(54) Title: METHOD OF TREATING OR AMELIORATING METABOLIC DISORDERS USING ANTAGONISTIC BINDING PROTEINS FOR GASTRIC INHIBITORY PEPTIDE RECEPTOR (GIPR)/GLP-1 RECEPTOR AGONIST FUSION PROTEINS

FIG. 3

(57) Abstract: Method of treating metabolic diseases and disorders using a composition comprising a GLP-l/GIPR antigen binding protein fusion protein are provided. In various embodiments the metabolic disease or disorder is type 2 diabetes, obesity, dyslipidemia, elevated glucose levels, elevated insulin levels and diabetic nephropathy. In certain embodiments the composition comprises the C-terminus of a GLP-1 analog fused to the N-terminus of the light chain variable or heavy chain variable region of an antibody or functional fragment thereof that binds GIPR, optionally with a linker in between.

METHOD OF TREATING OR AMELIORATING METABOLIC DISORDERS USING ANTAGONISTIC BINDING PROTEINS FOR GASTRIC INHIBITORY PEPTIDE RECEPTOR (GIPR)/GLP-1 RECEPTOR AGONIST FUSION PROTEINS

FIELD OF THE INVENTION

[0001] The present disclosure relates to the treatment or amelioration of a metabolic disorder, such as type 2 diabetes, elevated glucose levels, elevated insulin levels, obesity, non-alcoholic fatty liver disease, cardiovascular diseases or diabetic nephropathy, using GLP-1 receptor agonists fused via a peptide linker to an antigen binding protein specific for the gastric inhibitory peptide receptor (GIPR).

BACKGROUND OF THE INVENTION

[0002] Glucose-dependent insulinotropic polypeptide (GIP) is a single 42-amino acid peptide secreted from K-cells in the small intestine (duodenum and jejunum). Human GIP is derived from the processing of proGIP, a 153-amino acid precursor that is encoded by a gene localized to chromosome 17q (Inagaki et al., Mol Endocrinol 1989; 3:1014-1021; Fehmann et al. Endocr Rev. 1995; 16:390-410). GIP was formerly called gastric inhibitory polypeptide.

[0003] GIP secretion is induced by food ingestion. GIP has a number of physiological effects in tissues, including promotion of fat storage in adipocytes and promotion of pancreatic islet β-cell function and glucose-dependent insulin secretion. GIP and glucagon like polypeptide-1 (GLP-1) are known insulinotropic factors ("incretins"). Intact GIP is rapidly degraded by DPPIV to an inactive form. The insulinotropic effect of GIP is lost in type 2 diabetic patients while GLP-1's incretin effect remains intact (Nauck et al. J. Clinc. Invest. 1993; 91:301-307).

[0004] The GIP receptor (GIPR) is a member of the secretin-glucagon family of G-protein coupled receptors (GPCRs) having an extracellular N-terminus, seven transmembrane domains and an intracellular C-terminus. The N-terminal extracellular domains of this family of receptors are usually glycosylated and form the recognition and binding domain of the receptor. GIPR is highly expressed in a number of tissues, including the pancreas, gut, adipose tissue, heart, pituitary, adrenal cortex, and brain (Usdin et al., Endocrinology. 1993, 133:2861-2870). Human GIPR comprises 466 amino acids and is encoded by a gene located on chromosome 19q13.3 (Gremlich et al., Diabetes. 1995; 44:1202-8; Volz et al., FEBS Lett. 1995, 373:23-29). Studies have suggested that alternative mRNA splicing results in the production of GIP receptor variants of differing lengths in human, rat and mouse.

2018288852 31 Jan 2025

[0005] GIPR knockout mice (Gipr $^{-/-}$) are resistant to high fat diet-induced weight gain and have improved insulin sensitivity and lipid profiles. (Yamada et al., Diabetes. 2006, 55:S86; Miyawaki et al. Nature Med. 2002, 8:738-742). In addition, a novel small molecule GIPR antagonist SKL-14959 prevents obesity and insulin resistance. (Diabetologia 2008, 51:S373, 44th EASD Annual meeting poster).

[0006] Collectively, these links to obesity and insulin resistance imply GIPR inhibition is a useful approach for therapeutic intervention.

[0007] Glucagon-like peptide-1 is a 31-amino acid peptide derived from the proglucagon gene. It is secreted by intestinal L-cells and released in response to food ingestion to induce insulin secretion from pancreatic β–cells (Diabetes 2004, 53:S3, 205-214). In addition to the incretin effects, GLP-1 also decreases glucagon secretion, delays gastric emptying and reduces caloric intake (Diabetes Care, 2003, 26(10): 2929-2940). GLP-1 exerts its effects by activation of the GLP-1 receptor, which belongs to a class B G-protein-coupled receptor (Endocrinology. 1993, 133(4):1907-10). The function of GLP-1 is limited by rapid degradation by the DPP-IV enzyme, resulting in a half-life of approximately 2 minutes. Recently, long-lasting GLP-1 receptor agonists (GLP-1 RAs) such as exenatide, liraglutide, dulaglutide have been developed and are now being used clinically to improve glycemic control in patients with type 2 diabetes. Furthermore, GLP-1RAs also promote body weight reduction as well as reduction in blood pressure and plasma cholesterol levels in patients (Bioorg. Med. Chem.Lett 2013, 23:4011-4018).

[0007a] Any reference to any prior art in this specification is not, and should not be taken as an acknowledgement or any form of suggestion that the prior art forms part of the common general knowledge.

SUMMARY OF THE INVENTION

[0007b] The term "comprise" and variants of the term such as "comprises" or "comprising" are used herein to denote the inclusion of a stated integer or stated integers but not to exclude any other integer or any other integers, unless in the context or usage an exclusive interpretation of the term is required.

[0007c] In a first aspect, the present disclosure provides a composition comprising:

2018288852 31 Jan 2025

a) an antibody or functional fragment thereof that binds to and antagonizes human Gastric Inhibitory Peptide Receptor (GIPR), wherein the antibody or functional fragment thereof comprises a light chain variable region and a heavy chain variable region; and

b) a Glucagon-like Polypeptide-1 (GLP-1) receptor agonist comprising the amino acid sequence of SEQ ID NO: 3239, wherein the C-terminus of the GLP-1 receptor agonist is fused to N-terminus of either the light chain variable region or the heavy chain variable region.

[0007d] In a second aspect, the present disclosure provides a fusion construct comprising:

a) an antibody that binds to and antagonizes Gastric Inhibitory Peptide Receptor (GIPR), wherein the antibody comprises a light chain variable region having the amino acid sequence of SEQ ID NO: 74 and a heavy chain variable region comprising the amino acid sequence of SEQ ID NO: 231; and

b) a Glucagon-like Polypeptide-1 (GLP-1) receptor agonist comprising the amino acid sequence of SEQ ID NO: 3239, wherein the C-terminus of the GLP-1 receptor agonist is fused to N-terminus of either the light chain variable region or the heavy chain variable region.

[0007e] In a third aspect, the present disclosure provides a glucagon like polypeptide-1 (GLP-1) receptor agonist comprising the amino acid sequence of SEQ ID NO: 3239.

[0007f] In a fourth aspect, the present disclosure provides a fusion construct comprising the GLP-1 receptor agonist polypeptide of the third aspect.

[0007g] In a fifth aspect, the present disclosure provides a method of treating a metabolic disorder in a subject, the method comprising administering to the subject a therapeutically effective amount of the composition of the first aspect, the fusion construct of the second aspect, or the GLP-1 receptor agonist of the third aspect.

[0007h] In a sixth aspect, the present disclosure provides use of the composition of the first aspect, the fusion construct of the second aspect, or the GLP-1 receptor agonist of the third aspect in the manufacture of the medicament for treating a metabolic disorder in a subject.

[0008] In one aspect, the present disclosure provides a method of treating a subject with a metabolic disorder, the method comprising administering to the subject a therapeutically effective amount of a composition comprising a) an antibody or functional fragment thereof that specifically binds to human GIPR, wherein the antibody or functional fragment thereof

2018288852 31 Jan 2025

comprises a light chain variable region and a heavy chain variable region; and b) a GLP-1 receptor agonist, wherein the C-terminus of the GLP-1 receptor agonist is fused to N-terminus of either the light chain variable region or the heavy chain variable region. In one embodiment, the GLP-1 receptor agonist can be fused via a peptide linker.

[0009] In one embodiment, the metabolic disorder is a disorder of glucose metabolism. In another embodiment, the glucose metabolism disorder comprises hyperglycemia and administering the antigen binding protein reduces plasma glucose. In another embodiment,

[Text continues on page 3]

the glucose metabolism disorder comprises hyperinsulinemia and administering the antigen binding protein reduces plasma insulin. In another embodiment, the glucose metabolism disorder comprises glucose intolerance and administering the antigen binding protein reduces increases glucose tolerance. In another embodiment, the glucose metabolism disorder comprises insulin resistance and administering the antigen binding protein reduces insulin resistance. In another embodiment, the glucose metabolism disorder comprises diabetes mellitus. In another embodiment, the subject is obese. In another embodiment, administering the composition reduces body weight in an obese subject. In another embodiment, administering the composition reduces body weight gain in an obese subject. In another embodiment, administering the composition reduces fat mass in an obese subject. In another embodiment, the glucose metabolism disorder comprises insulin resistance and administering the composition reduces insulin resistance in an obese subject. In another embodiment, administering the composition reduces liver steatosis in an obese subject having increased liver steatosis. In another embodiment, administering the composition reduces liver fat content in an obese subject having increased liver fat content.

[0010] In one aspect, the composition comprises an antibody or functional fragment thereof that specifically binds to a protein having an amino acid sequence having at least 90% amino acid sequence identity to an amino acid sequence of a human GIPR.

[0011] In one embodiment, the human GIPR has a sequence comprising a sequence selected from the group consisting of SEQ ID NO: 3141, SEQ ID NO: 3143, and SEQ ID NO: 3145. In one embodiment, the antibody or functional fragment thereof is a monoclonal antibody, a recombinant antibody, a human antibody, a humanized antibody, a chimeric antibody, a multispecific antibody, or an antibody fragment thereof. In one embodiment, the antibody fragment is a Fab fragment, a Fab' fragment, or a F(ab')2 fragment. In one embodiment, the antibody or functional fragment thereof is of the IgG1-, IgG2- IgG3- or IgG4-type. In one embodiment, the antibody or functional fragment thereof inhibits binding of GIP to the extracellular portion of human GIPR.

[0012] In one embodiment, the GLP-1 receptor agonist is GLP-1(7-37) or a GLP-1(7-37) analog. In one embodiment, the GLP-1 receptor agonist is selected from the group consisting of GLP-1(7-37) (SEQ ID NO: 3184);

DETAILED DESCRIPTION OF THE INVENTION

[0215] The present disclosure provides a method of treating a metabolic disorder, such as a disorder of glucose metabolism (e.g. Type 2 diabetes, elevated glucose levels, elevated insulin levels, dyslipidemia, metabolic syndrome (Syndrome X or insulin resistance syndrome), glucosuria, metabolic acidosis, diabetic neuropathy, diabetic nephropathy, diabetic retinopathy, diabetic cardiomyopathy, Type 1 diabetes, obesity and conditions exacerbated by obesity) by blocking or interfering with the biological activity of GIP. In one embodiment, a therapeutically effective amount of an isolated human GIPR binding protein is administered to a subject in need thereof. Methods of administration and delivery are also provided.

