Title: QUINOLINUM DYES WITH FLUORINATED COUNTER ANION FOR DYE SENSITIZED SOLAR CELLS

Abstract: The present invention relates to an electrode layer comprising a porous film made of oxide semiconductor fine particles sensitized with a quinolinium dye having a fluorinated counteranion. Moreover the present invention relates to a photoelectric conversion device comprising said electrode layer, a dye sensitized solar cell comprising said photoelectric conversion device and to novel quinolinium dyes having a fluorinated counteranion.
Quinolinium dyes with fluorinated counter anion for dye sensitized solar cells

Description

The present invention relates to an electrode layer comprising a porous film made of oxide semiconductor fine particles sensitized with a quinolinium dye having a fluorinated counter anion. Moreover the present invention relates to a photoelectric conversion device comprising said electrode layer, a dye sensitized solar cell comprising said photoelectric conversion device and to novel quinolinium dyes having a fluorinated counter anion.

Dye-sensitized photoelectric conversion elements (dye sensitized solar cells, DSC) have attracted much attention in recent years. They have several advantages compared to silicon-based solar cells such as lower production and material costs because an inexpensive metal oxide semiconductor such as titanium dioxide can be used therefore without purification to a high purity. Other advantages include their flexibility, transparency and light weight. The overall performance of a photoelectric conversion device is characterized by several parameters such as the open circuit voltage ($V_{oc}$), the short circuit current ($I_{sc}$), the fill factor (FF) and the energy conversion efficiency ($\eta$) resulting therefrom. Thus, one approach to improve the energy conversion efficiency is to enhance the open circuit voltage and/or the short circuit current of the photoelectric conversion device by optimizing the dye used in the DSC.

The dyes have to meet several requirements among these are the stability, production costs and absorption properties, for example, the dye should absorb incident light of longer wavelength with a high absorption coefficient. Promising organic dyes used as sensitizers in DSCs are donor-π-acceptor systems, composed of donor, π-conjugated spacer, and acceptor/anchoring groups. However, the performance of these dyes is not always satisfactory.

CN 1534021 discloses photoelectric conversion devices comprising some methine dyes.

WO 201 1/026797 and WO 201 1/120908 relate to a dye sensitised solar cells (DSC) wherein the dye is a methine dye with a pyridinium acceptor group.

WO 2009/109499 relates to a photoelectric conversion element where the dye is a methine dye with a pyridinium, quinolium or isoquinolinium acceptor group, the spacer
connecting the donor and the acceptor group being an ethylene group carrying an electron withdrawing group.

JP 2006-294360 relates to a photoelectric conversion element where the dye is a methine dye of the formula (1)

\[
\begin{align*}
\text{R}_2 & \text{R}_3 \text{N} \text{Y} \\
\text{R}_1 & \text{A}_1 \\
\text{A}_2 & \text{X} \\
\text{SO}_2 \text{C}_n \text{F}_{2n+1} & \\
\text{SO}_2 \text{C}_n \text{F}_{2n+1}
\end{align*}
\]

(1)

where \(m\) and \(n\) represent integers, \(\text{R}_1\) represents an aromatic residual group, aliphatic hydrocarbon residual group or acyl group, \(\text{F}^{\text{N}},\ \text{F}^{\text{4}},\ \text{A}_1\) and \(\text{A}_2\) represent an aromatic residual group, aliphatic hydrocarbon residual group, hydroxyl group, phosphoric acid group, cyano group, hydrogen atom, halogen atom, nitro group, carboxyl group, carbamoyl group, alkoxy carbonyl group, aryl carbonyl group, or acyl group. \(\text{R}_2\) and \(\text{R}_3\) may be joined together to form ring. \(\text{X}\) represents \(\text{O}, \text{S}, \text{Se}, \text{CH}_2, \text{N}-\text{R}_4, \text{C}-\text{R}_5\text{R}_6\) or \(-\text{CR}_7=\text{CR}_8-\), \(\text{R}_4\) represents an aromatic residual group, aliphatic hydrocarbon residual group or acyl group, \(\text{R}_5, \text{R}_6, \text{R}_7\) and \(\text{R}_8\) represent an aromatic residual group, aliphatic hydrocarbon residual group, hydroxyl group or the like, and \(\text{Y}\) represents an aromatic residual group or an organometallic complex residual group.

EP 1 990 373 relates to a photoelectric conversion device comprising a methine dye in which a quinolinium acceptor group can be bonded to an ethylene group and the donor group is a di(optionally substituted fluorenyl)aminophenyl. The anionic counterion is i.a. bistrifluoromethylsulfonimide, \(\text{C}(\text{S}02\text{CF}3)_3^-, \text{SbF}_6^-, \text{BF}_4^-\) or \(\text{PF}_6^-\).

There is still an ongoing need to further improve the performance of dye-sensitized photoelectric conversion devices, in particular their energy conversion efficiency \(\eta\).

It is therefore the object of the present invention to provide an electrode layer sensitized with a dye, a photoelectric conversion device having an enhanced energy conversion efficiency \(\eta\), a solar cell comprising the device and new dyes.

Surprisingly, methine dyes with a quinolinium or isoquinolinium acceptor group and a fluorinated counter anion are particularly advantageous. They have excellent overall properties; in particular they have a particularly good dye absorption property on the
electrode, giving high long-term DSC stability, high long-term performance and high energy conversion efficiency.

Therefore, in a first aspect, the present invention relates to an electrode layer comprising a porous film made of oxide semiconductor fine particles sensitized with a dye of formula (I),

\[
\begin{array}{c}
\text{D} \\
\text{R}^1 \\
\text{R}^2 \\
\text{A} \\

\]
wherein alkyl, alkenyl, alkynyl or the aliphatic moieties in aralkyl, aralkenyl or aralkynyl are uninterrupted or interrupted by O, S, CO, NR, or combinations thereof;

with the proviso that at least one of the radicals Rf, Rf, Rf, and Rf is fluorne or Ci-C2o-fluoroalkyl, wherein fluoroalkyl is uninterrupted or interrupted by O, S, NR, CO, or combinations thereof;

X, X and X are independently of each other selected from S(=O) and CO;

Rf, Rf, Rf and Rf are independently of each other selected from unsubstituted or substituted Ci-C2o-fluoroalkyl, C-C2o-fluoroaryl, wherein fluoroalkyl is uninterrupted or interrupted by O, S, NR, CO, or combinations thereof; or

Rf and Rf together are C3-C6-fluoroalkyl;

Rf, Rf, Rf and Rf are independently of each other selected from fluorne, Ci-C2o-fluoroalkyl and C-C2o-fluoroaryl;

Rf and Rf together are C3-C7-fluoroalkyl which is unsubstituted or substituted by Ci-C6-fluoroalkyl;

Rg is unsubstituted or substituted Ci-C2o-alkyl, unsubstituted or substituted Ci-C2o-alkoxy, unsubstituted or substituted Ci-C2o-aryl or unsubstituted or substituted C-C2oaryl-O-, wherein alkyl and the alkyl moiety in alkoxy is uninterrupted or interrupted by O, S, NR, CO, or combinations thereof;

with the proviso that if Rf and Rf are both unsubstituted or substituted fluorene, Y is not bistrifluoromethylsulfonimide, C(S02CF3)3; hexafluoride antimonate, BF or PF; and

with the proviso that if A is a radical of the formula A.1.1c

\[
\begin{array}{c}
\text{Y}^* \\
\end{array}
\]

Y is not (C,F2n+iS02)2N-, where n is an integer from 1 to 18.

The invention moreover relates to a photoelectric conversion device comprising the electrode layer as defined above. A further aspect of the present invention is the methine dye of the formula I, except for compounds I, if Rf and Rf are both unsubstituted or substituted fluorene, Y is not bistrifluoromethylsulfonimide, C(S02CF3)3; hexafluoride antimonate, BF or PF; and
except for compounds, if A is a radical of the formula A.1.1c

\[
\begin{array}{c}
\text{(A.1.1c)} \\
\end{array}
\]

Y is not (CₙF₂n+1S0₂)₂N⁻, where n is an integer from 1 to 18 as defined above.

The invention also relates to the use of compounds of formula I in a photoelectric conversion device.

The electrode layer and the devices of the present invention are associated with several advantages. For instance, the quinolinium dyes with fluorinated counter anion allow for high Voc, Jsc and high FF that feature excellent energy conversion efficiencies η and are highly suitable for being used in solar cells.

When a denotation (e.g. D or G) occurs more than once (e.g. twice) in a compound, this denotation may be different groups or the same group unless otherwise stated.

The term “halogen” designates in each case, fluorine, bromine, chlorine or iodine, specifically fluorine.

The prefix Cₙ⁻Cₘ⁻ indicates the respective number of carbons in the hydrocarbon unit.

In the context of the present invention, the term “alkyl” comprises straight-chain or branched alkyl groups having usually 1 to 20 carbon atoms. Examples of alkyl groups are especially methyl, ethyl, n-propyl, isopropyl, n-butyl, isobutyl, sec-butyl, tert-butyl, n-pentyl, neo-pentyl, n-hexyl, n-heptyl, n-octyl, n-nonyl, n-decyl, n-undecyl, n-dodecyl, n-tridecyl, n-tetradecyl, n-hexadecyl, n-octadecyl and n-eicosyl. The expression alkyl also comprises alkyl radicals whose carbon chains may be interrupted by one or more, e.g. 1, 2, 3, 4, 5 or 6 groups which are selected from -O-, -S-, -NR₁⁴- and/or -C(=0)-, unless otherwise stated. R¹⁴ preferably is hydrogen or C₁⁻C₂₀-alkyl. It is to be understood that alkyl interrupted by -O-, -S-, -NR₁⁴- and/or -C(=0)- or combinations thereof comprises at least 2 carbon atoms.

Substituted alkyl groups may, depending on the length of the alkyl chain, have one or more (e.g. 1, 2, 3, 4, 5 or more than 5) identical or different substituents. Suitable substituents are e.g. C₄⁻C₂₀ -cycloalkyl, C₅⁻C₂₀ -cycloalkenyl, C₆⁻C₂₀ -cycloalkynyl,
heterocyclyl, halogen, S-R\(^2\), O-R\(^5\), CO-OR\(^2\), O-CO-R\(^2\), N R\(^5\)R\(^2\), CON R\(^5\)R\(^2\), N R\(^5\), CO-R\(^26\), S (\(=0\))\(_2\)O R\(^25\) and S (\(=0\))\(_2\)O-Z\(^+\), where R\(^25\), R\(^26\), Z\(^+\) are as defined above.

The above remarks regarding alkyl also apply to the alkyl moiety in alkoxy.

The term "Cl-C\(_{20}\) -haloalkyl" as used herein, which is also expressed as "CI-C\(_{20}\) -alkyl which is halogenated", refers to straight-chain or branched alkyl groups having 1 to 2 ("CI-C\(_2\) 2-haloalkyl"), 1 to 4 ("CI-C\(_4\) 4-haloalkyl"), 1 to 6 ("CI-C\(_6\) 6-haloalkyl"), 1 to 8 ("CI-C\(_8\) 8-haloalkyl"), 1 to 10 ("CI-C\(_{10}\) 10-haloalkyl"), 1 to 12 ("CI-C\(_{12}\) 12-haloalkyl"), 1 to 20 carbon atoms ("CI-C\(_{20}\) 20-haloalkyl") (as mentioned above), where some or all of the hydrogen atoms in these groups are replaced by halogen atoms as mentioned above: in particular CI-C\(_2\) -haloalkyl, such as chloromethyl, bromomethyl, dichloromethyl, trichloromethyl, fluoromethyl, difluoromethyl, trifluoromethyl, chlorofluoromethyl, dichlorofluoromethyl, chlorodifluoromethyl, 1-chloroethyl, 1-bromoethyl, 1-fluoroethyl, 2-fluoroethyl, 2,2-difluoroethyl, 2,2,2-trifluoroethyl, 2-chloro-2-fluoroethyl, 2-chloro-2,2-difluoroethyl, 2,2-dichloro-2-fluoroethyl, 2,2,2-trichloroethyl, pentafluoroethyl or 1,1,1,1,1-trifluoroethyl-2-yl.

Substituted haloalkyl groups may have one or more (e.g. 1, 2, 3, 4, 5 or more than 5) substituents different from halogen, specially one or two substituents different from halogen. Suitable substituents are e.g. C\(_4\)-C\(_{20}\) -cycloalkyl, C\(_5\)-C\(_{20}\) -cycloalkenyl, C\(_6\)-C\(_{20}\)-cycloalkynyl, heterocyclyl, S-R\(^2\), O-R\(^5\), CO-OR\(^2\), O-CO-R\(^2\), N R\(^5\)R\(^2\), CON R\(^5\)R\(^2\), N R\(^5\), CO-R\(^26\), S (\(=0\))\(_2\)O R\(^25\) and S (\(=0\))\(_2\)O-Z\(^+\), where R\(^25\), R\(^26\), Z\(^+\) are as defined above.

The term "Cl-C\(_{20}\) -fluoroalkyl" is an alkyl radical having ordinarily 1 to 4, 1 to 6, 1 to 8, 1 to 10, 1 to 12, or 1 to 20 carbon atoms as mentioned above, whose hydrogen atoms are partly or completely replaced by fluorine. Examples are fluoromethyl, difluoromethyl, trifluoromethyl, 2-fluoroethyl, 2,2-difluoroethyl, 2,2,2-trifluoroethyl, pentafluoroethyl, 2-fluoropropyl, 3-fluoropropyl, 2,2-difluoropropyl, 2,3-difluoropropyl, 3,3,3-trifluoropropyl, 2,2,3,3,3-pentafluoropropyl, heptafluoropropyl, 1-(fluoromethyl)-2-fluoroethyl, 4-fluorobutyl, nonafluorobutyl, 2-(fluoromethyl)-hexyl, 2,3-difluorononyl, 2,3,6-trifluoroundecyl and the like. Substituted fluoroalkyl groups may have one or more (e.g. 1, 2, 3, 4, 5 or more than 5) substituents different from fluorine, specially one or two substituents different from fluorine. Suitable substituents are e.g. C\(_4\)-C\(_{20}\)-cycloalkyl, C\(_5\)-C\(_{20}\) -cycloalkenyl, C\(_6\)-C\(_{20}\) -cycloalkynyl, heterocyclyl, S-R\(^2\), O-R\(^5\), CO-OR\(^2\), N R\(^5\)R\(^2\), CON R\(^5\)R\(^2\), N R\(^5\), CO-R\(^26\), S (\(=0\))\(_2\)O R\(^25\) and S (\(=0\))\(_2\)O-Z\(^+\), where R\(^25\), R\(^26\), Z\(^+\) are as defined above.

The term "alkenyl" comprises straight-chain or branched hydrocarbon radicals having two or more C atoms, e.g. 2 to 4, 2 to 6 or 2 to 12 or 2 to 20 carbon atoms and having
at least one double bond, e.g. one or two, preferably having one double bond in any position. Examples are C2-C6-alkenyl such as ethenyl (vinyl), 1-propenyl, 2-propenyl, 1-methylethenyl, 1-butynyl, 2-butynyl, 3-butynyl, 1-methyl-1-propenyl, 2-methyl-1-propenyl, 1-methyl-2-propenyl, 2-methyl-2-propenyl, 1-pentenyl, 2-pentenyl, 3-pentenyl, 4-pentenyl, 1-methyl-1-butenyl, 2-methyl-1-butenyl, 3-methyl-1-butenyl, 1-methyl-2-butenyl, 2-methyl-2-butenyl, 3-methyl-2-butenyl, 3-methyl-3-butenyl, 1,1-dimethyl-2-propenyl, 1,2-dimethyl-1-propenyl, 1,2-dimethyl-2-propenyl, 1-ethyl-1-propenyl, 1-ethyl-2-propenyl, 1-hexenyl, 2-hexenyl, 3-hexenyl, 4-hexenyl, 5-hexenyl, 1-methyl-1-propenyl, 2-methyl-1-pentenyl, 3-methyl-1-pentenyl, 4-methyl-1-pentenyl, 1-methyl-2-pentenyl, 2-methyl-2-pentenyl, 3-methyl-2-pentenyl, 4-methyl-2-pentenyl, 1-methyl-3-pentenyl, 2-methyl-3-pentenyl, 3-methyl-3-pentenyl, 4-methyl-3-pentenyl, 1-methyl-4-pentenyl, 2-methyl-4-pentenyl, 3-methyl-4-pentenyl, 4-methyl-4-pentenyl, 1,1-dimethyl-2-butenyl, 1,1-dimethyl-3-butenyl, 1,2-dimethyl-1-butenyl, 1,2-dimethyl-2-butenyl, 1,2-dimethyl-3-butenyl, 1,3-dimethyl-1-butenyl, 1,3-dimethyl-2-butenyl, 1,3-dimethyl-3-butenyl, 2,2-dimethyl-3-butenyl, 2,3-dimethyl-1-butenyl, 2,3-dimethyl-2-butenyl, 2,3-dimethyl-3-butenyl, 3,3-dimethyl-1-butenyl, 3,3-dimethyl-2-butenyl, 1-ethyl-1-butenyl, 1-ethyl-2-butenyl, 1-ethyl-3-butenyl, 2-ethyl-1-butenyl, 2-ethyl-2-butenyl, 2-ethyl-3-butenyl, 1,1,2-trimethyl-2-propenyl, 1-ethyl-1-methyl-2-propenyl, 1-ethyl-2-methyl-1-propenyl, 1-ethyl-2-methyl-2-propenyl.

The expression alkenyl also comprises alkenyl radicals whose carbon chains may be interrupted by one or more, e.g. 1, 2, 3, 4, 5 or 6 groups which are selected from -O-, -S-, -NR14- and/or -C(=0)-, unless otherwise stated. R14 preferably is hydrogen or C1-C20-alkyl. It is to be understood that alkenyl interrupted by -O-, -S-, -NR14- and/or -C(=0)- or combinations thereof comprises at least 3 carbon atoms. Substituted alkenyl groups may, depending on the length of the alkenyl chain, have one or more (e.g. 1, 2, 3, 4, 5 or more than 5) identical or different substituents. Suitable substituents are e.g. C4-C20-cycloalkyl, C6-C20-commercially available heterocyclic, halogen, S-R25, O-R25, CO-OR25, O-CO-R25, NR25R26, CONR25R26, NR25R26, CO-R26, S(=0)R25 and S(=0)2O-Z+, where R25, R26, Z+ are as defined above.

