control of wood diseases in grape.

In one embodiment the present inventions relates to the use of SDHIs for the control of Acremonium spp., Botryosphaeria spp., Botryosphaeria obtuse, Botryosphaeria dothidea, Cephalosporium spp., Eutypa lata, Formitiporia mediteranea, Phaemoniella chlamydospora, Phaeoacremonium aleophilum, Phialophora spp., Phomopsis viticola in grape.

In one embodiment the present inventions relates to the use of bixafen, penflufen or fluopyram for the control of Acremonium spp., Botryosphaeria spp., Botryosphaeria obtuse, Botryosphaeria dothidea, Cephalosporium spp., Eutypa lata, Formitiporia mediteranea, Phaemoniella chlamydospora, Phaeoacremonium aleophilum, Phialophora spp., Phomopsis viticola.

In one embodiment the present inventions relates to the use of fluopyram for the control of Acremonium spp., Botryosphaeria spp., Botryosphaeria obtuse, Botryosphaeria dothidea, Cephalosporium spp., Eutypa lata, Formitiporia mediteranea, Phaemoniella chlamydospora, Phaeoacremonium aleophilum, Phialophora spp., Phomopsis viticola.

In one embodiment the present inventions relates to the use of SDHIs for the control of Botryosphaeria spp., Botryosphaeria obtuse, Botryosphaeria dothidea, Eutypa lata, Formitiporia mediteranea, Phaemoniella chlamydospora, Phaeoacremonium aleophilum, Phomopsis viticola.

In one embodiment the present inventions relates to the use of bixafen, penflufen or fluopyram for the control of Botryosphaeria spp., Botryosphaeria obtuse, Botryosphaeria dothidea, Eutypa lata, Formitiporia mediteranea, Phaemoniella chlamydospora, Phaeoacremonium aleophilum, Phomopsis viticola.

In one embodiment the present inventions relates to the use of fluopyram for the control of Botryosphaeria spp., Botryosphaeria obtuse, Botryosphaeria dothidea, Eutypa lata, Formitiporia mediteranea, Phaemoniella chlamydospora, Phaeoacremonium aleophilum, Phomopsis viticola.
In one embodiment the present inventions relates to the use of SDHIs for the control of Botryosphaeria spp, Botryosphaeria obtuse, Botryosphaeria dothidea, Eutypa lata, Formitiporia mediteranea, Phaehoacremonium aleophilum, Phomopsis viticola in grape.

In one embodiment the present inventions relates to the use of bixafen, penflufen or fluopyram for the control of Botryosphaeria spp, Botryosphaeria obtuse, Botryosphaeria dothidea, Eutypa lata, Formitiporia mediteranea, Phaemoniella chlamydospora, Phaeoacremonium aleophilum, Phomopsis viticola.

In one embodiment the present inventions relates to the use of fluopyram for the control of Botryosphaeria spp, Botryosphaeria obtuse, Botryosphaeria dothidea, Eutypa lata, Formitiporia mediteranea, Phaemoniella chlamydospora, Phaeoacremonium aleophilum, Phomopsis viticola.

In one embodiment the present inventions relates to the use of bixafen, penflufen or fluopyram for the control of Botryosphaeria spp, Botryosphaeria obtuse, Botryosphaeria dothidea, Eutypa lata, Formitiporia mediteranea, Phaemoniella chlamydospora, Phaeoacremonium aleophilum, Phomopsis viticola in grape.

In one embodiment the present inventions relates to the use of fluopyram for the control of Botryosphaeria spp, Botryosphaeria obtuse, Botryosphaeria dothidea, Eutypa lata, Formitiporia mediteranea, Phaemoniella chlamydospora, Phaeoacremonium aleophilum, Phomopsis viticola in grape.

In one embodiment the present inventions relates to the use of SDHIs for the control of Formitiporia mediteranea, Phaemoniella chlamydospora, Phaeoacremonium aleophilum, Phomopsis viticola in grape.

In one embodiment the present inventions relates to the use of bixafen, penflufen or fluopyram for the control of Formitiporia mediteranea, Phaemoniella chlamydospora, Phaeoacremonium aleophilum, Phomopsis viticola.

In one embodiment the present inventions relates to the use of fluopyram for the control of Formitiporia mediteranea, Phaemoniella chlamydospora, Phaeoacremonium aleophilum, Phomopsis viticola.

In one embodiment the present inventions relates to the use of bixafen, penflufen or fluopyram for the control of Formitiporia mediteranea, Phaemoniella chlamydospora, Phaeoacremonium aleophilum, Phomopsis viticola in grape.

In one embodiment the present inventions relates to the use of fluopyram for the control of Formitiporia mediteranea, Phaemoniella chlamydospora, Phaeoacremonium aleophilum, Phomopsis viticola in grape.

In one embodiment the present inventions relates to a method for treating plants or plant parts for controlling wood diseases in grape by treating them with SDHIs.
In one embodiment the present inventions relates to a method for treating plants or plant parts for controlling wood diseases in grape by treating them with bixafen, penflufen or fluopyram.

In one embodiment the present inventions relates to a method for controlling wood diseases in grape plants and plant parts, and in plants which grow from the seedlings, grafts and cuttings, by treating them with SDHIs.

In one embodiment the present inventions relates to a method for controlling wood diseases in grape plants and plant parts, and in plants which grow from the seedlings, grafts and cuttings, by treating them with bixafen, penflufen or fluopyram.

In one embodiment the present inventions relates to a method for treating plants or plant parts for controlling Acremonium spp., Botryosphaeria spp, Botryosphaeria obtuse, Botryosphaeria dothidea, Cephalosporium spp., Eutypa lata, Formitiporia mediteranea, Phaeoniella chlamydospora, Phaeoaeremonium aleophilum, Phialophora spp., Phomopsis viticola in grape by treating them with SDHIs.

In one embodiment the present inventions relates to a method for treating plants or plant parts for controlling Acremonium spp., Botryosphaeria spp, Botryosphaeria obtuse, Botryosphaeria dothidea, Cephalosporium spp., Eutypa lata, Formitiporia mediteranea, Phaeoniella chlamydospora, Phaeoaeremonium aleophilum, Phialophora spp., Phomopsis viticola in grape by treating them with bixafen, penflufen or fluopyram.

In one embodiment the present inventions relates to a method for controlling Acremonium spp., Botryosphaeria spp, Botryosphaeria obtuse, Botryosphaeria dothidea, Cephalosporium spp., Eutypa lata, Formitiporia mediteranea, Phaeoniella chlamydospora, Phaeoaeremonium aleophilum, Phialophora spp., Phomopsis viticola in grape plants and plant parts, and in plants which grow from the seedlings, grafts and cuttings, by treating them with SDHIs.

In one embodiment the present inventions relates to a method for controlling Acremonium spp., Botryosphaeria spp, Botryosphaeria obtuse, Botryosphaeria dothidea, Cephalosporium spp., Eutypa lata, Formitiporia mediteranea, Phaeoniella chlamydospora, Phaeoaeremonium aleophilum, Phialophora spp., Phomopsis viticola in grape plants and plant parts, and in plants which grow from the seedlings, grafts and cuttings, by treating them with bixafen, penflufen or fluopyram.

In one embodiment the present inventions relates to a method for treating plants or plant parts for controlling Botryosphaeria spp, Botryosphaeria obtuse, Botryosphaeria dothidea, Eutypa lata, Formitiporia mediteranea, Phaeoniella chlamydospora, Phaeoaeremonium aleophilum, Phomopsis viticola in grape by treating them with SDHIs.
In one embodiment the present inventions relates to a method for treating plants or plant parts for controlling Botryosphaeria spp, Botryosphaeria obtuse, Botryosphaeria dothidea, Eutypa lata, Formitiporia mediteranea, Phaemoniella chlamydospora, Phaeoacremonium aleophilum, Phomopsis viticola in grape by treating them with bixafen, penflufen or fluopyram.

In one embodiment the present inventions relates to a method for treating plants or plant parts for controlling Botryosphaeria spp, Botryosphaeria obtuse, Botryosphaeria dothidea, Eutypa lata, Formitiporia mediteranea, Phaemoniella chlamydospora, Phaeoacremonium aleophilum, Phomopsis viticola in grape by treating them with fluopyram.

In one embodiment the present inventions relates to a method for treating plants or plant parts for controlling Formitiporia mediteranea, Phaemoniella chlamydospora, Phaeoacremonium aleophilum, Phomopsis viticola in grape by treating them with SDHIs.

In one embodiment the present inventions relates to a method for treating plants or plant parts for controlling Formitiporia mediteranea, Phaemoniella chlamydospora, Phaeoacremonium aleophilum, Phomopsis viticola in grape by treating them with bixafen, penflufen or fluopyram.

In one embodiment the present inventions relates to a method for treating plants or plant parts for controlling Formitiporia mediteranea, Phaemoniella chlamydospora, Phaeoacremonium aleophilum, Phomopsis viticola in grape by treating them with fluopyram.

In one embodiment the present inventions relates to a method for controlling Botryosphaeria spp, Botryosphaeria obtuse, Botryosphaeria dothidea, Eutypa lata, Formitiporia mediteranea, Phaemoniella chlamydospora, Phaeoacremonium aleophilum, Phomopsis viticola in grape plants and plant parts, and in plants which grow from the seedlings, grafts and cuttings, by treating them with SDHIs.

In one embodiment the present inventions relates to a method for controlling Botryosphaeria spp, Botryosphaeria obtuse, Botryosphaeria dothidea, Eutypa lata, Formitiporia mediteranea, Phaemoniella chlamydospora, Phaeoacremonium aleophilum, Phomopsis viticola in grape plants and plant parts, and in plants which grow from the seedlings, grafts and cuttings, by treating them with bixafen, penflufen or fluopyram.

In one embodiment the present inventions relates to a method for controlling Botryosphaeria spp, Botryosphaeria obtuse, Botryosphaeria dothidea, Eutypa lata, Formitiporia mediteranea, Phaemoniella chlamydospora, Phaeoacremonium aleophilum, Phomopsis viticola in grape plants and plant parts, and in plants which grow from the seedlings, grafts and cuttings, by treating them with fluopyram.
In one embodiment the present inventions relates to a method for *Formitiporia mediteranea*, *Phaemoniella chlamydospora*, *Phaeoaecremonium aleophilum*, *Phomopsis viticola* in grape plants and plant parts, and in plants which grow from the seedlings, grafts and cuttings, by treating them with SDHIs.

In one embodiment the present inventions relates to a method for controlling *Formitiporia mediteranea*, *Phaemoniella chlamydospora*, *Phaeoaecremonium aleophilum*, *Phomopsis viticola* in grape plants and plant parts, and in plants which grow from the seedlings, grafts and cuttings, by treating them with bixafen, penflufen or fluopyram.

In one embodiment the present inventions relates to a method for *Formitiporia mediteranea*, *Phaemoniella chlamydospora*, *Phaeoaecremonium aleophilum*, *Phomopsis viticola* in grape plants and plant parts, and in plants which grow from the seedlings, grafts and cuttings, by treating them with fluopyram.

**Definitions**

In the context of the present invention, "control of wood diseases in grape" means a significant reduction in infestation by *Acremonium* spp., *Botryosphaeria* spp., *Botryosphaeria* obtuse, *Botryosphaeria* dothidea, *Cephalosporium* spp., *Eutypa lata*, *Formitiporia mediteranea*, *Phaemoniella chlamydospora*, *Phaeoaecremonium aleophilum*, *Phialophora* spp., *Phomopsis viticola*, compared with the untreated plant, preferably a significant reduction (by 25-50 %), compared with the untreated plant (100%), more preferably a significant reduction (by 40-79%), compared with the untreated plant (100%); even more preferably, the infection by *Acremonium* spp., *Botryosphaeria* spp., *Botryosphaeria* obtuse, *Botryosphaeria* dothidea, *Cephalosporium* spp., *Eutypa lata*, *Formitiporia mediteranea*, *Phaemoniella chlamydospora*, *Phaeoaecremonium aleophilum*, *Phialophora* spp., *Phomopsis viticola* is entirely suppressed (by 70-100%). The control may be curative, i.e. for treatment of already infected plants, or protective, for protection of plants which have not yet been infected.

In the context of the present invention, a plant is preferably understood to mean a plant at dormancy stage (BBCH 00 according to the BBCH monograph from the German Federal Biological Research Centre for Agriculture and Forestry, 2nd edition, 2001) or after up to the stage of end of leaf fall (BBCH97).

All plants and plant parts can be treated in accordance with the invention.

In the context of the present invention, Plants are understood here to mean all plants and plant populations, such as desired and undesired wild plants or crop plants (including naturally occurring crop plants). Crop plants may be plants which can be obtained by conventional breeding and optimization methods or by biotechnological and genetic engineering methods or combinations of these methods, including the transgenic plants and including the plant varieties which are protectable and non-protectable by plant breeders' rights.
In the context of the present invention, the term "plant parts" are to be understood as meaning all above-ground and below-ground parts and organs of plants, such as shoot, leaf, flower and root, by way of example ears, leaves, needles, stalks, stems, trunks, flowers, fruit bodies, fruits, seed (including seeds of transgenic plants), seedlings, root-stocks, grafts and cuttings, and also roots, and rhizomes. The plant parts also include harvested material and also vegetative and generative propagation material, for example root-stocks, cuttings, grafts, rhizomes, slips and seedlings.