[0216] Recombinant polypeptide and nucleic acid methods used herein, including in the Examples, are generally those set forth in Sambrook et al., Molecular Cloning: A Laboratory Manual (Cold Spring Harbor Laboratory Press, 1989) or Current Protocols in Molecular Biology (Ausubel et al., eds., Green Publishers Inc. and Wiley and Sons 1994), both of which are incorporated herein by reference for any purpose.

[0217] The section headings used herein are for organizational purposes only and are not to be construed as limiting the subject matter described.

[0218] Unless otherwise defined herein, scientific and technical terms used in connection with the present application shall have the meanings that are commonly understood by those of ordinary skill in the art. Further, unless otherwise required by context, singular terms shall include pluralities and plural terms shall include the singular.

[0219] Generally, nomenclatures used in connection with, and techniques of, cell and tissue culture, molecular biology, immunology, microbiology, genetics and protein and nucleic acid chemistry and hybridization described herein are those well known and commonly used in the art. The methods and techniques of the present application are generally performed

according to conventional methods well known in the art and as described in various general and more specific references that are cited and discussed throughout the present specification unless otherwise indicated. See, e.g., Sambrook et al., Molecular Cloning: A Laboratory Manual, 3rd ed., Cold Spring Harbor Laboratory Press, Cold Spring Harbor, N.Y. (2001), Ausubel et al., Current Protocols in Molecular Biology, Greene Publishing Associates (1992), and Harlow and Lane Antibodies: A Laboratory Manual Cold Spring Harbor Laboratory Press, Cold Spring Harbor, N.Y. (1990), which are incorporated herein by reference. Enzymatic reactions and purification techniques are performed according to manufacturer's specifications, as commonly accomplished in the art or as described herein. The terminology used in connection with, and the laboratory procedures and techniques of, analytical chemistry, synthetic organic chemistry, and medicinal and pharmaceutical chemistry described herein are those well-known and commonly used in the art. Standard techniques can be used for chemical syntheses, chemical analyses, pharmaceutical preparation, formulation, and delivery, and treatment of patients.

[0220] It should be understood that this invention is not limited to the particular methodology, protocols, and reagents, etc., described herein and as such may vary. The terminology used herein is for the purpose of describing particular embodiments only, and is not intended to limit the scope of the disclosed, which is defined solely by the claims.

[0221] Other than in the operating examples, or where otherwise indicated, all numbers expressing quantities of ingredients or reaction conditions used herein should be understood as modified in all instances by the term "about." The term "about" when used in connection with percentages may mean ±1%.

[0222] Following convention, as used herein "a" and "an" mean "one or more" unless specifically indicated otherwise.

[0223] As used herein, the terms "amino acid" and "residue" are interchangeable and, when used in the context of a peptide or polypeptide, refer to both naturally occurring and synthetic amino acids, as well as amino acid analogs, amino acid mimetics and non-naturally occurring amino acids that are chemically similar to the naturally occurring amino acids.

[0224] A "naturally occurring amino acid" is an amino acid that is encoded by the genetic code, as well as those amino acids that are encoded by the genetic code that are modified after synthesis, e.g., hydroxyproline, γ-carboxyglutamate, and O-phosphoserine. An amino acid analog is a compound that has the same basic chemical structure as a naturally occurring amino acid, i.e., an α carbon that is bound to a hydrogen, a carboxyl group, an amino group,

and an R group, e.g., homoserine, norleucine, methionine sulfoxide, methionine methyl sulfonium. Such analogs can have modified R groups (e.g., norleucine) or modified peptide backbones, but will retain the same basic chemical structure as a naturally occurring amino acid.

[0225] An "amino acid mimetic" is a chemical compound that has a structure that is different from the general chemical structure of an amino acid, but that functions in a manner similar to a naturally occurring amino acid. Examples include a methacryloyl or acryloyl derivative of an amide, β-, γ-, δ-imino acids (such as piperidine-4-carboxylic acid) and the like.

[0226] A "non-naturally occurring amino acid" is a compound that has the same basic chemical structure as a naturally occurring amino acid, but is not incorporated into a growing polypeptide chain by the translation complex. "Non-naturally occurring amino acid" also includes, but is not limited to, amino acids that occur by modification (e.g., posttranslational modifications) of a naturally encoded amino acid (including but not limited to, the 20 common amino acids) but are not themselves naturally incorporated into a growing polypeptide chain by the translation complex. A non-limiting list of examples of non-naturally occurring amino acids that can be inserted into a polypeptide sequence or substituted for a wild-type residue in polypeptide sequence include β-amino acids, homoamino acids, cyclic amino acids and amino acids with derivatized side chains. Examples include (in the L-form or D-form; abbreviated as in parentheses): citrulline (Cit), homocitrulline (hCit), Nα-methylcitrulline (NMeCit), Nα-methylhomocitrulline (Nα-MeHoCit), ornithine (Orn), Nα-Methylornithine (Nα-MeOrn or NMeOrn), sarcosine (Sar), homolysine (hLys or hK), homoarginine (hArg or hR), homoglutamine (hQ), Nα-methylarginine (NMeR), Nα-methylleucine (Nα-MeL or NMeL), N-methylhomolysine (NMeHoK), Nα-methylglutamine (NMeQ), norleucine (Nle), norvaline (Nva), 1,2,3,4-tetrahydroisoquinoline (Tic), Octahydroindole-2-carboxylic acid (Oic), 3-(1-naphthyl)alanine (1-Nal), 3-(2-naphthyl)alanine (2-Nal), 1,2,3,4-tetrahydroisoquinoline (Tic), 2-indanylglycine (IgI), para-iodophenylalanine (pI-Phe), para-aminophenylalanine (4AmP or 4-Amino-Phe), 4-guanidino phenylalanine (Guf), glycyllysine (abbreviated "K(Nε-glycyl)" or "K(glycyl)" or "K(gly)"), nitrophenylalanine (nitrophe), aminophenylalanine (aminophe or Amino-Phe), benzylphenylalanine (benzylphe), γ-carboxyglutamic acid (γ-carboxyglu), hydroxyproline (hydroxypro), p-carboxyl-phenylalanine (Cpa), α-aminoadipic acid (Aad), Nα-methyl valine (NMeVal), N-α-methyl leucine (NMeLeu), Nα-methylnorleucine (NMeNle), cyclopentylglycine (Cpg), cyclohexylglycine (Chg), acetylarginine (acetylarg), α, β-diaminopropionoic acid (Dpr), α, γ-diaminobutyric acid (Dab), diaminopropionic acid (Dap),

cyclohexylalanine (Cha), 4-methyl-phenylalanine (MePhe), β, β-diphenyl-alanine (BiPhA), aminobutyric acid (Abu), 4-phenyl-phenylalanine (or biphenylalanine; 4Bip), α-amino-isobutyric acid (Aib), beta-alanine, beta-aminopropionic acid, piperidinic acid, aminocaprioic acid, aminoheptanoic acid, aminopimelic acid, desmosine, diaminopimelic acid, N-ethylglycine, N-ethylaspargine, hydroxylysine, allo-hydroxylysine, isodesmosine, allo-isoleucine, N-methylglycine, N-methylisoleucine, N-methylvaline, 4-hydroxyproline (Hyp), γ-carboxyglutamate, ε-N,N,N-trimethyllysine, ε-N-acetyllysine, O-phosphoserine, N-acetylserine, N-formylmethionine, 3-methylhistidine, 5-hydroxylysine, ω-methylarginine, 4-Amino-O-Phthalic Acid (4APA), and other similar amino acids, and derivatized forms of any of those specifically listed.

[0227] The term "isolated nucleic acid molecule" refers to a single or double-stranded polymer of deoxyribonucleotide or ribonucleotide bases read from the 5' to the 3' end (e.g., a GIPR nucleic acid sequence provided herein), or an analog thereof, that has been separated from at least about 50 percent of polypeptides, peptides, lipids, carbohydrates, polynucleotides or other materials with which the nucleic acid is naturally found when total nucleic acid is isolated from the source cells. Preferably, an isolated nucleic acid molecule is substantially free from any other contaminating nucleic acid molecules or other molecules that are found in the natural environment of the nucleic acid that would interfere with its use in polypeptide production or its therapeutic, diagnostic, prophylactic or research use.

[0228] The term "isolated polypeptide" refers to a polypeptide (e.g., a GIPR polypeptide sequence provided herein or an antigen binding protein of the present invention) that has been separated from at least about 50 percent of polypeptides, peptides, lipids, carbohydrates, polynucleotides, or other materials with which the polypeptide is naturally found when isolated from a source cell. Preferably, the isolated polypeptide is substantially free from any other contaminating polypeptides or other contaminants that are found in its natural environment that would interfere with its therapeutic, diagnostic, prophylactic or research use.

[0229] A composition of the present invention that includes a GLP-1 receptor agonist of the present invention fused via a peptide bond of its C-terminus to the N-terminus of an anti-GIPR antigen binding protein of the invention or is a "fusion protein" or "fusion molecule", or simply "fusion" of the present invention. A peptide linker sequence may be interposed between the GLP-1 receptor agonist peptide and the anti-GIPR antigen binding protein such that the GLP-1 receptor agonist of the present invention is fused via a peptide bond of its C-

terminus to the N-terminus of the linker peptide, and the C-terminus of the linker peptide is fused via a peptide bond to the N-terminus of the light chain variable region or to the N-terminus of the heavy chain variable region of the anti-GIPR antigen binding protein. Although the GLP-1 receptor agonists and/or linker peptides can be fused to the anti-GIPR antigen binding protein after translation or purification of the anti-GIPR antigen binding protein, in one embodiment the fusion proteins of the present invention can be produced via expression of the full length fusion protein in a suitable cell type without a further conjugation reaction.

[0230] The term "encoding" refers to a polynucleotide sequence encoding one or more amino acids. The term does not require a start or stop codon.

[0231] The terms "identical" and percent "identity," in the context of two or more nucleic acids or polypeptide sequences, refer to two or more sequences or subsequences that are the same. "Percent identity" means the percent of identical residues between the amino acids or nucleotides in the compared molecules and is calculated based on the size of the smallest of the molecules being compared. For these calculations, gaps in alignments (if any) can be addressed by a particular mathematical model or computer program (i.e., an "algorithm"). Methods that can be used to calculate the identity of the aligned nucleic acids or polypeptides include those described in Computational Molecular Biology, (Lesk, A. M., ed.), (1988) New York: Oxford University Press; Biocomputing Informatics and Genome Projects, (Smith, D. W., ed.), 1993, New York: Academic Press; Computer Analysis of Sequence Data, Part I, (Griffin, A. M., and Griffin, H. G., eds.), 1994, New Jersey: Humana Press; von Heinje, G., (1987) Sequence Analysis in Molecular Biology, New York: Academic Press; Sequence Analysis Primer, (Gribskov, M. and Devereux, J., eds.), 1991, New York: M. Stockton Press; and Carillo et al., (1988) SIAM J. Applied Math. 48:1073.

[0232] In calculating percent identity, the sequences being compared are aligned in a way that gives the largest match between the sequences. The computer program used to determine percent identity is the GCG program package, which includes GAP (Devereux et al., (1984) Nucl. Acid Res. 12:387; Genetics Computer Group, University of Wisconsin, Madison, WI). The computer algorithm GAP is used to align the two polypeptides or polynucleotides for which the percent sequence identity is to be determined. The sequences are aligned for optimal matching of their respective amino acid or nucleotide (the "matched span", as determined by the algorithm). A gap opening penalty (which is calculated as 3x the average diagonal, wherein the "average diagonal" is the average of the diagonal of the comparison matrix being used; the "diagonal" is the score or number assigned to each perfect amino acid

match by the particular comparison matrix) and a gap extension penalty (which is usually 1/10 times the gap opening penalty), as well as a comparison matrix such as PAM 250 or BLOSUM 62 are used in conjunction with the algorithm. In certain embodiments, a standard comparison matrix (see, Dayhoff et al., (1978) Atlas of Protein Sequence and Structure 5:345-352 for the PAM 250 comparison matrix; Henikoff et al., (1992) Proc. Natl. Acad. Sci. U.S.A. 89:10915-10919 for the BLOSUM 62 comparison matrix) is also used by the algorithm.