The term "alkynyl" comprises straight-chain or branched hydrocarbon radicals having two or more C atoms, e.g. 2 to 4, 2 to 6 or 2 to 12 or 2 to 20 carbon atoms and having at least one triple bond, e.g. one or two, preferably having one triple bond in any position, e.g. C2-C6-alkynyl such as ethynyl, 1-propynyl, 2-propynyl, 1-butynyl, 2-butynyl, 3-butynyl, 1-methyl-2-propynyl, 1-pentynyl, 2-pentynyl, 3-pentynyl, 4-pentynyl, 1-methyl-2-butynyl, 1-methyl-3-butynyl, 2-methyl-3-butynyl, 3-methyl-1-butynyl, 1,1-dimethyl-2-propynyl, 1-ethyl-2-propynyl, 1-hexynyl, 2-hexynyl, 3-hexynyl, 4-hexynyl, 5-hexynyl, 1-methyl-2-pentynyl, 1-methyl-3-pentynyl, 1-methyl-4-pentynyl, 2-methyl-3-pentynyl, 2-methyl-4-pentynyl, 3-methyl-1-pentynyl, 4-methyl-1-pentynyl, 1-methyl-2-pentynyl, 2-methyl-2-pentynyl, 3-methyl-2-pentynyl, 4-methyl-2-pentynyl, 1-methyl-3-pentynyl, 2-methyl-3-pentynyl, 3-methyl-3-pentynyl, 4-methyl-3-pentynyl, 1-methyl-4-pentynyl, 2-methyl-4-pentynyl, 3-methyl-4-pentynyl, 4-methyl-4-pentynyl, 1,1-dimethyl-2-butenyl, 1,1-dimethyl-3-butenyl, 1,2-dimethyl-1-butenyl, 1,2-dimethyl-2-butenyl, 1,2-dimethyl-3-butenyl, 1,3-dimethyl-1-butenyl, 1,3-dimethyl-2-butenyl, 1,3-dimethyl-3-butenyl, 2,2-dimethyl-3-butenyl, 2,3-dimethyl-1-butenyl, 2,3-dimethyl-2-butenyl, 2,3-dimethyl-3-butenyl, 3,3-dimethyl-1-butenyl, 3,3-dimethyl-2-butenyl, 1-ethyl-1-butenyl, 1-ethyl-2-butenyl, 1-ethyl-3-butenyl, 2-ethyl-1-butenyl, 2-ethyl-2-butenyl, 2-ethyl-3-butenyl, 1,1,2-trimethyl-2-propenyl, 1-ethyl-1-methyl-2-propenyl, 1-ethyl-2-methyl-1-propenyl, 1-ethyl-2-methyl-2-propenyl.
pentynyl, 4-methyl-2-pentynyl, 1,1-dimethyl-2-butynyl, 1,1-dimethyl-3-butynyl, 1,2-dimethyl-3-butynyl, 2,2-dimethyl-3-butynyl, 3,3-dimethyl-1-butynyl, 1-ethyl-2-butynyl, 1-ethyl-3-butynyl, 2-ethyl-3-butynyl, 1-ethyl-1-methyl-2-propynyl. The expression alkynyl also comprises alkynyl radicals whose carbon chains may be interrupted by one or more, e.g. 1, 2, 3, 4, 5 or 6 groups which are selected from -O-, -S-, -N R 14- and/or -C (=0)-, unless otherwise stated. R 14 preferably is hydrogen or C1-C20-alkyl. It is to be understood that alkynyl interrupted by -O-, -S-, -N R 14- and/or -C(=0)- or combinations thereof comprises at least 3 carbon atoms. Substituted alkynyl groups may, depending on the length of the alkynyl chain, have one or more (e.g. 1, 2, 3, 4, 5 or more than 5) identical or different substituents. Suitable substituents are e.g. C4-C20-cycloalkyl, C6-C20-cycloalkenyl, C6-C20-cycloalkynyl, heterocycl, halogen, S-R 25, O- R 25, CO-OR 25, O-CO-R 25, N R 25-R 26, CON-R 25-R 26, N R 25-CO-R 26, S(=O) O R 25 and S(=O) 2-O-Z +, where R 25, R 26, Z + are as defined above.

The term "C1-C20-alkylene" (or alkanediyl) refers to an alkyl radical having 1 to 20 carbon atoms as defined above, wherein one hydrogen atom of the alkyl radical is replaced by one further binding site, thus forming a bivalent radical. The hydrogen atom is not removed from the carbon atom carrying a binding site. Examples include methylene, ethylene, propylene (trimethylene), isopropylene, n-butylene (tetramethylene), sec-butylene, isobutylene, tert-butylene, 2-ethylbutylene, n-pentylene (pentamethylene), isopentylene, 1-methylnpentylene, 1,3-dimethylbutylene, n-hexylene, 1-methylhexylene, n-heptylene, 2-methylheptylene, 1,1,3,3-tetramethybutylene, 1-methylheptylene, 3-methylheptylene, n-octylene, 2-ethylhexylene, 1,1,3-trimethylhexylene, 1,1,3,3-tetramethylpentylene, nonylene, decylene, undecylene, 1-methylundecylene or dodecylene.

The term "C1-C20-alkyldiene" refers to an alkyl radical having 1 to 20 carbon atoms as defined above, wherein one hydrogen atom of the alkyl radical is replaced by one further binding site, thus forming a bivalent radical. The hydrogen atom is removed from the carbon atom carrying a binding site. Accordingly, the free valences are part of a double bond.

The term "C2-C4-alkenylene" (or alkenediy) as used herein in each case denotes a straight-chain or branched alkenyl radical having 2 to 4 carbon atoms as defined above, wherein one hydrogen atom at any position of the carbon backbone is replaced by one further binding site, thus forming a bivalent moiety. Examples include vinylene, propenylene, but-1-enylene or but-2-enylene.
The term "C$_6$-C$_{10}$-arylene" refers to an aryl group as defined below, wherein one hydrogen atom at any position of the aryl group is replaced by one further binding site, thus forming a bivalent radical. In case of polycyclic arylene, the bonding sites are either situated in the same ring or in different rings. Examples of arylene are phenylene such as 1,2-phenylene, 1,3-phenylene or 1,4-phenylene or naphthylene.

The term "C$_8$-C$_{20}$-aralkyl" refers to aryl-substituted alkyl. The aralkyl group has 7 to 20 carbon atoms, wherein aryl is as defined below, preferably phenyl or naphthyl, the aralkyl moiety preferably is C$_1$-C$_4$-alkyl as defined above. Examples are 1-naphthylmethyl, 2-naphthylmethyl, benzyl, diphenylmethyl, 1-phenylethyl, 2-phenylethyl, 1-phenylpropyl, 2-phenyl-propyl, 3-phenylpropyl, 1-methyl-1-phenyl-ethyl, 4-phenylbutyl, 2,2-dimethyl-2-phenylethyl, especially benzyl.

The term "C$_8$-C$_{20}$-aralkenyl" refers to aryl-substituted alkenyl. The aralkenyl group has 8 to 20 carbon atoms, wherein aryl is as defined below, preferably phenyl or naphthyl, the alkenyl moiety preferably is C$_2$-C$_4$-alkenyl. Examples are styryl (2-phenylvinyl), 2,2-diphenylvinyl, triphenylvinyl, cinnamyl, 1-naphthylvinyl, 2-naphthylvinyl and fluoren-9-ylidenemethyl, especially 2,2-diphenylvinyl and triphenylvinyl.

The term "fluoren-9-ylidenemethyl" is , where # means the point of attachment to the remainder of the molecule.

The term "C$_8$-C$_{20}$-aralkynyl" refers to aryl-substituted alkynyl moieties. The aralkynyl group has 8 to 20 carbon atoms, wherein aryl preferably is phenyl or naphthyl, the alkylnyl moiety preferably is C$_2$-C$_4$-alkynyl, e.g. 2-phenylethynyl.

The term "cycloalkyl" refers to a mono- or polycyclic, e.g. moncyclic, bicyclic or tricyclic, aliphatic radical having usually from 5 to 20, preferably 5 to 16, more preferably 3 to 12, or 3 to 8 carbon atoms. Examples of monocyclic rings are cyclopentyl, cyclohexyl, cycloheptyl or cyclooctyl, especially cyclopentyl and cyclohexyl. Examples of polycyclic rings are perhydroanthracyl, perhydronaphthyl, perhydrofluorenyl, perhydrochrysenyln, perhydropicenyln, adamantyl, bicyclo[1.1.1]pentyl, bicyclo[2.2.1]heptyl, bicyclo[4.2.2]decyl, bicyclo[2.2.2]octyl, bicyclo[3.3.0]octyl bicyclo[3.3.2]decyl, bicyclo[4.4.0]decyl, bicyclo[4.3.2]undecyl, bicyclo[4.3.3]dodecyl, bicyclo[3.3.3]undecyl, bicyclo[4.3.1]decyl, bicyclo[4.2.1]nonyl, bicyclo[3.3.1]nonyl, bicyclo[3.2.1]octyl and the
like. Cycloalkyl may be interrupted by one or more CO groups, usually one or two groups. An example for cycloalkyl interrupted by 1 CO group is 3-oxobicyclo[2.2.1]heptyl. Substituted cycloalkyl groups may have one or more (e.g. 1, 2, 3, 4, 5 or more than 5) identical or different substituents. Suitable substituents are e.g. halogen, S-R \(^{25}\), O-R \(^{25}\), CO-OR \(^{25}\), O-CO- \(^{25}\), NR\(^{25}\)R\(^{26}\), CONR\(^{25}\)R\(^{26}\), NR\(^{25}\)-CO-R\(^{26}\), S(=O) \(_{2}\)OR\(^{25}\), S(=O) \(_{2}\)-O-Z\(^{+}\), Ci-C\(_{20}\)-alkyl, C\(_{2}\)-C\(_{20}\)-alkenyl, C\(_{7}\)-C\(_{20}\)-aralkyl, C\(_{8}\)-C\(_{20}\)-aralkenyl, C\(_{8}\)-C\(_{20}\)-aralkynyl, heterocyclic, C\(_{6}\)-C\(_{20}\)-cycloalkynyl, heterocyclic, Ci-C\(_{20}\)-aryl, substituted Ci-C\(_{20}\)-aryl, unsubstituted or substituted maleic anhydridyl or substituted maleimidyld, where R\(^{25}\), R\(^{26}\) and Z\(^{+}\) are as defined above.

The term "cycloalkenyl" refers to a mono- or polycyclic, e.g. monocyclic, bicyclic or tricyclic, aliphatic radical having usually from 5 to 20, preferably 5 to 16, more preferably 3 to 12, or 3 to 8 carbon atoms and at least one double bond, preferably one double bond at any position. Examples include cyclopentenyl, cyclohexenyl or the like.

Cycloalkenyl may be interrupted by one or more CO groups, e.g. one or two CO groups. Substituted cycloalkenyl groups may have one or more (e.g. 1, 2, 3, 4, 5 or more than 5) identical or different substituents. Suitable substituents are e.g. halogen, S-R \(^{25}\), O-R \(^{25}\), CO-OR \(^{25}\), O-CO- \(^{25}\), NR\(^{25}\)R\(^{26}\), CONR\(^{25}\)R\(^{26}\), NR\(^{25}\)-CO-R\(^{26}\), S(=O) \(_{2}\)OR\(^{25}\), S(=O) \(_{2}\)-O-Z\(^{+}\), Ci-C\(_{20}\)-alkyl, C\(_{2}\)-C\(_{20}\)-alkenyl, C\(_{7}\)-C\(_{20}\)-aralkyl, C\(_{8}\)-C\(_{20}\)-aralkenyl, heterocyclic, C\(_{6}\)-C\(_{20}\)-cycloalkynyl, heterocyclic, Ci-C\(_{20}\)-aryl, substituted Ci-C\(_{20}\)-aryl, unsubstituted or substituted maleic anhydridyl or substituted maleimidyld, where R\(^{25}\), R\(^{26}\) and Z\(^{+}\) are as defined above.

The term "heterocyclyl" (also referred to as heterocycloalkyl) as used herein includes in general 3-, 4-, 5-, 6-, 7- or 8-membered, in particular 5-, 6-, 7- or 8-membered monocyclic heterocyclic non-aromatic radicals and 8-, 9- or 10-membered bicyclic heterocyclic non-aromatic radicals, the mono- and bicyclic non-aromatic radicals may be saturated or unsaturated. The mono- and bicyclic heterocyclic non-aromatic radicals usually comprise besides carbon atom ring members 1, 2, 3 or 4 heteroatoms, in particular 1 or 2 heteroatoms selected from N, O and S as ring members, where S-atoms as ring members may be present as S, SO or SO\(_{2}\). Heterocycloalkyl may be interrupted by one or more CO groups, e.g. one or two CO groups. When heterocyclyl is substituted by one or more identical or different radicals, it is for example mono-, di-, tri-, tetra- or penta-substituted. Suitable substituents are e.g. halogen, S-R \(^{25}\), O-R \(^{25}\), CO-OR \(^{25}\), O-CO- \(^{25}\), NR\(^{25}\)R\(^{26}\), CONR\(^{25}\)R\(^{26}\), NR\(^{25}\)-CO-R\(^{26}\), S(=O) \(_{2}\)OR\(^{25}\), S(=O) \(_{2}\)-O-Z\(^{+}\), Ci-C\(_{20}\)-alkyl, C\(_{2}\)-C\(_{20}\)-alkenyl, C\(_{7}\)-C\(_{20}\)-aralkyl, C\(_{8}\)-C\(_{20}\)-aralkynyl, heterocyclyl, C\(_{6}\)-C\(_{20}\)-aryl, substituted C\(_{6}\)-C\(_{20}\)-aryl, unsubstituted or substituted maleic anhydridyl or substituted maleimidyld, where R\(^{25}\), R\(^{26}\) and Z\(^{+}\) are as defined above.
C<sub>2o</sub>-aryl, substituted C<sub>6</sub>-C<sub>2o</sub> -aryl, unsubstituted or substituted maleic anhydridyl and unsubstituted or substituted maleimidyld, where R<sup>25</sup>, R<sup>26</sup> and Z<sup>+</sup> are as defined above.

Examples of saturated or unsaturated 3-, 4-, 5-, 6-, 7- or 8-membered heterocyclic radicals include saturated or unsaturated, non-aromatic heterocyclic rings, such as oxiranyl, oxetanyl, thietanyl, thietanyl-S-oxid (S oxothietanyl), thietanyl-S-dioxid (S dioxothietanyl), pyrrolidinyl, pyrazolinyl, imidazolinyl, pyrrolyl, pyrazolinyl, imidazolinyl, tetrahydrofuranyl, dihydrofuranyl, 1,3-dioxolanyl, dioxolenyl, thiolenyl, S-oxothiolanyl, S-oxothiethanyl, S-dioxothiethanyl, oxazolidin-2-onyl, dihydroisoindolyl, dioxothiomorpholinyl, dioxotetrahydrothiopyranyl, dioxodihydrothiopyranyl, oxothiopyranyl, dioxothiethanyl, oxazolidinyl, oxazolidinyl, isoxazolidinyl, oxazolinyl, isoxazolinyl, thiazolinyl, isothiazolinyl, thiazolinidinyl, oxathiolianyl, piperidinyl, piperazinyl, pyranyl, dihydropyran, tetrahydropyran, 1,3- and 1,4-dioxanyl, thiopyranyl, S-oxothiopyranyl, S-dioxothiopyranyl, dihydrothiopyranyl, S-oxodihydrothiopyranyl, S-dioxodihydrothiopyranyl, tetrahydrothiopyranyl, S-oxotetrahydrothiopyranyl, S-dioxotetrahydrothiopyranyl, morpholinyl, thiomorpholinyl, S-oxothiomorpholinyl, S-dioxothiomorpholinyl, thiazinyl and the like. Examples of 5- to 6-membered heterocyclic radicals comprising a fused benzene ring include dihydroindolyl, dihydroindolizynyl, dihydroisoindolyl, dihydroquinolinyl, dihydroisoquinolinyl, chromenyl and chromanyl. Examples for heterocyclic radicals also comprising 1 or 2 carbonyl groups as ring members comprise pyrrolidin-2-onyl, pyrrolidin-2,5-dionyl, imidazolidin-2-onyl, oxazolidin-2-onyl, thiazolidin-2-onyl, 3-oxo-2-oxa-bicycle[2.2.1]heptanyl and the like.

The term "C<sub>6</sub>-C<sub>2o</sub> -aryl" refers to a mono-, bi- or tricyclic aromatic hydrocarbon radical having 6 to 20 carbon ring members such as phenyl, naphthyl, anthracenyl, phenanthrenyl, fluorenlyl, pyrenyl, indenyl and the like, especially phenyl. Likewise preferably, C<sub>6</sub>-C<sub>2o</sub> -aryl is naphthyl or pyrenyl. Substituted phenyl is substituted once, twice, three times, four times or five times. The substituents may be identical or different. Bi- or tricyclic aryl is usually substituted by 1, 2, 3, 4, 5, 6, 7 or 8 identical or different substituents, preferably 1, 2, 3 or 4. Suitable substituents include C<sub>i</sub>-C<sub>2o</sub> -alkyl, C<sub>2</sub>-C<sub>2o</sub> -alkenyl, C<sub>2</sub>-C<sub>2o</sub> -alkynyl, C<sub>7</sub>-C<sub>2o</sub> -aralkenyl, C<sub>8</sub>-C<sub>2o</sub> -aralkenyl, C<sub>4</sub>-C<sub>2o</sub> -cycloalkyl, C<sub>8</sub>-C<sub>2o</sub> -cycloalkenyl, C<sub>6</sub>-C<sub>2o</sub> -cycloalkynyl, halogen, S=R<sup>14</sup>, O=R<sup>14</sup>, CO=OR<sup>14</sup>, O-CO-R<sup>14</sup>, O-CO-R<sup>14</sup>, NR<sup>14</sup>R<sup>14</sup>, CONR<sup>14</sup>R<sup>14</sup>, NR<sup>14</sup>-CO-R<sup>14</sup>, S(=0) R<sup>2</sup>R<sup>14</sup> and S(=0)R<sup>2</sup> Z<sup>+</sup>, where R<sup>14</sup> has one of the meanings given for R<sup>i</sup> and where R<sup>i</sup> is as defined above; and where R<sup>i</sup> is C<sub>2</sub>-C<sub>2o</sub> -alkyl which is interrupted by one or more, e.g., 2, 3, 4, 5, 6, 7, 8, 9, 10 or more than 10 oxygen atoms. If C<sub>2</sub>-C<sub>2o</sub> alkyl is interrupted by oxygen atom(s), the total sum of the chain members of C<sub>2</sub>-C<sub>2o</sub> alkyl interrupted by oxygen atom(s) equal the numbers of carbon and oxygen atoms present in the chain.
The term "C6-C20-fluoroaryl" refers to a mono-, bi- or tricyclic aromatic hydrocarbon radical having 6 to 20 carbon ring members such as phenyl, naphthyl, anthracenyl, phenanthrenyl, fluorenly, pyrenyl, indenyl and the like, especially phenyl, wherein some or all of the hydrogen atoms in these groups are replaced by fluorine.

The term "heteroaryl" (also referred to as hetaryl) includes in general 5- or 6-membered unsaturated monocyclic heterocyclic radicals and 8-, 9- or 10-membered unsaturated bicyclic heterocyclic radicals which are aromatic, i.e. they comply with Huckel's rule (4n+2 rule). Hetaryl usually comprise besides carbon atom(s) as ring member(s) 1, 2, 3 or 4 heteroatoms selected from N, O and S as ring members. Examples of 5- or 6-membered heteroaromatic radicals include: 2-furyl, 3-furyl, 2-thienyl, 3-thienyl, 1-pyrrolyl, 2-pyrrolyl, 3-pyrrolyl, 1-pyrazolyl, 3-pyrazolyl, 4-pyrazolyl, 2-oxazolyl, 4-oxazolyl, 5-oxazolyl, 2-thiazolyl, 4-thiazolyl, 5-thiazolyl, 3-isoxazolyl, 4-isoxazolyl or 5-isoxazolyl, 3-isothiazolyl, 4-isothiazolyl or 5-isothiazolyl, 1-imidazolyl, 2-imidazolyl, 4-imidazolyl, 2- or 5-[1,3,4]oxadiazolyl, 4- or 5-[1,2,3-oxadiazolyl, 3- or 5- (1,2,4-oxadiazolyl), 2- or 5-(1,3,4-thiadiazolyl), 2- or 5-(1,3,4-thiadiazolyl), 4- or 5- (1,2,3-thiadiazolyl), 3- or 5-(1,2,4-thiadiazolyl), 1H-, 2H- or 3H-1,2,3-triazol-4-yl, 1,3,4-triazol-2-yl, 2H-triazol-3-yl, 1H-, 2H-, or 4H-1,2,4-triazolyl, 1H- or 2H-tetrazolyl 2-pyridinyl, 3-pyridinyl, 4-pyridinyl, 3-pyridazinyl, 4-pyridazinyl, 2-pyrimidinyl, 4-pyrimidinyl, 5-pyrimidinyl and 2-pyrazinyl. When heteroaryl is substituted by one or more identical or different radicals, it is for example mono-, di-, tri-, tetra- or penta-substituted.

The term "heteroaryl" also includes bicyclic 8- to 10-membered heteroaromatic radicals comprising as ring members 1, 2 or 3 heteroatoms selected from N, O and S, wherein a 5- or 6-membered heteroaromatic ring is fused to a phenyl ring or to a 5- or 6-membered heteroaromatic radical. Examples of a 5- or 6-membered heteroaromatic ring fused to a phenyl ring or to a 5- or 6-membered heteroaromatic radical include benzofuranyl, benzothienyl, indolyl, indazolyl, benzimidazolyl, benzothiazolyl, benzoazadizolyl, benzothiadiazolyl, benzoxazinyl, chinolinyl, isochinolinyl, purinyl, 1,8-naphthyridyl, pteridyl, pyrido[3,2-d]pyrimidyl or pyridoimidazolyl and the like. These fused hetaryl radicals may be bonded to the remainder of the molecule via any ring atom of 5- or 6-membered heteroaromatic ring or via a carbon atom of the fused phenyl moiety.

