(54) **CONTAINER ASSEMBLY AND SMOKING SYSTEM**

(57) A flavor inhaler includes a heater assembly comprising a heater configured to atomize an aerosol source, an atomization chamber extending along a predetermined direction to form at least part of an aerosol channel through which aerosol passes, the aerosol being generated when the aerosol source is heated by the heater, and an intake channel configured to supply air from an inlet to the atomization chamber. The intake channel includes a first channel extending along the predetermined direction and leading to the inlet, a second channel extending from the first channel along an intersecting direction intersecting with the predetermined direction as viewed in a section of the heater assembly along the predetermined direction, and a third channel extending from the second channel along the predetermined direction. The flavor inhaler further includes a container with a hollow space including the atomization chamber and the third channel, wherein the container includes a bottom plate portion and a cylindrical portion, and the flavor inhaler further comprises a sensor for detecting puffing, being provided in the bottom plate portion.

ANNEX TO THE EUROPEAN SEARCH REPORT
ON EUROPEAN PATENT APPLICATION NO.

EP 25 15 3800

5

This annex lists the patent family members relating to the patent documents cited in the above-mentioned European search report. The members are as contained in the European Patent Office EDP file on
The European Patent Office is in no way liable for these particulars which are merely given for the purpose of information.