[0233] Recommended parameters for determining percent identity for polypeptides or nucleotide sequences using the GAP program are the following:

[0234] Algorithm: Needleman et al., 1970, J. Mol. Biol. 48:443-453;

[0235] Comparison matrix: BLOSUM 62 from Henikoff et al., 1992, supra;

[0236] Gap Penalty: 12 (but with no penalty for end gaps)

[0237] Gap Length Penalty: 4

[0238] Threshold of Similarity: 0

[0239] Certain alignment schemes for aligning two amino acid sequences can result in matching of only a short region of the two sequences, and this small aligned region can have very high sequence identity even though there is no significant relationship between the two full-length sequences. Accordingly, the selected alignment method (e.g., the GAP program) can be adjusted if so desired to result in an alignment that spans at least 50 contiguous amino acids of the target polypeptide.

[0240] The terms "GIPR polypeptide" and "GIPR protein" are used interchangeably and mean a naturally-occurring wild-type polypeptide expressed in a mammal, such as a human or a mouse, and includes naturally occurring alleles (e.g., naturally occurring allelic forms of human GIPR protein). For purposes of this disclosure, the term "GIPR polypeptide" can be used interchangeably to refer to any full-length GIPR polypeptide, e.g., SEQ ID NO: 3141, which consists of 466 amino acid residues and which is encoded by the nucleotide sequence SEQ ID NO: 3142, or SEQ ID NO: 3143, which consists of 430 amino acid residues and which is encoded by the nucleic acid sequence SEQ ID NO: 3144, or SEQ ID NO: 3145, which consists of 493 amino acid resides and which is encoded by the nucleic acid sequence of SEQ ID NO: 3146, or SEQ ID NO. 3147, which consists of 460 amino acids residues and which is encoded by the nucleic acid sequence of SEQ ID NO: 3148, or SEQ ID NO. 3149, which consists of 230 amino acids residues and which is encoded by the nucleic acid sequence of SEQ ID NO: 3150.

[0241] The term "GIPR polypeptide" also encompasses a GIPR polypeptide in which a naturally occurring GIPR polypeptide sequence (e.g., SEQ ID NOs: 3141, 3143 or 3145) has been modified. Such modifications include, but are not limited to, one or more amino acid substitutions, including substitutions with non-naturally occurring amino acids non-naturally-occurring amino acid analogs and amino acid mimetics.

[0242] In various embodiments, a GIPR polypeptide comprises an amino acid sequence that is at least about 85 percent identical to a naturally-occurring GIPR polypeptide (e.g., SEQ ID NOs: 3141, 3143 or 3145). In other embodiments, a GIPR polypeptide comprises an amino acid sequence that is at least about 90 percent, or about 95, 96, 97, 98, or 99 percent identical to a naturally-occurring GIPR polypeptide amino acid sequence (e.g., SEQ ID NOs: 3141, 3143 or 3145). Such GIPR polypeptides preferably, but need not, possess at least one activity of a wild-type GIPR polypeptide, such as the ability to bind GIP. The present invention also encompasses nucleic acid molecules encoding such GIPR polypeptide sequences.

[0243] The terms "GIPR activity assay" (also referred to as a "GIPR functional assay") means an assay that can be used to measure GIP or a GIP binding protein activity in a cellular setting. In one embodiment, the "activity" (or "functional") assay" can be a cAMP assay in GIPR expressing cells, in which GIP can induce cAMP signal, and the activity of a GIP/GIPR binding protein could be measured in the presence/absence of GIP ligand, in which IC50/EC50 and degree of inhibition/activation can be obtained (Biochemical and Biophysical Research Communications (2002) 290:1420–1426). In another embodiment, the "activity" (or "functional") assay can be an insulin secretion assay in pancreatic beta cells, in which GIP can induce glucose-dependent insulin secretion, and the activity of a GIP/GIPR binding protein could be measured in the presence/absence of GIP ligand, in which IC50/EC50 and degree of inhibition/activation can be obtained (Biochemical and Biophysical Research Communications (2002) 290:1420–1426).

[0244] The term "GIPR binding assay" means an assay that can be used to measure binding of GIP to GIPR. In one embodiment, "GIPR binding assay" can be an assay using FMAT or FACS that measures fluorescence-labeled GIP binding to GIPR expression cells, and GIP/GIPR binding protein's activity can be measured for displacing fluorescence-labeled GIP binding to GIPR expression cells. In another embodiment, "GIPR binding assay" can be an assay that measures radioactive-labeled GIP binding to GIPR expression cells, and GIP/GIPR binding protein's activity can be measured for displacing radioactive labeled GIP binding to GIPR expression cells (Biochimica et Biophysica Acta (2001) 1547:143-155).

[0245] The terms "GIP", "Gastric inhibitory polypeptide", "glucose-dependent insulinotropic peptide" and "GIP ligand" are used interchangeably and mean a naturally-occurring wild-type polypeptide expressed in a mammal, such as a human or a mouse, and includes naturally occurring alleles (e.g., naturally occurring allelic forms of human GIP protein). For purposes of this disclosure, the term "GIP" can be used interchangeably to refer to any mature GIP polypeptide.

[0246] The 42 amino acid sequence of mature human GIP is:

[0247] YAEGTFISDY SIAMDKIHQQ DFVNWLLAQK GKKNDWKHNI TQ (SEQ ID NO: 3151)

[0248] and is encoded by the DNA sequence:

[0249] tatgcggaag gcacctttat tagcgattat agcattgcga tggataaaat tcatcagcag gattttgtga actggctgct ggcgcagaaa ggcaaaaaaa acgattggaa acataacatt acccag (SEQ ID NO: 3152).

[0250] The 42 amino acid sequence of mature murine GIP is:

[0251] YAEGTFISDY SIAMDKIRQQ DFVNWLLAQR GKKSDWKHNI TQ (SEQ ID NO: 3153)

[0252] and is encoded by the DNA sequence:

[0253] tatgcggaag gcacctttat tagcgattat agcattgcga tggataaaat tcgccagcag gattttgtga actggctgct ggcgcagcgc ggcaaaaaaa gcgattggaa acataacatt acccag (SEQ ID NO: 3154).

[0254] The 42 amino acid sequence of mature rat GIP is:

[0255] YAEGTFISDY SIAMDKIRQQ DFVNWLLAQK GKKNDWKHNL TQ (SEQ ID NO: 3155)

[0256] and is encoded by the DNA sequence:

[0257] tatgcggaag gcacctttat tagcgattat agcattgcga tggataaaat tcgccagcag gattttgtga actggctgct gcgcagaaag gcaaaaaaaa cgattggaaa cataacctga cccag (SEQ ID NO: 3156).

[0258] An "antigen binding protein" as used herein means any protein that specifically binds a specified target antigen, such as a GIPR polypeptide (e.g., a human GIPR polypeptide such as provided in SEQ ID NOs: 3141, 3143 or 3145). The term encompasses intact antibodies that comprise at least two full-length heavy chains and two full-length light chains, as well as derivatives, variants, fragments, and mutations thereof. Examples of antibody fragments

include Fab, Fab', $F(ab')_2$, and Fv fragments. An antigen binding protein also includes domain antibodies such as nanobodies and scFvs as described further below.

[0259] In general, a GIPR antigen binding protein is said to "specifically bind" its target antigen GIPR when the antigen binding protein exhibits essentially background binding to non-GIPR molecules. An antigen binding protein that specifically binds GIPR may, however, cross-react with GIPR polypeptides from different species. Typically, a GIPR antigen binding protein specifically binds human GIPR when the dissociation constant (KD) is $\leq 10^{-7}$ M as measured via a surface plasma resonance technique (e.g., BIACore, GE-Healthcare Uppsala, Sweden) or Kinetic Exclusion Assay (KinExA, Sapidyne, Boise, Idaho). A GIPR antigen binding protein specifically binds human GIPR with "high affinity" when the KD is $\leq 5x\ 10^{-9}$ M, and with "very high affinity" when the KD is $\leq 5x\ 10^{-10}$ M, as measured using methods described.

[0260] "Antigen binding region" means a protein, or a portion of a protein, that specifically binds a specified antigen. For example, that portion of an antigen binding protein that contains the amino acid residues that interact with an antigen and confer on the antigen binding protein its specificity and affinity for the antigen is referred to as "antigen binding region." An antigen binding region typically includes one or more "complementary binding regions" ("CDRs") of an immunoglobulin, single-chain immunoglobulin, or camelid antibody. Certain antigen binding regions also include one or more "framework" regions. A "CDR" is an amino acid sequence that contributes to antigen binding specificity and affinity. "Framework" regions can aid in maintaining the proper conformation of the CDRs to promote binding between the antigen binding region and an antigen.

[0261] A "recombinant protein", including a recombinant GIPR antigen binding protein, is a protein made using recombinant techniques, i.e., through the expression of a recombinant nucleic acid as described herein. Methods and techniques for the production of recombinant proteins are well known in the art.

[0262] The term "antibody" refers to an intact immunoglobulin of any isotype, or a fragment thereof that can compete with the intact antibody for specific binding to the target antigen, and includes, for instance, chimeric, humanized, fully human, and bispecific antibodies. An "antibody" as such is a species of an antigen binding protein. An intact antibody generally will comprise at least two full-length heavy chains and two full-length light chains. Antibodies may be derived solely from a single source, or may be "chimeric," that is, different portions of the antibody may be derived from two different antibodies as described further below. The antigen binding proteins, antibodies, or binding fragments may be

produced in hybridomas, by recombinant DNA techniques, or by enzymatic or chemical cleavage of intact antibodies.

[0263] The term "light chain" as used with respect to an antibody or fragments thereof includes a full-length light chain and fragments thereof having sufficient variable region sequence to confer binding specificity. A full-length light chain includes a variable region domain, VL, and a constant region domain, CL. The variable region domain of the light chain is at the amino-terminus of the polypeptide. Light chains include kappa chains and lambda chains.

[0264] The term "heavy chain" as used with respect to an antibody or fragment thereof includes a full-length heavy chain and fragments thereof having sufficient variable region sequence to confer binding specificity. A full-length heavy chain includes a variable region domain, VH, and three constant region domains, CH1, CH2, and CH3. The VH domain is at the amino-terminus of the polypeptide, and the CH domains are at the carboxyl-terminus, with the CH3 being closest to the carboxy-terminus of the polypeptide. Heavy chains may be of any isotype, including IgG (including IgG1, IgG2, IgG3 and IgG4 subtypes), IgA (including IgA1 and IgA2 subtypes), IgM and IgE.

[0265] The term "immunologically functional fragment" (or simply "fragment") of an antibody or immunoglobulin chain (heavy or light chain), as used herein, is an antigen binding protein comprising a portion (regardless of how that portion is obtained or synthesized) of an antibody that lacks at least some of the amino acids present in a full-length chain but which is capable of specifically binding to an antigen. Such fragments are biologically active in that they bind specifically to the target antigen and can compete with other antigen binding proteins, including intact antibodies, for specific binding to a given epitope.

[0266] These biologically active fragments may be produced by recombinant DNA techniques, or may be produced by enzymatic or chemical cleavage of antigen binding proteins, including intact antibodies. Immunologically functional immunoglobulin fragments include, but are not limited to, Fab, Fab', and $F(ab')_2$ fragments.