The term "organic or inorganic cation equivalent" refers to a monovalent cation or that part of a polyvalent cation which corresponds to a single positive charge. The cation \(Z^+\) serves merely as counter cation for balancing negatively charged substituent groups of the sulfonate group, and can in principle be chosen at will. Preference is therefore
given to using alkali metal ions, in particular Na⁺, K⁺, or Li⁺ ions, an equivalent of an earth alkaline metal cation, in particular magnesium ion equivalent (1/2 Mg²⁺) or calcium ion equivalent (1/2 Ca²⁺) or onium ions, e.g. ammonium, monoalkylammonium, dialkylammonium, trialkylammonium, tetraalkylammonium, phosphonium, tetraalkylphosphonium or tetraarylphosphonium ions.

The term "and/or" or "or/and" are meant to express that not only one of the defined alternatives (substituents) may be present, but also several of the defined alternatives (substituents) together, namely mixtures of different alternatives (substituents).

The term "at least" is meant to define one or more than one, for example one, two, three, preferably one to two.

The term "one or more identical or different radicals" is meant to define one, two, three, four, five, six, seven, eight or more than eight identical or different radicals.

The remarks made below as to preferred embodiments of the variables (substituents) and indices of the compounds of formula I are valid on their own as well as preferably in combination with each other.

The remarks made below concerning preferred embodiments of the variables (substituents) and indices further are valid concerning the electrode layer, devices and the use of the compound of the formula I according to the present invention.

A specific embodiment of the invention relates to an electrode layer sensitized with a compound of the formula I, photoelectric conversion elements comprising said electrode layer, compounds of the formula I and the use, where R¹⁷ and R¹⁸ are independently of each other selected from unsubstituted or substituted Cl₁-C₂₀-alkyl, unsubstituted or substituted C₂-C₂₀-alkenyl, unsubstituted or substituted C₂-C₂₀-alkynyl, unsubstituted or substituted C₇-C₂₀-aralkyl, unsubstituted or substituted C₈-C₂₀-aralkenyl, unsubstituted or substituted C₈-C₂₀-aralkynyl, unsubstituted or substituted C₆-C₂₀-aryl, unsubstituted or substituted heteroaryl, unsubstituted or substituted heterocyclyl, unsubstituted or substituted C₄-C₂₀-cycloalkyl, unsubstituted or substituted C₅-C₂₀-cycloalkenyl and unsubstituted or substituted C₆-C₂₀-cycloalkynyl,

wherein alkyl, alkenyl, alkynyl or the aliphatic moieties in aralkyi, aralkenyl or aralkynyl are uninterrupted or interrupted by O, S, CO, NR or combinations thereof, where R¹⁴ is hydrogen, Cl₁-C₂₀-alkyl or C₆-C₁₀-aryl;
or

R\textsuperscript{17} and R\textsuperscript{18}, R\textsuperscript{17} and R\textsuperscript{22}, R\textsuperscript{17} and R\textsuperscript{20} and/or R\textsuperscript{18} and R\textsuperscript{19} form together an unsubstituted or substituted 5-, 6- or 7-membered ring.

A preferred embodiment of the invention relates to an electrode layer sensitized with a compound of the formula I, photoelectric conversion elements comprising said electrode layer, compounds of the formula I and the use, where in the compound of the formula I, D is the radical of the formulae D.1 and D.2,

\[
\begin{align*}
\text{D.1} & \quad \text{D.2} \\
\begin{array}{c}
\begin{array}{c}
\text{R}^{15} \quad \text{R}^{19} \\
\text{R}^{17} \quad \text{R}^{18}
\end{array} \\
\text{N} \\
\begin{array}{c}
\text{R}^{21} \quad \text{R}^{20} \\
\text{R}^{16} \quad \text{R}^{24}
\end{array}
\end{array}
\end{align*}
\]

\text{where}

\*

denotes the point of attachment to the remainder of the molecule,

R\textsuperscript{17} and R\textsuperscript{18} are independently selected from Ci-C\textsubscript{20}-alkyl, C\textsubscript{2}-C\textsubscript{20}-alkenyl, C\textsubscript{2}-C\textsubscript{20}-alkynyl, c\textsubscript{6}-C\textsubscript{20}-aryl, heteroaryl, heterocycl\textsubscript{r}, c\textsubscript{7}-C\textsubscript{20}-aralkyl, c\textsubscript{8}-C\textsubscript{20}-aralkenyl, C\textsubscript{s}-C\textsubscript{20}-aralkynyl, c\textsubscript{4}-C\textsubscript{20}-cycloalkyl, c\textsubscript{5}-C\textsubscript{20}-cycloalkenyl, c\textsubscript{6}-C\textsubscript{20}-cycloalkynyl,

wherein alkyl, alkenyl, alkynyl or the aliphatic moieties in aralkyl, aralkenyl or aralkynyl are uninterrupted or interrupted by O, S, NR\textsuperscript{14} or combinations thereof and/or may carry one or more substituents selected from c\textsubscript{4}-C\textsubscript{20}-cycloalkyl, c\textsubscript{s}-C\textsubscript{20}-cycloalkenyl, c\textsubscript{6}-C\textsubscript{20}-cycloalkynyl, heterocycl\textsubscript{r}, halogen, S-R\textsuperscript{25}, O-R\textsuperscript{25}, CO-OR\textsuperscript{25}, O-CO-R\textsuperscript{26}, CON R\textsuperscript{25}R\textsuperscript{26}, NR\textsuperscript{25}CO-R\textsuperscript{26}, S(=0) \text{Z} and S(=0) \text{Z}+ and

wherein aryl, the aryl moiety of aralkyl, aralkenyl, or aralkynyl, heteroaryl, heterocycl\textsubscript{r}, cycloalkyl, cycoalkenyl or cycoalkynyl are unsubstituted or may carry one or more substituents selected from halogen, S-R\textsuperscript{25}, O-R\textsuperscript{25}, CO-OR\textsuperscript{25}, O-CO-R\textsuperscript{25}, NR\textsuperscript{25}R\textsuperscript{26}, CON R\textsuperscript{25}R\textsuperscript{26}, NR\textsuperscript{25}CO-R\textsuperscript{26}, S(=0) \text{Z} and S(=0) \text{Z}+, C\textsubscript{1}-C\textsubscript{20}-alkyl, C\textsubscript{2}-C\textsubscript{20}-alkenyl, C\textsubscript{2}-C\textsubscript{20}-alkynyl, c\textsubscript{7}-C\textsubscript{20}-aralkyl, C\textsubscript{8}-C\textsubscript{20}-aralkenyl, C\textsubscript{8}-C\textsubscript{20}-aralkynyl, c\textsubscript{4}-C\textsubscript{20}-cycloalkyl, c\textsubscript{5}-C\textsubscript{20}-cycloalkenyl, c\textsubscript{6}-C\textsubscript{20}-cycloalkynyl, heterocycl\textsubscript{r}, c\textsubscript{6}-C\textsubscript{20}-aryl, c\textsubscript{6}-C\textsubscript{20}-aryl which carries one or more substituents selected from Ci-C\textsubscript{20}-alkyl and OR\textsuperscript{25}, maleic anhydridyl and maleimidyl, wherein the 2 last mentioned radicals are unsubstituted or may carry substituents selected from Ci-C\textsubscript{20}-alkyl, c\textsubscript{6}-C\textsubscript{20}-aryl and phenyl-NR\textsuperscript{25}R\textsuperscript{26};

or

R\textsuperscript{17} and R\textsuperscript{18} may form together with the nitrogen atom to which they are attached a 5-, 6- or 7-membered, saturated or unsaturated heterocycle which may have 1 or 2
further heteroatoms selected from O, S and N as ring members and wherein the
heterocyde is unsubstituted or may carry one or more substituents \( R^1 \),
where

each \( R^1 \) is selected from Ci-C2o-alkyl which is unsubstituted or may carry
one or more substituents \( R^2 \) and phenyl, which is unsubstituted or
may carry one or more substituents \( R^3 \), in addition two radicals \( R^1 \)
bonded to adjacent carbon atoms may form together with the carbon
atoms to which they are bonded a 4-, 5-, 6- or 7-membered saturated
or unsaturated carbocyclic ring or an aromatic ring selected from
benzene, naphthalene, anthracene and 9H-fluorene,
where the carbocyclic and the aromatic ring are unsubstituted or carry
one or more substituents \( R^3 \),
and/or two radicals \( R^1 \) present on the same carbon atom may be Ci-
c2o-alkylidene which is unsubstituted or carry one or more
substituents \( R^2 \), where

\[
\begin{align*}
R^2 & \text{ is selected from halogen, } S-R^{25}, O-R^{25}, CO-OR^{25}, O-CO-R^{25}, \\
& \quad NR^{25}R^{26}, CONR^{25}R^{26}, NR^{25}-CO-R^{26}, S(=0)_2OR^{25} \text{ and } \\
& \quad S(=0)_2O-Z^+; \\
R^3 & \text{ is selected from Ci-Cio-alkyl, fluoren-9-ylidenemethyl, halogen, } \\
& \quad S-R^{25}, O-R^{25}, CO-OR^{25}, O-CO-R^{25}, NR^{25}R^{26}, CONR^{25}R^{26}, NR^{25}- \\
& \quad CO-R^{26}, S(=0)_2OR^{25} \text{ and } S(=0)_2O-Z^++; \\
\end{align*}
\]

or

\( R^{17} \) and \( R^{20} \) may form together with the nitrogen atom to which \( R^{17} \) is attached
and the carbon atoms of the benzene ring to which \( R^{20} \) and \( N-R^{17} \) are
attached an unsubstituted or substituted 5-, 6- or 7-membered ring which
may have 1 or 2 further heteroatoms selected from O, S and N as ring
members and wherein the heterocyde is unsubstituted or may carry one or
more substituents \( R^4 \);

or,

\( R^{17} \) and \( R^{22} \) may form together with the nitrogen atom to which \( R^{17} \) is attached
and the carbon atoms of the benzene ring to which \( R^{22} \) and \( N-R^{17} \) are
attached an unsubstituted or substituted 5-, 6- or 7-membered ring, which
may have 1 or 2 further heteroatoms selected from O, S and N as ring
members and wherein the heterocyde is unsubstituted or may carry one or
more substituents \( R^4 \);

and/or

\( R^{18} \) and \( R^{19} \) may form with the nitrogen atom to which \( R^{18} \) is attached and the
carbon atoms of the benzene ring to which \( R^{19} \) and \( N-R^{18} \) are attached an
unsubstituted or substituted 5-, 6- or 7-membered ring which may have 1 or 2 further heteroatoms selected from O, S and N as ring members and wherein the heterocycle is unsubstituted or may carry one or more substituents R^4;

where each R^4 is selected from Ci-C2o-alkyl which is unsubstituted or may carry one or more substituents R^5 and phenyl, which is unsubstituted or carry one or more substituents R^6,
in addition two radicals R^4 bonded to adjacent carbon atoms may form together with the carbon atoms to which they are bonded a 4-, 5-, 6- or 7-membered saturated or unsaturated carbocyclic ring or an aromatic ring selected from benzene, naphthalene, anthracene and 9H-fluorene, where the carbocyclic or the aromatic ring are unsubstituted or may carry one or more substituents R^6,
and/or two radicals R^4 present on the same C atom may be Ci-C2o-alkylidene which is unsubstituted or carry one or more substituents R^5;

where each R^5 has one of the meanings given for R^2, and each R^6 has one of the meaning given for R^3 and where in addition two radicals R^6 bonded to adjacent carbon atoms may form together with the carbon atoms to which they are bonded a benzene or naphthalene ring;

wherein alki is uninterrupted or interrupted by O, S, NR^14 or combinations thereof, and wherein alki, the alki moiety of aralkyl, alkenyl, the alkenyl moiety of aralkenyl, alkynyl and the alkynyl moiety of aralkynyl may carry substituents selected from C_{4-20}-cycloalkyl, halogen, S-R^{14}, O-R^{14}, CO-OR^{14}, O-CO-R^{14}, NR^{14}R^{14}, CONR^{14}R^{14}, NR^{14}CO-R^{14}, S(=0)_{2}OR^{14} and S(=0)_{2}OZ^{+},

where aryl, the aryl moiety of aralkyl, aralkenyl and aralkynyl, heteroaryl, heterocyclyl, cycloalkyl, cycloalkenyl and cycloalkynyl may carry substituents selected from Ci-C2o-alkyl, C2-C2o-alkenyl, C2-C2o-alkynyl, C^7-C2o-aralkyl, C^8-C2o-aralkenyl, C^8-C2o-aralkynyl, C^4-C2o-cycloalkyl, C^5-C2o-cycloalkenyl, C^6-C2o-
cycloalkynyl, halogen, S-R, O-R, CO-OR, O-CO-R, NR4R14, CON R14R14, NR14-CO-R, S(=0)2OR and S(=0)2O-Z+, where R14 has one of the meanings given for R14 and where R14, R25, R26, R27 and Z are as defined above.

According to a specific aspect of this embodiment, D is a radical selected from the radicals of the formulas D.1 and D.2, where

R17 and R18 are independently selected from Ci-C2o-alkyl, C2-C2o-alkenyl, C2-C2o-alkynyl, C6-C2o-aryl, heteroaryl, heterocyclyl, C7-C2o-aralkyl, C8-C2o-aralkenyl, Cs-C2o-aralkynyl, C4-C2o-cycloalkyl, C5-C2o-cycloalkenyl, C6-C2o-cycloalkynyl, wherein alkyl, alkenyl, alkynyl or the aliphatic moieties in aralkyl, aralkenyl or aralkynyl are uninterrupted or interrupted by O, S, NR14 or combinations thereof and/or may carry one or more substituents selected from C4-C2o-cycloalkyl, Cs-C2o-cycloalkenyl, C6-C2o-cycloalkynyl, heterocyclyl, halogen, S-R25, O-R25, CO-OR25, O-CO-R25, NR25R26, CON R25R26, NR25-CO-R26, S(=0)2OR25 and S(=0)2O-Z+ and wherein aryl, the aryl moiety of aralkyl, aralkenyl, or aralkynyl, heteroaryl, heterocyclyl, cycloalkyl, cycloalkenyl or cycloalkynyl are unsubstituted or may carry one or more substituents selected from halogen, S-R25, O-R25, CO-OR25, O-CO-R25, NR25R26, CON R25R26, NR25-CO-R26, S(=0)2OR25, S(=0)2O-Z+, C1-C2o-alkyl, C2-C2o-alkenyl, C2-C2o-alkynyl, C7-C2o-aralkyl, C8-C2o-aralkenyl, C8-C2o-aralkynyl, C4-C2o-cycloalkyl, C5-C2o-cycloalkenyl, C6-C2o-cycloalkynyl, heterocyclyl, C6-C2o-aryl, C6-C2o-aryl which carries one or more substituents selected from Ci-C2o-alkyl and OR25, maleic anhydridyl and maleimidyld, wherein the 2 last mentioned radicals are unsubstituted or may carry substituents selected from Ci-C2o-alkyl, C6-C2o-aryl and phenyl-NR25R26;

or

R17 and R18 may form together with the nitrogen atom to which they are attached a 5-, 6- or 7-membered, saturated or unsaturated heterocycle which may have 1 or 2 further heteroatoms selected from O, S and N as ring members and wherein the heterocycle is unsubstituted or may carry one or more substituents R1x, where

each R1x is selected from Ci-C2o-alkyl which is unsubstituted or may carry one or more substituents R12 and phenyl, which is unsubstituted or may carry one or more substituents R13, in addition two radicals R1x bonded to adjacent carbon atoms may form together with the carbon atoms to which they are bonded a 4-, 5-, 6- or 7-membered saturated
or unsaturated carbocyclic ring or an aromatic ring selected from benzene, naphthalene, anthracene and 9H-fluorene,
where the carbocyclic and the aromatic ring are unsubstituted or carry one or more substituents $R^3$,
and/or two radicals $R^1$ present on the same carbon atom may be Cl-
c-alkylidene which is unsubstituted or carry one or more substituents $R^2$, where

$R^2$ is selected from halogen, S-R$^{25}$, O-R$^{25}$, CO-OR$^{25}$, O-CO-R$^{25}$,
NR$^{25}$R$^{26}$, CONR$^{26}$R$^{26}$, NR$^{26}$-CO-R$^{26}$, S(=0)OR$^{25}$ and S(=0)O-Z$^+$,

$R^3$ is selected from Cl-C$_2$-alkyl, halogen, fluoren-9-ylidenemethyl, S-
R$^{25}$, O-R$^{25}$, CO-OR$^{25}$, O-CO-R$^{25}$, NR$^{25}$R$^{26}$, CONR$^{26}$R$^{26}$, NR$^{26}$-CO-R$^{26}$, S(=0)OR$^{25}$ and S(=0)O-Z$^+$;

or $R^{17}$ and $R^{22}$, $R^{17}$ and $R^{20}$ and/or $R^{18}$ and $R^{19}$ may form together with the nitrogen atom
to which they are attached a 5-, 6- or 7-membered, saturated or unsaturated
heterocycle which may have 1 or 2 further heteroatoms selected from O, S and N
as ring members and wherein the heterocycle may be unsubstituted or may carry
one or more substituents $R^4$, where
each $R^4$ is selected from Cl-C$_2$-alkyl which is unsubstituted or may carry one or
more substituents $R^5$ and phenyl, which is unsubstituted or carry one or more
substituents $R^6$,
in addition two radicals $R^4$ bonded to adjacent carbon atoms may form together
with the carbon atoms to which they are bonded a 4-, 5-, 6- or 7-membered
saturated or unsaturated carbocyclic ring or an aromatic ring selected from benzene, naphthalene, anthracene and 9H-fluorene, where the carbocyclic or the
aromatic ring are unsubstituted or may carry one or more substituents $R^6$,
and/or two radicals $R^4$ present on the same C atom may be Cl-C$_2$-alkylidene
which is unsubstituted or carry one or more substituents $R^5$;

where each $R^5$ has one of the meanings given for $R^2$, and
each $R^6$ has one of the meaning given for $R^3$.

According to a specific aspect of this embodiment, $D.1$ is selected from radicals of the
formulae $D.1$-a, $D.1$-b, $D.1$-c, $D.1$-d, $D.1$-e, $D.1$-f, $D.1$-g, $D.1$-h, $D.1$-i, $D.1$-k, $D.1$-
l, $D.1$-m, $D.1$-n, $D.1$-o, $D.1$-p, $D.1$-q, $D.1$-r and $D.1$-s, preferably $D.1$-a
wherein
* is the point of attachment to the remainder of the molecule,
$R^{15}$ and $R^{21}$ have one of the meanings given above, especially a preferred one;
$R^{17}$, $R^{18}$, $R^{19}$ and $R^{20}$, if present, have one of the meanings given above, especially a preferred one;
$R^{4a}$ is as defined above;
$R^{4a}$ is hydrogen or has one of the meanings given for $R^{4a}$; and
$a$ is 0, 1, 2, 3, 4, 5, 6, 7 or 8.

According to a further specific aspect of this embodiment D1 is selected from radicals of the formulae D.1-t, D.1-u, D.1-v, D.1-w, D.1-x, D.1-y and D.1-z.
where

* is the point of attachment to the remainder of the molecule,

$R^{15}$, $R^{19}$, $R^{20}$ and $R^{21}$ have one of the meanings given above, especially a preferred one;

$R^{11}$ is as defined above;

$R^{11a}$ is hydrogen or has one of the meanings given for $R^{11}$; and

b is 0, 1, 2, 3, 4, 5, 6, 7, 8, 9 or 10.

