(54) Shielded data connector

(57) An electrical shielded data connector includes an inner terminal support housing (46) carrying a plurality of electrical terminals (30) and includes shield members (130) surrounding the terminal support housing (46). This shielded sub-assembly is fitted into an outer housing and a rear support plate and cable support member can be assembled around a cable after the con-

connector has been attached to the cable. The cable support member can be positioned in one of two orientations to provide for either a straight through or an angled cable exit. A cross talk shield (200) is positioned in a stuffer cap and is situated between adjacent terminals (30) when in the final position. Another cross talk shield (220) is positioned in a slot intermediate the terminals (30) at the lower side thereof.