[0267] In another embodiment, Fvs, domain antibodies and scFvs, and may be derived from an antibody of the present invention.

[0268] It is contemplated further that a functional portion of the antigen binding proteins disclosed herein, for example, one or more CDRs, could be covalently bound to a second protein or to a small molecule to create a therapeutic agent directed to a particular target in

the body, possessing bifunctional therapeutic properties, or having a prolonged serum half-life.

[0269] A "Fab fragment" is comprised of one light chain and the CH1 and variable regions of one heavy chain. The heavy chain of a Fab molecule cannot form a disulfide bond with another heavy chain molecule.

[0270] An "Fc" region contains two heavy chain fragments comprising the CH2 and CH3 domains of an antibody. The two heavy chain fragments are held together by two or more disulfide bonds and by hydrophobic interactions of the CH3 domains.

[0271] An "Fab' fragment" contains one light chain and a portion of one heavy chain that contains the VH domain and the CH1 domain and also the region between the CH1 and CH2 domains, such that an interchain disulfide bond can be formed between the two heavy chains of two Fab' fragments to form an F(ab')2 molecule.

[0272] An "F(ab')2 fragment" contains two light chains and two heavy chains containing a portion of the constant region between the CH1 and CH2 domains, such that an interchain disulfide bond is formed between the two heavy chains. A F(ab')2 fragment thus is composed of two Fab' fragments that are held together by a disulfide bond between the two heavy chains.

[0273] The "Fv region" comprises the variable regions from both the heavy and light chains, but lacks the constant regions.

[0274] " Single chain antibodies" or "scFvs" are Fv molecules in which the heavy and light chain variable regions have been connected by a flexible linker to form a single polypeptide chain, which forms an antigen-binding region. scFvs are discussed in detail in International Patent Application Publication No. WO 88/01649 and United States Patent Nos. 4,946,778 and No. 5,260,203, the disclosures of which are incorporated by reference.

[0275] A "domain antibody" or "single chain immunoglobulin" is an immunologically functional immunoglobulin fragment containing only the variable region of a heavy chain or the variable region of a light chain. Examples of domain antibodies include Nanobodies®. In some instances, two or more VH regions are covalently joined with a peptide linker to create a bivalent domain antibody. The two VH regions of a bivalent domain antibody may target the same or different antigens.

[0276] A "bivalent antigen binding protein" or "bivalent antibody" comprises two antigen binding regions. In some instances, the two binding regions have the same antigen specificities. Bivalent antigen binding proteins and bivalent antibodies may be bispecific, see, infra.

[0277] A multispecific antigen binding protein" or "multispecific antibody" is one that targets more than one antigen or epitope.

[0278] A "bispecific," "dual-specific" or "bifunctional" antigen binding protein or antibody is a hybrid antigen binding protein or antibody, respectively, having two different antigen binding sites. Bispecific antigen binding proteins and antibodies are a species of multispecific antigen binding protein or multispecific antibody and may be produced by a variety of methods including, but not limited to, fusion of hybridomas or linking of Fab' fragments. See, e.g., Songsivilai and Lachmann, 1990, Clin. Exp. Immunol. 79:315-321; Kostelny et al., 1992, J. Immunol. 148:1547-1553. The two binding sites of a bispecific antigen binding protein or antibody will bind to two different epitopes, which may reside on the same or different protein targets.

[0279] The term "compete" when used in the context of antigen binding proteins (e.g., antibodies) means competition between antigen binding proteins is determined by an assay in which the antigen binding protein (e.g., antibody or immunologically functional fragment thereof) under test prevents or inhibits specific binding of a reference antigen binding protein to a common antigen (e.g., GIPR or a fragment thereof). Numerous types of competitive binding assays can be used, for example: solid phase direct or indirect radioimmunoassay (RIA), solid phase direct or indirect enzyme immunoassay (EIA), sandwich competition assay (see, e.g., Stahli et al., 1983, Methods in Enzymology 9:242-253); solid phase direct biotin-avidin EIA (see, e.g., Kirkland et al., 1986, J. Immunol. 137:3614-3619) solid phase direct labeled assay, solid phase direct labeled sandwich assay (see, e.g., Harlow and Lane, 1988, Antibodies, A Laboratory Manual, Cold Spring Harbor Press); solid phase direct label RIA using I-125 label (see, e.g., Morel et al., 1988, Molec. Immunol. 25:7-15); solid phase direct biotin-avidin EIA (see, e.g., Cheung, et al., 1990, Virology 176:546-552); and direct labeled RIA (Moldenhauer et al., 1990, Scand. J. Immunol. 32:77-82). Typically, such an assay involves the use of purified antigen bound to a solid surface or cells bearing either of these, an unlabelled test antigen binding protein and a labeled reference antigen binding protein. Competitive inhibition is measured by determining the amount of label bound to the solid surface or cells in the presence of the test antigen binding protein. Usually the test antigen binding protein is present in excess. Additional details regarding methods for determining competitive binding are provided in the examples herein. Usually, when a competing antigen binding protein is present in excess, it will inhibit specific binding of a reference antigen binding protein to a common antigen by at least 40%, 45%, 50%, 55%,

60%, 65%, 70% or 75%. In some instances, binding is inhibited by at least 80%, 85%, 90%, 95%, or 97% or more.

[0280] The term "antigen" refers to a molecule or a portion of a molecule capable of being bound by a selective binding agent, such as an antigen binding protein (including, e.g., an antibody), and additionally capable of being used in an animal to produce antibodies capable of binding to that antigen. An antigen may possess one or more epitopes that are capable of interacting with different antigen binding proteins, e.g., antibodies.

[0281] The term "epitope" is the portion of a molecule that is bound by an antigen binding protein (for example, an antibody). The term includes any determinant capable of specifically binding to an antigen binding protein, such as an antibody. An epitope can be contiguous or non-contiguous (discontinuous) (e.g., in a polypeptide, amino acid residues that are not contiguous to one another in the polypeptide sequence but that within in context of the molecule are bound by the antigen binding protein). A conformational epitope is an epitope that exists within the conformation of an active protein but is not present in a denatured protein. In certain embodiments, epitopes may be mimetic in that they comprise a three dimensional structure that is similar to an epitope used to generate the antigen binding protein, yet comprise none or only some of the amino acid residues found in that epitope used to generate the antigen binding protein. Most often, epitopes reside on proteins, but in some instances may reside on other kinds of molecules, such as nucleic acids. Epitope determinants may include chemically active surface groupings of molecules such as amino acids, sugar side chains, phosphoryl or sulfonyl groups, and may have specific three dimensional structural characteristics, and/or specific charge characteristics. Generally, antigen binding proteins specific for a particular target antigen will preferentially recognize an epitope on the target antigen in a complex mixture of proteins and/or macromolecules.

[0282] As used herein, "substantially pure" means that the described species of molecule is the predominant species present, that is, on a molar basis it is more abundant than any other individual species in the same mixture. In certain embodiments, a substantially pure molecule is a composition wherein the object species comprises at least 50% (on a molar basis) of all macromolecular species present. In other embodiments, a substantially pure composition will comprise at least 80%, 85%, 90%, 95%, 96%, 97%, 98%, or 99% of all macromolecular species present in the composition. In other embodiments, the object species is purified to essential homogeneity wherein contaminating species cannot be detected in the composition by conventional detection methods and thus the composition consists of a single detectable macromolecular species.

[0283] The term "treating" refers to any indicia of success in the treatment or amelioration of an injury, pathology or condition, including any objective or subjective parameter such as abatement; remission; diminishing of symptoms or making the injury, pathology or condition more tolerable to the patient; slowing in the rate of degeneration or decline; making the final point of degeneration less debilitating; improving a patient's physical or mental well-being. The treatment or amelioration of symptoms can be based on objective or subjective parameters; including the results of a physical examination, neuropsychiatric exams, and/or a psychiatric evaluation. For example, certain methods presented herein successfully treat cardiovascular disease such as atherosclerosis by decreasing the incidence of cardiovascular disease, causing remission of cardiovascular disease and/or ameliorating a symptom associated with cardiovascular disease.

[0284] An "effective amount" is generally an amount sufficient to reduce the severity and/or frequency of symptoms, eliminate the symptoms and/or underlying cause, prevent the occurrence of symptoms and/or their underlying cause, and/or improve or remediate the damage that results from or is associated with the disease state (e.g., diabetes, obesity, dyslipidemia, elevated glucose levels, elevated insulin levels or diabetic nephropathy. In some embodiments, the effective amount is a therapeutically effective amount or a prophylactically effective amount. A "therapeutically effective amount" is an amount sufficient to remedy a disease state (e.g. atherosclerosis) or symptoms, particularly a state or symptoms associated with the disease state, or otherwise prevent, hinder, retard or reverse the progression of the disease state or any other undesirable symptom associated with the disease in any way whatsoever. A "prophylactically effective amount" is an amount of a pharmaceutical composition that, when administered to a subject, will have the intended prophylactic effect, e.g., preventing or delaying the onset (or reoccurrence) of the disease state, or reducing the likelihood of the onset (or reoccurrence) of the disease state or associated symptoms. The full therapeutic or prophylactic effect does not necessarily occur by administration of one dose, and may occur only after administration of a series of doses. Thus, a therapeutically or prophylactically effective amount may be administered in one or more administrations.

[0285] The terms "therapeutically effective dose" and "therapeutically effective amount," as used herein, means an amount of a GIPR binding protein that elicits a biological or medicinal response in a tissue system, animal, or human being sought by a researcher, physician, or other clinician, which includes alleviation or amelioration of the symptoms of the disease or disorder being treated, i.e., an amount of a GIPR binding protein that supports an observable

level of one or more desired biological or medicinal response, for example lowering blood glucose, insulin, triglyceride, or cholesterol levels; reducing body weight; or improving glucose tolerance, energy expenditure, or insulin sensitivity.

[0286] The term "polynucleotide" or "nucleic acid" includes both single-stranded and double-stranded nucleotide polymers. The nucleotides comprising the polynucleotide can be ribonucleotides or deoxyribonucleotides or a modified form of either type of nucleotide. The modifications include base modifications such as bromouridine and inosine derivatives, ribose modifications such as 2',3'-dideoxyribose, and internucleotide linkage modifications such as phosphorothioate, phosphorodithioate, phosphoroselenoate, phosphorodiselenoate, phosphoroanilothioate, phoshoraniladate and phosphoroamidate.

[0287] The term "oligonucleotide" means a polynucleotide comprising 200 or fewer nucleotides. In some embodiments, oligonucleotides are 10 to 60 bases in length. In other embodiments, oligonucleotides are 12, 13, 14, 15, 16, 17, 18, 19, or 20 to 40 nucleotides in length. Oligonucleotides may be single stranded or double stranded, e.g., for use in the construction of a mutant gene. Oligonucleotides may be sense or antisense oligonucleotides. An oligonucleotide can include a label, including a radiolabel, a fluorescent label, a hapten or an antigenic label, for detection assays. Oligonucleotides may be used, for example, as PCR primers, cloning primers or hybridization probes.

[0288] An "isolated nucleic acid molecule" means a DNA or RNA of genomic, mRNA, cDNA, or synthetic origin or some combination thereof which is not associated with all or a portion of a polynucleotide in which the isolated polynucleotide is found in nature, or is linked to a polynucleotide to which it is not linked in nature. For purposes of this disclosure, it should be understood that "a nucleic acid molecule comprising" a particular nucleotide sequence does not encompass intact chromosomes. Isolated nucleic acid molecules "comprising" specified nucleic acid sequences may include, in addition to the specified sequences, coding sequences for up to ten or even up to twenty other proteins or portions thereof, or may include operably linked regulatory sequences that control expression of the coding region of the recited nucleic acid sequences, and/or may include vector sequences.