According to a specific aspect of this embodiment, D.2 is selected from radicals of the formulae D.2-a, D.2-b, D.2-c, D.2-d, D.2-e, D.2-f, D.2-g, D.2-h, D.2-i,
wherein
\( R^6, R^8, R^{23} \) and \( R^{24} \) have one of the meanings given above, especially a preferred one;
\( R^{x4} \) is as defined above;
\( R^{x4a} \) is hydrogen or has one of the meanings given for \( R^{x4} \); and
\( a \) is 0, 1, 2, 3, 4, 5 or 6.

According to a further specific aspect of this embodiment, \( D.2 \) is selected from radicals
of the formulae \( D.2-a, D.2-b, D.2-c, D.2-d, D.2-e, D.2-f, D.2-g, D.2-h, D.2-i, D.2-k, D.2-l, D.2-m, D.2-n, D.2-o, D.2-p \) and \( D.2-q \),

wherein
\( R^6, R^{22}, R^{23} \) and \( R^{24} \) have one of the meanings given above, especially a preferred one;
\( R^{x1} \) is as defined above;
\( R^{x1a} \) is hydrogen or has one of the meanings given for \( R^{x1} \); and
\( b \) is 0, 1, 2, 3, 4, 5, 6, 7, 8, 9 or 10.

According to a particular aspect of this embodiment \( R^{17} \) and \( R^{18} \) are independently of each other selected from \( C_{1-6} \)-alkyl, \( C_{2-8} \)-alkenyl, \( C_{6-20} \)-aryl, heteroaryl, \( C_{7-20} \)-heteroaryl.
aralkyl, C8-C2o -aralkenyl, C8-C10 -aralkynyl and C5-C12 -cycloalkyl, where alkyl or alkenyl may be unsubstituted or may carry 1, 2 or 3 substituents selected from tetrahydrofuranyl, halogen, S-R 14, O-R 14, CO-OR 14, O-CO-R 14, N-R 14 R 14, CON R 14 R 14 and N-R 14-CO-R 14, where aryl, heteroaryl, the aryl moiety of aralkyl,

aralkenyl and aralkynyl and cycloalkyl are unsubstituted or may carry substituents selected from Ci-C6 -alkyl, C2-C6 -alkenyl and C8-C20 -aralkenyl; or R 17 and R 20 may form together with the nitrogen atom to which R 17 is attached and the carbon atoms of the benzene ring to which R 20 and N-R 17 are attached a 5-, 6- or 7-membered, saturated or unsaturated heterocycle which may have 1 further heteroatom selected from O, S and N as ring member and wherein the heterocycle may be unsubstituted or may carry one or more substituents R 4 selected from Ci-C20 -alkyl and phenyl,
in addition two radicals R 4 bonded to adjacent carbon atoms may form together with the carbon atoms to which they are bonded a 4-, 5-, 6- or 7-membered saturated or unsaturated carbocyclic ring or an aromatic ring selected from benzene and 9H-fluorene where the carbocyclic and the aromatic ring are unsubstituted or carry one or more substituents selected from Ci-C6 -alkyl and fluor-en-9-ylidenemethyl, and/or two radicals R 4 present on the same carbon atom may be Ci-C20 -alkylidene;
r 16 is selected from hydrogen, N-R 25 R 26, O-R 25, S-R 25, O-CO-R 25 and N-R 25-CO-R 26; and r 15, r 20 and r 21 are hydrogen, wherein r 4 has one of the meanings given for r 4 and r 14, r 25, r 26, r 27 and z are as defined above.

According to a more particular aspect of this embodiment, D is a radical of the formula D.1. In particular D is a radical D.1, where

r 17 and r 18 are independently of each other selected from

Ci-C6 -alkyl,

phenyl which is unsubstituted or carries 1 or 2 substituents selected from C1-C6-alkyl, Ci-C4 -alkoxy, 2-phenylvinyl, 2,2-diphenyl- vinyl and triphenylvinyl,

9H-fluoren-2-yl, which is unsubstituted or carries 1, 2 or 3 substituents selected from Ci-C6 -alkyl, and

pyrenyl, which is unsubstituted or carries 1 or 2 substituents selected from C1-C6-alkyl;
or

r 17 and r 18 together with the nitrogen atom to which they are attached are morpholinyl; or

r 17 and r 20 form together with the nitrogen atom to which r 17 is attached and the carbon atoms of the benzene ring to which r 20 and N-R 17 are attached a 5- or 6-membered, nitrogen heterocycle which is unsubstituted or carries 2 radicals R 4, where two radicals R 4 on two adjacent carbon atoms form together with the
carbon atoms they are bonded to a 4-, 5-, 6-, or 7-membered saturated ring or a benzene ring,

R\textsuperscript{15} is hydrogen, CI-C\textsubscript{20}-alkyl or OR\textsuperscript{25} where R\textsuperscript{25} is as defined above, preferably R\textsuperscript{25} is CI-C4-alkyl; and

R\textsuperscript{19}, R\textsuperscript{20} and R\textsuperscript{21} are each hydrogen.

According to a further more particular aspect of this embodiment, D is a radical of the formula D.1, where R\textsuperscript{17} and R\textsuperscript{18} together with the nitrogen atom to which they are attached are thiomorpholinyl, piperidinyl, piperazinyl, pyrrolidinyl, pyrazolidinyl or imidazolidinyl.

According to an even more preferred aspect of this embodiment D is a radical of the formula D.1, where R\textsuperscript{15}, R\textsuperscript{19}, R\textsuperscript{20} and R\textsuperscript{21} are each hydrogen and R\textsuperscript{17} and R\textsuperscript{18} are independently of each other selected from CI-C\textsubscript{6}-alkyl.

According to a further more preferred aspect of this embodiment D is a radical of the formula D.1 selected from radicals of the formulae D.1-1 and D.1-2

\[
\begin{align*}
\text{(D.1-1)} & & \text{(D.1-2)} \\
\end{align*}
\]

wherein
\* denotes the point of attachment to the remainder of the molecule and

R\textsuperscript{18} is phenyl which is substituted by 2-phenylvinyl or 2,2-diphenylvinyl, 9H-fluoren-2-yl or 9,9-di(CI-C\textsubscript{6}-alkyl)-9H-fluoren-2-yl.

In particular, R\textsuperscript{18} is phenyl which carries in the 4-position one radical selected from 2-phenylvinyl and 2,2-diphenylvinyl, or R\textsuperscript{18} is 9H-fluoren-2-yl, 9,9-dimethyl-9H-fluoren-2-yl, 9,9-diethyl-9H-fluoren-2-yl, 9,9-di(n-propyl)-9H-fluoren-2-yl or 9,9-di(n-butyl)-9H-fluoren-2-yl.

Examples of suitable donors D are:
A further suitable donor D is
Especially preferred donors D are

\[
\begin{align*}
&\text{\(\text{I}^*\)}, \\
&\text{\(\text{II}^*\)}, \text{ and} \\
&\text{\(\text{III}^*\)}
\end{align*}
\]

A preferred embodiment of the invention relates to an electrode layer sensitized with a compound of the formula \(\text{I}\), photoelectric conversion elements comprising said electrode layer, compounds of the formula \(\text{I}\) and the use, where in the compound of the formula \(\text{I}\), \(A\) is selected from the radicals of the formulae \(\text{A.1.1a}, \text{A.1.1b}, \text{A.2}, \text{A.3}, \text{A.4 and A.5}\)

\[
\begin{align*}
&\text{(A.1.1a)} & &\text{(A.1.1b)} & &\text{(A.2)} \\
&\text{(A.3)} & &\text{(A.4)} & &\text{(A.5)}
\end{align*}
\]

where

\# denotes the bond to the remaining compound of formula \(\text{I}\)
\(Y^-, R_{29}^{30}, R_{30}^{31}, R_{31}^{32}, R_{32}^{33}, R_{33}^{34}, R_{34}^{35}\) and \(R_{35}^{36}\) are as defined above.
According to a specific aspect of this embodiment, \( A \) is a radical of the formulae \( A.1.1a \), \( A.1.1b \), \( A.2 \), \( A.3 \) or \( A.4 \), where

\[
R^{28} \text{ is selected from a radical } G, \text{Ci-C}_2\text{O-alkyl which is uninterrupted or interrupted by O, S, CO, NR}^{14} \text{ or combinations thereof, } C_6\text{-C}_{20} \text{-aryl, heteroaryl, } C_7\text{-C}_{20} \text{-aralkyl,}
\]

\[
c_6\text{-C}_{20} \text{-aryl substituted by 1, 2 or 3 Ci-Cs-alkyl, and } C_7\text{-C}_{20} \text{-aralkyl wherein the aryl moiety of aralkyl is substituted by 1, 2 or 3 Ci-Cs-alkyl;}
\]

\[
R^{30} \text{ is selected from a radical } G, \text{hydrogen, Ci-C}_2\text{O-alkyl wherein alkyl is uninterrupted or interrupted by O, S, CO, NR}^{14} \text{ or combinations thereof, } C_6\text{-C}_{20} \text{-aryl, heteroaryl, and } C_6\text{-C}_{20} \text{-aryl wherein the aryl moiety of aralkyl is substituted by 1, 2 or 3 Ci-Cs-alkyl;}
\]

\[
R^{31} \text{ is selected from hydrogen and a radical of the formula } D^*
\]

\[
D \left[ \begin{array}{c} R^1 \\ \hline \vdots \\ R^2 \end{array} \right]_{m} #^* \quad (D^*)
\]

where \( #^* \) denotes the point of attachment to the remainder of the molecule, \( m \) is 1, 2, 3, 4, 5 or 6, and \( D, R^1 \) and \( R^2 \) are as defined above;

\( R^{32}, R^{33}, R^{34} \) and \( R^{35} \) are independently selected from hydrogen or Ci-C\(_2\)O-alkyl wherein alkyl is uninterrupted or interrupted by O, S, \( \text{NR}^{14} \) or combinations thereof, \( c_6\)-c\(_{20}\)-aryl, heteroaryl, and \( c_6\)-c\(_{20}\)-aryl wherein the aryl moiety of aralkyl is substituted by 1, 2 or 3 Ci-C\(_{20}\)-alkyl; and

\( G \) is selected from \(-R^{28}\)-COOH, \(-R^{28}\)-COO-Z\(^{+}\); \(-R^{28}\)-S\(_2\)O \(_3\)H, \(-R^{28}\)-S\(_2\)O \(_3\)Z\(^{+}\); \(-R^{28}\)-OP(0)(OH)\(_2\), \(-R^{28}\)-OP(0)(OH)\(_2\)Z\(^{+}\); where \( R^{28} \) is a direct bond, Ci-C\(_2\)o-alkylene, \( c_2\)-C\(_4\)-alkenylen or \( c_6\)-C\(_{20}\)-arylene and \( Z^{+}\) is \( \text{N(R}^{14})\(_4\)^{+}\), or an alkali metal cation, where \( R^{14} \) is as defined above; and

\( Y\) is as defined above.

According to a preferred aspect of this embodiment, \( R^{28} \) is a radical \( G, \text{Ci-Cs-alkyl or Ci-Cs-alkyl which is interrupted by one or two heteroatoms or heteroatomic groups selected from O, S, CO and NR}^{14} \) in particular a radical \( G \);

\( R^{30} \) is hydrogen, a radical \( G, \text{Ci-Cs-alkyl or Ci-Cs-alkyl which is interrupted by one or two heteroatoms or heteroatomic groups selected from O, S, CO and NR}^{14} \);

\( R^{31} \) is hydrogen;

\( R^{32}, R^{33}, R^{34} \) and \( R^{35} \) are independently of each other selected from hydrogen, Ci-Cs-alkyl and Ci-Cs-alkyl which is interrupted by one or two heteroatoms selected from O, S and \( \text{NR}^{14} \);

\( G \) is \(-R^{28}\)-COOH or \(-R^{28}\)-COO-Z\(^{+}\); where \( R^{28} \) is a direct bond, Ci-C\(_{20}\)-alkylene, \( c_2\)-C\(_4\)-alkenylen or \( c_6\)-C\(_{20}\)-arylene and \( Z^{+}\) is an alkali metal cation such as Na\(^{+}\), K\(^{+}\), Li\(^{+}\) or Rb\(^{+}\).
or \( \text{N}(R^4)_{4}^{+} \), with each \( R^4 \) being independently of each other selected from hydrogen, phenyl, and \( \text{C}_1-\text{C}_{20} \)-alkyl; and \( Y^- \) is as defined above or has one of the preferred meanings given below.

5 According to a more preferred aspect of this embodiment, \( A \) is a radical of the formula A.1.1a. According to an even more preferred aspect of this embodiment, \( A \) is a radical of the formula A.1.1a, in which \( R^{30}, R^{31}, R^{32}, R^{33}, R^{34} \) and \( R^{35} \) are each hydrogen and \( R^{29} \) is a radical G.

10 According to a particularly preferred aspect of this embodiment, \( A \) is a radical of the formula A.1.1a,

(\text{A.1.1a})

where

\[
\begin{align*}
\# & \text{ denotes the point of attachment to the remainder of the molecule,} \\
R^{29} & \text{ is } -\text{R}^{28}\text{-CONH-OH,} \\
& \text{ where } R^{28} \text{ is a direct bond, } \text{C}_1\text{-C}_4 \text{-alkylene, } \text{C}_2\text{-C}_4 \text{-alkenylene or phenylene;} \\
Y^- & \text{ is as defined above and has preferable one of the preferred meanings.}
\end{align*}
\]

According to a further particularly preferred aspect of this embodiment, \( A \) is a radical of the formula A.1.1a,

(\text{A.1.1a})

where

\[
\begin{align*}
\# & \text{ denotes the point of attachment to the remainder of the molecule,} \\
R^{29} & \text{ is } -\text{R}^{28}\text{-COOH or } -\text{R}^{28}\text{-COO-Z}^+; \\
& \text{ where } R^{28} \text{ is a direct bond, } \text{C}_1\text{-C}_4 \text{-alkylene, } \text{C}_2\text{-C}_4 \text{-alkenylene or phenylene; and} \\
Z^+ & \text{ is } \text{N}(R^{14})_{4}^{+}, \text{Li}^+, \text{Na}^+ \text{ or } \text{K}^+; \\
R^{14} & \text{ is hydrogen or } \text{C}_1\text{-C}_{20} \text{-alkyl; and} \\
Y^- & \text{ is as defined above and has preferable one of the preferred meanings.}
\end{align*}
\]

30 Examples of preferred acceptors are:
where \# denotes the point of attachment to the remainder of the molecule and \( Y^- \) is as defined above and has preferably one of the preferred meanings.

In particular, in the radical of the formula A.1 .a, \( R^{28} \) is C1-C4-alkylene, especially -CH\(_2\)- or -CH\(_2\)-CH\(_2\)-. \( R^{29} \) is in particular \( R^{28}\)-COOH with \( R^{28} \) being C1-C2-alkylene and \( Y^- \) is as defined above and has preferably one of the preferred meanings.

A further preferred embodiment of the invention relates to an electrode layer sensitized with a compound of the formula I, photoelectric conversion elements comprising said electrode layer, compounds of the formula I and the use, where \( Y^- \) is \( \text{BF}_4^-, \text{PF}_6^-, \text{SbF}_6^-, \text{AsF}_6^- \), preferably \( \text{PF}_6^- \).

A further preferred embodiment of the invention relates to an electrode layer sensitized with a compound of the formula I, photoelectric conversion elements comprising said electrode layer, compounds of the formula I and the use, where \( Y^- \) is a fluorinated organic anion selected from the groups \( Y.1 , Y.2, Y.3, Y.4 , Y.5 \) and \( Y.6 \),

where

\[
\begin{align*}
\text{(Y.1)} & \quad \text{(Y.2)} & \quad \text{(Y.3)} \\
\text{(Y.4)} & \quad \text{(Y.5)} & \quad \text{(Y.6)}
\end{align*}
\]
X is S(=0)₂0⁻, 0-S(=0)₂0⁻, COO⁻; R¹ is fluorine, CI-C₂₀ -alkyl, CI-C₂₀ -haloalkyl, where the two last-mentioned radicals are uninterrupted or interrupted by O, S, NR¹⁴, CO or combinations thereof and/or are unsubstituted or substituted by one or more radicals selected from halogen, OR₂⁵, O-CO-R₂⁵, O-CO-OR₂⁵, 0-CO-NR₂⁵R₂⁶, CO-OR₂⁵ and CO-NR₂⁵R₂⁶.

R², R₃, R⁴, R⁵ and R⁶ are independently selected from fluorine, hydrogen, OR₂⁵, O-CO-R₂⁵, O-CO-OR₂⁵, 0-CO-NR₂⁵R₂⁶, CO-OR₂⁵ and CO-NR₂⁵R₂⁶, or R⁷ and R₈ together are C₃-C₆ -fluoroalkyl;

X¹, X² and X³ are independently selected from S(=0)₂0⁻ and CO;

R⁷, R₈, R⁸ and R⁹ are independently selected from C₆-C₂₀ -fluoroaryl, CI-C₂₀ -fluoroalkyl and CI-C₂₀ -fluoroalkyl which is interrupted by O, S, NR¹⁴, CO or combinations thereof, wherein CI-C₂₀ -fluoroalkyl and interrupted CI-C₂₀ -fluoroalkyl are unsubstituted or substituted by one or more radicals selected from OR₂⁵, O-CO-R₂⁵, O-CO-OR₂⁵, 0-CO-NR₂⁵R₂⁶, CO-OR₂⁵ and CO-NR₂⁵R₂⁶, or R⁷ and R₈ together are C₃-C₆ -fluoroalkyl.

R¹⁰, R¹¹, R¹² and R¹³ are independently selected from fluorine, CI-C₂₀ -fluoroalkyl and C₆-C₂₀ -fluoroaryl,

R¹⁴ and R¹⁵ are together C₃-C₆ -perfluoroalkyl where the fluorine atoms of the last mentioned group may be replaced by CI-C₆ -fluoroalkyl;

where R¹⁴, R₂⁵, R₂⁶ and R²⁷ are as defined above.

For example, Y⁻ is a radical Y.2, where R², R₃, R⁵ and R⁶ are each fluorine and R⁴ is O-CO -R₂⁵ where R₂⁵ is CI-C₆ -alkyl or CI-C₆ -alkyl which carries one or two substituents selected from d-Cs-alkylcarbonylamino.

According to a preferred aspect of this embodiment, Y⁻ is a radical of the formula Y.1.

More preferably, Y⁻ is a radical of the formulae

\[
\text{R¹}_1 \text{COO}^- \quad \text{or} \quad \text{R¹}_1 \text{S(}=0)₂\text{O}^- \\
\text{(Y.1a)} \quad \quad \quad \quad \quad \quad \quad \text{(Y.1b)}
\]

where

R¹ is fluorine, CI-C₆ -fluoroalkyl or CI-C₆ -fluoroalkyl which is substituted by o C (=0)-R₂⁵, where R₂⁵ is as defined above. Preferably, R₂⁵ is CI-C₂₀ -alkyl, phenyl which is unsubstituted or substituted by one or more, e.g. one, two or three CI-C₂₀ -alkoxy groups, where the alkyl moiety of alkoxy may be interrupted by 1, 2, 3, 4, 5, 6, 7, 8, 9 or 10 or more than 10 oxygen atoms, or R₂⁵ is 6-, 7-, 8- or 9-membered saturated heterocyclyl containing 1 or 2 heteroatoms or
heteroatom groups selected from N, O, C(O), S, SO and SO2, as ring members, where heterocyclyl is unsubstituted or may carry 1, 2, 3, 4, 5 or 6 C1-C4-alkyl groups. More preferably, R25 is C1-C20-alkyl, phenyl which is unsubstituted or carries one or two C1-C20-alkoxy groups, where the alkyi moiety of alkoxy may be interrupted by 1, 2, 3, 4, 5, 6, 7, 8, 9 or 10 oxygen atoms, or, R25 is 6-, 7-, 8- or 9-membered saturated heterocyclyl containing 1 or 2 heteroatoms or heteroatom groups selected from O and CO as ring members, which is substituted by 1, 2, 3 or 4 C1-C4-alkyl, preferably 6-, 7-, 8- or 9-membered saturated heterocyclyl containing 1 or 2 heteroatoms or heteroatom groups selected from O and CO as ring members, which is substituted by 1, 2, 3 or 4 C1-C4-alkyl. Even more preferably, R25 is 4,7,7-trimethyl-3-oxo-2-oxa-bicyclo[2.2.1]hept-1-yl. Likewise, even more preferably, R25 is C1-C10-alkyl. Likewise, even more preferably, R25 is phenyl or phenyl which is substituted by 1 or 2 C1-C20-alkoxy groups, where the alkyi moiety of alkoxy is interrupted by 1, 2, 3, 4, 5, 6, 7, 8, 9 or 10 oxygen atoms.