Preferred plant parts are leaves, stems, shoots and trunks, very preferred are stems, shoots and trunks.

In the context of the present invention a succinate dehydrogenase (SDH) inhibitor refers to a compound which is capable of inhibiting succinate dehydrogenase in phytopathogenic fungal organisms, also being known as complex II inhibitor. According to the present invention the at least one SDH inhibitor may be selected from the group consisting of bixafen (1.1), penflufen (1.2), sedaxane (1.3), isopyrazam (comprising mixture of syn-epimeric racemate 1RS,4SR,9RS and anti-epimeric racemate 1RS,4SR,9SR, anti-epimeric racemate 1RS,4SR,9SR, anti-epimeric enantiomer 1S,4R,9R, syn-epimeric racemate 1RS,4SR,9RS, syn-epimeric enantiomer 1R,4S,9S, anti-epimeric enantiomer 1S,4R,9R, syn epimeric racemate 1RS,4SR,9RS, syn epimeric enantiomer 1R,4S,9R, syn epimeric enantiomer 1S,4R,9S) (1.4), pentaoyrad (1.5), furanpyr (1.6), bosalid (1.7), fluxapyroxad (1.8), N-[1-(1,4-dichlorophenyl)-1-methoxypropan-2-yl]-3-(difluoromethyl)-1-methyl-1H-pyrazole-4-carboxamide (1.9), N-[9-(dichloromethylen)-1,2,3,4-tetrahydro-1,4-methanonaphthalen-5-yl]-3-(difluoromethyl)-1-methyl-1H-pyrazol-4-carboxamide (1.10), N-[(1S,4R)-9-(dichloromethylen)-1,2,3,4-tetrahydro-1,4-methanonaphthalen-5-yl]-3-(difluoromethyl)-1-methyl-1H-pyrazol-4-carboxamide (1.11), N-[(IR,4S)-9-(dichloromethylen)-1,2,3,4-tetrahydro-1,4-methanonaphthalen-5-yl]-3-(difluoromethyl)-1-methyl-1H-pyrazol-4-carboxamide (1.12), 3-(difluoromethyl)-1-methyl-N-[2-(1,1,2,2-tetrafluoroethoxy)phenyl]-1H-pyrazol-4-carboxamide (1.13), 3-(difluoromethyl)-N-[4-fluoro-2-[1,1,2,3,3,3-hexafluoropropyloxy]phenyl]-1-methyl-1H-pyrazol-4-carboxamide (1.14), 3-(difluoromethyl)-1-methyl-N-[2-(1,1,2,3,3,3-hexafluoropropyloxy)phenyl]-1-methyl-1H-pyrazol-4-carboxamide (1.15), 3-(difluoromethyl)-1-methyl-N-[2-(3-Cl,1,1,2-trifluoroethoxy)phenyl]-1H-pyrazol-4-carboxamide (1.16), N-[9-(dichloromethylene)-1,2,3,4-tetrahydro-1,4-methanonaphthalen-5-yl]-3-(difluoromethyl)-1-methyl-1H-pyrazol-4-carboxamide (1.17), N-[(1S,4R)-9-(dichloromethylen)-1,2,3,4-tetrahydro-1,4-methanonaphthalen-5-yl]-3-(difluoromethyl)-1-methyl-1H-pyrazol-4-carboxamide (1.18), and N-[(IR,4S)-9-(dichloromethylen)-1,2,3,4-tetrahydro-1,4-methanonaphthalen-5-yl]-3-(difluoromethyl)-1-methyl-1H-pyrazol-4-carboxamide (1.19), fluopyram (1.20).

The SDHIs are described either by the CAS-No or another reference:
Bixafen (1.1; CAS-No 581809-46-3), penflufen (1.2; CAS-No 494793-67-8), sedaxane (1.3; CAS-No 874967-67-6), isopyrazam (comprising mixture of syn-epimeric racemate 1RS,4SR,9RS and anti-epimeric racemate 1RS,4SR,9SR, anti-epimeric racemate 1RS,4SR,9SR, anti-epimeric enantiomer
In the context of the present invention (A) fluopyram (1.20) refers to a compound of the formula

![Diagram](image)

also known as N-
[2-[3-chloro-5-(trifluoromethyl)-2-pyridyl]ethyl]-a,a-trifluoro-ortho-toluamide or N-
[2-[3-chloro-5-(trifluoromethyl)-2-pyridinyl]ethyl]-2-(trifluoromethyl)benzamide. Fluopyram is widely
known as a fungicide, belonging to the group of succinate dehydrogenase (SDH) inhibitors. WO
2004/016088 discloses derivatives of the pyridinylethylbenzamide fungicides, for example fluopyram
against different phytopathogenic fungi. However, it is not apparent from the teaching of the publication
that fluopyram is highly efficient against the wood disease described above. More particularly, the
suitability of fluopyram for treatment of wood diseases is not explicitly disclosed.

Preferably the succinate dehydrogenase (SDH) inhibitor may be selected from the group consisting of
fluopyram (1.20), bixafen (1.1), penflufen (1.2), sedaxane (1.3), isopyrazam (comprising mixture of syn-
epimeric racemate 1RS,4SR,9RS and anti-epimeric racemate 1RS,4SR,9RS, anti-epimeric racemate
1RS,4SR,9RS, anti-epimeric enantiomer 1R,4S,9S, anti-epimeric enantiomer 1S,4R,9R, syn epimeric
racemate 1RS,4SR,9RS, syn-epimeric enantiomer 1R,4S,9R, syn-epimeric enantiomer 1S,4R,9S) (1.4), pentiopyrad (1.5), furametpyr (1.6), fluxapyroxad (1.8), N-[l-(1,4-dichlorophenyl)-1-methoxypropan-2-yl]-3-(difluoromethyl)-1-methyl-1H-pyrazole-4-carboxamide (1.9), N-[9-(dichloromethylen)-1,2,3,4-tetrahydro-1,4-methanonaphthalen-5-yl]-3-(difluoromethyl)-1-methyl-1H-pyrazol-4-carboxamide (1.10), N-[(lS,4R)-9-(dichloromethylen)-1,2,3,4-tetrahydro-1,4-methanonaphthalen-5-yl]-3-(difluoromethyl)-1-methyl-1H-pyrazol-4-carboxamide (1.11), N-[(lR,4S)-9-(dichloromethylen)-1,2,3,4-tetrahydro-1,4-methanonaphthalen-5-yl]-3-(difluoromethyl)-1-methyl-1H-pyrazol-4-carboxamide (1.12), 3-(difluoromethyl)-1-methyl-N-[2-(1,1,2,2-tetrafluoroethoxy)phenyl]-1H-pyrazol-4-carboxamide (1.13), 3-(difluoromethyl)-N-[4-fluoro-2-((1,1,2,3,3-hexafluoropropoxy)phenyl]-1-methyl-1H-pyrazol-4-carboxamide (1.14), 3-(difluoromethyl)-1-methyl-N-[2-(1,1,2,3,3,3-hexafluoropropoxy)phenyl]-1-methyl-1H-pyrazol-4-carboxamide (1.15), 3-(difluoromethyl)-1-methyl-N-[2-(3-Cl-1,1,2-trifluoroethoxy)phenyl]-1H-pyrazol-4-carboxamide (1.16), N-[9-(dichloromethylene)-1,2,3,4-tetrahydro-1,4-methanonaphthalen-5-yl]-3-(difluoromethyl)-1-methyl-1H-pyrazole-4-carboxamide (1.17), N-[(lS,4R)-9-(dichloromethylene)-1,2,3,4-tetrahydro-1,4-methanonaphthalen-5-yl]-3-(difluoromethyl)-1-methyl-1H-pyrazole-4-carboxamide (1.18), and N-[(lR,4S)-9-(dichloromethylene)-1,2,3,4-tetrahydro-1,4-methanonaphthalen-5-yl]-3-(difluoromethyl)-1-methyl-1H-pyrazole-4-carboxamide (1.19).

More preferably the succinate dehydrogenase (SDH) inhibitor may be selected from the group consisting of fluopyram (1.20), bixafen (1.1), penflufen (1.2), isopyrazam (comprising mixture of syn-epimeric racemate 1RS,4SR,9RS and anti-epimeric racemate 1RS,4SR,9SR, anti-epimeric racemate 1RS,4SR,9SR, anti-epimeric enantiomer 1R,4S,9R, syn epimeric racemate 1RS,4SR,9RS, syn-epimeric enantiomer 1R,4S,9R, syn-epimeric enantiomer 1S,4R,9S) (1.4), pentiopyrad (1.5), fluxapyroxad (1.8), N-[l-(1,4-dichlorophenyl)-1-methoxypropan-2-yl]-3-(difluoromethyl)-1-methyl-1H-pyrazole-4-carboxamide (1.9), N-[9-(dichloromethylen)-1,2,3,4-tetrahydro-1,4-methanonaphthalen-5-yl]-3-(difluoromethyl)-1-methyl-1H-pyrazol-4-carboxamide (1.10), N-[(lS,4R)-9-(dichloromethylene)-1,2,3,4-tetrahydro-1,4-methanonaphthalen-5-yl]-3-(difluoromethyl)-1-methyl-1H-pyrazol-4-carboxamide (1.11), N-[(lR,4S)-9-(dichloromethylene)-1,2,3,4-tetrahydro-1,4-methanonaphthalen-5-yl]-3-(difluoromethyl)-1-methyl-1H-pyrazol-4-carboxamide (1.12), 3-(difluoromethyl)-1-methyl-N-[2-(1,1,2,2-tetrafluoroethoxy)phenyl]-1H-pyrazol-4-carboxamide (1.13), 3-(difluoromethyl)-N-[4-fluoro-2-((1,1,2,3,3,3-hexafluoropropoxy)phenyl]-1-methyl-1H-pyrazol-4-carboxamide (1.14), 3-(difluoromethyl)-1-methyl-N-[2-(1,1,2,3,3,3-hexafluoropropoxy)phenyl]-1-methyl-1H-pyrazol-4-carboxamide (1.15), 3-(difluoromethyl)-1-methyl-N-[2-(3-Cl-1,1,2-trifluoroethoxy)phenyl]-1H-pyrazol-4-carboxamide (1.16), N-[9-(dichloromethylene)-1,2,3,4-tetrahydro-1,4-methanonaphthalen-5-yl]-3-(difluoromethyl)-1-methyl-1H-pyrazole-4-carboxamide (1.17), N-[(lS,4R)-9-(dichloromethylene)-1,2,3,4-tetrahydro-1,4-methanonaphthalen-5-yl]-3-(difluoromethyl)-1-methyl-1H-pyrazole-4-carboxamide (1.18), and N-[(lR,4S)-9-(dichloromethylene)-1,2,3,4-tetrahydro-1,4-methanonaphthalen-5-yl]-3-(difluoromethyl)-1-methyl-1H-pyrazole-4-carboxamide (1.19).
Evn more preferably the succinate dehydrogenase (SDH) inhibitor may be selected from the group consisting of fluopyram (1.20), bixafen (1.1), penflufen (1.2), isopyrazam (comprising mixture of syn-epimeric racemate 1RS,4SR,9RS and anti-epimeric racemate 1RS,4SR,9SR, anti-epimeric enantiomer 1R,4S,9S, anti-epimeric enantiomer 1S,4R,9R, syn epimeric racemate 1RS,4SR,9RS, syn-epimeric enantiomer 1R,4S,9R, syn-epimeric enantiomer 1S,4R,9S) (1.4), pentiopyrad (1.5), fluxapyroxad (1.8), N-[(1,4-dichlorophenyl)-1-methoxypropan-2-yl]-3-(difluoromethyl)-1-methyl-1H-pyrazole-4-carboxamide (1.9), N-[9-(dichloromethylen)-1,2,3,4-tetrahydro-1,4-methanonaphthalen-5-yl]-3-(difluoromethyl)-1-methyl-1H-pyrazol-4-carboxamide (1-10), N-[1R,4S)-9-(dichloromethylen)-1,2,3,4-tetrahydro-1,4-methanonaphthalen-5-yl]-3-(difluoromethyl)-1-methyl-1H-pyrazol-4-carboxamide (1.11), N-[1R,4S)-9-(dichloromethylen)-1,2,3,4-tetrahydro-1,4-methanonaphthalen-5-yl]-3-(difluoromethyl)-1-methyl-1H-pyrazol-4-carboxamide (1.12).

Preferably, at least one SDH inhibitor is selected from the group consisting of bixafen (1.1), penflufen (1.2), and fluopyram (1.20). The most preferred SDH inhibitor is fluopyram (1.20).

**Mixtures**

SDHIs, in particular fluopyram, bixafen or penflufen may be present in their commercially available formulations and in the use forms, prepared from these formulations, as a mixture with other active ingredients, such as insecticides, attractants, sterilants, bactericides, acaricides, nematicides, fungicides, growth regulators, herbicides, safeners, fertilizers, biological control agents, resistance enhancers or semiochemicals.