[0289] Unless specified otherwise, the left-hand end of any single-stranded polynucleotide sequence discussed herein is the 5' end; the left-hand direction of double-stranded polynucleotide sequences is referred to as the 5' direction. The direction of 5' to 3' addition of nascent RNA transcripts is referred to as the transcription direction; sequence regions on the DNA strand having the same sequence as the RNA transcript that are 5' to the 5' end of the RNA transcript are referred to as "upstream sequences;" sequence regions on the DNA strand

having the same sequence as the RNA transcript that are 3' to the 3' end of the RNA transcript are referred to as "downstream sequences."

[0290] The term "control sequence" refers to a polynucleotide sequence that can affect the expression and processing of coding sequences to which it is ligated. The nature of such control sequences may depend upon the host organism. In particular embodiments, control sequences for prokaryotes may include a promoter, a ribosomal binding site, and a transcription termination sequence. For example, control sequences for eukaryotes may include promoters comprising one or a plurality of recognition sites for transcription factors, transcription enhancer sequences, and transcription termination sequences. "Control sequences" can include leader sequences and/or fusion partner sequences.

[0291] The term "vector" means any molecule or entity (e.g., nucleic acid, plasmid, bacteriophage or virus) used to transfer protein coding information into a host cell.

[0292] The term "expression vector" or "expression construct" refers to a vector that is suitable for transformation of a host cell and contains nucleic acid sequences that direct and/or control (in conjunction with the host cell) expression of one or more heterologous coding regions operatively linked thereto. An expression construct may include, but is not limited to, sequences that affect or control transcription, translation, and, if introns are present, affect RNA splicing of a coding region operably linked thereto.

[0293] As used herein, "operably linked" means that the components to which the term is applied are in a relationship that allows them to carry out their inherent functions under suitable conditions. For example, a control sequence in a vector that is "operably linked" to a protein coding sequence is ligated thereto so that expression of the protein coding sequence is achieved under conditions compatible with the transcriptional activity of the control sequences.

[0294] The term "host cell" means a cell that has been transformed with a nucleic acid sequence and thereby expresses a gene of interest. The term includes the progeny of the parent cell, whether or not the progeny is identical in morphology or in genetic make-up to the original parent cell, so long as the gene of interest is present.

[0295] The terms "polypeptide" or "protein" are used interchangeably herein to refer to a polymer of amino acid residues. The terms also apply to amino acid polymers in which one or more amino acid residues is an analog or mimetic of a corresponding naturally occurring amino acid, as well as to naturally occurring amino acid polymers. The terms can also encompass amino acid polymers that have been modified, e.g., by the addition of carbohydrate residues to form glycoproteins, or phosphorylated. Polypeptides and proteins

can be produced by a naturally-occurring and non-recombinant cell; or it is produced by a genetically-engineered or recombinant cell, and comprise molecules having the amino acid sequence of the native protein, or molecules having deletions from, additions to, and/or substitutions of one or more amino acids of the native sequence. The terms "polypeptide" and "protein" specifically encompass GIPR antigen binding proteins, antibodies, or sequences that have deletions from, additions to, and/or substitutions of one or more amino acids of an antigen-binding protein. The term "polypeptide fragment" refers to a polypeptide that has an amino-terminal deletion, a carboxyl-terminal deletion, and/or an internal deletion as compared with the full-length protein. Such fragments may also contain modified amino acids as compared with the full-length protein. In certain embodiments, fragments are about five to 500 amino acids long. For example, fragments may be at least 5, 6, 8, 10, 14, 20, 50, 70, 100, 110, 150, 200, 250, 300, 350, 400, or 450 amino acids long. Useful polypeptide fragments include immunologically functional fragments of antibodies, including binding domains.

[0296] The term "isolated protein" means that a subject protein (1) is free of at least some other proteins with which it would normally be found, (2) is essentially free of other proteins from the same source, e.g., from the same species, (3) is expressed by a cell from a different species, (4) has been separated from at least about 50 percent of polynucleotides, lipids, carbohydrates, or other materials with which it is associated in nature, (5) is operably associated (by covalent or noncovalent interaction) with a polypeptide with which it is not associated in nature, or (6) does not occur in nature. Typically, an "isolated protein" constitutes at least about 5%, at least about 10%, at least about 25%, or at least about 50% of a given sample. Genomic DNA, cDNA, mRNA or other RNA, of synthetic origin, or any combination thereof may encode such an isolated protein. Preferably, the isolated protein is substantially free from proteins or polypeptides or other contaminants that are found in its natural environment that would interfere with its therapeutic, diagnostic, prophylactic, research or other use.

[0297] A "variant" of a polypeptide (e.g., an antigen binding protein such as an antibody) comprises an amino acid sequence wherein one or more amino acid residues are inserted into, deleted from and/or substituted into the amino acid sequence relative to another polypeptide sequence.

[0298] The term "naturally occurring" as used throughout the specification in connection with biological materials such as polypeptides, nucleic acids, host cells, and the like, refers to materials which are found in nature.

[0299] A "subject" or "patient" as used herein can be any mammal. In a typical embodiment, the subject or patient is a human.

[0300] As disclosed herein, a GIPR polypeptide described by the instant disclosure can be engineered and/or produced using standard molecular biology methodology. In various examples, a nucleic acid sequence encoding a GIPR, which can comprise all or a portion of SEQ ID NOs:1, 3 or 5, can be isolated and/or amplified from genomic DNA, or cDNA using appropriate oligonucleotide primers. Primers can be designed based on the nucleic and amino acid sequences provided herein according to standard (RT)-PCR amplification techniques. The amplified GIPR nucleic acid can then be cloned into a suitable vector and characterized by DNA sequence analysis.

[0301] Oligonucleotides for use as probes in isolating or amplifying all or a portion of the GIPR sequences provided herein can be designed and generated using standard synthetic techniques, e.g., automated DNA synthesis apparatus, or can be isolated from a longer sequence of DNA.

[0302] The 466 amino acid sequence of human GIPR is (Volz et al., FEBS Lett. 373:23-29 (1995); NCBI Reference Sequence: NP_0001555):

[0303] MTTSPILQLL LRLSLCGLLL QRAETGSKGQ TAGELYQRWE RYRRECQETL AAAEPPSGLA CNGSFDMYVC WDYAAPNATA RASCPWYLPW HHHVAAGFVL RQCGSDGQWG LWRDHTQCEN PEKNEAFLDQ RLILERLQVM YTVGYSLSLA TLLLALLILS LFRRLHCTRN YIHINLFTSF MLRAAAILSR DRLLPRPGPY LGDQALALWN QALAACRTAQ IVTQYCVGAN YTWLLVEGVY LHSLLVLVGG SEEGHFRYYL LLGWGAPALF VIPWVIVRYL YENTQCWERN EVKAIWWIIR TPILMTILIN FLIFIRILGI LLSKLRTRQM RCRDYRLRLA RSTLTLVPLL GVHEVVFAPV TEEQARGALR FAKLGFEIFL SSFQGFLVSV LYCFINKEVQ SEIRRGWHHC RLRRSLGEEQ RQLPERAFRA LPSGSGPGEV PTSRGLSSGT LPGPGNEASR ELESYC (SEQ ID NO: 3141)

[0304] and is encoded by the DNA sequence (NCBI Reference Sequence: NM_000164):

[0322] As stated herein, the term "GIPR polypeptide" encompasses naturally occurring GIPR polypeptide sequences, e.g., human amino acid sequences SEQ ID NOs: 3141, 3143 or 3145. The term "GIPR polypeptide," however, also encompasses polypeptides comprising an amino acid sequence that differs from the amino acid sequence of a naturally occurring GIPR polypeptide sequence, e.g., SEQ ID NOs: 3141, 3143 or 3145, by one or more amino acids, such that the sequence is at least 85% identical to SEQ ID NOs: 3141, 3143 or 3145. GIPR polypeptides can be generated by introducing one or more amino acid substitutions, either conservative or non-conservative and using naturally or non-naturally occurring amino acids, at particular positions of the GIPR polypeptide.

[0323] A "conservative amino acid substitution" can involve a substitution of a native amino acid residue (i.e., a residue found in a given position of the wild-type GIPR polypeptide sequence) with a nonnative residue (i.e., a residue that is not found in a given position of the wild-type GIPR polypeptide sequence) such that there is little or no effect on the polarity or charge of the amino acid residue at that position. Conservative amino acid substitutions also encompass non-naturally occurring amino acid residues that are typically incorporated by chemical peptide synthesis rather than by synthesis in biological systems. These include peptidomimetics, and other reversed or inverted forms of amino acid moieties.

[0324] Naturally occurring residues can be divided into classes based on common side chain properties:

[0325] (1) hydrophobic: norleucine, Met, Ala, Val, Leu, Ile;

[0326] (2) neutral hydrophilic: Cys, Ser, Thr;

[0327] (3) acidic: Asp, Glu;

[0328] (4) basic: Asn, Gln, His, Lys, Arg;

[0329] (5) residues that influence chain orientation: Gly, Pro; and

[0330] (6) aromatic: Trp, Tyr, Phe.

[0331] Additional groups of amino acids can also be formulated using the principles described in, e.g., Creighton (1984) PROTEINS: STRUCTURE AND MOLECULAR PROPERTIES (2d Ed. 1993), W.H. Freeman and Company. In some instances it can be useful to further characterize substitutions based on two or more of such features (e.g., substitution with a "small polar" residue, such as a Thr residue, can represent a highly conservative substitution in an appropriate context).

[0332] Conservative substitutions can involve the exchange of a member of one of these classes for another member of the same class. Non-conservative substitutions can involve the exchange of a member of one of these classes for a member from another class.

[0333] Synthetic, rare, or modified amino acid residues having known similar physiochemical properties to those of an above-described grouping can be used as a "conservative" substitute for a particular amino acid residue in a sequence. For example, a D-Arg residue may serve as a substitute for a typical L-Arg residue. It also can be the case that a particular substitution can be described in terms of two or more of the above described classes (e.g., a substitution with a small and hydrophobic residue means substituting one amino acid with a residue(s) that is found in both of the above-described classes or other synthetic, rare, or modified residues that are known in the art to have similar physiochemical properties to such residues meeting both definitions).

[0334] Nucleic acid sequences encoding a GIPR polypeptide provided herein, including those degenerate to SEQ ID NOs: 3141, 3143 or 3145, and those encoding polypeptide variants of SEQ ID NOs: 3141, 3143 or 3145 form other aspects of the instant disclosure.

[0335] In order to express the GIPR nucleic acid sequences provided herein, the appropriate coding sequences, e.g., SEQ ID NOs: 3141, 3143 or 3145, can be cloned into a suitable vector and after introduction in a suitable host, the sequence can be expressed to produce the encoded polypeptide according to standard cloning and expression techniques, which are known in the art (e.g., as described in Sambrook, J., Fritsh, E. F., and Maniatis, T. Molecular Cloning: A Laboratory Manual 2nd, ed., Cold Spring Harbor Laboratory, Cold Spring Harbor Laboratory Press, Cold Spring Harbor, N.Y., 1989). The invention also relates to such vectors comprising a nucleic acid sequence according to the invention.

