(54) Apparatus for cleaning of containers and use of such apparatus

(57) The invention relates to an apparatus for cleaning primarily the inner of containers. The apparatus comprises a foremost carriage (1) provided with means in the form of rotating brushes (4) and spraying pipes (5) for cleaning of the inner of containers. The carriage is moved forward by means of wheels (3) mounted on the carriage. Maintaining the carriage in an initial direction

takes place by means of jaw-tongs mechanisms (2) extending behind the carriage in a vertical plane and which preferably are supported by wheels (13). The jaw-tongs mechanisms have great rigidity in lateral direction so that the risk is very small that the carriage deviates from its course.

**ANNEX TO THE EUROPEAN SEARCH REPORT
ON EUROPEAN PATENT APPLICATION NO.**

EP 99 20 0664

This annex lists the patent family members relating to the patent documents cited in the above-mentioned European search report.
The members are as contained in the European Patent Office EDP file on
The European Patent Office is in no way liable for these particulars which are merely given for the purpose of information.