In addition, the described positive effect of SDHIs, in particular fluopyram, bixafen or penflufen on the control of wood diseases can be promoted by an additional treatment with insecticidal, fungicidal or bactericidal active ingredients, resistance enhancers and biological control agents.

Combinations of SDHIs, with substances including insecticides, fungicides, resistance enhancers and bactericides, fertilizers, growth regulators and biological control agents, can likewise find use in the control of wood diseases in the context of the present invention. The combined use of fluopyram, with genetically modified cultivars, especially of transgenic vine cultivars, is additionally likewise possible.

Furthermore the SDHIs, in particular bixafen, penflufen or fluopyram according to the present invention may comprise one or more additional fungicides which may be selected from the group consisting of:

- (1) Inhibitors of the ergosterol biosynthesis, for example (1.1) aldimorph (1704-28-5), (1.2) azaconazole (60207-31-0), (1.3) bitertanol (55179-31-2), (1.4) bromuconazole (116255-48-2), (1.5) cyproconazole

(113096-99-4), (1.6) diclazuril (75736-33-3), (1.7) difenoconazole (119446-68-3), (1.8) diniconazole (83657-24-3), (1.9) diniconazole-M (83657-18-5), (1.10) dodemorph (1593-77-7), (1.11) dodemorph acetate (31717-87-0), (1.12) epoxiconazole (106325-08-0), (1.13) etaconazole (60207-93-4), (1.14) fenamid (60168-88-9), (1.15) fenbuconazole (114369-43-6), (1.16) fenhexamid (126833-17-8), (1.17) fenpropidin (67306-00-7), (1.18) fluquinconazole (136426-54-5), (1.20) furprimidol (56425-91-3), (1.21) flusilazole (85509-19-9), (1.22) flutriafol (76674-21-0), (1.23) furconazole (112839-33-5), (1.24) furconazole-cis (112839-32-4), (1.25) hexaconazole (79983-71-4), (1.26) imazalil (60534-80-7), (1.27) imazalil sulfate (58594-72-2), (1.28) imibenconazole (86598-92-7), (1.29) ipconazole (125225-28-7), (1.30) metconazole (125116-23-6), (1.31) myclobutanil (88671-89-0), (1.32) naftifine (65472-88-0), (1.33) naurimol (63284-71-9), (1.34) o xoconazole (174212-12-5), (1.35) paclobutrazol (76738-62-0), (1.36) pefurazoate (101903-30-4), (1.37) penconazole (66246-88-6), (1.38) piperalin (3478-94-2), (1.39) prochloraz (67747-09-5), (1.40) propiconazole (60207-90-1), (1.41) prothioconazole (178928-70-6), (1.42) pyrubicarbaz (88678-67-5), (1.43) pyrifenox (88283-41-4), (1.44) quinconazole (103970-75-8), (1.45) simeconazole (149508-90-7), (1.46) spiroxamine (118134-30-8), (1.47) tebuconazole (107534-96-3), (1.48) terbinafine (91161-71-6), (1.49) tetraconazole (112281-77-3), (1.50) triadimefon (43121-43-3), (1.51) triadimenol (89482-17-7), (1.52) tridemorph (81412-43-3), (1.53) triflumizol (68694-11-1), (1.54) triforine (26644-46-2), (1.55) triticonazole (131983-72-7), (1.56) uniconazole (83657-22-1), (1.57) uniconazole-p (83657-17-4), (1.58) viniconazole (77174-66-4), (1.59) voriconazole (137234-62-9), (1.60) 1-(4-chlorophenyl)-2-(1H,1,2,4-triazol-1-yl)cycloheptanol (129586-32-9), (1.61) methyl 1-(2,2-dimethyl-2,3-dihydro-1H-inden-1-yl)-1H-imidazole-5-carboxylate (110323-95-0), (1.62) N'-[5-(difluoromethyl)-2-methyl-4-[3-(trimethylsilyl)propoxy]phenyl]-N-ethyl-N-methylimidofomamide, (1.63) N-ethyl-N-methyl-N'-[2-methyl-5-(trifluoromethyl)-4-[3-(trimethylsilyl)propoxy]phenyl] imidofomamide and (1.64) O-[1-(4-methoxyphenoxy)-3,3-dimethylbutan-2-yl] 1H-imidazole-1-carboxioate (111226-71-2).
tetrafluoroethoxy)phenyl]-3-(trifluoromethyl)-1H-pyrazole-4-carboxamide, (2.25) 3-(difluoromethyl)-1-methyl-N-[2-(1,1,2,2-tetrafluoroethoxy)phenyl] -1H-pyrazole-4-carboxamide, (2.26) 3-(difluoromethyl)-N-[4-fluoro-2-(1,1,2,3,3,3-hexafluoropropoxy)phenyl]-1-methyl-1H-pyrazole-4-carboxamide, (2.27) N-[1-(2,4-dichlorophenyl)-1-methoxypropan-2-yl]-3-(difluoromethyl)-1-methyl-1H-pyrazole-4-carboxamide (1092400-95-7) (WO 2008148570), (2.28) 5,8-difluoro-N-[2-(2-fluoro-4-{[(4-(difluoromethyl)pyridin-2-yl)oxy]phenyl}ethyl]quinazolin-4-amine (1210070-84-0) (WO20 10025451), (2.29) N-[9-(dichloromethylene)-1,2,3,4-tetrahydro-1,4-methanonaphthalen-5-yl]-3-(difluoromethyl)-1-methyl-1H-pyrazole-4-carboxamide, (2.30) N-[(1S,4R)-9-(dichloromethylene)-1,2,3,4-tetrahydro-1,4-methanonaphthalen-5-yl]-3-(difluoromethyl)-1-methyl-1H-pyrazole-4-carboxamide and (2.31) N-[(1R,4S)-9-(dichloromethylene)-1,2,3,4-tetrahydro-1,4-methanonaphthalen-5-yl]-3-(difluoromethyl)-1-methyl-1H-pyrazole-4-carboxamide.

[(2,5-dimethylphenoxy)methyl]phenyl]-2-methoxy-N-methylacetamide (173662-97-0) and (3.33) (2R)-2-
[2-[(2,5-dimethylphenoxy)methyl]phenyl]-2-methoxy-N-methylacetamide (394657-24-0).

(4) Inhibitors of the mitosis and cell division, for example (4.1) benomyl (17804-35-2), (4.2) carbachlor 
(10605-21-7), (4.3) chlorfenazole (3574-96-7), (4.4) diclofluanid (287130-20-9), (4.5) ethaboxam 
(162650-77-3), (4.6) fluopicolide (239110-15-7), (4.7) fuberidazole (3878-19-1), (4.8) pencyclon 
(66063-05-6), (4.9) thiabendazole (148-79-8), (4.10) thiophanate-methyl (-)-2-chloro-7-(4-methylpiperidin-1-yl)-6-(2,4,6-trifluorophenyl)[1,2,4]triazolo[1,5-a]pyrimidine (177406-68-7), (9.2) dimethomorph (110488-70-5), (9.3) flumorph (211867-47-9), (9.4) iprovalicarb (140923-17-7), (9.5) 
mancozeb (224049-04-1), (6.3) probenazole (27605-76-1) and (6.4) tiadinil (223580-51-6).

(5) Compounds capable to have a multisite action, like for example (5.1) Bordeaux mixture (8011-63-0), 
(5.2) captan (2425-06-1), (5.3) captan (133-06-2) (WO 02/12172), (5.4) chlorothalonil (1897-45-6), 
(5.5) copper hydroxide (20427-59-2), (5.6) copper naphthenate (1338-02-9), (5.7) copper oxide (1317- 
39-1), (5.8) copper oxychloride (1332-40-7), (5.9) copper(2+) sulfate (7758-98-7), (5.10) dichlofluanid 
(1085-98-9), (5.11) dithianon (3347-22-6), (5.12) dodecane (2439-10-3), (5.13) dodecane free base, (5.14) 
ferbam (14484-64-1), (5.15) folpet (719-96-0), (5.16) folpet (133-07-3), (5.17) guazatine (108173-
90-6), (5.18) guazatine acetate, (5.19) iminoctadine (13516-27-3), (5.20) iminoctadine albesilate 
(169202-06-6), (5.21) iminoctadine triacetate (57520-17-9), (5.22) mancopper (53988-93-5), (5.23) 
mancozeb (8018-01-7), (5.24) maneb (12427-38-2), (5.25) metiram (9006-42-2), (5.26) metiram zinc 
(9006-42-2), (5.27) oxine-copper (10380-28-6), (5.28) propamidine (104-32-5), (5.29) propineb (12071-
83-9), (5.30) sulphur and sulphur preparations including calcium polysulphide (7004-34-9), (5.31) thiram 
(137-26-8), (5.32) tolylfluanid (731-27-1), (5.33) zineb (12122-67-7) and (5.34) ziram (137-30-4).

(6) Compounds capable to induce a host defence, for example (6.1) acibenzolar-S-methyl (135158-54-2), 
(6.2) isothianil (224049-04-1), (6.3) probenazole (27605-76-1) and (6.4) tiadinil (223580-51-6).

(7) Inhibitors of the amino acid and/or protein biosynthesis, for example (7.1) andoprim (23951-85-1), 
(7.2) blasticidin-S (2079-00-7), (7.3) cypacin (121552-61-2), (7.4) kasugamycin (6980-18-3), (7.5) 
kasugamycin hydrochloride hydrate (19408-46-9), (7.6) mepanipyrim (110235-47-7), (7.7) pyrimethanil 
(53112-28-0) and (7.8) 3-(5-fluoro-3,3,4,4-tetramethyl-3,4-dihydroisooquinolin-1-yl)quinoline 
(861647-32-7) (WO2005070917).

(8) Inhibitors of the ATP production, for example (8.1) fenthenyl acetate (900-95-8), (8.2) fenthenyl chloride 
(639-58-7), (8.3) fenthenyl hydroxide (76-87-9) and (8.4) silthiofol (175217-20-6).

(9) Inhibitors of the cell wall synthesis, for example (9.1) benthialvalicarb (177406-68-7), (9.2) 
dimethomorph (110488-70-5), (9.3) flumorph (211867-47-9), (9.4) iprovalicarb (140923-17-7), (9.5)
mandipropamid (374726-62-2), (9.6) polyoxins (11113-80-7), (9.7) polyoxorim (22976-86-9), (9.8) validamycin A (37248-47-8) and (9.9) valifenalate (283159-94-4; 283159-90-0).

(10) Inhibitors of the lipid and membrane synthesis, for example (10.1) biphenyl (92-52-4), (10.2) chloroneb (2675-77-6), (10.3) dicrooran (99-30-9), (10.4) edifenphos (17109-49-8), (10.5) etridiazole (2593-15-9), (10.6) iodocarb (55406-53-6), (10.7) iprobenfos (26087-47-8), (10.8) isoprothiolane (50512-35-1), (10.9) propamocarb (25606-41-1), (10.10) propamocarb hydrochloride (25606-41-1), (10.11) prothiocarb (19622-08-3), (10.12) pyrazophos (13457-18-6), (10.13) quintozene (82-68-8), (10.14) tecnazene (117-18-0) and (10.15) tolclofos-methyl (57018-04-9).

(11) Inhibitors of the melanine biosynthesis, for example (11.1) carpropamid (104030-54-8), (11.2) diclocymet (139920-32-4), (11.3) fenoxanil (115852-48-7), (11.4) phthalide (27355-22-2), (11.5) pyroquilon (57369-32-1), (11.6) tricyclazole (41814-78-2) and (11.7) 2,2,2-trifluoroethyl [3-methyl-1-[[4-methylbenzoyl]amino]butan-2-yl] carbamate (85 1524-22-6) (WO2005042474).

(12) Inhibitors of the nucleic acid synthesis, for example (12.1) benalaxyl (71626-11-4), (12.2) benalaxyl-M (kiralaxyl) (98243-83-5), (12.3) bupirimate (41483-43-6), (12.4) clozylacon (67932-85-8), (12.5) dimethirimil (5221-53-4), (12.6) ethirimol (23947-60-6), (12.7) furalaxyl (57646-30-7), (12.8) hymexazol (10004-44-1), (12.9) metalaxyl (57837-19-1), (12.10) metalaxyl-M (mefenoxam) (70630-17-0), (12.11) ofurace (58810-48-3), (12.12) oxadixyl (77732-09-3) and (12.13) oxilinic acid (14698-29-4).

(13) Inhibitors of the signal transduction, for example (13.1) chlozoline (84332-86-5), (13.2) fenpiclonil (74738-17-3), (13.3) fludioxonil (131341-86-1), (13.4) iprodione (36734-19-7), (13.5) procymidone (32809-16-8), (13.6) quinoxyfen (124495-18-7) and (13.7) vinoclazolin (50471-44-8).

