(54) Title: METHODS AND APPARATUSES FOR DYNAMICALLY SCALING A TOUCH DISPLAY USER INTERFACE

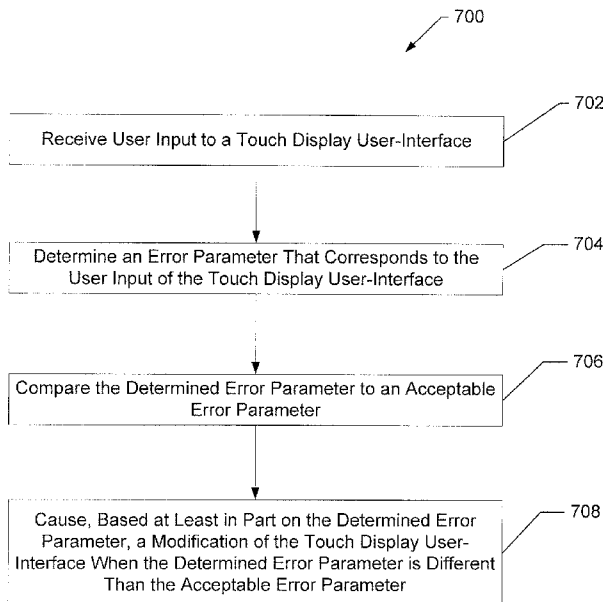

FIG. 7

(57) Abstract: Methods, apparatuses, and computer program products are herein provided for dynamically scaling a touch display user interface. Some embodiments provide a method, apparatus, and computer program product for monitoring a user's error rate and adapting the size of the on-screen virtual keyboard, or other touch display user interface, to compensate for the monitored error rate in an effort to obtain an acceptable error rate. A method may include receiving user input to a touch display user interface. The method may further include determining, by a processor, an error parameter that corresponds to the user input for the touch display user interface. The method may also include causing, based at least in part on the determined error parameter, a modification in size of the touch display user interface. Corresponding apparatuses and computer program products are also provided.
