(54) Title: CARPENTRY TOOL

(57) Abstract: A carpentry tool (1) is provided for securing a framing square (2) to a workpiece such that the framing square can be used to measure and mark angles to be cut into said workpiece. The tool comprises a framing square member and a support member (3) slidably engaged to one another. The support member comprises two parallel rectangular bars held together in a manner that allows the tongue and body of said framing square to be positioned therebetween. Such an arrangement creates a framing square having dual transverse edges, allowing for use of the square on either side of the workpiece without requiring disassembly.

\* Special categories of cited documents:

"A" document defining the general state of the art which is not considered to be of particular relevance

"E" earlier application or patent published on or after the international filing date

"L" document which may throw doubts on priority claim(s) or which is cited to establish the publication date of another citation or other special reason (as specified)

"O" document referring to an oral disclosure, use, exhibition or other means

"P" document published prior to the international filing date but later than the priority date claimed

"T"

later document published after the international filing date or priority date and not in conflict with the application but cited to understand the principle or theory underlying the invention

"X"

document of particular relevance; the claimed invention cannot be considered novel or cannot be considered to involve an inventive step when the document is taken alone

"Y"

document of particular relevance; the claimed invention cannot be considered to involve an inventive step when the document is combined with one or more other such documents, such combination being obvious to a person skilled in the art