(14) Compounds capable to act as an uncoupler, for example (14.1) binapacryl (485-31-4), (14.2) dinocap (131-72-6), (14.3) ferimzone (89269-64-7), (14.4) fluazinam (79622-59-6) and (14.5) meptyldinocap (131-72-6).

(15) Further compounds, for example (15.1) benthiazole (21564-17-0), (15.2) bethoxazin (163269-30-5), (15.3) capsimycin (70694-08-5), (15.4) carvone (99-49-0), (15.5) chinomethionat (2439-01-2), (15.6) pyriofenone (chlazafenone) (68804-61-9), (15.7) cufraneb (11096-18-7), (15.8) cyflufenamid (180409-60-3), (15.9) cyxinoxanil (57966-95-7), (15.10) cyprosulfamide (221667-31-8), (15.11) dazomet (533-74-4), (15.12) debacarb (62732-91-6), (15.13) dichlorophen (97-23-4), (15.14) diclomezine (62865-36-5), (15.15) difenzoquat (49866-87-7), (15.16) difenzoquat methylsulphate (43222-48-6), (15.17) diphenylamine (122-39-4), (15.18) ecomate, (15.19) fenpyrazamine (473798-59-3), (15.20) flumetover (154025-04-4), (15.21) fluoroimide (41205-21-4), (15.22) flusulfamide (106917-52-6), (15.23) flutianil (304900-25-2), (15.24) fosetyl-aluminium (39148-24-8), (15.25) fosetyl-calcium, (15.26) fosetyl-sodium (39148-16-8), (15.27) hexachlorobenzene (118-74-1), (15.28) irumycin (81604-73-1), (15.29)
methasulfocarb (66952-49-6), (15.30) methyl isothiocyanate (556-61-6), (15.31) metrafenone (220899-03-6), (15.32) mildiomycin (67527-71-3), (15.33) natamycin (7681-93-8), (15.34) nickel dimethylthiocarbamate (15521-65-0), (15.35) nitrothio-isopropyl (10552-74-6), (15.36) ochnithinone (26530-20-1), (15.37) oxamocarb (917242-12-7), (15.38) oxyfentin (34407-87-9), (15.39) pentachlorophenol and salts (87-86-5), (15.40) phenoethrin, (15.41) phosphorous acid and its salts (13598-36-2), (15.42) propamocarb-fosetylrate, (15.43) propanosine-sodium (88498-02-6), (15.44) proquinazid (189278-12-4), (15.45) pyrimorph (868390-90-3), (15.45e) (2E)-3-(4-tert-butylphenyl)-3-(2-chloropyridin-4-yl)-1-(methyl-4-yl)prop-2-en-1-one (1231776-28-5), (15.45z) (2Z)-3-(4-tert-butylphenyl)-3-(2-chloropyridin-4-yl)-1-(methyl-4-yl)prop-2-en-1-one (1231776-29-6), (15.46) pyrrolnitrine (10187-71-9) (EP A 1 559 320), (15.47) tebufloquin (376645-78-2), (15.48) tecloftalam (76280-91-6), (15.49) tolnifide (304911-98-6), (15.50) triazoxide (72459-58-6), (15.51) trichlamide (70193-21-4), (15.52) zarilamid (84527-51-5), (15.53) [3,3'-[(3-isobutyryloxy)methoxy]-4-methoxy-1-(4-chlorophenyl)-2,3-dibutyl-6-chlorothieno[2,3-d]pyrimidin-4(3H)-one (15.54) l-(4-[[5R]-5-(2,6-difluorophenyl)-4,5-dihydro-1,2-oxazol-3-yl]-1,3-thiazol-2-yl) piperidin-1-yl)-2-[5-methyl-3-(trifluoromethyl)]-IH-pyrazol-1-ylfethaneone (1003319-79-6) (WO 2008013622), (15.55) l-(4-[[5S]-5-(2,6-difluorophenyl)-4,5-dihydro-1,2-oxazol-3-yl]-1,3-thiazol-2-yl) piperidin-1-yl)-2-[5-methyl-3-(trifluoromethyl)]-IH-pyrazol-1-ylfethaneone (1003319-80-9) (WO 2008013622), (15.56) l-(4-[[5S]-5-(2,6-difluorophenyl)-4,5-dihydro-1,2-oxazol-3-yl]-1,3-thiazol-2-yl) piperidin-1-yl)-2-[5-methyl-3-(trifluoromethyl)]-IH-pyrazol-1-ylfethaneone (1003318-67-9) (WO 2008013622), (15.57) l-(4-methoxyphenoxy)-3,3-dimethylbutan-2-yl IH-imidazol-1-carboxylate (111227-19-9), (15.58) 2,3,5,6-tetraphloro-4-(methylsulfonyl)pyridine (13108-52-6), (15.59) 2,3-dibutyl-6-chlorothieno[2,3-d]pyrimidin-4(3H)-one (221451-58-7), (15.60) 2,6-dimethyl-IH,5H-[1,4]dithiinno[2,3-c:5,6-c']dipyrrrole-1,3,5,7(2H,6H)-tetron, (15.61) 2-[5-methyl-3-(trifluoromethyl)]-IH-pyrazol-1-yl)-1-(4-[[5R]-5-(4,5-dihydro-1,2-oxazol-3-yl)-1,3-thiazol-2-yl)piperidin-1-yl)ethanone (1003316-53-7) (WO 2008013622), (15.62) 2-[5-methyl-3-(trifluoromethyl)]-IH-pyrazol-1-yl)-1-(4-[[5S]-5-(5-phenyl-4,5-dihydro-1,2-oxazol-3-yl)-1,3-thiazol-2-yl)piperidin-1-yl)ethanone (1003316-54-0) (WO 2008013622), (15.63) 2-[5-methyl-3-(trifluoromethyl)]-IH-pyrazol-1-yl)-1-(4-[[5S]-5-(5-phenyl-4,5-dihydro-1,2-oxazol-3-yl)-1,3-thiazol-2-yl)piperidin-1-yl)ethanone (1003316-51-5) (WO 2008013622), (15.64) 2-butoxy-6-iodo-3-propyl-IH-chromen-4-one, (15.65) 2-chloro-5-[2-chloro-1-(2,6-difluoromethoxyphenyl)-4-methyl-IH-imidazol-5-yl]pyridine, (15.66) 2-phenylethenol and salts (90-43-7), (15.67) 3-[4,4,5-trifluoro-3,3-dimethyl-3,4-dihydroisoquinolin-1-yl]quinoline (861647-85-0) (WO 2005070917), (15.68) 3,4,5-trichloropyridine-2,6-dicarbonitrile (17824-85-0), (15.69) 3-[5-(4-chlorophenyl)-2,3-dimethyl-1,2-oxazolidin-3-yl]pyridine, (15.70) 3-chloro-5-(4-chlorophenyl)-4-(2,6-difluorophenyl)-6-methylpyridazine, (15.71) 4-(4-chlorophenyl)-5-(2,6-difluorophenyl)-3,6-dimethylpyridazine, (15.72) 5-amino-l,3,4-thiadiazole-2-thiol, (15.73) 5-chloro-N'-phenyl-N'-(prop-2-yn-1-yl)thiophene-2-sulfonohydrizide (134-31-6), (15.74) 5-fluoro-2-[4-

All named combination partners of the classes (1) to (16), as well as the SDHIs, in particular bixafen, penflufen and fluopyram of the present invention can, if their functional groups enable this, optionally form salts with suitable bases or acids.

In one embodiment a composition comprising the SDHIs, in particular bixafen, penflufen or fluopyram according to the present invention may comprise one or more additional fungicides which may be selected from the group consisting of:

(1) Inhibitors of the ergosterol biosynthesis, for example aldimorph, azaconazole, bitertanol, bromuconazole, cyproconazole, diclobutrazole, difenoconazole, diniconazole, diniconazole-M, dodemorph, dodemorph acetate, epoxiconazole, etaconazole, fenarimol, fenbuconazole, fenhexamid, fenpropidin, fenpropimorph, fluquinconazole, flurprimidol, flusilazole, flutriafol, furconazole, furconazole-cis, hexaconazole, imazalil, imazalil sulfate, imibenconazole, ipconazole, metconazole, myclobutanil, naftifine, nuarimol, oxpoconazole, paclobutrazol, pefurazoate, penconazole, piperazin, prochloraz, propiconazole, prothioconazole, pyributicarb, pyrifenox, quinoconazole, simeconazole, spiroxamine, tebuconazole, terbinafine, tetaconazole, triadimefon, triadimenol, tridemorph, triflumizole, triforine, triticonazole, uniconazole, uniconazole-p, viniconazole, voriconazole, l-(4-chlorophenyl)-2-(1H-1,2,4-triazol-1-yl)cycloheptanol, methyl l-(2,2-dimethyl-2,3-dihydro-1H-inden-1-yl)-1H-imidazole-5-carboxylate, N′-[5-(difluoromethyl)-2-methyl-4-[3-(trimethylsilyl)propoxy]phenyl]-N-ethyl-N-methylimidoformamide, N-ethyl-N-methyl-N′-[2-methyl-5-(trifluoromethyl)-4-[3-
(trimethylsilyl)propoxy]phenyl} imidoformamide and O-[(1-(4-methoxyphenoxy)-3,3-dimethylbutan-2-yl)lH-imidazole-1-carbothioate and

(2) inhibitors of the respiratory chain at complex I or II, for example (2.1) bixafen (581809-46-3), (2.2) boscalid (188425-85-6), (2.3) carboxin (5234-68-4), (2.4) diflumetorim (130339-07-0), (2.5) fenfuram (24691-80-3), (2.6) fluopyram (658066-35-4), (2.7) flutolanil (66332-96-5), (2.8) fluxapyroxad (907204-31-3), (2.9) furametpyr (123572-88-3), (2.10) furmecyclox (60568-05-0), (2.11) isopyrazam (mixture of syn-epimeric racemate 1RS,4SR,9RS and anti-epimeric racemate 1RS,4SR,9SR) (881685-58-1), (2.12) isopyrazam (anti-epimeric racemate 1RS,4SR,9SR), (2.13) isopyrazam (anti-epimeric enantiomer 1R,4S,9S), (2.14) isopyrazam (anti-epimeric enantiomer 1S,4R,9R), (2.15) isopyrazam (syn-epimeric racemate 1RS,4SR,9RS), (2.16) isopyrazam (syn-epimeric enantiomer 1R,4S,9R), (2.17) isopyrazam (syn-epimeric enantiomer 1S,4R,9S), (2.18) mepronil (558141-40-1), (2.19) oxycarboxin (5259-88-1), (2.20) penflufen (494793-67-8), (2.21) penthiopyrad (183675-82-3), (2.22) sedaxane (874967-67-6), (2.23) thifluzamide (130000-40-7), (2.24) 1-methyl-N-[2-(1,1,2,2-tetrafluoroethoxy)phenyl]-3-(trifluoromethyl)-lH-pyrazole-4-carboxamide, (2.25) 3-(difluoromethyl)-1-methyl-N-[2-(1,1,2,2-tetrafluoroethoxy)phenyl]-1H-pyrazole-4-carboxamide, (2.26) 3-(difluoromethyl)-N-[4-fluoro-2-[(1,2,3,3,3-hexafluoropropoxy)phenyl]-1-methyl-1H-pyrazole-4-carboxamide, (2.27) N-[1-(2,4-dichlorophenyl)-2-methoxypropan-2-yl]-3-(difluoromethyl)-1-methyl-1H-pyrazole-4-carboxamide (1092400-95-7) (WO 2008148570), (2.28) 5,8-difluoro-N-[2-(2-fluoro-4-[[4-(trifluoromethyl)pyridin-2-yl]oxy]phenyl]ethyl]quinazolin-4-amine (1210070-84-0) (WO2010025451), (2.29) N-[9-(dichloromethylene)-1,2,3,4-tetrahydro-1,4-methanonaphthalen-5-yl]-3-(difluoromethyl)-1-methyl-1H-pyrazole-4-carboxamide, (2.30) N-[[1S,4R]-9-(dichloromethylene)-1,2,3,4-tetrahydro-1,4-methanonaphthalen-5-yl]-3-(difluoromethyl)-1-methyl-1H-pyrazole-4-carboxamide and (2.31) N-[1R,4S]-9-(dichloromethylene)-1,2,3,4-tetrahydro-1,4-methanonaphthalen-5-yl]-3-(difluoromethyl)-1-methyl-1H-pyrazole-4-carboxamide.