[0336] A "vector" refers to a delivery vehicle that (a) promotes the expression of a polypeptide-encoding nucleic acid sequence; (b) promotes the production of the polypeptide therefrom; (c) promotes the transfection/transformation of target cells therewith; (d) promotes

the replication of the nucleic acid sequence; (e) promotes stability of the nucleic acid; (f) promotes detection of the nucleic acid and/or transformed/transfected cells; and/or (g) otherwise imparts advantageous biological and/or physiochemical function to the polypeptide-encoding nucleic acid. A vector can be any suitable vector, including chromosomal, non-chromosomal, and synthetic nucleic acid vectors (a nucleic acid sequence comprising a suitable set of expression control elements). Examples of such vectors include derivatives of SV40, bacterial plasmids, phage DNA, baculovirus, yeast plasmids, vectors derived from combinations of plasmids and phage DNA, and viral nucleic acid (RNA or DNA) vectors.

[0337] A recombinant expression vector can be designed for expression of a GIPR protein in prokaryotic (e.g., E. coli) or eukaryotic cells (e.g., insect cells, using baculovirus expression vectors, yeast cells, or mammalian cells). In one embodiment the host cell is a mammalian, non-human host cell. Representative host cells include those hosts typically used for cloning and expression, including Escherichia coli strains TOP10F', TOP10, DH10B, DH5a, HB101, W3110, BL21(DE3) and BL21 (DE3)pLysS, BLUESCRIPT (Stratagene), mammalian cell lines CHO, CHO-K1, HEK293, 293-EBNA pIN vectors (Van Heeke & Schuster, J. Biol. Chem. 264: 5503-5509 (1989); pET vectors (Novagen, Madison Wis.). Alternatively, the recombinant expression vector can be transcribed and translated in vitro, for example using T7 promoter regulatory sequences and T7 polymerase and an in vitro translation system. Preferably, the vector contains a promoter upstream of the cloning site containing the nucleic acid sequence encoding the polypeptide. Examples of promoters, which can be switched on and off, include the lac promoter, the T7 promoter, the trc promoter, the tac promoter and the trp promoter.

[0338] Thus, provided herein are vectors comprising a nucleic acid sequence encoding GIPR that facilitate the expression of recombinant GIPR. In various embodiments, the vectors comprise an operably linked nucleotide sequence which regulates the expression of GIPR. A vector can comprise or be associated with any suitable promoter, enhancer, and other expression-facilitating elements. Examples of such elements include strong expression promoters (e.g., a human CMV IE promoter/enhancer, an RSV promoter, SV40 promoter, SL3-3 promoter, MMTV promoter, or HIV LTR promoter, EF1alpha promoter, CAG promoter), effective poly (A) termination sequences, an origin of replication for plasmid product in E. coli, an antibiotic resistance gene as a selectable marker, and/or a convenient cloning site (e.g., a polylinker). Vectors also can comprise an inducible promoter as opposed to a constitutive promoter such as CMV IE. In one aspect, a nucleic acid comprising a

sequence encoding a GIPR polypeptide which is operatively linked to a tissue specific promoter which promotes expression of the sequence in a metabolically-relevant tissue, such as liver or pancreatic tissue is provided.

[0339] In another aspect of the instant disclosure, host cells comprising the GIPR nucleic acids and vectors disclosed herein are provided. In various embodiments, the vector or nucleic acid is integrated into the host cell genome, which in other embodiments the vector or nucleic acid is extra-chromosomal.

[0340] Recombinant cells, such as yeast, bacterial (e.g., E. coli), and mammalian cells (e.g., immortalized mammalian cells) comprising such a nucleic acid, vector, or combinations of either or both thereof are provided. In various embodiments cells comprising a non-integrated nucleic acid, such as a plasmid, cosmid, phagemid, or linear expression element, which comprises a sequence coding for expression of a GIPR polypeptide, are provided.

[0341] A vector comprising a nucleic acid sequence encoding a GIPR polypeptide provided herein can be introduced into a host cell by transformation or by transfection. Methods of transforming a cell with an expression vector are well known.

[0342] A GIPR-encoding nucleic acid can be positioned in and/or delivered to a host cell or host animal via a viral vector. Any suitable viral vector can be used in this capacity. A viral vector can comprise any number of viral polynucleotides, alone or in combination with one or more viral proteins, which facilitate delivery, replication, and/or expression of the nucleic acid of the invention in a desired host cell. The viral vector can be a polynucleotide comprising all or part of a viral genome, a viral protein/nucleic acid conjugate, a virus-like particle (VLP), or an intact virus particle comprising viral nucleic acids and a GIPR polypeptide-encoding nucleic acid. A viral particle viral vector can comprise a wild-type viral particle or a modified viral particle. The viral vector can be a vector which requires the presence of another vector or wild-type virus for replication and/or expression (e.g., a viral vector can be a helper-dependent virus), such as an adenoviral vector amplicon. Typically, such viral vectors consist of a wild-type viral particle, or a viral particle modified in its protein and/or nucleic acid content to increase transgene capacity or aid in transfection and/or expression of the nucleic acid (examples of such vectors include the herpes virus/AAV amplicons). Typically, a viral vector is similar to and/or derived from a virus that normally infects humans. Suitable viral vector particles in this respect, include, for example, adenoviral vector particles (including any virus of or derived from a virus of the adenoviridae), adeno-associated viral vector particles (AAV vector particles) or other parvoviruses and parvoviral

vector particles, papillomaviral vector particles, flaviviral vectors, alphaviral vectors, herpes viral vectors, pox virus vectors, retroviral vectors, including lentiviral vectors.

[0343] A GIPR polypeptide expressed as described herein can be isolated using standard protein purification methods. A GIPR polypeptide can be isolated from a cell in which is it naturally expressed or it can be isolated from a cell that has been engineered to express GIPR, for example a cell that does not naturally express GIPR.

[0344] Protein purification methods that can be employed to isolate a GIPR polypeptide, as well as associated materials and reagents, are known in the art. Additional purification methods that may be useful for isolating a GIPR polypeptide can be found in references such as Bootcov MR, 1997, Proc. Natl. Acad. Sci. USA 94:11514-9, Fairlie WD, 2000, Gene 254: 67-76.

[0345] Antagonist antigen binding proteins that bind GIPR, including human GIPR (hGIPR) are provided herein. In one embodiment, the human GIPR has the sequence as such as set forth in SEQ ID NO: 3141. In another embodiment, the human GIPR has the sequence as such set forth in SEQ ID NO: 3143. In another embodiment, the human GIPR has the sequence as such set forth in SEQ ID NO: 3145.

[0346] The antigen binding proteins provided are polypeptides into which one or more complementary determining regions (CDRs), as described herein, are embedded and/or joined. In some antigen binding proteins, the CDRs are embedded into a "framework" region, which orients the CDR(s) such that the proper antigen binding properties of the CDR(s) are achieved. Certain antigen binding proteins described herein are antibodies or are derived from antibodies. In other antigen binding proteins, the CDR sequences are embedded in a different type of protein scaffold. The various structures are further described below.

[0347] The antigen binding proteins that are disclosed herein have a variety of utilities. The antigen binding proteins, for instance, are useful in specific binding assays, affinity purification of GIPR, and in screening assays to identify other antagonists of GIPR activity. Other uses for the antigen binding proteins include, for example, diagnosis of GIPR-associated diseases or conditions and screening assays to determine the presence or absence of GIPR. Given that the antigen binding proteins that are provided are antagonists, the GIPR antigen binding proteins have value in therapeutic methods in which it is useful to reduce weight gain, even while maintaining or increasing food intake, increasing % fat mass and increasing % lean mass, improving glucose tolerance, decreasing insulin levels, decreasing cholesterol and triglyceride levels. Accordingly, the antigen binding proteins have utility in

the treatment and prevention of diabetes, e.g., type 2 diabetes, obesity, dyslipidemia, elevated glucose levels or elevated insulin levels.

[0348] A variety of selective binding agents useful for modulating the activity of GIPR are provided. These agents include, for instance, antigen binding proteins that contain an antigen binding domain (e.g., scFvs, domain antibodies, and polypeptides with an antigen binding region) and specifically bind to a GIPR polypeptide, in particular human GIPR. Some of the agents, for example, are useful in enhancing the activity of GIPR, and can activate one or more activities associated with GIPR.

[0349] In general the antigen binding proteins that are provided typically comprise one or more CDRs as described herein (e.g., 1, 2, 3, 4, 5 or 6). In some instances, the antigen binding protein comprises (a) a polypeptide structure and (b) one or more CDRs that are inserted into and/or joined to the polypeptide structure. The polypeptide structure can take a variety of different forms. For example, it can be, or comprise, the framework of a naturally occurring antibody, or fragment or variant thereof, or may be completely synthetic in nature. Examples of various polypeptide structures are further described below.

[0350] In certain embodiments, the polypeptide structure of the antigen binding proteins is an antibody or is derived from an antibody. Accordingly, examples of certain antigen binding proteins that are provided include, but are not limited to, monoclonal antibodies, bispecific antibodies, minibodies, domain antibodies such as Nanobodies®, synthetic antibodies (sometimes referred to herein as "antibody mimetics"), chimeric antibodies, humanized antibodies, human antibodies, antibody fusions, and portions or fragments of each, respectively. In some instances, the antigen binding protein is an immunological fragment of a complete antibody (e.g., a Fab, a Fab', a F(ab')2). In other instances the antigen binding protein is a scFv that uses CDRs from an antibody of the present invention.

[0351] The antigen binding proteins as provided herein specifically bind to a human GIPR. In a specific embodiment, the antigen binding protein specifically binds to human GIPR comprising or consisting of the amino acid sequence of SEQ ID NO: 3141. In a specific embodiment, the antigen binding protein specifically binds to human GIPR comprising or consisting of the amino acid sequence of SEQ ID NO: 3143. In a specific embodiment, the antigen binding protein specifically binds to human GIPR comprising or consisting of the amino acid sequence of SEQ ID NO: 3145.

[0352] The antigen binding proteins that are provided are antagonists and typically have one, two, three, four, five, six, seven or all eight of the following characteristics:

[0353] (a) ability to prevent or reduce binding of GIP to GIPR, where the levels can be measured, for example, by the methods such as radioactive- or fluorescence-labeled ligand binding study, or by the methods described herein (e.g. cAMP assay or other functional assays). The decrease can be at least 10, 25, 50, 100% or more relative to the pre-treatment levels of SEQ ID NO: 3141, 3143 or 3145 under comparable conditions.

[0354] (b) ability to decrease blood glucose;

[0355] (c) ability to increase glucose tolerance;

[0356] (d) ability to increase insulin sensitivity;

[0357] (e) ability to decrease body weight or reduce body weight gain;

[0358] (f) ability to decrease fat mass or decrease inflammation in fat tissue;

[0359] (g) ability to decrease fasting insulin levels;

[0360] (h) ability to decrease circulating cholesterol levels;

[0361] (i) ability to decrease circulating triglyceride levels;

[0362] (j) ability to decrease liver steatosis or reduce triglyceride level in liver;

[0363] (k) decrease AST, ALT, and/or ALP levels.

[0364] In one embodiment, a GIPR antigen binding protein has one or more of the following activities:

[0365] (a) binds human GIPR such that KD is ≤200 nM, is ≤150 nM, is ≤100 nM , is ≤50 nM, is ≤10 nM, is ≤5 nM, is ≤2 nM, or is ≤1 nM, e.g., as measured via a surface plasma resonance or kinetic exclusion assay technique.

