UNITED STATES PATENT OFFICE.

HENRY F. JENKS, OF PAWTUCKET, RHODE ISLAND.

DESIGN FOR DRINKING-FOUNTAIN.

SPECIFICATION forming part of Design No. 11,817, dated June 8, 1880.

Application filed April 6, 1880. Term of patent 14 years.

To all whom it may concern:

Be it known that I, HENRY F. JENKS, of Pawtucket, in the county of Providence and State of Rhode Island, have originated a new, useful, and ornamental Design for a Drinking-Fountain, of which the following is a full, clear, and exact description, reference being had to the accompanying drawings, making part thereof.

10 The design contemplates supplying water for both man and beast; and to this end, as a feature of utility, I provide a capacious basin for animals to drink from, and a trickling stream, from which, in a cup, a portion may
15 be caught for human use. An annular channel in the base permits dogs and birds to drink therefrom.

The characteristic feature in the appearance of this design is a cylindrical pedestal, *a*,
20 mounted upon a suitable base, *b*, and supporting a circular bowl, *c*, nearly hemispherical in configuration, from the center of which springs a vertical tapering stem, *d*, bearing near its
25 base two or more dolphins or mythical aquatic creatures, *e*, represented with streams of water issuing from their mouths and falling into the bowl *c* at *f*. This bowl is so formed and
30 located upon the pedestal *a* that when approached by a team the pole will pass beneath the bottom of said bowl, so as to allow the

horses on both sides of the pole to drink at the same time without any loss of time or necessity for unhitching or driving up one side at a time, as usual, to water.

The stem *d* may be continued upwardly, ornamented, as shown, with leaves, flutes, &c., and may support a lamp or lantern, if desired, in any suitable form, or a vase or basket for plants.

In the base and surrounding the pedestal *a* is an upturned flange, *g*, inclosing a depressed annular space for water; but this feature, though ornamental and useful, is not essential to my design.

The stem and pedestal may be plain or ornamented with vines and panels, without materially affecting the general aspect of the design.

Having thus described my drinking-fountain, I claim—

The design for a drinking-fountain herein described and shown, consisting of the cylindrical pedestal *a*, bowl *c*, tapering stem *d*, and aquatic figures *e* formed thereon, all having the form of a configuration substantially as
55 herein set forth.

HENRY F. JENKS.