Further compounds, for example benthiazole, bethoxazin, capsimycin, carvone, chinomethionat, pyriofenone (chlazafenone), cufraneb, cyflufenamid, cymoxanil, cyprosulfamid, dazomet, debacarb, dichlorophen, diclomezine, difenzoquat, difenzoquat methylsulphate, diphenylamine, ecomate, fenpyrazamine, flumetover, fluoroimide, flusulfamide, flutianil, fosetyl-aluminium, fosetyl-calcium, fosetyl-sodium, hexachlorobenzene, irumycin, methasulfocarb, methyl isothiocyanate, metrafenone, mildiomyacin, nitamycin, nickel dimethylthiocarbamate, nitrothal-isopropyl, octrilinone, oxamocarb, oxyfenthin, pentachlorophenol and salts, phenothrin, phosphorous acid and its salts, propamocarb-fosetylale, propanosine-sodium, proquinazid, pyrimorph, tebufloquin, tecloftalam, tolnifanide, triazoxide, trichlamide, zarilamid, (3S,6S,7R,8R)-8-benzyl-3-[{(3-[isobutyryloxy]methoxy]-4-methoxyprpyridin-2-yl}carbonylamino]-6-methyl-4,9-dioxo-1,5-dioxonan-7-yl 2-methylpropanoate, 1-(4-{4-[5R]-5-(2,6-difluorophenyl)-4,5-dihydro-1,2-oxazol-3-yl}-1,3-thiazol-2-yl piperidin-1-yl)-2-[5-methyl-3-(trifluoromethyl)-IH-pyrazol-1-yl]ethanone, 1-(4-{4-[5S]-5-(2,6-difluorophenyl)-4,5-dihydro-1,2-oxazol-3-yl}-1,3-thiazol-2-yl) piperidin-1-yl)ethanone, 1-(4-{4-[5R]-5-(2,6-difluorophenyl)-4,5-dihydro-1,2-oxazol-3-yl}-1,3-thiazol-2-yl) piperidin-1-yl)ethanone, 2-[5-methyl-3-(trifluoromethyl)-IH-pyrazol-1-yl]-1-(4-{4-[5R]-5-(2,6-difluorophenyl)-4,5-dihydro-1,2-oxazol-3-yl}-1,3-thiazol-2-yl) piperidin-1-yl)ethanone, 2-[5-methyl-3-(trifluoromethyl)-IH-pyrazol-1-yl]-1-(4-{4-[5R]-5-(2,6-difluorophenyl)-4,5-dihydro-1,2-oxazol-3-yl}-1,3-thiazol-2-yl) piperidin-1-yl)ethanone, 2-[5-methyl-3-(trifluoromethyl)-IH-pyrazol-1-yl]-1-(4-{4-[5S]-5-(2,6-difluorophenyl)-4,5-dihydro-1,2-oxazol-3-yl}-1,3-thiazol-2-yl) piperidin-1-yl)ethanone, 2-[5-methyl-3-(trifluoromethyl)-IH-pyrazol-1-yl]-1-(4-{4-[5S]-5-(2,6-difluorophenyl)-4,5-dihydro-1,2-oxazol-3-yl}-1,3-thiazol-2-yl) piperidin-1-yl)ethanone, 2-[5-methyl-3-(trifluoromethyl)-IH-pyrazol-1-yl]-1-(4-{4-[5S]-5-(2,6-difluorophenyl)-4,5-dihydro-1,2-oxazol-3-yl}-1,3-thiazol-2-yl) piperidin-1-yl)ethanone, 2-[5-methyl-3-(trifluoromethyl)-IH-pyrazol-1-yl]-1-(4-{4-[5S]-5-(2,6-difluorophenyl)-4,5-dihydro-1,2-oxazol-3-yl}-1,3-thiazol-2-yl) piperidin-1-yl)ethanone, 2-[5-methyl-3-(trifluoromethyl)-IH-pyrazol-1-yl]-1-(4-{4-[5S]-5-(2,6-difluorophenyl)-4,5-dihydro-1,2-oxazol-3-yl}-1,3-thiazol-2-yl) piperidin-1-yl)ethanone, 2-[5-methyl-3-(trifluoromethyl)-IH-pyrazol-1-yl]-1-(4-{4-[5S]-5-(2,6-difluorophenyl)-4,5-dihydro-1,2-oxazol-3-yl}-1,3-thiazol-2-yl) piperidin-1-yl)ethanone, 2-[5-methyl-3-(trifluoromethyl)-IH-pyrazol-1-yl]-1-(4-{4-[5S]-5-(2,6-difluorophenyl)-4,5-dihydro-1,2-oxazol-3-yl}-1,3-thiazol-2-yl) piperidin-1-yl)ethanone, 2-[5-methyl-3-(trifluoromethyl)-IH-pyrazol-1-yl]-1-(4-{4-[5S]-5-(2,6-difluorophenyl)-4,5-dihydro-1,2-oxazol-3-yl}-1,3-thiazol-2-yl) piperidin-1-yl)ethanone, 2-[5-methyl-3-(trifluoromethyl)-IH-pyrazol-1-yl]-1-(4-{4-[5S]-5-(2,6-difluorophenyl)-4,5-dihydro-1,2-oxazol-3-yl}-1,3-thiazol-2-yl) piperidin-1-yl)ethanone, 2-[5-methyl-3-(trifluoromethyl)-IH-pyrazol-1-yl]-1-(4-{4-[5S]-5-(2,6-difluorophenyl)-4,5-dihydro-1,2-oxazol-3-yl}-1,3-thiazol-2-yl) piperidin-1-yl)ethanone,
5-phenyl-4,5-dihydro-1,2-oxazol-3-yl]-1,3-thiazol-2-yl)piperidin-1-yl)ethanone, 2-[5-methyl-3-(trifluoromethyl)-1H-pyrazol-1-yl]-1-[4-[4-(5-phenyl-4,5-dihydro-1,2-oxazol-3-yl)-1,3-thiazol-2-yl)piperidin-1-yl]ethanone, 2-butoxy-6-iodo-3-propyl-4H-chromen-4-one, 2-chloro-5-[2-chloro-1-(2,6-difluoro-4-methoxyphenyl)-4-methyl-1H-indazol-5-yl]pyridine, 2-phenylphenol and salts, 3-(4,4,5-trifluoro-3,3-dimethyl-3,4-dihydroisoquinolin-1-yl)quinoline, 3,4,5-trichloropyridine-2,6-dicarbonitrile, 3-[5-(4-chlorophenyl)-2,3-dimethyl-1,2-oxazolodin-3-yl]pyridine, 3-chloro-5-(4-chlorophenyl)-4-(2,6-difluorophenyl)-6-methylpyrazidine, 4-(4-chlorophenyl)-5-(2,6-difluorophenyl)-3,6-dimethylpyridazine, 5-amino-1,3,4-thiadiazole-2-thiol, 5-chloro-N'-phenyl-N'-(prop-2-yn-1-yl)thiophene-2-sulfonohydrazide, 5-fluoro-2-[(4-fluorobenzyl)oxy]pyridin-4-amine, 5-fluoro-2-[(4-methylbenzyl)oxy]pyrrolidinidin-4-amine, 5-methyl-6-octyl-[1,2,4]triazolo[1,5-a]pyrrolidinidin-7-amine, ethyl (2Z)-3-amino-2-cyano-3-phenylprop-2-enoate, N'-4-[3-(4-fluorobenzyl)-1,2,4-thiadiazol-5-yl]oxo]-2,5-dimethylphenyl)-N-ethyl-N-methylindioformamide, N-(4-chlorobenzyl)-3-[3-methoxy-4-(prop-2-yn-1-yl)oxy]phenylpropanamide, N-(4-chlorophenyl)(cyano)methyl]-3-[3-methoxy-4-(prop-2-yn-1-yl)oxy]phenylpropanamide, N-[(5-bromo-3-chloropyridin-2-yl)methyl]-2,4-dichloropyridine-3-carboxamide, N-[1-(5-bromo-3-chloropyridin-2-yl)ethyl]-2,4-dichloropyridine-3-carboxamide, N-[1-(5-bromo-3-chloropyridin-2-yl)ethyl]-2-fluoro-4-iodopyridine-3-carboxamide, N-[(E)-[(cyclopropylmethoxy)imino]-6-(difluoromethoxy)-2,3-difluorophenyl]methyl]-2-phenylacetamide, N-[(Z)-[(cyclopropylmethoxy)imino]-6-(difluoromethoxy)-2,3-difluorophenyl]methyl]-2-phenylacetamide, N'-4-[3-tert-butyl-4-cyano-1,2-thiazol-5-yl]oxo]-2-chloro-5-methylphenyl)-N-ethyl-N-methylindioformamide, N-methyl-2-(1-[(5-methyl-3-(trifluoromethyl)-1H-pyrazol-1-yl)acetyl] piperidin-4-yl)-N-(1,2,3,4-tetrahydronaphthalen-1-yl)-1,3-thiazole-4-carboxamide, N-methyl-2-(1-[[5-methyl-3-(trifluoromethyl)-1H-pyrazol-1-yl]acetyl] piperidin-4-yl)-N-[(1R)-1,2,3,4-tetrahydronaphthalen-1-yl]-1,3-thiazole-4-carboxamide, N-methyl-2-(1-[[5-methyl-3-(trifluoromethyl)-1H-pyrazol-1-yl]acetyl] piperidin-4-yl)-N-[(1S)-1,2,3,4-tetrahydronaphthalen-1-yl]-1,3-thiazole-4-carboxamide, penty]l [6-][([1-methyl-1H-tetrazol-5-yl)(phenyl)methylidene]amino]oxy]methyl]pyridin-2-yl)carbamate, phenazine-1-carboxylic acid, quinolin-8-ol, quinolin-8-ol sulfate (2:1) and tert-butyl [6-[([1-methyl-1H-tetrazol-5-yl)(phenyl)methylene]amino]oxy]methyl]pyridin-2-yl)carbamate.

In one embodiment a composition comprising the SDHIs, in particular bixafen, penflufen or fluopyram according to the present invention may comprise one or more additional fungicides which may be selected from the group consisting of tebuconazole, prothioconazole, epoxiconazole, ipconazole, fosetyl-aluminium, fosetyl-calcium, fosetyl-sodium, phosphorous acid and its salts, propamocarb-fosetylale, trifloxystrobin.

In one embodiment a composition comprising bixafen, penflufen or fluopyram according to the present invention may comprise one or more additional fungicides which may be selected from the group.
consisting of tebuconazole, prothioconazole, epoxiconazole, ipconazole, fosetyl-aluminium, fosetyl-calcium, fosetyl-sodium, phosphorous acid and its salts, propamocarb-fosetyl, trifloxystrobin.

In one embodiment a composition comprising bixafen according to the present invention may comprise one or more additional fungicides which may be selected from the group consisting of tebuconazole, prothioconazole, epoxiconazole, ipconazole, fosetyl-aluminium, fosetyl-calcium, fosetyl-sodium, phosphorous acid and its salts, propamocarb-fosetyl, trifloxystrobin.

In one embodiment a composition comprising penflufen according to the present invention may comprise one or more additional fungicides which may be selected from the group consisting of tebuconazole, prothioconazole, epoxiconazole, ipconazole, fosetyl-aluminium, fosetyl-calcium, fosetyl-sodium, phosphorous acid and its salts, propamocarb-fosetyl, trifloxystrobin.

In one embodiment a composition comprising fluopyram according to the present invention may comprise one or more additional fungicides which may be selected from the group consisting of tebuconazole, prothioconazole, epoxiconazole, ipconazole, fosetyl-aluminium, fosetyl-calcium, fosetyl-sodium, phosphorous acid and its salts, propamocarb-fosetyl, trifloxystrobin.

In one embodiment a composition comprising fluopyram according to the present invention may comprise tebuconazole.

In one embodiment the active ingredient of a composition consists out of one SDHI as defined above.

In one embodiment the active ingredient of a composition consists out of bixafen.

In one embodiment the active ingredient of a composition consists out of penflufen.

In one embodiment the active ingredient of a composition consists out of fluopyram.

In one embodiment the active ingredients of a composition consists out of fluopyram and tebuconazole.

**Compositions**

The fungicidal compositions of the present invention comprising the SDHIs may further comprise at least one other additional component such as auxiliaries, solvents, carriers or supports, filler, surfactants or extenders, all being agriculturally acceptable.
According to the invention the term "support" or "carrier" is to be understood as meaning a natural or synthetic, organic or inorganic substance which is mixed or combined with the active compounds for better applicability, in particular for application to plants or plant parts or seeds. The support or carrier, which may be solid or liquid, is generally inert and should be suitable for use in agriculture. Suitable solid or liquid carriers / supports include for example ammonium salts and natural ground minerals, such as kaolins, clays, talc, chalk, quartz, attapulgite, montmorillonite or diatomaceous earth, and ground synthetic minerals, such as finely divided silica, alumina and natural or synthetic silicates, resins, waxes, solid fertilizers, water, alcohols, especially butanol, organic solvents, mineral oils and vegetable oils, and also derivatives thereof. It is also possible to use mixtures of such supports or carriers. Solid supports / carriers suitable for granules are: for example crushed and fractionated natural minerals, such as calcite, marble, pumice, sepiolite, dolomite, and also synthetic granules of inorganic and organic meals and also granules of organic material, such as sawdust, coconut shells, maize cobs and tobacco stalks. Suitable liquefied gaseous extenders or carriers are liquids which are gaseous at ambient temperature and under atmospheric pressure, for example aerosol propellants, such as butane, propane, nitrogen and carbon dioxide. Tackifiers, such as carboxymethylcellulose and natural and synthetic polymers in the form of powders, granules and latices, such as gum arabic, polyvinyl alcohol, polyvinyl acetate, or else natural phospholipids, such as cephalins and lecithins and synthetic phospholipids can be used in the formulations. Other possible additives are mineral and vegetable oils and waxes, optionally modified. If the extender used is water, it is also possible for example, to use organic solvents as auxiliary solvents.