[0366] (b) has a half-life in human serum of at least 3 days;

[0367] Some antigen binding proteins that are provided have an on-rate (ka) for GIPR of at least 10^4/ M x seconds, at least 10^5/M x seconds, or at least 10^6/M x seconds as measured, for instance, as described below. Certain antigen binding proteins that are provided have a slow dissociation rate or off-rate. Some antigen binding proteins, for instance, have a kd (off-rate) of 1x 10^{-2} s^{-1} , or 1x 10^{-3} s^{-1} , or 1x 10^{-4} s^{-1} , or 1x 10^{-5} s^{-1} . In certain embodiments, the antigen binding protein has a KD (equilibrium binding affinity) of less than 25 pM, 50 pM, 100 pM, 500 pM, 1 nM, 5 nM, 10 nM, 25 nM or 50 nM.

[0368] In another aspect, an antigen-binding protein is provided having a half-life of at least one day in vitro or in vivo (e.g., when administered to a human subject). In one embodiment, the antigen binding protein has a half-life of at least three days. In various other embodiments, the antigen binding protein has a half-life of 4, 5, 6, 7, 8, 9, 10, 15, 20, 25, 30, 40, 50, or 60 days or longer. In another embodiment, the antigen binding protein is derivatized or modified such that it has a longer half-life as compared to the underivatized or

unmodified antibody. In another embodiment, the antigen binding protein contains point mutations to increase serum half-life. Further details regarding such mutant and derivatized forms are provided below.

[0369] Some of the antigen binding proteins that are provided have the structure typically associated with naturally occurring antibodies. The structural units of these antibodies typically comprise one or more tetramers, each composed of two identical couplets of polypeptide chains, though some species of mammals also produce antibodies having only a single heavy chain. In a typical antibody, each pair or couplet includes one full-length "light" chain (in certain embodiments, about 25 kDa) and one full-length "heavy" chain (in certain embodiments, about 50-70 kDa). Each individual immunoglobulin chain is composed of several "immunoglobulin domains", each consisting of roughly 90 to 110 amino acids and expressing a characteristic folding pattern. These domains are the basic units of which antibody polypeptides are composed. The amino-terminal portion of each chain typically includes a variable domain that is responsible for antigen recognition. The carboxy-terminal portion is more conserved evolutionarily than the other end of the chain and is referred to as the "constant region" or "C region". Human light chains generally are classified as kappa and lambda light chains, and each of these contains one variable domain and one constant domain. Heavy chains are typically classified as mu, delta, gamma, alpha, or epsilon chains, and these define the antibody's isotype as IgM, IgD, IgG, IgA, and IgE, respectively. IgG has several subtypes, including, but not limited to, IgG1, IgG2, IgG3, and IgG4. IgM subtypes include IgM, and IgM2. IgA subtypes include IgA1 and IgA2. In humans, the IgA and IgD isotypes contain four heavy chains and four light chains; the IgG and IgE isotypes contain two heavy chains and two light chains; and the IgM isotype contains five heavy chains and five light chains. The heavy chain C region typically comprises one or more domains that may be responsible for effector function. The number of heavy chain constant region domains will depend on the isotype. IgG heavy chains, for example, each contain three C region domains known as CH1, CH2 and CH3. The antibodies that are provided can have any of these isotypes and subtypes. In certain embodiments, the GIPR antibody is of the IgG1, IgG2, or IgG4 subtype. The terms “GIPR antibody” and “anti-GIPR antibody” are used interchangeably throughout this application and figures. Both terms refer to an antibody that binds to GIPR.

[0370] In full-length light and heavy chains, the variable and constant regions are joined by a "J" region of about twelve or more amino acids, with the heavy chain also including a "D" region of about ten more amino acids. See, e.g. Fundamental Immunology, 2nd ed., Ch. 7

(Paul, W., ed.) 1989, New York: Raven Press (hereby incorporated by reference in its entirety for all purposes). The variable regions of each light/heavy chain pair typically form the antigen binding site.

[0371] For the antibodies provided herein, the variable regions of immunoglobulin chains generally exhibit the same overall structure, comprising relatively conserved framework regions (FR) joined by three hypervariable regions, more often called "complementarity determining regions" or CDRs. The CDRs from the two chains of each heavy chain/light chain pair mentioned above typically are aligned by the framework regions to form a structure that binds specifically with a specific epitope on GIPR. From N-terminal to C-terminal, naturally-occurring light and heavy chain variable regions both typically conform with the following order of these elements: FR1, CDR1, FR2, CDR2, FR3, CDR3 and FR4. A numbering system has been devised for assigning numbers to amino acids that occupy positions in each of these domains. This numbering system is defined in Kabat Sequences of Proteins of Immunological Interest (1987 and 1991, NIH, Bethesda, Md.), or Chothia & Lesk, 1987, J. Mol. Biol. 196:901-917; Chothia et al., 1989, Nature 342:878-883.

[0372] The sequence information for specific antibodies prepared and identified as described in the Examples below is summarized in TABLE 1. Thus, in an embodiment, an antigen binding protein is an antibody with the CDR, variable domain and light and heavy chain sequences as specified in one of the rows of TABLE 1.

[0373] SEQ ID NOs have been assigned to variable light chain, variable heavy chain, light chain, heavy chain, CDRL1, CDRL2, CDRL3, CDRH1, CDRH2, and CDRH3 sequences of the antibodies and fragments thereof of the present invention and are shown in TABLE 1. SEQ ID NOs have also been assigned to polynucleotides encoding the variable light chain, variable heavy chain, light chain, heavy chain, CDRL1, CDRL2, CDRL3, CDRH1, CDRH2, and CDRH3 sequences of the antibodies and fragments thereof of the present invention and are shown in TABLE 2. The antigen binding proteins of the present invention can be identified by SEQ ID NO, but also by construct name (e.g., 2C2.005) or identifier number (e.g., iPS:336175). The antigen binding proteins identified in Tables 1-5 below can be grouped into families based on construct name. For example, the “4B1 family” includes the constructs 4B1, 4B1.010, 4B1.011, 4B1.012, 4B1.013, 4B1.014, 4B1.015, and 4B1.016.

[0374] The various light chain and heavy chain variable regions provided herein are depicted in TABLE 3. Each of these variable regions may be attached to a heavy or light chain constant regions to form a complete antibody heavy and light chain, respectively.

Furthermore, each of the so generated heavy and light chain sequences may be combined to form a complete antibody structure.

Table 1. Amino acid SEQ ID NOs.

WO 2018/237095 PCT/US2018/038634

[0375] In one embodiment the antibody or fragment thereof comprises a light chain variable region comprising a sequence selected from the group consisting of SEQ ID NOs: 1-157 and a heavy chain variable region comprising a sequence selected from the group consisting of SEQ ID NOs: 158-314.

[0376] In one embodiment the antibody or fragment thereof comprises a combination of light chain variable region and a heavy chain variable region selected from the group consisting of a light chain variable region comprising SEQ ID NO: 1 and a heavy chain variable region comprising SEQ ID NO: 158; a light chain variable region comprising SEQ ID NO: 2 and a heavy chain variable region comprising SEQ ID NO: 159; a light chain variable region comprising SEQ ID NO: 3 and a heavy chain variable region comprising SEQ ID NO: 160; a light chain variable region comprising SEQ ID NO: 4 and a heavy chain variable region comprising SEQ ID NO: 161; a light chain variable region comprising SEQ ID NO: 5 and a heavy chain variable region comprising SEQ ID NO: 162; a light chain variable region comprising SEQ ID NO: 6 and a heavy chain variable region comprising SEQ ID NO: 163; a light chain variable region comprising SEQ ID NO: 7 and a heavy chain variable region comprising SEQ ID NO: 164; a light chain variable region comprising SEQ ID NO: 8 and a heavy chain variable region comprising SEQ ID NO: 165; a light chain variable region comprising SEQ ID NO: 9 and a heavy chain variable region comprising SEQ ID NO: 166; a light chain variable region comprising SEQ ID NO: 10 and a heavy chain variable region comprising SEQ ID NO: 167; a light chain variable region comprising SEQ ID NO: 11 and a heavy chain variable region comprising SEQ ID NO: 168; a light chain variable region comprising SEQ ID NO: 12 and a heavy chain variable region comprising SEQ ID NO: 169; a light chain variable region comprising SEQ ID NO: 13 and a heavy chain variable region comprising SEQ ID NO: 170; a light chain variable region comprising SEQ ID NO: 14 and a heavy chain variable region comprising SEQ ID NO: 171; a light chain variable region comprising SEQ ID NO: 15 and a heavy chain variable region comprising SEQ ID NO: 172; a light chain variable region comprising SEQ ID NO: 16 and a heavy chain variable region comprising SEQ ID NO: 173; a light chain variable region comprising SEQ ID NO: 17 and a heavy chain variable region comprising SEQ ID NO: 174; a light chain variable region comprising SEQ ID NO: 18 and a heavy chain variable region comprising SEQ ID NO: 175; a light chain variable region comprising SEQ ID NO: 19 and a heavy chain variable region comprising SEQ ID NO: 176; a light chain variable region comprising SEQ ID NO: 20 and a heavy chain variable region comprising SEQ ID NO: 177; a light chain variable region comprising SEQ ID NO: 21 and a heavy chain variable region comprising SEQ ID NO: 178;

a light chain variable region comprising SEQ ID NO: 22 and a heavy chain variable region comprising SEQ ID NO: 179; a light chain variable region comprising SEQ ID NO: 23 and a heavy chain variable region comprising SEQ ID NO: 180; a light chain variable region comprising SEQ ID NO: 24 and a heavy chain variable region comprising SEQ ID NO: 181; a light chain variable region comprising SEQ ID NO: 25 and a heavy chain variable region comprising SEQ ID NO: 182; a light chain variable region comprising SEQ ID NO: 26 and a heavy chain variable region comprising SEQ ID NO: 183; a light chain variable region comprising SEQ ID NO: 27 and a heavy chain variable region comprising SEQ ID NO: 184; a light chain variable region comprising SEQ ID NO: 28 and a heavy chain variable region comprising SEQ ID NO: 185; a light chain variable region comprising SEQ ID NO: 29 and a heavy chain variable region comprising SEQ ID NO: 186; a light chain variable region comprising SEQ ID NO: 30 and a heavy chain variable region comprising SEQ ID NO: 187; a light chain variable region comprising SEQ ID NO: 31 and a heavy chain variable region comprising SEQ ID NO: 188; a light chain variable region comprising SEQ ID NO: 32 and a heavy chain variable region comprising SEQ ID NO: 189; a light chain variable region comprising SEQ ID NO: 33 and a heavy chain variable region comprising SEQ ID NO: 190; a light chain variable region comprising SEQ ID NO: 34 and a heavy chain variable region comprising SEQ ID NO: 191; a light chain variable region comprising SEQ ID NO: 35 and a heavy chain variable region comprising SEQ ID NO: 192; a light chain variable region comprising SEQ ID NO: 36 and a heavy chain variable region comprising SEQ ID NO: 193; a light chain variable region comprising SEQ ID NO: 37 and a heavy chain variable region comprising SEQ ID NO: 194; a light chain variable region comprising SEQ ID NO: 38 and a heavy chain variable region comprising SEQ ID NO: 195; a light chain variable region comprising SEQ ID NO: 39 and a heavy chain variable region comprising SEQ ID NO: 196; a light chain variable region comprising SEQ ID NO: 40 and a heavy chain variable region comprising SEQ ID NO: 197; a light chain variable region comprising SEQ ID NO: 41 and a heavy chain variable region comprising SEQ ID NO: 198; a light chain variable region comprising SEQ ID NO: 42 and a heavy chain variable region comprising SEQ ID NO: 199; a light chain variable region comprising SEQ ID NO: 43 and a heavy chain variable region comprising SEQ ID NO: 200; a light chain variable region comprising SEQ ID NO: 44 and a heavy chain variable region comprising SEQ ID NO: 201; a light chain variable region comprising SEQ ID NO: 45 and a heavy chain variable region comprising SEQ ID NO: 202; a light chain variable region comprising SEQ ID NO: 46 and a heavy chain variable region comprising SEQ ID NO: 203; a light chain variable region comprising SEQ ID NO: 47 and a

