UNITED STATES PATENT OFFICE.

ANDREAS J. SORENSSEN, OF ERIE, PENNSYLVANIA, ASSIGNOR TO BURDETT
ORGAN COMPANY, OF SAME PLACE.

IMPROVEMENT IN REED-ORGANS.

Specification forming part of Letters Patent No. **139,483**, dated June 3, 1873; application filed
March 14, 1873.

To all whom it may concern:

Be it known that I, ANDREAS J. SORENSSEN, of Erie, in the county of Erie and State of Pennsylvania, have invented a new and Improved Top for Cabinet-Organ Cases, of which the following is a specification:

My invention consists in extending the ends of a reed-organ case provided with a front fall, which slides backward and forward, thereby improving the appearance of the case, and in so constructing this extension as to furnish an inclosure for books, music, &c., the hinged door to which shall serve for a music-desk, and with recesses for lamp-stands.

This device is illustrated in the accompanying drawing, as follows:

Figure 1 is a front view of my invention.
Fig. 2 is an end view thereof.

The letters B B indicate the recesses for

lamps, &c. The letters A A indicate the lamp-stands. The letters E E indicate the frame-work of the entrance to the case-top. The letter D indicates the hinged door to the inclosure. The letter C indicates the fretted surface of the hinged door D. An organ-case top thus extended and modified is not only greatly improved in appearance, but better meets the wants of the organ-player than it otherwise would.

I claim—

The reed-organ top, provided with the hinged door D, its frame-work E E, and having the music-receptacle in the rear of said door, substantially as described.

ANDREAS J. SORENSSEN.