Suitable liquid solvents are essentially: aromatic compounds, such as xylene, toluene or alkynaphthalenes, chlorinated aromatic compounds or chlorinated aliphatic hydrocarbons, such as chlorobenzenes, chloroethylenes or methylene chloride, aliphatic hydrocarbons, such as cyclohexane or paraffins, for example mineral oil fractions, mineral and vegetable oils, alcohols, such as butanol or glycol, and also ethers and esters thereof, ketones, such as acetone, methyl ethyl ketone, methyl isobutyl ketone or cyclohexanone, strongly polar solvents, such as dimethylformamide and dimethyl sulphoxide, and also water.

In the present specification, the term "surfactant" comprises an emulsifier, a dispersing agent or a wetting agent of ionic or non-ionic type or a mixture of such surfactants. Mention may be made, for example, of polyacrylic acid salts, lignosulphonic acid salts, phenolsulphonic or naphthalenesulphonic acid salts, polycondensates of ethylene oxide with fatty alcohols or with fatty acids or with fatty amines, substituted phenols (in particular alkylphenols or arylphenols), salts of sulphonuccinic esters, taurine derivatives (in particular alkyl taurates), phosphoric esters of polyoxyethylated alcohols or phenols, fatty acid esters of polyols, and derivatives of the above compounds containing sulphate, sulphonate and phosphate functions. The presence of at least one surfactant is generally essential when the active material and/or the inert support are water-insoluble and when the vector agent for the application is water. Preferably, surfactant content may be comprised between 5% and 40% by weight of the composition.
Additional components may also be included, e.g. protective colloids, adhesives, thickeners, thixotropic agents, penetration agents, stabilisers, sequestering agents. More generally, the active materials can be combined with any solid or liquid additive, which complies with the usual formulation techniques.

It is further possible to use colourants such as inorganic pigments, for example iron oxide, titanium oxide, Prussian blue, and organic dyes, such as alizarin dyes, azo dyes and metal phthalocyanine dyes, and trace nutrients, such as salts of iron, manganese, boron, copper, cobalt, molybdenum and zinc.

In general, the compositions according to the invention may contain from 0.05 to 99% (by weight) of active material, preferably 0.1 to 95% by weight, more preferably 1 to 90% by weight, most preferably 10 to 70% by weight.

Compositions according to the present invention can be used in various forms such as aerosol dispenser, capsule suspension, cold fogging concentrate, dustable powder, emulsifiable concentrate, emulsion oil in water, emulsion water in oil, encapsulated granule, fine granule, flowable concentrate for seed treatment, gas (under pressure), gas generating product, granule, hot fogging concentrate, macrogranule, microgranule, oil dispersible powder, oil miscible flowable concentrate, oil miscible liquid, paste, plant rodlet, powder for dry seed treatment, seed coated with a pesticide, soluble concentrate, soluble powder, solution for seed treatment, suspension concentrate (flowable concentrate), ultra low volume (ulv) liquid, ultra low volume (ulv) suspension, water dispersible granules or tablets, water dispersible powder for slurry treatment, water soluble granules or tablets, water soluble powder for seed treatment and wettable powder.

These compositions include not only compositions which are ready to be applied to the plant or seed to be treated by means of a suitable device, such as a spraying or dusting device, but also concentrated commercial compositions which must be diluted before they are applied to the crop.

In one embodiment, the SDHIs, are applied by dipping, spraying, atomizing, irrigating, evaporating, painting, spreading-on, watering (drenching), drip irrigating, chemigating (i.e. by addition of the active ingredients to the irrigation water, injection and in hydroponic/mineral systems) or injecting the plants, plant parts, plants growing from seedlings, root-stocks, grafts and cuttings or the soil to be treated.

In one embodiment, the SDHIs are applied by dipping, spraying, atomizing, irrigating, evaporating, painting, spreading-on, watering (drenching), drip irrigating, chemigating or injecting seedlings, root-stocks, grafts and cuttings, stems, shoots, trunks, and leaves to be treated.

In one embodiment, bixafen, penflufen and fluopyram are applied by dipping, spraying, atomizing, irrigating, evaporating, painting, spreading-on, watering (drenching), drip irrigating, chemigating or injecting seedlings, root-stocks, grafts and cuttings, the stems, shoots, trunks, and leaves to be treated.
In one embodiment, fluopyram is applied by dipping, spraying, atomizing, irrigating, evaporating, painting, spreading-on, watering (drenching), drip irrigating, chemigating or injecting seedlings, root-stocks, grafts and cuttings, stems, shoots, trunks, and leaves to be treated.

In one embodiment, bixafen, penflufen and fluopyram are applied by dipping, spraying, irrigating, painting, spreading-on, watering (drenching), drip irrigating, chemigating or injecting seedlings, root-stocks, grafts and cuttings, stems, shoots, trunks, and leaves to be treated.

In one embodiment, fluopyram is applied by dipping, spraying, irrigating, painting, spreading-on, watering (drenching), drip irrigating, chemigating or injecting seedlings, root-stocks, grafts and cuttings, stems, shoots, trunks, and leaves to be treated.

The use of the succinate dehydrogenase inhibitors envisaged in accordance with the invention, preferably of fluopyram, bixafen or penflufen are effected preferably with an application rate between 0.01 and 3 kg/ha of active ingredient, more preferably between 0.05 and 2 kg/ha, even more preferably between 0.1 and 1 kg/ha, much more preferably between 0.1 and 0.5 kg/ha.

In one embodiment the application rate is 0.05 to 0.5 kg/ha.

Formulations

Depending on their particular physical and/or chemical properties, fluopyram, bixafen or penflufen can be converted in accordance with the invention to the customary formulations, such as solutions, emulsions, suspensions, powders, foams, pastes, granules, aerosols and microencapsulations in polymeric substances and in coating materials for seed, and also ULV cool and warm fogging formulations.

The formulations contain generally between 0.01 and 95 per cent by weight of active ingredient, preferably between 0.05 and 90%, more preferably between 0.1 and 80%.

These formulations are produced in a known manner, for example by mixing the active ingredients with extenders, i.e. liquid solvents, liquefied gases under pressure and/or solid carriers, optionally using surfactants, i.e. emulsifiers and/or dispersants, and/or foam formers. If the extender used is water, it is also possible to use, for example, organic solvents as auxiliary solvents. Useful liquid solvents are essentially: aromatics such as xylene, toluene or alkynaphthalenes, chlorinated aromatics or chlorinated aliphatic hydrocarbons such as chlorobenzenes, chloroethylenes or methylene chloride, aliphatic hydrocarbons such as cyclohexane or paraffins, for example mineral oil fractions, alcohols such as butanol or glycol and their ethers and esters, ketones such as acetone, methyl ethyl ketone, methyl isobutyl ketone or cyclohexanone, strongly polar solvents such as dimethylformamide or dimethyl sulphoxide, or else water. Liquefied gaseous extenders or carriers are understood to mean those liquids which are
gaseous at standard temperature and under standard pressure, for example aerosol propellants such as halohydrocarbons, or else butane, propane, nitrogen and carbon dioxide. Useful solid carriers are: for example natural rock flours such as kaolins, clays, talc, chalk, quartz, attapulgite, montmorillonite or diatomaceous earth, and synthetic rock flours such as finely divided silica, alumina and silicates. Useful solid carriers for granules are: for example crushed and fractionated natural rocks such as calcite, pumice, marble, sepiolite, dolomite, and synthetic granules of inorganic and organic flours, and also granules of organic material such as sawdust, coconut shells, maize cobs and tobacco stalks. Useful emulsifiers and/or foam generators are: for example nonionic and anionic emulsifiers, such as polyoxyethylene fatty acid esters, polyoxyethylene fatty alcohol ethers, for example alkylaryl polyglycol ethers, alkylsulphonates, alkyl sulphates, arylsulphonates, or else protein hydrolysates. Useful dispersants include: for example lignosulphite waste liquors and methylcellulose.

In the formulations it is possible to use tackifiers such as carboxymethylcellulose, natural and synthetic polymers in the form of powders, granules or latices, such as gum arabic, polyvinyl alcohol and polyvinyl acetate, or else natural phospholipids such as cephalins and lecithins and synthetic phospholipids. Further additives may be mineral and vegetable oils.

It is possible to use colorants such as inorganic pigments, for example iron oxide, titanium oxide and Prussian Blue, and organic dyes such as alizarin dyes, azo dyes and metal phthalocyanine dyes, and trace nutrients such as salts of iron, manganese, boron, copper, cobalt, molybdenum and zinc.

One of the advantages of the present invention is that, owing to the particular systemic properties of fluopyram, bixafen or penflufen, the treatment of the plants, plant parts as for example leaves, stems, trunks and shoots, and plants grown from seedlings, root stocks, grafts and cuttings with fluopyram, bixafen or penflufen enables not only the control of wood diseases on the plant itself, but also on the plant parts which originate therefrom after plant growth. In this way, the immediate treatment of the crop before or at the time of transplanting, or after can be dispensed.

**GMOs**

Particular preference is given in accordance with the invention to treating plants of the plant cultivars which are each commercially available or in use. Plant cultivars are understood to mean plants which have new properties ("traits") and which have been obtained by conventional breeding, by mutagenesis or with the aid of recombinant DNA techniques. Crop plants may accordingly be plants which can be obtained by conventional breeding and optimization methods or by biotechnology and genetic engineering methods or combinations of these methods, including the transgenic plants and including the plant varieties which can and cannot be protected by plant variety rights.
The method according to the invention can thus also be used for the treatment of genetically modified organisms (GMOs), for example plants or seeds. Genetically modified plants (or transgenic plants) are plants in which a heterologous gene has been integrated stably into the genome. The term "heterologous gene" means essentially a gene which is provided or assembled outside the plant and which, on introduction into the cell nucleus genome, imparts new or improved agronomic or other properties to the chloroplast genome or the mitochondrial genome of the transformed plant by virtue of it expressing a protein or polypeptide of interest or by virtue of another gene which is present in the plant, or other genes which are present in the plant, being downregulated or silenced (for example by means of antisense technology, co-suppression technology or RNAi technology [RNA interference]). A heterologous gene present in the genome is likewise referred to as a transgene. A transgene which is defined by its specific presence in the plant genome is referred to as a transformation or transgenic event.

Plants and plant cultivars which are preferably treated according to the invention include all plants which have genetic material which imparts particularly advantageous, useful traits to these plants (whether obtained by breeding and/or biotechnological means).

Plants and plant cultivars which may also be treated in according to invention are those plants which are resistant to one or more abiotic stresses. Abiotic stress conditions may include, for example, drought, cold temperature exposure, heat exposure, osmotic stress; flooding, increased soil salinity, increased mineral exposure, ozone exposure, high light exposure, limited availability of nitrogen nutrients, limited availability of phosphorus nutrients or shade avoidance.

Plants and plant cultivars which may also be treated according to the invention are those plants characterized by enhanced yield characteristics. Increased yield in said plants can be the result of, for example, improved plant physiology, growth and development, such as water use efficiency, water retention efficiency, improved nitrogen use, enhanced carbon assimilation, improved photosynthesis, increased germination efficiency and accelerated maturation. Yield can furthermore be affected by improved plant architecture (under stress and non-stress conditions), including but not limited to early flowering, flowering control for hybrid seed production, seedling vigour, plant size, internode number and distance, root growth, seed size, fruit size, pod size, pod or ear number, seed number per pod or ear, seed mass, enhanced seed filling, reduced seed dispersal, reduced pod dehiscence and lodging resistance. Further yield traits include seed composition, such as carbohydrate content, protein content, oil content and composition, nutritional value, reduction in anti-nutritional compounds, improved processability and better storage stability.

Plants that may also be treated according to the invention are hybrid plants that already express the characteristic of heterosis or hybrid vigour which generally results in higher yield, vigour, health and resistance towards biotic and abiotic stress factors. Such plants are typically made by crossing an inbred
male-sterile parent line (the female parent) with another inbred male-fertile parent line (the male parent). Hybrid seed is typically harvested from the male sterile plants and sold to growers. Male sterile plants can sometimes (e.g. in maize) be produced by detasseling, i.e. the mechanical removal of the male reproductive organs (or male flowers), but, more typically, male sterility is the result of genetic determinants in the plant genome. In that case, and especially when seed is the desired product to be harvested from the hybrid plants, it is typically useful to ensure that male fertility in hybrid plants that contain the genetic determinants responsible for the male sterility is fully restored. This can be accomplished by ensuring that the male parents have appropriate fertility restorer genes which are capable of restoring the male fertility in hybrid plants that contain the genetic determinants responsible for male sterility. Genetic determinants for male sterility may be located in the cytoplasm. Examples of cytoplasmatic male sterility (CMS) were for instance described in Brassica species (WO 1992/005251, WO 1995/009910, WO 1998/27806, WO 2005/002324, WO 2006/021972 and US 6,229,072). However, genetic determinants for male sterility can also be located in the nuclear genome. Male-sterile plants can also be obtained by plant biotechnology methods such as genetic engineering. A particularly useful means of obtaining male-sterile plants is described in WO 89/10396, in which, for example, a ribonuclease such as barnase is selectively expressed in the tapetum cells in the stamens. Fertility can then be restored by expression in the tapetum cells of a ribonuclease inhibitor such as barstar (e.g. WO 1991/002069).