Examples are CF3C(=0)O-, CF3CF2C(O)O-, CF3(CF2)2C(O)O-, CF3S(0)2O-, CF3CF2S(0)2O-, CF3(CF2)2S(0)2O-, CF3(CF2)3S(0)2O-, CF3(CF2)4S(0)2O-, CF3(CF2)5S(0)2O-, CF3(CF2)6S(0)2O-, CF3(CF2)7S(0)2O-, and

Further examples are C1-C10-alkyl-C(O)-O-CH2-CHF-CF2-S(0)2O- such as

Further examples are phenyl-C(0)-O-CH2-CHF-CF2-SO2O-, where phenyl is unsubstituted or carries one or two C1-Cs-alkoxy groups or C2-C10 alkoxy groups, where the alkyi moiety of alkoxy is interrupted by 1, 2, 3, 4, 5, 6, 7, 8, 9 or 10 oxygen atoms such as
According to a further preferred aspect of this embodiment, $Y$ is a radical of the formula $Y.2$. More preferably, $Y$ is a radical of the formula $Y.2a$,

\[
\begin{array}{c}
\text{F} \hspace{0.5cm} \text{F} \\
\text{Rf^4} & \text{S}^+ \hspace{0.5cm} \text{O}^-
\end{array}
\quad (Y.2a)
\]

where $\text{Rf}^4$ is $\text{OC}(?) \text{R}^{25}$. $\text{R}^{25}$ is as defined above. Preferably, $\text{R}^{25}$ is $\text{Ci-ClO-alkyl}$.

According to a further preferred aspect of this embodiment, $Y$ is a radical of the formula $Y.3$. More preferably, $Y$ is a radical of the formula $Y.3a$

\[
\begin{array}{c}
\text{O}^+ \hspace{0.5cm} \text{N}^- \\
\text{Rf^7} & \text{S}^+ \hspace{0.5cm} \text{O}^-
\end{array}
\quad (Y.3a)
\]

where $\text{Rf}^7$ and $\text{Rf}^8$ are independently of each other selected from $\text{Ci-C6-fluoroalkyl}$ or $\text{CF}$ and $\text{Rf}^8$ taken together are $\text{C}_3\text{-C}_6$-fluoroalkyl, preferably $\text{CF}_2\text{-CF}_2\text{-CF}_2$.

Examples are

\[
\begin{array}{c}
\text{F} \hspace{0.5cm} \text{O} \hspace{0.5cm} \text{N}^- \\
\text{F} & \text{A} & \text{F}
\end{array}
\]

According to a further preferred aspect of this embodiment, $Y$ is a radical of the formula $Y.4$. More preferably, $Y$ is a radical of the formula $Y.4a$

\[
\begin{array}{c}
\text{Rf}^7 & \text{C}^1 & \text{O} & \text{Rf}^8 \\
\text{X}^1 & \text{X}^2 & \text{X}^3
\end{array}
\quad (Y.4a)
\]

where $\text{Rf}^{7\prime}$, $\text{Rf}^{8\prime}$, and $\text{Rf}^9$ are independently of each other selected from $\text{C1-C6-fluoroalkyl}$, preferably $\text{Cl-C3-fluoroalkyl}$; and $\text{X}^1$, $\text{X}^2$ and $\text{X}^3$ are each $\text{SO}_2$.

Examples are $[(\text{CF}_3\text{SO}_2)_3\text{C}]$ and $[(\text{CF}_3\text{CF}_2\text{SO2})_3\text{C}]$. 

25
According to a further preferred aspect of this embodiment, \( Y^- \) is a radical of the formula \( Y.5 \). More preferably, \( Y^- \) is a radical of the formula \( Y.5a \)

\[
\begin{align*}
\text{Rf}^{10} & \\
\text{Rf}^{11} & \quad \text{B}-\text{Rf}^{13} \\
\text{Rf}^{12} & \\
\text{Rf}^{14} & \\
\end{align*}
\]

\((Y.5a)\)

where \( \text{Rf}^{10}, \text{Rf}^{11}, \text{Rf}^{12} \) and \( \text{Rf}^{13} \) are each pentafluorophenyl.

According to a further preferred aspect of this embodiment, \( Y^- \) is a radical of the formula \( Y.6 \). More preferably, \( Y^- \) is a radical of the formula \( Y.6a \)

\[
\begin{align*}
\text{Rf}^{14a} & \\
\end{align*}
\]

\((Y.6a)\)

where \( \text{Rf}^{14a} \) is \( \text{Ci-C}_6 \)-fluoroalkyl. Especially, \( \text{Rf}^{14} \) is \( \text{CF}_3, \text{CF}_3\text{CF}_2 \) or \( \text{CF}_3\text{CF}_2\text{CF}_2 \).

Specific examples of \( Y^- \) are: \( \text{PF}_6^-, \)

Further specific examples of \( Y^- \) are
A preferred embodiment of the invention relates to an electrode layer sensitized with a compound of the formula I, photoelectric conversion elements comprising said electrode layer, compounds of the formula I and the use, where in the compound of the formula I

- $A$ is a radical of the formula A.1a, where $R^{29}$ is CH$_2$COOH, and $Y$ is selected from BF$_4^-$, B(C$_6$F$_5$)$_4^-$, PFe$^-$, SbF$_6^-$, Y.1a, Y.1b, Y.3a, Y.4a and Y.6a, where Y.1a, Y.1b, Y.3a, Y.4a and Y.6a are as defined above; or
- $A$ is a radical of the formula A.1a, where $R^{29}$ is CH$_2$COOH, and $Y$ is Y.2a, where Y.2a is as defined above.

A further preferred embodiment of the invention relates to an electrode layer sensitized with a compound of the formula I, photoelectric conversion elements comprising said electrode layer, compounds of the formula I and the use, where in the compound of the formula I, $R^1$ and $R^2$ are independently selected from hydrogen, C$_1$-C$_{20}$-alkyl which is uninterrupted or interrupted by O, S, CO, NR$_4^-$ or combinations thereof, C$_6$-C$_{20}$-aryl, heteroaryl, C$_6$-C$_{20}$-aryl which is substituted by 1, 2 or 3 C$_1$-C$_{5}$-alkyl and $R^1$ may also be a radical of the formula D, wherein $R^4$ is as defined above.

According to a preferred aspect of this embodiment, $R^2$ is hydrogen, C$_1$-C$_{20}$-alkyl or C$_6$-C$_{20}$-aryl. More preferably $R^2$ is hydrogen or C$_1$-C$_{10}$-alkyl or phenyl. $R^1$ has one of the meanings given for $R^2$ or is a radical of the formula D. In particular, $R^1$ and $R^2$ are both hydrogen.

A further preferred embodiment of the invention relates to an electrode layer sensitized with a compound of the formula I, photoelectric conversion elements comprising said electrode layer, compounds of the formula I and the use, where in the compound of the formula I, where $n$ is 1 or 2. According to a preferred aspect of this embodiment, $n$ is 1.
A further preferred embodiment of the invention relates to an electrode layer sensitized with a compound of the formula I, photoelectric conversion elements comprising said electrode layer, compounds of the formula I and the use, where in the compound of the formula I,

- \( n = 1; \)
- \( R^1 \) and \( R^2 \) are independently of each other selected from hydrogen or \( \text{Cl-Clo-alkyl}; \)
- \( D \) is a radical of the formula D.1,
- where \( R^{15} \) is hydrogen or \( \text{Cl-C}^{20}-\text{alkoxy}; \)
- \( R^{19}, R^{20} \) and \( R^{21} \) are each hydrogen;
- \( R^{17} \) and \( R^{18} \) together with the nitrogen atom to which they are attached are morpholiny, thiomorpholiny, piperidiny, piperaziny, pyrrolidiny, pyrazolidiny or imidazolidiny or
- \( R^{17} \) and \( R^{18} \) are independently of each other selected from \( \text{Cl-C}^{6-}\text{-alkyl}, 9H-fluoren-2-yl, 9,9-di(\text{Cl-C}^{6-}\text{-alkyl})-9H-fluoren-2-yl, \) pyrenyl, pyrenyl which is substituted by \( \text{Cl-C}^{6-}\text{-alkyl} \) and phenyl which is substituted by 2-phenylvinyl, 2,2-diphenylvinyl or triphenylvinyl or
- \( D \) is a radical of the formulae D.1-1 or D.1-2

\[
\begin{align*}
\text{(D.1-1)} & \quad \text{(D.1-2)} \\
* \quad \text{denotes the point of attachment to the remainder of the molecule and} \\
\text{R}^{18} & \quad \text{is phenyl which is substituted by 2-phenylvinyl or 2,2-diphenylvinyl,} \\
9H-fluoren-2-yl & \quad \text{or 9,9-di(\text{Cl-C}^{6-}\text{-alkyl})-9H-fluoren-2-yl;}
A & \quad \text{is a radical of the formula A.1.1a,}
\text{where} \\
\text{R}^{29} & \quad \text{is -R}^{28-}\text{COOH or -R}^{28-}\text{COO-Z}^{+}, \\
\text{where} & \quad \text{R}^{28} \text{ is a direct bond, Cl-C}^{4-}\text{-alkylene, C}^{2-}\text{-C}^{4-}\text{-alkenylene or phenylene; and}
\end{align*}
\]
$Z^+$ is $N(R_{4}^{14})^{+},Li^{+},Na^{+}$ or $K^{+}$; where $R_{4}^{14}$ is hydrogen or $\text{Ci-C}_{20}$-alkyl; and

$Y^-$ is selected from $B(C_{6}F_{5})_{4},PF_{6}^{-},([\text{Ci-C}_{4}\text{perfluoroalkyl}]SO_{2})_{2}N^{-},([\text{Ci-C}_{4}\text{perfluoroalkyl}]SO_{2})_{3}C^{-},d-\text{Cs-perfluoroalkyl-SOs}^{-}$

where $R_{25}^{25}$ is $\text{Ci-C}_{20}$-alkyl, phenyl which is unsubstituted or substituted by $\text{C}_{1}-\text{C}_{20}$-alkoxy, or 6-, 7-, 8- or 9-membered saturated heterocyclyl containing 1 or 2 heteroatoms or heteroatom groups selected from O, C(O), as ring members, where heterocyclyl is unsubstituted or may carry 1, 2, 3, 4, 5 or 6 $\text{Ci-C}_{4}$-alkyl groups, where $\text{Ci-C}_{20}$-alkoxy may be interrupted by one or more, e.g., 2, 3, 4, 5, 6, 7, 8 or more than 8 oxygen atoms, and $Rf^{14a}$ is $\text{Ci-C}_{3}$-perfluoroalkyl.

Apart from that, the variables $R_{25}^{25},R_{26}^{26}$ and $R_{27}^{27}$ independently of each other, are preferably selected from hydrogen, $\text{Ci-C}_{20}$-alkyl and $\text{C}_{6}\text{C}_{20}$-aryl.

The compounds of the formula $I$ can be prepared by condensation of the corresponding carbonyl compound and quinolinium or isoquinolinium salt and as described below or in the experimental part.

Scheme 1 illustrates the preparation of compounds of the formula $I$, where $n$ is zero or 1.

Scheme 1:

in case of $n=0$;

\begin{align*}
\text{D} & \equiv \text{O} \quad \text{(II)} \\
\text{D} & \equiv \text{A} \\
\text{D} & \equiv \text{A} \\
\text{(III)} & \equiv \text{A}
\end{align*}

\begin{align*}
\text{D} & \equiv \text{R}^{1} \\
\text{D} & \equiv \text{R}^{2} \\
\text{D} & \equiv \text{A} \\
\text{(III)} & \equiv \text{A}
\end{align*}
In case of \( n=1 \);

\[
\begin{align*}
\text{D} & \quad \text{R}^1 \quad \text{R}^1 \quad \text{O} \quad \text{R}^2 \quad \text{R}^2 \quad \text{A} \\
\text{(lla)} & \quad \text{R}^2 \quad \text{A} \\
\text{(III)} & \quad \text{R}^1 \quad \text{R}^1 \quad \text{R}^2 \quad \text{R}^2 \quad \text{A}
\end{align*}
\]

(1)

In scheme 1, D, A, R, R₂ and \( n \) are as defined above.

For instance, the reaction conditions of the condensation of the quaternary salts (III) with carbonyl compounds (II) or (lla) are reflux in ethanol in the presence of piperidine or pyrrolidine (see for instance, *J. Chem. Soc.* 1961, 5074, *Dyes & Pigments* 2003, 58, 227), or heating in acetic anhydride (see for instance, *Indian J. Chem.* 1968, 6, 235.), or heating in acetic acid in a presence of ammonium acetate.

After condensation reactions, fluorinated counter anion can be placed from inorganic anion e.g. bromide via counter anion exchange reaction.

Before condensation, the group G may be protected. Then after the condensation reaction, the protection group can be removed. A group G comprising COOH or COO⁻·Z⁺ can be protected by, for example, t-butyl group. Then after condensation reactions, the COO-t-butyl group can be converted into COOH or COO⁻·Z⁺.

Or compounds of formula (I) can be prepared by condensation of the corresponding quinoline or isoquinoline derivatives with carbonyl compounds, followed by quaternization to the corresponding pyridinium, quinolinium or isoquinolinium salt.

For instance, the starting materials are partly items of commerce or can be obtained according to methods known in the art.

The oxide semiconductor fine particles are, for instance, made of TiO₂, SnO₂, WO₃, ZnO, Nb₂O₅, Fe₂O₃, ZrO₂, MgO, WO₃, ZnO, CdS, ZnS, PbS, Bi₂S₃, CdSe, CdTe or combinations thereof. Preferably, the oxide semiconductor fine particles are made of TiO₂.

According to a specific aspect of this invention, the electrode layer comprises a dye of formula (I) or a mixture of dyes of formula (I) as the only dye(s).
Preferred is a porous film made of oxide semiconductor fine particles which is sensitized with a dye of formula (I) and one or more further dyes.

Examples of further dyes are metal complex dyes (preferably the metal is Ru, Pt, Ir, Rh, Re, Os, Fe, W, Cr, Mo, Ni, Co, Mn, Zn or Cu, more preferably Ru, Os or Fe, most preferably Ru) and/or organic dyes selected from the group consisting of indoline, coumarin, cyanine, merocyanine, hemicyanine, methin, azo, quinone, quinonimine, diketo-pyrrolo-pyrrole, quinacridone, squaraine, triphenylmethane, perylene, indigo, xanthene, eosin, rhodamine and combinations thereof. As further dyes organic dyes, methine dye are preferred.

The molar ratio of a further dye, if present, to a dye of formula (I) usually is 1:19 to 19:1, preferably 1:9 to 9:1, more preferably 1:5 to 5:1, most preferably 1:3 to 3:1.

For example, the dye is adsorbed together with an additive, preferably a co-adsorbent.

Examples of such additives are co-adsorbents selected from the group consisting of a steroid (preferably deoxycholic acid, dehydrodeoxcholic acid, chenodeoxycholic acid, cholic acid methyl ester, cholic acid sodium salt or combinations thereof), a crown ether, a cyclodextrine, a calixarene, a polyethyleneoxide, hydroxamic acid, hydroxamic acid derivative and combinations thereof, especially hydroxamic acid and hydroxiamic acid derivative.

The molar ratio of such an additive to a dye of formula (I) usually is 1000:1 to 1:100, preferably 100:1 to 1:10, most preferably 10:1 to 1:2.

For example, such an additive is not a dye.

The present invention also pertains to a photoelectric conversion device comprising an electrode layer as defined herein.

Such photoelectric conversion devices usually comprise

(a) a transparent conductive electrode substrate layer,
(b) an electrode layer comprising a porous film made of oxide semiconductor fine particles sensitized with
(c) a dye of formula (I),
(d) a counter electrode layer, and
(e) an electrolyte layer (e.g. filled between the working electrode layer b and the counter electrode layer d).

The component (c) can also be a combination of a dye of formula (I) and one or more further dyes.

Preferably, the transparent conductive electrode substrate layer (a) contains (e.g. consists of)
(a-1) a transparent insulating layer and
(a-2) a transparent conductive layer.

The transparent conductive layer (a-2) is usually between the transparent insulating layer (a-1) and the electrode layer (b).

Examples of the transparent insulating layer (a-1) include glass substrates of soda glass, fused quartz glass, crystalline quartz glass, synthetic quartz glass; heat resistant resin sheets such as a flexible film; metal sheets, transparent plastic sheets made of polyethylene terephthalate (PET), polyethylene naphthalate (PEN), polycarbonate (PC), polyether sulfone (PES); a polished plate of a ceramic, such as titanium oxide or alumina.

Examples of transparent conductive layer (a-2) are conductive metal oxides such as ITO (indium-tin compounded oxide), IZO (indium-zinc compounded oxide), FTO (fluorine-doped tin oxide), zinc oxide doped with boron, gallium or aluminum, and niobium-doped titanium oxide. The thickness of the transparent conductive layer (a-2) is usually 0.1 to 5 µm. The surface resistance is usually below 40 ohms/sq, preferably below 20 ohms/sq.

To improve the conductivity of the transparent conductive layer (a-2), it is possible to form a metal wiring layer on it, made of for instance silver, platinum, aluminum, nickel or titanium. The area ratio of the metal wiring layer is generally within the range that does not significantly reduce the light transmittance of the transparent conductive electrode substrate layer (a). When such a metal wiring layer is used, the metal wiring layer may be provided as a grid-like, stripe-like, or comb-like pattern.

The electrode layer (b) is usually between the transparent conductive electrode substrate layer (a) and the electrolyte layer (e).

The porous film of oxide semiconductor fine particles of the electrode layer (b) can be
prepared by a hydrothermal process, a sol/gel process or high temperature hydrolysis in gas phase. The fine particles usually have an average particle diameter of from 1 nm to 1000 nm. Particles with different size can be blended and can be used as either single or multi-layered porous film. The porous film of the oxide semiconductor layer (b) has usually a thickness of from 0.5 to 2,000 nm.

If desired, it is possible to form a blocking layer on the electrode layer (b) (usually between the surface of the electrode layer (b) and the dye (c)) and/or between the electrode layer (b) and the transparent conductive electrode substrate layer (a) to improve the performance of the electrode layer (b). An example of forming a blocking layer is immersing the electrode layer (b) into a solution of metal alkoxides such as titanium ethoxide, titanium isopropoxide and titanium butoxide, chlorides such as titanium chloride, tin chloride and zinc chloride, nitrides and sulfides and then drying or sintering the substrate. For instance, the blocking layer is made of a metal oxide (e.g. TiO2, SiO2, Al2O3, ZrO2, MgO, SnO2, ZnO, Eu2O3, and Nb2O5 or combinations thereof) or a polymer (e.g. poly(phenylene oxide-co-2-allylphenylene oxide) or poly(methylsiloxane)). Details of the preparation of such layers are described in, for example, Electrochimica Acta, 1995, 40, 643; J. Phys. Chem. B, 2003, 107, 14394; J. Am. Chem. Soc, 2003, 125, 475; Chem. Lett, 2006, 35, 252; J. Phys. Chem. B, 2006, 110, 19191; J. Phys. Chem. B, 2001, 105, 1422. The blocking layer may be applied to prevent undesired reaction. The blocking is usually dense and compact, and is usually thinner than the electrode layer (b).

Preferably, the counter electrode layer (d) contains (e.g. consists of)
(d-1) a conductive layer and
(d-2) an insulating layer.

The conductive layer (d-1) is usually between the insulating layer (d-2) and the electrolyte layer (e).

