(54) Title: A MOUNT HAVING A PUSH NUT AND A POST

FIG. 13

(57) Abstract: Certain embodiments of the present invention provide a mount. The mount includes a post and a push nut. The post includes a longitudinal axis. The push nut is connected to the post. The push nut includes an opening for receiving the post along the longitudinal axis and at least one locking wedge rotatably connected to the push nut and extending into the opening. The at least one locking wedge allows the push nut to slide along the longitudinal axis of the post in a first direction and prevents the push nut from sliding along the longitudinal axis of the post in a second direction opposite the first direction.

* Special categories of cited documents :

"A" document defining the general state of the art which is not considered to be of particular relevance

"E" earlier document but published on or after the international filing date

"L" document which may throw doubts on priority claim(s) or which is cited to establish the publication date of another citation or other special reason (as specified)

"O" document referring to an oral disclosure, use, exhibition or other means

"P" document published prior to the international filing date but later than the priority date claimed

"T" later document published after the international filing date or priority date and not in conflict with the application but cited to understand the principle or theory underlying the invention

"X" document of particular relevance; the claimed invention cannot be considered novel or cannot be considered to involve an inventive step when the document is taken alone

"Y" document of particular relevance; the claimed invention cannot be considered to involve an inventive step when the document is combined with one or more other such documents, such combination being obvious to a person skilled in the art.

"&" document member of the same patent family