Plants or plant cultivars (obtained by plant biotechnology methods such as genetic engineering) which may likewise be treated according to the invention are herbicide-tolerant plants, i.e. plants made tolerant to one or more given herbicides. Such plants can be obtained either by genetic transformation, or by selection of plants containing a mutation imparting such herbicide tolerance.

Herbicide-tolerant plants are for example glyphosate-tolerant plants, i.e. plants made tolerant to the herbicide glyphosate or salts thereof. For example, glyphosate-tolerant plants can be obtained by transforming the plant with a gene encoding the enzyme 5-enolpyruvylshikimate-3-phosphate synthase (EPSPS). Examples of such EPSPS genes are the AroA gene (mutant CT7) of the bacterium Salmonella typhimurium (Comai et al., Science (1983), 221, 370-371), the CP4 gene of the bacterium Agrobacterium sp. (Barry et al., Curr. Topics Plant Physiol. (1992), 7, 139-145), the genes encoding a petunia EPSPS (Shah et al., Science (1986), 233, 478-481), a tomato EPSPS (Gasser et al., J. Biol. Chem. (1988), 263, 4280-4289) or an Eleusine EPSPS (WO 2001/66704). It can also be a mutated EPSPS, as described, for example, in EP-A 0837944, WO 2000/066746, WO 2000/066747 or WO 2002/026995. Glyphosate-tolerant plants can also be obtained by expressing a gene that encodes a glyphosate oxidoreductase enzyme as described in US 5,776,760 and US 5,463,175. Glyphosate-tolerant plants can also be obtained by expressing a gene that encodes a glyphosate acetyl transferase enzyme as described, for example, in WO 2002/036782, WO 2003/092360, WO 2005/012515 and WO 2007/024782. Glyphosate-tolerant
plants can also be obtained by selecting plants containing naturally occurring mutations of the above-mentioned genes as described, for example, in WO 2001/024615 or WO 2003/013226.

Other herbicide-resistant plants are for example plants that have been made tolerant to herbicides inhibiting the enzyme glutamine synthase, such as bialaphos, phosphinothricin or glufosinate. Such plants can be obtained by expressing an enzyme detoxifying the herbicide or a mutant glutamine synthase enzyme that is resistant to inhibition. One such efficient detoxifying enzyme is, for example, an enzyme encoding a phosphinothricin acetyltransferase (such as the bar or pat protein from Streptomyces species). Plants expressing an exogenous phosphinothricin acetyltransferase are for example described in US 5,561,236; US 5,648,477; US 5,646,024; US 5,273,894; US 5,637,489; US 5,276,268; US 5,739,082; US 5,908,810 and US 7,112,665.

Further herbicide-tolerant plants are also plants that have been made tolerant to the herbicides inhibiting the enzyme hydroxyphenylpyruvatedioxygenase (HPPD). Hydroxyphenylpyruvatedioxygenases are enzymes that catalyse the reaction in which para-hydroxyphenylpyruvate (HPP) is transformed into homogentisate. Plants tolerant to HPPD-inhibitors can be transformed with a gene encoding a naturally occurring resistant HPPD enzyme, or a gene encoding a mutated HPPD enzyme according to WO 1996/038567, WO 1999/024585 and WO 1999/024586. Tolerance to HPPD inhibitors can also be obtained by transforming plants with genes encoding certain enzymes enabling the formation of homogentisate despite the inhibition of the native HPPD enzyme by the HPPD inhibitor. Such plants and genes are described in WO 1999/034008 and WO 2002/36787. Tolerance of plants to HPPD inhibitors can also be improved by transforming plants with a gene encoding an enzyme prephenate dehydrogenase in addition to a gene encoding an HPPD-tolerant enzyme, as described in WO 2004/024928.

Further herbicide-resistant plants are plants that have been made tolerant to acetolactate synthase (ALS) inhibitors. Known ALS-inhibitors include, for example, sulphonyleurea, imidazolinone, triazolopyrimidines, pyrimidinloxy(thio)benzoates, and/or sulphonylaminocarbyltriazolinone herbicides. Different mutations in the ALS enzyme (also known as acetohydroxyacid synthase, AHAS) are known to confer tolerance to different herbicides and groups of herbicides, as described for example in Tranel and Wright, Weed Science (2002), 50, 700-712, but also in US 5,605,011; US 5,378,824; US 5,141,870 and US 5,013,659. The production of sulphonylurea-tolerant plants and imidazolinone-tolerant plants is described in US 5,605,011; US 5,013,659; US 5,141,870; US 5,767,361; US 5,731,180; US 5,304,732; US 4,761,373; US 5,331,107; US 5,928,937; and US 5,378,824; and international publication WO 1996/033270. Other imidazolinone-tolerant plants are also described in for example WO 2004/040012, WO 2004/106529, WO 2005/020673, WO 2005/093093, WO 2006/007373, WO 2006/015376, WO 2006/024351 and WO 2006/060634. Further sulphonylurea- and imidazolinone-tolerant plants are also described in for example WO 2007/024782.
Other plants tolerant to imidazolinone and/or sulphonylurea can be obtained by induced mutagenesis, selection in cell cultures in the presence of the herbicide or by mutation breeding as described for example for soya beans in US 5,084,082, for rice in WO 1997/41218, for sugar beet in US 5,773,702 and WO 1999/057965, for lettuce in US 5,198,599 or for sunflower in WO 2001/065922.

Plants or plant cultivars (obtained by plant biotechnology methods such as genetic engineering) which may also be treated according to the invention are insect-resistant transgenic plants, i.e. plants made resistant to attack by certain target insects. Such plants can be obtained by genetic transformation, or by selection of plants containing a mutation imparting such insect resistance.

The term "insect-resistant transgenic plant", as used herein, includes any plant containing at least one transgene comprising a coding sequence encoding:

1) an insecticidal crystal protein from *Bacillus thuringiensis* or an insecticidal portion thereof, such as the insecticidal crystal proteins listed by Crickmore et al., Microbiology and Molecular Biology Reviews (1998), 62, 807-813, updated by Crickmore et al. (2005) in the *Bacillus thuringiensis* toxin nomenclature, online at:

http://www.lifesci.sussex.ac.uk/Home/Neil_Crickmore/Bt/, or insecticidal portions thereof, e.g. proteins of the Cry protein classes Cry1Ab, Cry1Ac, CryIF, Cry2Ab, Cry3Ae or Cry3Bb or insecticidal portions thereof; or

2) a crystal protein from *Bacillus thuringiensis* or a portion thereof which is insecticidal in the presence of a second other crystal protein from *Bacillus thuringiensis* or a portion thereof, such as the binary toxin made up of the Cy34 and Cy35 crystal proteins (Moellenbeck et al., Nat. Biotechnol. (2001), 19, 668-72; Schnepf et al., Applied Environm. Microb. (2006), 71, 1765-1774); or

3) a hybrid insecticidal protein comprising parts of two different insecticidal crystal proteins from *Bacillus thuringiensis*, such as a hybrid of the proteins of 1) above or a hybrid of the proteins of 2) above, e.g. the Cry1A.105 protein produced by maize event MON98034 (WO 2007/027777); or

4) a protein of any one of points 1) to 3) above wherein some, particularly 1 to 10, amino acids have been replaced by another amino acid to obtain a higher insecticidal activity to a target insect species, and/or to expand the range of target insect species affected, and/or because of changes induced in the encoding DNA during cloning or transformation, such as the Cry3Bb1 protein in maize events MON863 or MON88017, or the Cry3A protein in maize event MIR604; or
5) an insecticidal secreted protein from *Bacillus thuringiensis* or *Bacillus cereus*, or an insecticidal portion thereof, such as the vegetative insecticidal proteins (VIP) listed at: http://www.lifesci.sussex.ac.uk/home/Neil_Crickmore/Bt/vip.html, e.g. proteins from the VIP3Aa protein class; or

5) a secreted protein from *Bacillus thuringiensis* or *Bacillus cereus* which is insecticidal in the presence of a second secreted protein from *Bacillus thuringiensis* or *B. cereus*, such as the binary toxin made up of the VIPIA and VIP2A proteins (WO 1994/21795); or

7) a hybrid insecticidal protein comprising parts from different secreted proteins from *Bacillus thuringiensis* or *Bacillus cereus*, such as a hybrid of the proteins in 1) above or a hybrid of the proteins in 2) above; or

8) a protein of any one of points 1) to 3) above wherein some, particularly 1 to 10, amino acids have been replaced by another amino acid to obtain a higher insecticidal activity to a target insect species, and/or to expand the range of target insect species affected, and/or because of changes induced in the encoding DNA during cloning or transformation (while still encoding an insecticidal protein), such as the VIP3Aa protein in cotton event COT102.

Of course, insect-resistant transgenic plants, as used herein, also include any plant comprising a combination of genes encoding the proteins of any one of the abovementioned classes 1 to 8. In one embodiment, an insect-resistant plant contains more than one transgene encoding a protein of any one of the abovementioned classes 1 to 8, to expand the range of target insect species affected or to delay insect resistance development to the plants, by using different proteins insecticidal to the same target insect species but having a different mode of action, such as binding to different receptor binding sites in the insect.

Plants or plant cultivars (obtained by plant biotechnology methods such as genetic engineering) which may also be treated according to the invention are tolerant to abiotic stress factors. Such plants can be obtained by genetic transformation, or by selection of plants containing a mutation imparting such stress resistance. Particularly useful stress-tolerant plants include:

a. plants which contain a transgene capable of reducing the expression and/or the activity of the poly(ADP-ribose)polymerase (PARP) gene in the plant cells or plants as described in WO 2000/004173 or EP 04077984.5 or EP 06009836.5;

b. plants which contain a stress tolerance-enhancing transgene capable of reducing the expression and/or the activity of the PARG encoding genes of the plants or plant cells as described, for example, in WO 2004/090140;
plants which contain a stress tolerance-enhancing transgene coding for a plant-functional enzyme of the nicotinamide adenine dinucleotide salvage biosynthesis pathway, including nicotinamidase, nicotinate phosphoribosyltransferase, nicotinic acid mononucleotide adenyltransferase, nicotinamide adenine dinucleotide synthetase or nicotinamide phosphoribosyltransferase as described, for example, in EP 04077624.7 or WO 2006/133827 or PCT/EP07/002433.

Plants or plant cultivars (obtained by plant biotechnology methods such as genetic engineering) which may also be treated according to the invention show altered quantity, quality and/or storage stability of the harvested product and/or altered properties of specific ingredients of the harvested product such as:

Plants or plant cultivars (obtained by plant biotechnology methods such as genetic engineering) which may also be treated according to the invention are plants, such as cotton plants, with altered fibre characteristics. Such plants can be obtained by genetic transformation, or by selection of plants containing a mutation imparting such altered fibre characteristics and include:

10 a) plants, such as cotton plants, containing an altered form of cellulose synthase genes as described in WO 1998/000549,

b) plants, such as cotton plants, containing an altered form of rsw2 or rsw3 homologous nucleic acids as described in WO 2004/053219;

c) plants, such as cotton plants, with increased expression of sucrose phosphate synthase as described in WO 2001/017333;

d) plants, such as cotton plants, with increased expression of sucrose synthase as described in WO 02/45485;

e) plants, such as cotton plants, wherein the timing of the plasmodesmatal gating at the basis of the fibre cell is altered, for example through downregulation of fibre-selective β-1,3-glucanase as described in WO 2005/017157;

f) plants, such as cotton plants, having fibres with altered reactivity, e.g. through the expression of the N-acetylglicosaminetransferase gene including nodC and chitin synthase genes as described in WO 2006/136351.

Plants or plant cultivars (that can be obtained by plant biotechnology methods such as genetic engineering) which may also be treated according to the invention are plants, such as oilseed rape or related Brassica plants, with altered oil profile characteristics. Such plants can be obtained by genetic transformation or by selection of plants containing a mutation imparting such altered oil characteristics and include:

a) plants, such as oilseed rape plants, producing oil having a high oleic acid content, as described, for example, in US 5,969,169, US 5,840,946 or US 6,323,392 or US 6,063,947;
b) plants, such as oilseed rape plants, producing oil having a low linolenic acid content, as described in US 6,270,828, US 6,169,190 or US 5,965,755.

c) plants, such as oilseed rape plants, producing oil having a low level of saturated fatty acids, as described, for example, in US 5,434,283.

Examples of herbicide-tolerant plants which may be mentioned are varieties, which are sold under the following trade names: Roundup Ready® (tolerance to glyphosate), Liberty Link® (tolerance to phosphinotricin), IMI® (tolerance to imidazolinones) and SCS® (tolerance to sulphonylureas). Herbicide-resistant plants (plants bred in a conventional manner for herbicide tolerance) which may be mentioned include the varieties sold under the Clearfield® name.

