UNITED STATES PATENT OFFICE.

FRED B. CONINE, OF CLIFTON, TEXAS.

SLEEVE-PROTECTOR.

1,153,893. Specification of Letters Patent. Patented Sept. 21, 1915.

Application filed June 14, 1913. Serial No. 773,656.

To all whom it may concern:

Be it known that I, FRED B. CONINE, a citizen of the United States, residing at Clifton, in the county of Bosque and State of Texas, have invented new and useful Improvements in Sleeve-Protectors, of which the following is a specification.

This invention relates to sleeve protectors and the object of the invention is the provision of a simple and efficient device which may be conveniently attached to the wrist of the wearer whereby he will be enabled to wash his hands, use a tooth brush, or perform any other duty which involves in the use of water without soiling the coat or shirt sleeves.

Further objects of the invention will appear as the following specific description is read in connection with the accompanying drawing which forms a part of this application, and in which:—

Figure 1 is a perspective view of the device shown applied. Fig. 2 is a section taken through the same.

Referring more particularly to the drawing 1 represents a band of any suitable material having sufficient flexibility or elasticity to permit the band to be placed over the hand and fit in tight engagement with the wrist. Extending around the band and projecting therefrom is a flange 2 of any suitable material which will permit the band to flex or expand as before described and which is eccentric in shape having its wide portion provided with a pocket 3 which is adapted to catch the water when the hand is raised as in reaching for some article above the head when the hands are wet. This pocket is arranged upon the lower side of the device when applied so that water passing over the band and striking the flange will run downwardly into the pocket to be held there until discharged as will be readily understood.

What is claimed is:—

1. A sleeve protector comprising an expansible wrist band, an eccentric shaped flange carried by and projecting outwardly from the band intermediate its ends, and a liquid holding pocket formed on the flange.

2. A sleeve protector comprising an expansible wrist band, an eccentric shaped flange carried by and projecting outwardly from the band intermediate its ends, and a water retaining pocket formed on the flange adjacent its wide portion.

3. A sleeve protector comprising an expansible wrist band, an eccentric-shaped flange carried by and projecting outwardly from the band intermediate its ends, and a water retaining pocket formed on the flange and gradually deepening toward the wide portion of said flange.

In testimony whereof I affix my signature in presence of two witnesses.

FRED B. CONINE.