For instance, the conductive layer (d-1) contains a conductive carbon (e.g. graphite, single walled carbon nanotubes, multiwalled carbon nanotubes, carbon nanofibers, carbon fibers, graphene or carbon black), a conductive metal (e.g. gold or platinum), a metal oxide (e.g. ITO (indium-tin compounded oxide), IZO (indium-zinc compounded oxide), FTO (fluorine-doped tin oxide), zinc oxide doped with boron, gallium or aluminum, and niobium-doped titanium oxide) or mixtures thereof.

Furthermore, the conductive layer (d-1) may be one obtained by forming a layer of platinum, carbon or the like (generally with a thickness of from 0.5 to 2,000 nm), on a
thin film of a conductive oxide semiconductor, such as ITO, FTO, or the like (generally with a thickness of from 0.1 to 5 µm). The layer of platinum, carbon or the like is usually between the electrolyte layer (e) and the insulating layer (d-2).

Examples of the insulating layer (d-2) includes glass substrates of soda glass, fused quartz glass, crystalline quartz glass, synthetic quartz glass; heat resistant resin sheets such as a flexible film; metal sheets, transparent plastic sheets made of polyethylene terephthalate (PET), polyethylene naphthalate (PEN), polycarbonate (PC), polyether sulfone (PES); a polished plate of a ceramic, such as titanium oxide or alumina.

The dye (c) is usually disposed on the electrode layer (b) on that surface of the electrode layer (b) facing the electrolyte layer (e).

For adsorption of the dye (c) to the electrode layer (b), the electrode layer (b) may be immersed into a solution or a dispersion liquid of the dye. A concentration of the dye solution or dye dispersion liquid is not limited to, but preferably from 1 µM to 1 M, and is preferably 10 µM to 0.1 M. The time period for the dye adsorption is preferably from 10 seconds to 1000 hours or less, more preferably from 1 minute to 200 hours or less, most preferably from 1 to 10 hours. The temperature for dye adsorption is preferably from room temperature to the boiling temperature of the solvent or the dispersion liquid. The adsorption may be carried out dipping, immersing or immersing with stirring. As the stirring method, a stirrer, supersonic dispersion, a ball mill, a paint conditioner, a sand mill or the like is employed, while the stirring method shall not be limited thereto.

The solvent for dissolving or dispersing the dye (c) includes water, alcohol solvents such as methanol, ethanol, isopropyl alcohol, t-butyl alcohol, ethylene glycol and propylene glycol, ether solvents such as dioxane, diethyl ether, dimethoxyethane, tetrahydrofuran, dioxolane, t-butyl methyl ether, ethylene glycol dialkyl ether, propylene glycol monomethyl ether acetate and propylene glycol methyl ether, ketone solvents such as acetone, amide solvents such as N,N-dimethylformamide, N,N-dimethylacetamide and N-methylpyrrolidone, nitrile solvents such as acetonitrile, methoxy acetonitrile, methoxy propionitrile, propionitrile and benzonitrile, carbonate solvents such as ethylene carbonate, propylene carbonate and diethyl carbonate, heterocyclic compounds such as 3-methyl-2-oxazolidinone, dimethyl sulfoxide, sulfolane and γ-butyrolactone, halogenated hydrocarbon solvents such as dichloromethane, chloroform, dichloroethane, trichloroethane, trichloroethylene, chlorobenzene, o-dichlorobenzene, 1-chloronaphthalene, bromoform, bromobenzene, methyl iodide, iodobenzene and fluoro benzene and hydrocarbon solvents such as benzene, toluene, o-xylene, m-xylene, p-xylene, ethyl benzene, cumene, n-pentane, n-
hexane, n-octane, cyclohexane, methylcyclohexane, 1,5-hexadiene and cyclohexadiene. These may be used solely or in the form of a mixture containing two or more solvents. As a solvent, supercritical solvent such as supercritical carbon dioxide may be used.

As dye (c) a dye of formula (I) may be adsorbed on the electrode layer (b) solely or in combination with one or more further dyes. The dyes adsorbed together are not limited to dyes of formula (I). Two or more dyes may be adsorbed on the electrode layer (b) one by one or all together by dissolving the dyes in a solvent. It is preferable to use the dyes with different absorption peaks in different wavelengths to absorb wide range of light wavelengths and generate higher current. The ratio of two or more dyes adsorbed on the electrode layer (b) is not limited but preferably each dye has molar ratio of more than 10%.

For adsorption of the dye (c), an additive may be used in combination. The additive may be any one of an agent that has a function presumably for controlling dye adsorption. The additive includes a condensation agent such as thiol or a hydroxyl compound and a co-adsorbent. These may be used solely or a mixture of them. The molar ratio of the additive to the dye is preferably 0.01 to 1,000, more preferably 0.1 to 100.

For instance, the dye-adsorbed electrode layer may be treated with amines such as 4-tert-butyl pyridine. As a treatment method, immersing the dye-sensitized electrode layer into amine solution which may be diluted with a solvent such as acetonitrile or ethanol can be employed.

In the above manner, the electrode layer of the present invention can be obtained.

When the electrolyte layer (e) is in the form of solution, quasi-solid or solid, the electrolyte layer (e) usually contains,

(e-1) electrolyte compound,
(e-2) solvent and/or ionic liquid, and
preferably (e-3) other additives.

Examples of the electrolyte compound (e-1) include a combination of a metal iodide such as lithium iodide, sodium iodide, potassium iodide, cesium iodide or calcium iodide with iodine, a combination of a quaternary ammonium iodide such as tetraalkylammonium iodide, pyridium iodide or imidazolium iodide with iodine, a combination of a metal bromide such as lithium bromide, sodium bromide, potassium
bromide, cesium bromide or calcium bromide with bromine, a combination of a quaternary ammonium bromide such as tetraalkylammonium bromide or pyridinium bromide with bromine, metal complexes such as ferrocyanic acid salt-ferricyanide acid salt or ferrocene-ferricyanide ion, sulfur compounds such as sodium polysulfide and alkylthiolyldisulfide, a viologen dye, hydroquinone-quinone and a combination of a nitrooxide radical such as 2,2,6,6-tetramethyl-1-piperidinoxy (TEMPO) and o xoammonium salt. It is possible to prepare electrolyte compounds (e-1) by partially converting nitrooxide radical into the o xoammonium salt in situ by adding oxidizing agent (e.g. NOBF₄).

The above electrolyte compounds (e-1) may be used solely or in the form of a mixture. As an electrolyte compound (e-1), there may be used a molten salt that is in a molten state at room temperature. When such a molten salt is used, particularly, it is not necessary to use a solvent.

The electrolyte compound (e-1) concentration in the electrolyte solution is preferably 0.05 to 20 M, more preferably 0.1 to 15 M.

For instance, the solvent (e-2) is nitrile solvents such as acetonitrile, methoxy acetonitrile, methoxy propionitrile, propionitrile and benzonitrile, carbonate solvents such as ethylene carbonate, propylene carbonate and diethyl carbonate, alcohol solvents such as methanol, ethanol, isopropyl alcohol, t-butyl alcohol, ethylene glycol and propylene glycol, ether solvents such as dioxane, diethyl ether, dimethoxyethane, tetrahydrofuran, dioxolane, t-butyl methyl ether, ethylene glycol dialkyl ether, propylene glycol monomethyl ether acetate and propylene glycol methyl ethyl, water, ketone solvents such as acetone, amide solvents such as N,N-dimethylformamide, N,N-dimethylacetamide and N-methylpyrrolidone, heterocyclic compounds such as 3-methyl-2-oxazolidinone, dimethyl sulfoxide, sulfolane and γ-butyrolactone, halogenated hydrocarbon solvents such as dichloromethane, chloroform, dichloroethane, trichloroethane, trichloroethylene, chlorobenzene, o-dichlorobenzene, 1-chloronaphthalene, bromoform, bromobenzene, methyl iodide, iodobenzene and fluorobenzene and hydrocarbon solvents such as benzene, toluene, o-xylene, m-xylene, p-xylene, ethylbenzene, cumene, n-pentane, n-hexane, n-octane, cyclohexane, methylcyclohexane, 1,5-hexadiene and cyclohexadiene or combinations of the above mentioned solvents and the ionic liquid is a quaternary imidazoli um salt, a quaternary pyridinium salt, a quaternary ammonium salt or combinations thereof, preferably the anion of the salt is BF₄⁻, PF₆⁻, F(HF)²⁻, F(HF)₃⁻, bis(trifluoromethanesulfonyl)imide [(CF₃SO₂)₂N⁻], N(CN)₂⁻, C(CN)₃⁻, B(CN)₄⁻, SCN⁻, SeCN⁻, I⁻, IO₃⁻ or combinations thereof.
For example, a photoelectric conversion device comprises a solvent (e.g. without an ionic liquid). For instance, a photoelectric conversion device comprises an ionic liquid (e.g. without a solvent).

Examples of further additives (e-3) are lithium salts (especially 0.05 to 2.0 M, preferably 0.1 to 0.7 M) (e.g. LiClO₄, LiS0₃CF₃ or Li(CF₃SO₂)N); pyridines (especially 0.005 to 2.0 M, preferably 0.02 to 0.7M) (e.g. pyridine, tert-butylpyridine or polyvinylpyridine), gelling agents (especially 0.1 to 50 wt.%, preferably 1.0 to 10 wt.% based on the weight of the component e) (e.g. polyvinylidene fluoride, polyvinylidene fluoride - hexafluoropropylene copolymer, polyethylene oxide derivatives, polyacrylonitrile derivatives or amino acid derivatives), nano particles (especially 0.1 to 50 wt.%, preferably 1.0 to 10 wt.% based on the weight of the component e) (e.g. conductive nano particles, in particular single-wall carbon nanotubes, multi-wall carbon nanotubes or combinations thereof, carbon fibers, carbon black, polyaniline-carbon black composite TiO₂, SiO₂ or SnO₂; and combinations thereof.

In the present invention, an inorganic solid compound such as Cul, CuSCN, Cul nSe2, Cu(In,Ga)Se₂, CuGaSe₂, Cu₂O, CuS, CuGaS₂, CulnS₂, CuAlSe₂, GaP, NiO, CoO, FeO, B₁₂O₃, MO₂, Cr₂O₃ or the like, an organic hole-transporting material or an electron-transporting material can be used in place of the electrolyte layer (e). Examples of organic hole-transporting materials are p-type semiconductors based on polymers such as polythiophene and polyaryl amines, or on amorphous, reversibly oxidizable nonpolymeric organic compounds such as the spirobifluorenes. These solid p-type semiconductors may be used both in the undoped and doped form. These compounds may be used alone or in admixture of two or more.

The instant electrode layer, photoelectric conversion devices and DSC can be prepared as outlined in US 4,927,721, US 5,084,365, US 5,350,644 and US 5,525,440 or in analogy thereto.

The present invention also refers to a dye sensitized solar cell comprising a photoelectric conversion device as described herein.

The present invention also refers to the use of a compound of formula (I) as defined herein as a dye in a dye sensitized solar cell.

The present invention further refers to a compound of formula (I) as defined herein.
The present invention is now illustrated in further detail by the following examples. However, the purpose of the following examples is only illustrative and is not intended to limit the present invention to them.

Example D-1

D-1 is prepared according to the scheme below.

Preparation of the quinolinium salt (A):
A mixture of 4-methylquinoline (7.17 g, 50.07 mmol), t-butyl bromoacetate (10.4 ml, 70.44 mmol) and 150 ml of toluene were stirred overnight at 80°C under N2. The precipitate was collected by filtration, washed by toluene and dried, giving beige solid (A) (13.6 g). The crude was used without further purification.

Preparation of the quinolinium salt (C):
A mixture of aldehyde (B) (1.0 g, 6.7 mmol), quinolinium salt (A) (1.8 g, 7.0 mmol) and 10 ml of acetic anhydride stirred at 80°C under N2 for 2 hours. Acetic anhydride was removed by vacuum evaporation and the obtained solid was purified by column chromatography (silica gel, DCM-methanol (10->20%)), giving 1.4 g of (C).
Preparation of the quinolinium salt (D):
A mixture of quinolinium salt (C) (1.4 g) and 20 ml of dichloromethane/trifluoroacetic acid (4:3) was stirred at room temperature for 2 hours. Solvents were removed by vacuum evaporation and the obtained solid was purified by column chromatography (silica gel, DCM-methanol (5->20%)), giving 1.1 g of (D).

Preparation of D-1
A mixture of quinolinium salt (D) (150 mg, 0.36 mmol), lithium bis(trifluoromethanesulfonyl)imide (LiTFSI) (206 mg, 0.72 mmol) and dichloromethane (5 ml) /H2O (5 ml) was stirred at room temperature for 17 hours. Dichloromethane was removed by vacuum evaporation, yielding a water suspension of dye D-1. The dye was collected by filtration and washed by water and was dried in vacuo at room temperature overnight, giving 150 mg of D-1.

The procedures described in the synthesis example above were used to prepare further compounds D-2 to D-21 by appropriate modification of the starting compounds. The compounds thus obtained are listed in table I below, together with physicochemical data.

Example D-2 to D-4
Dyes D-2, D-3 and D-4 were prepared in analogy to the above-mentioned procedures except using corresponding salt of counter anion in place of LiTFSI.

Example D-5

Dyes D-5 was prepared in analogy to the above-mentioned procedures except using corresponding aldehyde (E) in place of (B).

Example D-6 to D-9
Dyes D-6 to D-9 were prepared in analogy to the procedure of D-5 except using corresponding salt of counter anion in place of LiTFSI.
Example D-10
Dyes D-10 was prepared in analogy to the procedure of D-1 except using corresponding salt of counter anion in place of LiTFSI.

Example D-11 to D-13
Dyes D-11 to D-13 were prepared in analogy to the procedure of D-5 except using corresponding salt of counter anion in place of LiTFSI.

Example D-14 to D-16

Dyes D-14 to D-16 were prepared in analogy to the above-mentioned procedures except using corresponding aldehyde (F), (G) and (H), respectively.

Dyes D-17 to D-29 are prepared in analogy to the above-mentioned procedures.

Performance results

Example A-1 (Preparation of DSC device)

FTO (tin oxide doped with fluorine) glass substrates (< 12 ohms/sq, A11DU80, supplied by AGC Fabritech Co., Ltd.) were used as the base material, which were successively treated with glass cleaner, Semico Clean (Furuuchi Chemical Corporation), fully deionized water and acetone, in each case for 5 min in an ultrasonic bath, then baked for 10 minutes in isopropanol and dried in a nitrogen flow.

A spray pyrolysis method was used to produce the solid \( \text{TiO}_2 \) buffer layer. Titanium oxide paste (PST-18NR, supplied by Catalysts & Chemicals Ind. Co., Ltd.) was applied onto the FTO glass substrate by screen printing method. After being dried for 5 minutes at 120°C, a working electrode layer having a thickness of 1.6 \( \mu \text{m} \) was obtained by applying heat treatment in air at 450°C for 30 minutes and 500°C for 30 minutes.

Obtained working electrode is then treated with TiCU, as described by M. Gratzel et al., for example, in Gratzel M. et al., Adv. Mater. 2006, 18, 1202. After sintering the sample
was cooled to 60 to 80°C. The sample was then treated with additive (E-1) shown below (EP 10167649.2).

![Chemical structure of E-1](image)

5 mM of (E-1) in ethanol was prepared and the intermediate was immersed for 17 hours, washed in a bath of pure ethanol, briefly dried in a nitrogen stream and subsequently immersed in a 0.5 mM solution of dye (D-1) in a mixture solvent of acetonitrile + t-butyl alcohol (1:1) for 2 hours so as to adsorb the dye. After removal from the solution, the specimen was subsequently washed in acetonitrile and dried in a nitrogen flow.

A p-type semiconductor solution was spin-coated on next. To this end a 0.165M 2,2',7,7'-tetrakis(N,N-di-p-methoxyphenyl-amine)-9,9'-spirobifluorene (spiro-MeOTAD) and 20mM LiN(SO$_{2}$CF$_{3}$)$_{2}$ (Wako Pure Chemical Industries, Ltd.) solution in chlorobenzene was employed. 20 μl/cm$^2$ of this solution was applied onto the specimen and allowed to act for 60 s. The supernatant solution was then spun off for 30 s at 2000 revolutions per minute. The substrate was stored overnight under ambient conditions. Thus, the HTM was oxidized and for this reason the conductivity increased.

As the metal back electrode, Ag was evaporated by thermal metal evaporation in a vacuum at a rate of 0.5 nm/s in a pressure of 1x10$^{-5}$ mbar, so that an approximately 100 nm thick Ag layer was obtained.

In order to determine the photo-electric power conversion efficiency $\eta$ of the above photoelectric conversion device, the respective current/voltage characteristic such as short-circuit current density $J_{sc}$, open-circuit voltage $V_{oc}$ and fill factor FF. was obtained with a Source Meter Model 2400 (Keithley Instruments Inc.) under the illumination of an artificial sunlight (AM 1.5, 100 mW/cm$^2$ intensity) generated by a solar simulator (Peccell Technologies, Inc).

Examples A-2 to A-4
DSC device was prepared and evaluated in the same manner as described in the example A-1 except that the compound (D-1) was replaced with a compound (D-2) to (D-4).
Comparative example A-5 to A-6
DSC device was prepared and evaluated in the same manner as described in the example A-1 except that the compound (D-1) was replaced with a compound (R-1) to (R-2) shown below. Compounds R-1 and R-2 are not according to the invention and serve as comparison compounds. Compounds R-1 and R-2 only differ in the counter anion from compounds according to the invention.

Table 1 shows the results.

"Included in the claim of CN1 534021, but not example"

As can be seen from table 1, compounds I with a fluorinated counter anion (A-1 to A-4) show higher Jsc and Voc, giving higher energy conversion efficiency than comparative compounds R-1 and R-2 with Br and C8H17SO3⁻ as counter anion for the same chromophore.

Examples A-7 to A-18
DSC device is prepared and evaluated in the same manner as described in the example A-1 except that the compound (D-1) is replaced with a compound (D-5) to (D-9) and (D-23) to (D-29).