Particularly useful transgenic plants which may be treated according to the invention are plants containing transformation events, or a combination of transformation events, that are listed for example in the databases from various national or regional regulatory agencies (see for example http://gmoinfo.jrc.it/gmp_browse.aspx and http://www.agbios.com/dbase.php).
The example which follows serves to illustrate the invention, but without restricting it.

**Examples: Wood diseases / Grapes**

The following examples illustrate the efficacy of SDHIs for the control of wood diseases developing in grape plants or plant parts.

This test is carried out on representative fungi found in grape plants showing "Esca" Symptoms

<table>
<thead>
<tr>

Formulated products are diluted in sterilized dematerialized water at the desired concentration and added to malt agar medium. Fluopyram and penflufen were used as a soluble concentrate formulation containing 100g/l active ingredient (SC 100), Bixafen as an emulsifiable concentrate formulation containing 200g/l active ingredient (EC 200), and tebuconazole as an oil in water emulsion formulation containing 250g/l active ingredient (EW 250). The medium containing the product to be tested is poured in 90 mm diameter Petri dishes. Each dish is then inoculated using a 5 mm diameter mycelium plug taken, using a cork borer, from the active growing edge of a colony.

Inoculated Petri dishes are then incubated at 22°C with a photoperiod of 12h. The incubation period corresponds to the time required for the fungus to invade the entire surface of the growth medium. At that time, mycelium growth is evaluated by calculating the mean of two perpendicular measures of the colony diameter. A percentage of efficacy is then calculated (Abbott formula).

The concentration of 50 ppm corresponds approximately to about 50 g/ha when an application amount of 1000 l water per hectare is used.
Results

Fluopyram, Bixafen and Penflufen showed a significant reduction at 50ppm of several fungi belonging to the community usually found in plants showing Esca symptoms. The test is validated by the level of efficacy of already known fungicides, Tebuconazole at 50ppm and Flutriafol+Carbendazime.

Claims:

1. Use of succinate dehydrogenase inhibitors selected from the group consisting of fluopyram (1.20), bixafen (1.1), penflufen (1.2), sedaxane (1.3), isopyrazam (comprising mixture of syn-epimeric racemate 1RS,4SR,9RS and anti-epimeric racemate 1RS,4SR,9SR, anti-epimeric racemate 1RS,4SR,9SR, anti-epimeric enantiomer 1R,4S,9S, anti-epimeric enantiomer 1S,4R,9R, syn epimeric racemate 1RS,4SR,9RS, syn-epimeric enantiomer 1R,4S,9R, syn-epimeric enantiomer 1S,4R,9S) (1.4), penthiopyrad (1.5), furametpyr (1.6), fluxapyroxad (1.8), N-[1-(1,4-dichlorophenyl)-1-methoxypropan-2-yl]-3-(difluoromethyl)-1-methyl-1H-pyrazole-4-carboxamide (1.9), N-[9-(dichloromethylene)-1,2,3,4-tetrahydro-1,4-methanonaphthalen-5-yl]-3-(difluoromethyl)-1-methyl-1H-pyrazol-4-carboxamide (1.10), N-[(1S,4R)-9-(dichloromethylene)-1,2,3,4-tetrahydro-1,4-methanonaphthalen-5-yl]-3-(difluoromethyl)-1-methyl-1H-pyrazol-4-carboxamide (1.11), N-[(1R,4S)-9-(dichloromethylene)-1,2,3,4-tetrahydro-1,4-methanonaphthalen-5-yl]-3-(difluoromethyl)-1-methyl-1H-pyrazol-4-carboxamide (1.12), 3-(difluoromethyl)-1-methyl-N-[2-(1,1,2,2-tetrafluoroethoxy)phenyl]-1H-pyrazol-4-carboxamide (1.13), 3-(difluoromethyl)-N-[4-fluoro-2-(1,1,2,3,3-hexafluoropropoxy)phenyl]-1-methyl-1H-pyrazol-4-carboxamide (1.14), 3-(difluoromethyl)-1-methyl-N-[2-(1,1,2,3,3-hexafluoropropoxy)phenyl]-1-methyl-1H-pyrazol-4-carboxamide (1.15), 3-(difluoromethyl)-1-methyl-N-[2-(3-Cl-1,1,2-trifluoroethoxy)phenyl]-1H-pyrazol-4-carboxamide (1.16), N-[9-(dichloromethylene)-1,2,3,4-tetrahydro-1,4-methanonaphthalen-5-yl]-3-(difluoromethyl)-1-methyl-1H-pyrazol-4-carboxamide (1.17), N-[(1S,4R)-9-(dichloromethylene)-1,2,3,4-tetrahydro-1,4-methanonaphthalen-5-yl]-3-(difluoromethyl)-1-methyl-1H-pyrazole-4-carboxamide (1.18), and N-[(1R,4S)-9-(dichloromethylene)-1,2,3,4-tetrahydro-1,4-methanonaphthalen-5-yl]-3-(difluoromethyl)-1-methyl-1H-pyrazole-4-carboxamide (1.19) for control of wood diseases in grapes.

2. Use according to Claim 1, wherein the succinate dehydrogenase inhibitors are selected from the group consisting of fluopyram (1.20), bixafen (1.1), penflufen (1.2), isopyrazam (comprising mixture of syn-epimeric racemate 1RS,4SR,9RS and anti-epimeric racemate 1RS,4SR,9SR, anti-epimeric racemate 1RS,4SR,9SR, anti-epimeric enantiomer 1R,4S,9S, anti-epimeric enantiomer 1S,4R,9R, syn epimeric racemate 1RS,4SR,9RS, syn-epimeric enantiomer 1R,4S,9R, syn-epimeric enantiomer 1S,4R,9S) (1.4), penthiopyrad (1.5), fluxapyroxad (1.8), N-[1-(1,4-dichlorophenyl)-1-methoxypropan-2-yl]-3-(difluoromethyl)-1-methyl-1H-pyrazole-4-carboxamide (1.9), N-[9-(dichloromethylene)-1,2,3,4-tetrahydro-1,4-methanonaphthalen-5-yl]-3-(difluoromethyl)-1-methyl-1H-pyrazol-4-carboxamide (1.10), N-[(1S,4R)-9-(dichloromethylene)-1,2,3,4-tetrahydro-1,4-methanonaphthalen-5-yl]-3-(difluoromethyl)-1-methyl-1H-pyrazol-4-carboxamide (1.11), N-[(1R,4S)-9-(dichloromethylene)-1,2,3,4-tetrahydro-1,4-methanonaphthalen-5-yl]-3-(difluoromethyl)-1-methyl-1H-pyrazole-4-carboxamide (1.12), 3-(difluoromethyl)-1-methyl-N-[2-(1,1,2,2-tetrafluoroethoxy)phenyl]-1H-pyrazol-4-carboxamide (1.13), 3-(difluoromethyl)-N-[4-fluoro-2-(1,1,2,3,3-hexafluoropropoxy)phenyl]-1-methyl-1H-pyrazol-4-carboxamide (1.14), 3-(difluoromethyl)-1-methyl-N-[2-(1,1,2,3,3-hexafluoropropoxy)phenyl]-1-methyl-1H-pyrazol-4-carboxamide (1.15), 3-(difluoromethyl)-1-methyl-N-[2-(3-Cl-1,1,2-trifluoroethoxy)phenyl]-1H-pyrazol-4-carboxamide (1.16), N-[9-(dichloromethylene)-1,2,3,4-tetrahydro-1,4-methanonaphthalen-5-yl]-3-(difluoromethyl)-1-methyl-1H-pyrazol-4-carboxamide (1.17), N-[(1S,4R)-9-(dichloromethylene)-1,2,3,4-tetrahydro-1,4-methanonaphthalen-5-yl]-3-(difluoromethyl)-1-methyl-1H-pyrazole-4-carboxamide (1.18), and N-[(1R,4S)-9-(dichloromethylene)-1,2,3,4-tetrahydro-1,4-methanonaphthalen-5-yl]-3-(difluoromethyl)-1-methyl-1H-pyrazole-4-carboxamide (1.19) for control of wood diseases in grapes.
1-methyl-1\(\text{H}\)-pyrazol-4-carboxamide (1-12), 3-(difluoromethyl)-1-methyl-N-[2-(1,1,2,2-tetrafluoroethoxy)phenyl]-1H-pyrazol-4-carboxamide (1.13), 3-(difluoromethyl)-N-[4-fluoro-2-(1,1,2,3,3,3-hexafluoropropoxy)phenyl]-1-methyl-1H-pyrazol-4-carboxamide (1.14), 3-(difluoromethyl)-1-methyl-N-[2-(1,1,2,3,3,3-hexafluoropropoxy)phenyl]-1-methyl-1H-pyrazol-4-carboxamide (1.15), 3-(difluoromethyl)-1-methyl-N-[2-(3-Cl,1,1,2-trifluoroethoxy)phenyl]-1H-pyrazol-4-carboxamide (1.16), N-[9-(dichloromethylene)-1,2,3,4-tetrahydro-1,4-methanomonaphthalen-5-yl]-3-(difluoromethyl)-1-methyl-1H-pyrazole-4-carboxamide (1.17), N-[(L\(\text{S}\),4\(\text{R}\))-9-(dichloromethylene)-1,2,3,4-tetrahydro-1,4-methanomonaphthalen-5-yl]-3-(difluoromethyl)-1-methyl-1H-pyrazole-4-carboxamide (1.18), and N-[(L\(\text{R}\),4\(\text{S}\))-9-(dichloromethylene)-1,2,3,4-tetrahydro-1,4-methanomonaphthalen-5-yl]-3-(difluoromethyl)-1-methyl-1H-pyrazole-4-carboxamide (1.19).

3. Use according to either of Claims 1 and 2, characterized in that the succinate dehydrogenase inhibitors are selected from the group consisting of bixafen (1.1), penflufen (1.2), fluopyram (1.20).

4. Use according to any of Claims 1 to 3, characterized in that the succinate dehydrogenase inhibitor is fluopyram (1.20).

5. Use according to any of Claims 1 to 4, characterized in that the succinate dehydrogenase inhibitors are used for the control of Acremonium spp., Botryosphaeria spp., Botryosphaeria obtuse, Botryosphaeria dothidea, Cephalosporium spp., Eutypa lata, Formitiporia mediteranea, Phaemoniella chlamydospora, Phaeoacremonium aleophilum, Phialophora spp., Phomopsis viticola.

6. Use according to any of Claims 1 to 5, characterized in that the succinate dehydrogenase inhibitors are used for the control of Formitiporia mediteranea, Phaemoniella chlamydospora, Phaeoacremonium aleophilum, Phialophora spp., Phomopsis viticola.

7. Use according to any of Claims 1 to 6, characterized in that the succinate dehydrogenase inhibitor is employed in combination with a further active fungicidal ingredient.

8. Method for controlling wood diseases in grape plants or plant parts thereof, characterized in that the plants or plant parts or plants grown from the seedlings, grafts and cuttings are treated with the succinate dehydrogenase inhibitors as defined in any of the claims 1 to 4.

9. Method according to Claim 8, characterized in that Acremonium spp., Botryosphaeria spp., Botryosphaeria obtuse, Botryosphaeria dothidea, Cephalosporium spp., Eutypa lata, Formitiporia
mediteranea, Phaemoniella chlamydospora, Phaeoacremonium aleophilum, Phialophora spp., Phomopsis viticola are controlled.

10. Method according to Claim 8 or 9, characterized in that Formitiporia mediteranea, Phaemoniella chlamydospora, Phaeoacremonium aleophilum, Phialophora spp., Phomopsis viticola are controlled.

This international search report has not been established in respect of certain claims under Article 17(2)(a) for the following reasons:

1. ☐ Claims Nos.: because they relate to subject matter not required to be searched by this Authority, namely:

2. ☐ Claims Nos.: because they relate to parts of the international application that do not comply with the prescribed requirements to such an extent that no meaningful international search can be carried out, specifically:

3. ☐ Claims Nos.: because they are dependent claims and are not drafted in accordance with the second and third sentences of Rule 6.4(a).

This International Searching Authority found multiple inventions in this international application, as follows:

see additional sheet

1. ☐ As all required additional search fees were timely paid by the applicant, this international search report covers all searchable claims.

2. ☑ As all searchable claims could be searched without effort justifying an additional fees, this Authority did not invite payment of additional fees.

3. ☐ As only some of the required additional search fees were timely paid by the applicant, this international search report covers only those claims for which fees were paid, specifically claims Nos.:

4. ☑ No required additional search fees were timely paid by the applicant. Consequently, this international search report is restricted to the invention first mentioned in the claims; it is covered by claims Nos.:

see annexe

Remark on Protest
☐ The additional search fees were accompanied by the applicant’s protest and, where applicable, the payment of a protest fee.
☐ The additional search fees were accompanied by the applicant’s protest but the applicable protest fee was not paid within the time limit specified in the invitation.
☐ No protest accompanied the payment of additional search fees.