Comparative example A-19
DSC device is prepared and evaluated in the same manner as described in the example A-1 except that the compound (D-1) is replaced with a compound (R-3) shown
below. Compound R-3 only differs in the counter anion from compounds according to the invention. Table 2 shows the results.

\[ \text{R}^{17} \text{ and } \text{R}^{18} \text{ are independently of each other selected from unsubstituted or substituted } \text{Cl-C2o-alkyl, unsubstituted or substituted } \text{C2-C2o-alkenyl, unsubstituted or substituted } \text{C2-C2o-alkynyl, unsubstituted or substituted } \text{C7-C2o-aralkyl, unsubstituted or substituted } \text{C8-C2o-aralkenyl, unsubstituted or substituted } \text{C8-C2o-aralkynyl, unsubstituted or substituted } \text{C8-C2o-aralkenyl, unsubstituted or substituted } \text{C8-C2o-aralkynyl, unsubstituted or substituted } \text{C4-C2o-cycloalkyl, unsubstituted or substituted } \text{C5-C2o-cycloalkenyl and unsubstituted or substituted } \text{C6-C2o-cycloalkynyl,} \]

\[ \text{wherein alkyl, alkenyl, alkynyl or the aliphatic moieties in aralkyl,} \]
aralkeny1 or aralkynyl are uninterrupted or interrupted by O, S, CO, NR or combinations thereof, where R is hydrogen, C8-C20-alkyl or C6-C10-aryl;

or

R17 and R18 form together with the nitrogen atom to which they are attached an unsubstituted or substituted 5-, 6- or 7-membered ring;

or

R17 and R20 form together with the nitrogen atom to which R17 is attached and the carbon atoms of the benzene ring to which R20 and N-R17 are attached an unsubstituted or substituted 5-, 6- or 7-membered ring;

or

R17 and R22 form together with the nitrogen atom to which R17 is attached and the carbon atoms of the benzene ring to which R22 and N-R17 are attached an unsubstituted or substituted 5-, 6- or 7-membered ring;

and/or

R18 and R19 form with the nitrogen atom to which R18 is attached and the carbon atoms of the benzene ring to which R19 and N-R18 are attached an unsubstituted or substituted 5-, 6- or 7-membered ring;

unsubstituted or substituted C1-C20-alkenyl, unsubstituted or substituted C2-C20-alkynyl,

unsubstituted or substituted C7-C20-aralkyl, unsubstituted or substituted C8-C20-aralkenyl, unsubstituted or substituted C8-C20-aralkynyl, unsubstituted or substituted C6-C20-aryl, unsubstituted or substituted heteroaryl, unsubstituted or substituted heterocyclyl,
aralkenyl or aralkynyl are uninterrupted or interrupted by O, S, CO, NR' or combinations thereof;

R^{26}, R^{26} and R^{27} are independently of each other selected from hydrogen, unsubstituted or substituted Ci-C20-alkyl, unsubstituted or substituted C2-C20-alkenyl, unsubstituted or substituted C 7-C20-aralkyl, unsubstituted or substituted C8-C20-aralkenyl, unsubstituted or substituted C8-C20-aralkynyl, unsubstituted or substituted C 6-C20-aryl, unsubstituted or substituted heteroaryl, unsubstituted or substituted heterocycl, unsubstituted or substituted C 6-C20-cycloalkyl, unsubstituted or substituted C 5-C20-cycloalkenyl and unsubstituted or substituted C 6-C20-cycloalkynyl,

wherein alkyl, alkenyl, alkynyl or the aliphatic moieties in aralkyl, aralkenyl or aralkynyl are uninterrupted or interrupted by O, S, CO, NR' or combinations thereof;

A is a radical of formulae A.1, A.2, A.3, A.4 or A.5

\[
\begin{align*}
(A.1) & \quad (A.2) & \quad (A.3) \\
(A.4) & \quad (A.5) \\
\end{align*}
\]

where

\# denotes the bond to the remaining compound of formula 1

R^{29}, R^{31}, R^{32}, R^{33}, R^{34} and R^{35} are independently of each other selected from a radical G, hydrogen, halogen, OR.16
unsubstituted or substituted unsubstituted or substituted Ci-C20-alkyl, unsubstituted or substituted C2-C20-alkenyl, unsubstituted or substituted C2-C20-alkynyl, unsubstituted or substituted C7-C20-aralkyl, unsubstituted or substituted C8-C20-aralkenyl, unsubstituted or substituted C8-C20-aralkynyl, unsubstituted or substituted C6-C20-aryle, unsubstituted or substituted heteroaryl, unsubstituted or substituted heterocyclyl, unsubstituted or substituted C5-C20-cycloalkenyl, unsubstituted or substituted C5-C20-cycloalkenyl and unsubstituted or substituted C6-C20-cycloalkenyl, wherein alkyl, alkenyl, alkynyl or the aliphatic moieties in aralkyl, aralkenyl or aralkynyl are uninterrupted or interrupted by O, S, CO, NR14 or combinations thereof;

with the proviso that at least one of the radicals R29, R30, R31, R32, R33, R34 and R35 is a radical G,

where

R36 is unsubstituted or substituted Ci-C20-alkyl, unsubstituted or substituted C6-C20-aryl, unsubstituted or substituted heteroaryl, wherein alkyl is uninterrupted or interrupted by O, S, CO, NR14 or combinations thereof;

G is selected from \(-\text{R}^{28}\cdot\text{COOH}\), \(-\text{R}^{28}\cdot\text{COO} \cdot \text{Z}^+\), \(-\text{R}^{28}\cdot\text{OH}\), \(-\text{R}^{28}\cdot\text{S}(=\text{O})\text{R}^2\text{OH}\), \(-\text{R}^{28}\cdot\text{S}(=\text{O})\text{R}^2\text{OH}\), \(-\text{R}^{28}\cdot\text{P}(=\text{O})(0-Z^+)\text{R}^2\text{OH}\), \(-\text{R}^{28}\cdot\text{P}(=\text{O})(0-Z^+)\text{R}^2\text{OH}\), \(-\text{R}^{28}\cdot\text{NH}\text{OH}\), \(-\text{R}^{28}\cdot\text{NR}^{14}\text{S}(=\text{O})\text{R}^2\text{OH}\) and \(-\text{R}^{28}\cdot\text{NR}^{14}\text{S}(=\text{O})\text{R}^2\text{OH}\);

where

\(\text{R}^{28}\) is a direct bond, Ci-C20-alkylene, C2-C4-alkenylene or C6-C10-arylene;

\(\text{Z}^+\) is an organic or inorganic cation equivalent;

Y- is BF₄-, PF₆-, SbF₆-, AsF₆- or a fluorinated organic anion selected from the groups Y.1, Y.2, Y.3, Y.4, Y.5 and Y.6;
X- is S(=0)\textsubscript{2}O-, O-S(=0)\textsubscript{2}O-, COO-, O-P(=0)\textsubscript{2}O-, or O-P(=0)\textsubscript{2}O;\\

Rf\textsuperscript{1} is halogen, unsubstituted or substituted C\textsubscript{1}-C\textsubscript{20} alkyl, unsubstituted or substituted haloalkyl, unsubstituted or substituted C\textsubscript{2}-C\textsubscript{20} alkenyl, unsubstituted or substituted haloalkenyl, unsubstituted or substituted C\textsubscript{2}-C\textsubscript{20} alkynyl, unsubstituted or substituted haloalkynyl, unsubstituted or substituted C\textsubscript{7}-C\textsubscript{20} aralkyl, unsubstituted or substituted C\textsubscript{8}-C\textsubscript{20} aralkenyl, unsubstituted or substituted C\textsubscript{8}-C\textsubscript{20} aralkynyl, unsubstituted or substituted C\textsubscript{6}-C\textsubscript{20} aryl, unsubstituted or substituted heteroaryl, unsubstituted or substituted heterocyclyl, unsubstituted or substituted C\textsubscript{4}-C\textsubscript{20} cycloalkyl, unsubstituted or substituted C\textsubscript{5}-C\textsubscript{20} cycloalkenyl and unsubstituted or substituted C\textsubscript{6}-C\textsubscript{20} cycloalkynyl, wherein alkyl, haloalkyl, alkenyl, haloalkenyl, alkynyl, haloalkynyl or the aliphatic moieties in aralkyl, aralkenyl or aralkynyl are uninterrupted or interrupted by O, S, CO, NR\textsubscript{14} or combinations thereof,

Rf\textsuperscript{2}, Rf\textsuperscript{3}, Rf\textsuperscript{4}, Rf\textsuperscript{5} and Rf\textsuperscript{6} are independently selected from halogen, hydrogen, NR\textsubscript{25}R\textsubscript{26}, OR\textsubscript{25}, SR\textsubscript{25}, NR\textsubscript{25}-NR\textsubscript{26}R\textsubscript{27}, NR\textsubscript{25}-OR\textsubscript{26}, O-CO-R\textsubscript{25}, O-CO-OR\textsubscript{25}, 0-CO-NR\textsubscript{25}R\textsubscript{26}, NR\textsubscript{25}-CO-R\textsubscript{26}, NR\textsubscript{25}-CO-OR\textsubscript{26}, NR\textsubscript{25}-CO-NR\textsubscript{25}R\textsubscript{26}, CO-R\textsubscript{25}, CO-OR\textsubscript{25}, CO-NR\textsubscript{25}R\textsubscript{26}, S-CO-R\textsubscript{25}, CO-SR\textsubscript{25}, CO-NR\textsubscript{25}-NR\textsubscript{26}R\textsubscript{27}, CO-NR\textsubscript{25}-OR\textsubscript{26}, CO-O-CO-R\textsubscript{25}, CO-O-CO-OR\textsubscript{25}, CO-0-CO-NR\textsubscript{25}R\textsubscript{26}, CO-NR\textsubscript{25}-CO-R\textsubscript{26}, CO-NR\textsubscript{25}-CO-OR\textsubscript{26}. 
unsubstituted or substituted Ci-C2o-alkyl, unsubstituted or substituted C2-C2o-alkenyl, unsubstituted or substituted C6-C2o-alkynyl, unsubstituted or substituted C6-C2o-aryl, unsubstituted or substituted heteroaryl, unsubstituted or substituted heterocyclyl, unsubstituted or substituted C7-C2o-aralkyl, unsubstituted or substituted C8-C2o-aralkenyl, unsubstituted or substituted C8-C2o-aralkynyl, unsubstituted or substituted C4-C2o-cycloalkenyl, unsubstituted or substituted C5-C2o-cycloalkynyl and unsubstituted or substituted C6-C2o-cycloalkynyl, wherein alkyi, alkenyl, alkynyl or the aliphatic moieties in aralkyl, aralkenyl or aralkynyl are uninterrupted or interrupted by O, S, CO, NR\textsuperscript{14} or combinations thereof;

with the proviso that at least one of the radicals Rf\textsuperscript{2}, Rf\textsuperscript{3}, Rf\textsuperscript{4}, Rf\textsuperscript{5} and Rf\textsuperscript{6} is fluorene or Ci-C2o-fluoroalkyl, wherein fluoroalkyl is uninterrupted or interrupted by O, S, NR\textsuperscript{14}, CO, or combinations thereof;

X\textsuperscript{1}, X\textsuperscript{2} and X\textsuperscript{3} are independently of each other selected from S(=O)\textsubscript{2} and CO;

Rf\textsuperscript{7}, Rf\textsuperscript{7'}', Rf\textsuperscript{8}, Rf\textsuperscript{8'} and Rf\textsuperscript{9} are independently of each other selected from unsubstituted or substituted Ci-C2o-fluoroalkyl, C6-C2o-fluoroaryl, wherein fluoroalkyl is uninterrupted or interrupted by O, S, NR\textsuperscript{14}, CO, or combinations thereof; or

Rf\textsuperscript{7} and Rf\textsuperscript{8} together are C3-C6-fluoroalkyl;

Rf\textsuperscript{10}, Rf\textsuperscript{11}, Rf\textsuperscript{12} and Rf\textsuperscript{13} are independently of each other selected from fluorene, Ci-C2o-fluoroalkyl and C6-C2o-fluoroaryl;

Rf\textsuperscript{14} and Rf\textsuperscript{15} together are C3-C7-fluoroalkyl which is unsubstituted or substituted by Ci-C6-fluoroalkyl;

Rg is unsubstituted or substituted Ci-C2o-alkyl, unsubstituted or substituted Ci-C2o-alkoxy, unsubstituted or substituted C6-C2o-aryl or unsubstituted or substituted C6-C2oaryl-0-, wherein alkyi and the alkyi moiety in alkoxy is uninterrupted or interrupted by O, S, NR\textsuperscript{14}, CO, or combinations thereof;

with the proviso that if Rf\textsuperscript{7} and Rf\textsuperscript{8} are both unsubstituted or substituted fluorene, Y- is not bistrifluoromethylsulfonimide, C(S02CF\textsubscript{s})\textsuperscript{3}; hexafluoride antimonate, B\textsubscript{F}\textsubscript{4} or PF\textsubscript{6}; and

with the proviso that if A is a radical of the formula A.1.1c
Y is not (C\textsubscript{n}F\textsubscript{2n+i}S\textsubscript{0}2\textsuperscript{-})\textsubscript{2N}-, where n is an integer from 1 to 18.

The electrode layer as claimed in claim 1, where in the radical of the formulae
D.1 and D.2,
R\textsuperscript{17} and R\textsuperscript{18} are independently selected from Cl-C\textsubscript{2o} -alkyl, C\textsubscript{2}-C\textsubscript{2o} -alkenyl, C\textsubscript{2}-C\textsubscript{2o} -alkynyl, C\textsubscript{6}-C\textsubscript{2o} -aryl, heteroaryl, heterocyclyl, C\textsubscript{7}-C\textsubscript{2o} -aralkyl, C\textsubscript{8}-C\textsubscript{2o} -aralkenyl, C\textsubscript{8}-C\textsubscript{2o} -aralkynyl, C\textsubscript{4}-C\textsubscript{2o} -cycloalkyl, C\textsubscript{5}-C\textsubscript{2o} -cycloalkenyl, C\textsubscript{6}-C\textsubscript{2o} -cycloalkynyl,

wherein alkyl, alkenyl, alkynyl or the aliphatic moieties in aralkyl, aralkenyl or aralkynyl are uninterrupted or interrupted by O, S, N or combinations thereof and/or may carry one or more substitutes selected from C\textsubscript{4}-C\textsubscript{2o} -cycloalkyl, C\textsubscript{5}-C\textsubscript{2o} -cycloalkenyl, C\textsubscript{6}-C\textsubscript{2o} -cycloalkynyl, heterocyclyl, halogen, S-\textsuperscript{25}, O-\textsuperscript{25}, CO-\textsuperscript{25}, O-CO-\textsuperscript{25}, 0-C-\textsuperscript{25}, N R\textsuperscript{25}, CON -\textsuperscript{25}, R\textsuperscript{25}, N R\textsuperscript{25}, CO-R -\textsuperscript{26}, S (=0)\textsubscript{2}O R\textsuperscript{25} and S (=0)\textsubscript{2}0-Z -

wherein aryl, the aryl moiety of aralkyl, aralkenyl, or aralkynyl, heteroaryl, heterocyclyl, cycloalkyl, cycloalkenyl or cycloalkynyl are unsubstituted or may carry one or more substitutes selected from halogen, S-R\textsuperscript{25}, O-R\textsuperscript{25}, CO-\textsuperscript{25}, O-C-\textsuperscript{25}, N R\textsuperscript{25}, CON -\textsuperscript{25}, R\textsuperscript{25}, N R\textsuperscript{25}, CO-R -\textsuperscript{26}, S (=0)\textsubscript{2}O R\textsuperscript{25}, S (=0)\textsubscript{2}0-Z -, Cl-C\textsubscript{2o} -alkyl, C\textsubscript{2}-C\textsubscript{2o} -alkenyl, C\textsubscript{2}-C\textsubscript{2o} -alkynyl, C\textsubscript{7}-C\textsubscript{2o} -aralkyl, C\textsubscript{8}-C\textsubscript{2o} -aralkenyl, C\textsubscript{8}-C\textsubscript{2o} -aralkynyl, C\textsubscript{4}-C\textsubscript{2o} -cycloalkyl, C\textsubscript{5}-C\textsubscript{2o} -cycloalkenyl, C\textsubscript{6}-C\textsubscript{2o} -cycloalkynyl, heterocyclyl, C\textsubscript{6}-C\textsubscript{2o} -aryl, C\textsubscript{6}-C\textsubscript{2o} -ar which carries one or more substitutes selected from Cl-C\textsubscript{2o} -alkyl and O R\textsuperscript{25}, maleic anhydridyl and maleimidyl, wherein the 2 last mentioned radicals are unsubstituted or may carry substituents selected from Cl-C\textsubscript{2o} -alkyl, C\textsubscript{6}-C\textsubscript{2o} -aryl and phenyl-N R\textsuperscript{25}.

or

R\textsuperscript{17} and R\textsuperscript{18} may form together with the nitrogen atom to which they are attached a 5-, 6- or 7-membered, saturated or unsaturated heterocycle which may have 1 or 2 further heteroatoms selected from O, S and N as ring members and wherein the heterocycle is unsubstituted or may carry one or more substitutes R\textsuperscript{17}.

where
each \( R^1 \) is selected from Ci-C2o-alkyl which is unsubstituted or may carry one or more substituents \( R^2 \) and phenyl, which is unsubstituted or may carry one or more substituents \( R^3 \), in addition two radicals \( R^1 \) bonded to adjacent carbon atoms may form together with the carbon atoms to which they are bonded a 4-, 5-, 6- or 7-membered saturated or unsaturated carbocyclic ring or an aromatic ring selected from benzene, naphthalene, anthracene and 9H-fluorene, where the carbocyclic and the aromatic ring are unsubstituted or carry one or more substituents \( R^3 \), and/or two radicals \( R^1 \) present on the same carbon atom may be Ci-C2o-alkylidene which is unsubstituted or carry one or more substituents \( R^2 \), where

\[
R^2 \text{ is selected from halogen, S-R}^{25}, \text{O-R}^{25}, \text{CO-OR}^{25}, \text{O-CO-R}^{25},
\]

\[
\text{NR}^{25}R^{26}, \text{CONR}^{25}R^{26}, \text{NR}^{25}\text{CO-R}^{26}, S(=0)\text{O}R^{25} \text{ and } S(=0)\text{O}^{2}Z^+,
\]

\[
R^3 \text{ is selected from Ci-Cio-alkyl, halogen, fluoren-9-ylidenemethyl, } S-R^{25}, \text{O-R}^{25}, \text{CO-OR}^{25}, \text{O-CO-R}^{25}, \text{NR}^{25}R^{26}, \text{CONR}^{25}R^{26}, \text{NR}^{25}\text{-CO-R}^{26}, S(=0)\text{O}R^{25} \text{ and } S(=0)\text{O}^{2}Z^+;
\]

or

\( R^1 \) and \( R^2 \) may form together with the nitrogen atom to which \( R^1 \) is attached and the carbon atoms of the benzene ring to which \( R^2 \) and N-\( R^1 \) are attached an unsubstituted or substituted 5-, 6- or 7-membered ring which may have 1 or 2 further heteroatoms selected from O, S and N as ring members and wherein the heterocycle is unsubstituted or may carry one or more substituents \( R^4 \);

or

\( R^1 \) and \( R^2 \) may form together with the nitrogen atom to which \( R^1 \) is attached and the carbon atoms of the benzene ring to which \( R^2 \) and N-\( R^1 \) are attached an unsubstituted or substituted 5-, 6- or 7-membered ring, which may have 1 or 2 further heteroatoms selected from O, S and N as ring members and wherein the heterocycle is unsubstituted or may carry one or more substituents \( R^4 \);

and/or

\( R^1 \) and \( R^2 \) may form with the nitrogen atom to which \( R^1 \) is attached and the carbon atoms of the benzene ring to which \( R^1 \) and N-\( R^1 \) are attached an unsubstituted or substituted 5-, 6- or 7-membered ring which may have 1 or 2 further heteroatoms selected from O, S and N as ring members and
wherein the heterocycle is unsubstituted or may carry one or more substituents R^4; where each R^4 is selected from Ci-C20-alkyl which is unsubstituted or may carry one or more substituents R^5 and phenyl, which is unsubstituted or carry one or more substituents R^6, in addition two radicals R^4 bonded to adjacent carbon atoms may form together with the carbon atoms to which they are bonded a 4-, 5-, 6- or 7-membered saturated or unsaturated carbocyclic ring or an aromatic ring selected from benzene, naphthalene, anthracene and 9H-fluorene, where the carbocyclic or the aromatic ring are unsubstituted or may carry one or more substituents R^6, and/or two radicals R^4 present on the same C atom may be Ci-C20-alkylidene which is unsubstituted or carry one or more substituents R^5; where each R^5 has one of the meanings given for R^2; and each R^6 has one of the meaning given for R^2 and where in addition, two radicals R^6 bonded to adjacent carbon atoms may form together with the carbon atoms to which they are bonded a benzene or naphthalene ring.

where aryl, the aryl moiety of aralkyl, aralkenyl and aralkynyl, heteroaryl, heterocyclyl, cycloalkyl, cycloalkenyl and cycloalkynyl may carry substituents selected from Ci-C20-alkyl, C2-C20-alkenyl, C2-C20-alkynyl, C7-C20-aralkyl, C8-C20-aralkenyl, C8-C20-aralkynyl, c4-C20-cycloalkyl, Cs-C20-cycloalkenyl, C6-C20-cycloalkynyl, halogen, S-R^14, O-R^14, CO-OR^14, O-CO-
3. The electrode layer as claimed in claim 2, where D is a radical of the formula D.1, where

R^{17} and R^{18} are independently of each other selected from \text{CI-C}_{3} -alkyl, \text{C}_{2}\text{C}_{8}-alkenyl, \text{C}_{6}\text{C}_{20} -aryl, heteroaryl, \text{C}_{7}\text{C}_{20} -aralkyl, \text{C}_{8}\text{C}_{20} -aralkenyl, \text{C}_{6}\text{do}-aralkynyl and \text{C}_{5}\text{C}_{12} -cycloalkyl, where alkyl or alkenyl may be

unsubstituted or may carry 1, 2 or 3 substituents selected from tetrahydrofuranyl, halogen, S-R^{14}, O-R^{14}, CO-OR^{14}, O-CO-R^{14}, NR^{14}R^{14}, CONR^{14}R^{14} and NR^{14}-CO-R^{14},

where aryl, heteroaryl, the aryl moiety of aralkyl, aralkenyl and aralkynyl

cycloalkyl are unsubstituted or may carry substituents selected from \text{CI-C}_{6} -alkyl, \text{C}_{2}\text{C}_{-alkenyl and \text{C}_{8}\text{C}_{20} -aralkenyl;}

or

R^{17} and R^{20} may form together with the nitrogen atom to which R^{17} is attached

and the carbon atoms of the benzene ring to which R^{20} and N-R^{17} are

attached a 5-, 6- or 7-membered, saturated or unsaturated heterocycle

which may have 1 further heteroatom selected from O, S and N as ring

member and wherein the heterocycle may be unsubstituted or may carry

one or more substituents R^X selected from \text{CI-C}_{20} -alkyl and phenyl,

in addition two radicals R^Y bonded to adjacent carbon atoms may form

together with the carbon atoms to which they are bonded a 4-, 5-, 6- or 7-

membered saturated or unsaturated carbocyclic ring or an aromatic ring

selected from benzene and 9H-fluorene where the carbocyclic and the

aromatic ring are unsubstituted or carry one or more substituents selected

from \text{CI-C}_{6} -alkyl and fluoren-9-ylidenemethyl, and/or two radicals R^Z

present on the same carbon atom may be \text{CI-C}_{20} -alkylidene;

R^{15} is selected from hydrogen, NR^{25}R^{26}, OR^{25}, SR^{25}, O-CO-R^{25} and NR^{25}-CO-R^{26};

and

R^{19}, R^{20} and R^{21} are hydrogen,

wherein R^{14} has one of the meanings given for R^{14}, R^{25}, R^{26}, R^{27} and Z

are as defined in claim 1.

4. The electrode layer as claimed in any one of the preceding claims, where D is a radical of the formula D.1, where
R<sub>7</sub> and R<sub>8</sub> are independently of each other selected from Ci-Cs-alkyl, phenyl which is unsubstituted or carries 1 or 2 substituents selected from Ci-C6-alkyl, Ci-C4-alkoxy, 2-phenylvinyl, 2,2-diphenyl-vinyl and triphenylvinyl, 9H-fluoren-2-yl, which is unsubstituted or carries 1, 2 or 3 substituents selected from Ci-C6-alkyl, pyrenyl, which is unsubstituted or carries 1 or 2 substituents selected from Ci-C6-alkyl; or R<sub>7</sub> and R<sub>8</sub> together with the nitrogen atom to which they are attached are morpholinyl; or R<sub>7</sub> and R<sub>20</sub> form together with the nitrogen atom to which R<sub>7</sub> is attached and the carbon atoms of the benzene ring to which R<sub>20</sub> and N-R<sub>7</sub> are attached a 5- or 6- membered, nitrogen heterocycle which is unsubstituted or carries 2 radicals R<sub>z</sub>, where two radicals R<sub>z</sub> on two adjacent carbon atoms form together with the carbon atoms they are bonded to a 4-, 5-, 6-, or 7- membered saturated ring or a benzene ring, R<sub>15</sub> is hydrogen, Ci-C2o-alkyl or OR<sub>25</sub> where R<sub>25</sub> is as defined in claim 1; and R<sub>19</sub>, R<sub>20</sub> and R<sub>1</sub> are hydrogen.

5. The electrode layer as claimed in claim 4, where D is a radical of the formula D.1, where R<sub>15</sub>, R<sub>19</sub>, R<sub>20</sub> and R<sub>1</sub> are each hydrogen and R<sub>17</sub> and R<sub>18</sub> are independently of each other selected from Ci-C6-alkyl, 9H-fluoren-2-yl and 9,9-di(Ci-C8-alkyl)-9H-fluoren-2-yl or D is a radical of the formula D.1 selected from radicals of the formulae D.1-1 and D.1-2

wherein
`
* denotes the point of attachment to the remainder of the molecule and
R<sub>18</sub> is phenyl which is substituted by 2-phenylvinyl or 2,2-diphenylvinyl, 9H-fluoren-2-yl or 9,9-di(Ci-C<sub>8</sub>-alkyl)-9H-fluoren-2-yl.

6. The electrode layer as claimed in any of the preceding claims, where A is selected from the radicals of the formulae A.1.1a, A.1.1b, A.2, A.3, A.4 and A.5
where

# denotes the bond to the remaining compound of formula I

Y-, R^{29}, R^{30}, R^{31}, R^{32}, R^{33}, R^{34} and R^{35} are as defined in claim 1.

7. The electrode layer as claimed in any of the preceding claims, where
A is selected from the radicals of the formulae A.1.1a, A.1.1b, A.2, A.3 and A.4

\[ R^{29} \]

is selected from a radical G, C_6-C_{2o} -alkyl which is uninterrupted or
interrupted by O, S, CO, NR^{14} or combinations thereof, C_6-C_{2o} -aryl,
heteroaryl, C_7-C_{2o}-aralkyl, C_6-C_{2o} -aryl substituted by 1, 2 or 3 C_{1-8} -alkyl,
and C_7-C_{2o}-aralkyl wherein the aryl moiety of aralkyl is substituted by 1, 2 or
3 C_{1-8} -alkyl;

\[ R^{30} \]

is selected from a radical G, hydrogen, C_6-C_{2o} -alkyl wherein alkyl is
interrupted or uninterrupted by O, S, CO, NR^{14} or combinations thereof, C_6-
C_{2o} -aryl, heteroaryl, and C_6-C_{2o} -aryl wherein the aryl moiety of aralkyl is
substituted by 1, 2 or 3 C_{1-8} -alkyl;

\[ R^{31} \]

is selected from hydrogen and a radical of the formula D^{*}

\[ D^{*} \]

where #^{*} denotes the point of attachment to the remainder of the molecule,
m is 1, 2, 3, 4, 5 or 6, and D, R^{1} and R^{2} are as defined in claim 1;

\[ R^{32}, R^{33}, R^{34} \text{ and } R^{35} \text{ are independently selected from hydrogen or C}_{1-8} -alkyl \]

wherein alkyl is uninterrupted or interrupted by O, S, NR^{14} or combinations

\[ \text{(A.3)} \]  \[ \text{(A.4)} \]  \[ \text{(A.5)} \]
70
thereof, C6-C20 -aryl, heteroaryl, and C6-C20 -aryl wherein the aryl moiety of
aralkyl is substituted by 1, 2 or 3 d-Cs-alkyl; and
G
is selected from -R28-COOH, -R28,COO Z+; -R28,S03H, -R28,S03Z+; -R28,
O P (0)(0-Z)2, -Ri8-OP (0)(OH)2 and -R28-OP (0)(OH)O-Z+, where R28 is a
direct bond, Cl-C20 -alkylene, C2=C 4-alkylene or C6-C10 -arylene and Z+ is
N(R14)+, or an alkali metal cation, where R14 is as defined in claim 1; and
Y- is as defined in claim 1.

8. The electrode layer as claimed in claim 7, wherein
A is a radical of the formula A.1.1a,

![Image](A.1.1a)

where

R29 is R28,COOH or -R28-COO-Z+,
where R28 is a direct bond, Cl-C4-alkylene, C2=C4-alkylene or phenylene;
and Z+ is N(R14)+, Li+, Na+ or K+; R14 is hydrogen or Cl-C20-alkyl; and
Y- is as defined in claim 1.

9. The electrode layer as claimed in any of claims 7 or 8, where Y- is BF4−, PF6−,
SbF6−, AsF6− or a fluorinated organic anion selected from the groups Y.1, Y.2, Y.3,
Y.4, Y.5 and Y.6, where in the groups Y.1, Y.2, Y.3, Y.4 Y.5 and Y.6
X- is S(=0)2O-, O-S(=0)2O-, COO-;
Rf1 is fluorine, Cl-C20 -alkyl, Cl-C20 -haloalkyl, where the two last-mentioned
radicals are uninterrupted or interrupted by O, S, NR14, CO or combinations
thereof and/or are unsubstituted or substituted by one or more radicals
selected from halogen, OR25, O-CO-R25, O-CO-OR25, 0-CO-NR 25R26, CO-
OR25 and CO-NR25R26,
Rf2, Rf3, Rf4, Rf5 and Rf6 are independently selected from fluorine, hydrogen,
OR25, O-CO-R25, O-CO-OR25, 0-CO-NR 25R26, C1-C20-fluoroalkyl;
X1, X2 and X3 are independently selected from S(=0)2 and CO;
Rf7, Rf7, Rf8 and Rf9 are independently selected from C6-C20 -fluoroaryl, Cl-
C20-fluoroalkyl and Cl-C20 -fluoroalkyl which is interrupted by O, S, NR14, CO
or combinations thereof, wherein Cl-C20 -fluoroalkyl and interrupted C1-C20-
fluoroalkyl are unsubstituted or substituted by one or more radicals selected
from OR25, O-CO-R25, O-CO-OR25, 0-CO-NR 25R26, CO-OR25 and CO-
NR25R26, or Rf7 and Rf8 together are C3-C6-fluoroalkyl,
Rf<sup>10</sup>, Rf<sup>11</sup>, Rf<sup>12</sup> and Rf<sup>13</sup> are independently selected from fluorine, C<sub>1</sub>-C<sub>20</sub>-fluoroalkyl and C<sub>6</sub>-C<sub>20</sub>-fluoroaryl,

Rf<sup>14</sup> and Rf<sup>15</sup> are together C<sub>8</sub>-C<sub>18</sub>-perfluoroalkyl where the fluorine atoms of the last mentioned group may be replaced by C<sub>1</sub>-C<sub>20</sub>-fluoroalkyl;

where R<sup>14</sup>, R<sup>25</sup>, R<sup>26</sup> and R<sup>27</sup> are as defined in claim 1.

10. The electrode layer as claimed in claim 9, where Y is selected from BF<sub>4</sub>-, PF<sub>6</sub>-, SbF<sub>6</sub>-, AsF<sub>6</sub>-; a radical Y.1a, Y.1b, Y.2a, Y.3a, Y.4a, Y.5a and Y.6a

where

Rf<sup>1</sup> is fluorine, C<sub>1</sub>-C<sub>20</sub>-fluoroalkyl or C<sub>1</sub>-C<sub>18</sub>-fluoroalkyl which is substituted by

OC(=O)-R<sup>25</sup>, where

R<sup>25</sup> is C<sub>1</sub>-C<sub>20</sub>-alkyl,

phenyl which is unsubstituted or substituted by one or more C<sub>1</sub>-C<sub>20</sub>-alkoxy, where the alkyl moiety of alkoxy is interrupted by one or more oxygen atoms, or

6-, 7-, 8- or 9-membered saturated heterocyclyl containing 1 or 2 heteroatoms or heteroatom groups selected from N, O, C(O), S, S(O) and SO<sub>2</sub>, as ring members, where heterocyclyl is unsubstituted or may carry 1, 2, 3, 4, 5 or 6 C<sub>1</sub>-C<sub>4</sub>-alkyl groups;

Rf<sup>4</sup> is O(C(=O))C<sub>1</sub>-C<sub>20</sub>-alkyl;

Rf<sup>7</sup> and Rf<sup>8</sup> are independently of each other selected from C<sub>1</sub>-C<sub>6</sub>-fluoroalkyl or

RF and R<sup>8</sup> taken together are C<sub>3</sub>-C<sub>6</sub>-fluoroalkyl,

X<sup>1</sup>, X<sup>2</sup> and X<sup>3</sup> are each SO<sub>2</sub>,

Rf<sup>7</sup>, Rf<sup>8</sup>, and Rf<sup>9</sup> are independently of each other selected from C<sub>1</sub>-C<sub>6</sub>-fluoroalkyl;

Rf<sup>10</sup>, Rf<sup>11</sup>, Rf<sup>12</sup> and Rf<sup>13</sup> are each pentafluorophenyl;
R\textsuperscript{14a} is d-Ce-fluoroalkyl.

11. The electrode layer as claimed in any of the preceding claims, where A is a radical of the formula A.1a, where R\textsuperscript{29} is CH\textsubscript{2}COOH, and Y\textsuperscript{i} is selected from B\textsubscript{F}\textsubscript{4}-, B(\textsubscript{C}\textsubscript{6}F\textsubscript{5})\textsubscript{4}-, P\textsubscript{F}\textsubscript{4}-, SbFe\textsuperscript{3-}, Y.1a, Y.1b, Y.2a, Y.3a, Y.4a and Y.6a, where Y.1a, Y.1b, Y.3a, Y.4a and Y.6a are as defined in claim 10.

12. The electrode layer as claimed in any of the preceding claims, where R\textsuperscript{1} and R\textsuperscript{2} are independently selected from hydrogen, C\textsubscript{i}-C\textsubscript{2o} -alkyl which is uninterrupted or interrupted by O, S, CO, NR\textsuperscript{14} or combinations thereof, C\textsubscript{6}-C\textsubscript{2o} -aryl, heteroaryl, C\textsubscript{6}-C\textsubscript{2o} -aryl which is substituted by 1, 2 or 3 C\textsubscript{i}-C\textsubscript{5} -alkyl and R\textsuperscript{1} may also be a radical of the formula D, wherein R\textsuperscript{14} is as defined in claim 1.

13. The electrode layer as claimed in claim 11, where R\textsuperscript{2} is hydrogen, C\textsubscript{i}-C\textsubscript{2o} -alkyl or C\textsubscript{6}-C\textsubscript{2o} -aryl; and R\textsuperscript{1} has one of the meanings given for R\textsuperscript{2} or is a radical of the formula D.

14. The electrode layer as claimed in any of the preceding claims, wherein R\textsuperscript{1} and R\textsuperscript{2} are hydrogen.

15. The electrode layer as claimed in any one of the preceding claims, wherein n is 1 or 2, preferably 1.

16. The electrode layer as claimed in any one of the preceding claims, wherein n is 1; R\textsuperscript{1} and R\textsuperscript{2} are independently each other selected from hydrogen or C\textsubscript{1}-C\textsubscript{10} -alkyl; D is a radical of the formula D.1, where R\textsuperscript{15} is hydrogen or C\textsubscript{i}-C\textsubscript{2o} -alkoxy; R\textsuperscript{19}, R\textsuperscript{20} and R\textsuperscript{21} are each hydrogen, R\textsuperscript{17} and R\textsuperscript{18} together with the nitrogen atom to which they are attached are morpholinyl, thiomorpholinyl, piperidinyl, pipеразинyl, pyrrolidinyl, pyrazolidinyl or imidazolidinyl, or R\textsuperscript{17} and R\textsuperscript{18} are independently each other selected from C\textsubscript{i}-C\textsubscript{6} -alkyl, 9H-fluoren-2-yl, 9,9-di(C\textsubscript{i}-C\textsubscript{6} -alkyl)-9H-fluoren-2-yl, pyrenyl, pyrenyl which is substituted by C\textsubscript{i}-C\textsubscript{6} -alkyl and phenyl which is substituted by 2-phenylvinyl, 2,2-diphenylvinyl or triphenylvinyl or D is a radical of the formulae D.1-1 or D.1-2.
wherein

* denotes the point of attachment to the remainder of the molecule and

$R^{18}$ is phenyl which is substituted by 2-phenylvinyl or 2,2-diphenylvinyl, 9H-fluoren-2-yl or 9,9-di(C1-Ce-alkyl)-9H-fluoren-2-yl;

$A$ is a radical of the formula A.1.1a,

where

$R^{29} \quad i.e. -R^{28}\text{-COOH or } -R^{28}\text{-COO}\text{-Z}^+$,

where $R^{28}$ is a direct bond, C1-C4 -alkylene, C2-C4 -alkenylene or phenylene; and

$Z^+$ is $N(R^{14})_4^+$, Li$, Na^+$ or $K^+$; where $R^{14}$ is hydrogen or C1-C2-o-alkyl; and

$Y^-$ is selected from $B(C_6F_5)_4^-$, $PFe^-$, $[\text{C1-C4-perfluoroalkyl}SO_2]^2_2N^-$ or $[\text{C1-C4-perfluoroalkyl}SO_3]^2^-$. $R^{30}$ is C1-C2-o-alkyl, phenyl which is unsubstituted or substituted by C1-C2-o-alkoxy, or 6-, 7-, 8- or 9-membered saturated heterocyclyl containing 1 or 2 heteroatoms or heteroatom groups selected from O, C(O), as ring members, where heterocyclyl is unsubstituted or may carry 1, 2, 3, 4, 5 or 6 C1-C2-o-alkyl groups, where C1-C2-o-alkoxy may be interrupted by one or more oxygen atoms, and $Rf^{14a}$ is C1-C3-perfluoroalkyl.

17. The electrode layer according to any of the preceding claims, wherein the oxide semiconductor fine particles are made of TiO$_2$, SnO$_2$, WO$_3$, ZnO, Nb$_2$O$_5$, Fe$_2$O$_3$, ZrO$_2$, MgO, WO$_3$, ZnO, CdS, ZnS, PbS, Bi$_2$S$_3$, CdSe, CdTe or combinations
18. The electrode layer as claimed in any one of the preceding claims, wherein the porous film made of oxide semiconductor fine particles is sensitized with a dye of formula (I) and one or more further dyes.

19. The electrode layer as claimed in claim 18, wherein the further dye is a metal complex dye and/or an organic dye selected from the group consisting of indoline, coumarin, cyanine, merocyanine, hemicyanine, methin, azo, quinone, quinonimine, diketo-pyrrolo-pyrrole, quinacridone, squaraine, triphenylmethane, perylene, indigo, xanthene, eosin, rhodamine and combinations thereof.

20. The electrode layer as claimed in any one of the preceding claims, wherein the dye is adsorbed together with an additive.

21. The electrode layer as claimed in claim 20, wherein the additive is an adsorbent, preferably a steroid, a crown ether, a cyclodextrine, a calixarene, a polyethyleneoxide, a hydroxamic acid, a hydroxamic acid derivative or combinations thereof.

22. A photoelectric conversion device comprising the electrode layer as defined in any one of claims 1 to 21.

23. A dye sensitized solar cell comprising a photoelectric conversion device as defined in claim 22.

24. Use of a compound of formula (I) as defined in any of claims 1 to 16 as a dye in a dye sensitized solar cell.

25. A compound of formula (I) as defined in any of claims 1 to 16.
A. CLASSIFICATION OF SUBJECT MATTER

IN. C09B23/10 C09B69/06 H01G9/20 H01L51/00 C09B23/00
C09B23/14 C09B57/00 C09B23/01

B. FIELDS SEARCHED

Minimum documentation searched (classification system followed by classification symbols):
C09B H01G H01L

Documentation searched other than minimum documentation to the extent that such documents are included in the fields searched:

Electronic data base consulted during the international search (name of data base and, where practicable, search terms used):

EPO-Internal, WPI Data, CHEM ABS Data

C. DOCUMENTS CONSIDERED TO BE RELevant

Further documents are listed in the continuation of Box C.

* Special categories of cited documents:

"A" document defining the general state of the art which is not considered to be of particular relevance
"E" earlier application or patent but published on or after the international filing date
"L" document which may throw doubts on priority claim(s) or which is cited to establish the publication date of another citation or other special reason (as specified)
"O" document referring to an oral disclosure, use, exhibition or other means
"P" document published prior to the international filing date but later than the priority date claimed

"T" later document published after the international filing date or priority date and not in conflict with the application but cited to understand the principles or theory underlying the invention
"X" document of particular relevance: the claimed invention cannot be considered novel or cannot be considered to involve an inventive step when the document is taken alone
"Y" document of particular relevance: the claimed invention cannot be considered to involve an inventive step when the document is combined with one or more other such documents, such combination being obvious to person skilled in the art
"A" document member of the same patent family

Date of the actual completion of the international search: 31 May 2013