heavy chain variable region comprising SEQ ID NO: 204; a light chain variable region comprising SEQ ID NO: 48 and a heavy chain variable region comprising SEQ ID NO: 205; a light chain variable region comprising SEQ ID NO: 49 and a heavy chain variable region comprising SEQ ID NO: 206; a light chain variable region comprising SEQ ID NO: 50 and a heavy chain variable region comprising SEQ ID NO: 207; a light chain variable region comprising SEQ ID NO: 51 and a heavy chain variable region comprising SEQ ID NO: 208; a light chain variable region comprising SEQ ID NO: 52 and a heavy chain variable region comprising SEQ ID NO: 209; a light chain variable region comprising SEQ ID NO: 53 and a heavy chain variable region comprising SEQ ID NO: 210; a light chain variable region comprising SEQ ID NO: 54 and a heavy chain variable region comprising SEQ ID NO: 211; a light chain variable region comprising SEQ ID NO: 55 and a heavy chain variable region comprising SEQ ID NO: 212; a light chain variable region comprising SEQ ID NO: 56 and a heavy chain variable region comprising SEQ ID NO: 213; a light chain variable region comprising SEQ ID NO: 57 and a heavy chain variable region comprising SEQ ID NO: 214; a light chain variable region comprising SEQ ID NO: 58 and a heavy chain variable region comprising SEQ ID NO: 215; a light chain variable region comprising SEQ ID NO: 59 and a heavy chain variable region comprising SEQ ID NO: 216; a light chain variable region comprising SEQ ID NO: 60 and a heavy chain variable region comprising SEQ ID NO: 217; a light chain variable region comprising SEQ ID NO: 61 and a heavy chain variable region comprising SEQ ID NO: 218; a light chain variable region comprising SEQ ID NO: 62 and a heavy chain variable region comprising SEQ ID NO: 219; a light chain variable region comprising SEQ ID NO: 63 and a heavy chain variable region comprising SEQ ID NO: 220; a light chain variable region comprising SEQ ID NO: 64 and a heavy chain variable region comprising SEQ ID NO: 221; a light chain variable region comprising SEQ ID NO: 65 and a heavy chain variable region comprising SEQ ID NO: 222; a light chain variable region comprising SEQ ID NO: 66 and a heavy chain variable region comprising SEQ ID NO: 223; a light chain variable region comprising SEQ ID NO: 67 and a heavy chain variable region comprising SEQ ID NO: 224; a light chain variable region comprising SEQ ID NO: 68 and a heavy chain variable region comprising SEQ ID NO: 225; a light chain variable region comprising SEQ ID NO: 69 and a heavy chain variable region comprising SEQ ID NO: 226; a light chain variable region comprising SEQ ID NO: 70 and a heavy chain variable region comprising SEQ ID NO: 227; a light chain variable region comprising SEQ ID NO: 71 and a heavy chain variable region comprising SEQ ID NO: 228; a light chain variable region comprising SEQ ID NO: 72 and a heavy chain variable region comprising SEQ ID NO: 229;

a light chain variable region comprising SEQ ID NO: 73 and a heavy chain variable region comprising SEQ ID NO: 230; a light chain variable region comprising SEQ ID NO: 74 and a heavy chain variable region comprising SEQ ID NO: 231; a light chain variable region comprising SEQ ID NO: 75 and a heavy chain variable region comprising SEQ ID NO: 232; a light chain variable region comprising SEQ ID NO: 76 and a heavy chain variable region comprising SEQ ID NO: 233; a light chain variable region comprising SEQ ID NO: 77 and a heavy chain variable region comprising SEQ ID NO: 234; a light chain variable region comprising SEQ ID NO: 78 and a heavy chain variable region comprising SEQ ID NO: 235; a light chain variable region comprising SEQ ID NO: 79 and a heavy chain variable region comprising SEQ ID NO: 236; a light chain variable region comprising SEQ ID NO: 80 and a heavy chain variable region comprising SEQ ID NO: 237; a light chain variable region comprising SEQ ID NO: 81 and a heavy chain variable region comprising SEQ ID NO: 238; a light chain variable region comprising SEQ ID NO: 82 and a heavy chain variable region comprising SEQ ID NO: 239; a light chain variable region comprising SEQ ID NO: 83 and a heavy chain variable region comprising SEQ ID NO: 240; a light chain variable region comprising SEQ ID NO: 84 and a heavy chain variable region comprising SEQ ID NO: 241; a light chain variable region comprising SEQ ID NO: 85 and a heavy chain variable region comprising SEQ ID NO: 242; a light chain variable region comprising SEQ ID NO: 86 and a heavy chain variable region comprising SEQ ID NO: 243; a light chain variable region comprising SEQ ID NO: 87 and a heavy chain variable region comprising SEQ ID NO: 244; a light chain variable region comprising SEQ ID NO: 88 and a heavy chain variable region comprising SEQ ID NO: 245; a light chain variable region comprising SEQ ID NO: 89 and a heavy chain variable region comprising SEQ ID NO: 246; a light chain variable region comprising SEQ ID NO: 90 and a heavy chain variable region comprising SEQ ID NO: 247; a light chain variable region comprising SEQ ID NO: 91 and a heavy chain variable region comprising SEQ ID NO: 248; a light chain variable region comprising SEQ ID NO: 92 and a heavy chain variable region comprising SEQ ID NO: 249; a light chain variable region comprising SEQ ID NO: 93 and a heavy chain variable region comprising SEQ ID NO: 250; a light chain variable region comprising SEQ ID NO: 94 and a heavy chain variable region comprising SEQ ID NO: 251; a light chain variable region comprising SEQ ID NO: 95 and a heavy chain variable region comprising SEQ ID NO: 252; a light chain variable region comprising SEQ ID NO: 96 and a heavy chain variable region comprising SEQ ID NO: 253; a light chain variable region comprising SEQ ID NO: 97 and a heavy chain variable region comprising SEQ ID NO: 254; a light chain variable region comprising SEQ ID NO: 98 and a

heavy chain variable region comprising SEQ ID NO: 255; a light chain variable region comprising SEQ ID NO: 99 and a heavy chain variable region comprising SEQ ID NO: 256; a light chain variable region comprising SEQ ID NO: 100 and a heavy chain variable region comprising SEQ ID NO: 257; a light chain variable region comprising SEQ ID NO: 101 and a heavy chain variable region comprising SEQ ID NO: 258; a light chain variable region comprising SEQ ID NO: 102 and a heavy chain variable region comprising SEQ ID NO: 259; a light chain variable region comprising SEQ ID NO: 103 and a heavy chain variable region comprising SEQ ID NO: 260; a light chain variable region comprising SEQ ID NO: 104 and a heavy chain variable region comprising SEQ ID NO: 261; a light chain variable region comprising SEQ ID NO: 105 and a heavy chain variable region comprising SEQ ID NO: 262; a light chain variable region comprising SEQ ID NO: 106 and a heavy chain variable region comprising SEQ ID NO: 263; a light chain variable region comprising SEQ ID NO: 107 and a heavy chain variable region comprising SEQ ID NO: 264; a light chain variable region comprising SEQ ID NO: 108 and a heavy chain variable region comprising SEQ ID NO: 265; a light chain variable region comprising SEQ ID NO: 109 and a heavy chain variable region comprising SEQ ID NO: 266; a light chain variable region comprising SEQ ID NO: 110 and a heavy chain variable region comprising SEQ ID NO: 267; a light chain variable region comprising SEQ ID NO: 111 and a heavy chain variable region comprising SEQ ID NO: 268; a light chain variable region comprising SEQ ID NO: 112 and a heavy chain variable region comprising SEQ ID NO: 269; a light chain variable region comprising SEQ ID NO: 113 and a heavy chain variable region comprising SEQ ID NO: 270; a light chain variable region comprising SEQ ID NO: 114 and a heavy chain variable region comprising SEQ ID NO: 271; a light chain variable region comprising SEQ ID NO: 115 and a heavy chain variable region comprising SEQ ID NO: 272; a light chain variable region comprising SEQ ID NO: 116 and a heavy chain variable region comprising SEQ ID NO: 273; a light chain variable region comprising SEQ ID NO: 117 and a heavy chain variable region comprising SEQ ID NO: 274; a light chain variable region comprising SEQ ID NO: 118 and a heavy chain variable region comprising SEQ ID NO: 275; a light chain variable region comprising SEQ ID NO: 119 and a heavy chain variable region comprising SEQ ID NO: 276; a light chain variable region comprising SEQ ID NO: 120 and a heavy chain variable region comprising SEQ ID NO: 277; a light chain variable region comprising SEQ ID NO: 121 and a heavy chain variable region comprising SEQ ID NO: 278; a light chain variable region comprising SEQ ID NO: 122 and a heavy chain variable region comprising SEQ ID NO: 279; a light chain variable region comprising SEQ ID NO: 123 and a heavy chain variable region comprising SEQ ID NO: 280;

a light chain variable region comprising SEQ ID NO: 124 and a heavy chain variable region comprising SEQ ID NO: 281; a light chain variable region comprising SEQ ID NO: 125 and a heavy chain variable region comprising SEQ ID NO: 282; a light chain variable region comprising SEQ ID NO: 126 and a heavy chain variable region comprising SEQ ID NO: 283; a light chain variable region comprising SEQ ID NO: 127 and a heavy chain variable region comprising SEQ ID NO: 284; a light chain variable region comprising SEQ ID NO: 128 and a heavy chain variable region comprising SEQ ID NO: 285; a light chain variable region comprising SEQ ID NO: 129 and a heavy chain variable region comprising SEQ ID NO: 286; a light chain variable region comprising SEQ ID NO: 130 and a heavy chain variable region comprising SEQ ID NO: 287; a light chain variable region comprising SEQ ID NO: 131 and a heavy chain variable region comprising SEQ ID NO: 288; a light chain variable region comprising SEQ ID NO: 132 and a heavy chain variable region comprising SEQ ID NO: 289; a light chain variable region comprising SEQ ID NO: 133 and a heavy chain variable region comprising SEQ ID NO: 290; a light chain variable region comprising SEQ ID NO: 134 and a heavy chain variable region comprising SEQ ID NO: 291; a light chain variable region comprising SEQ ID NO: 135 and a heavy chain variable region comprising SEQ ID NO: 292; a light chain variable region comprising SEQ ID NO: 136 and a heavy chain variable region comprising SEQ ID NO: 293; a light chain variable region comprising SEQ ID NO: 137 and a heavy chain variable region comprising SEQ ID NO: 294; a light chain variable region comprising SEQ ID NO: 138 and a heavy chain variable region comprising SEQ ID NO: 295; a light chain variable region comprising SEQ ID NO: 139 and a heavy chain variable region comprising SEQ ID NO: 296; a light chain variable region comprising SEQ ID NO: 140 and a heavy chain variable region comprising SEQ ID NO: 297; a light chain variable region comprising SEQ ID NO: 141 and a heavy chain variable region comprising SEQ ID NO: 298; a light chain variable region comprising SEQ ID NO: 142 and a heavy chain variable region comprising SEQ ID NO: 299; a light chain variable region comprising SEQ ID NO: 143 and a heavy chain variable region comprising SEQ ID NO: 300; a light chain variable region comprising SEQ ID NO: 144 and a heavy chain variable region comprising SEQ ID NO: 301; a light chain variable region comprising SEQ ID NO: 145 and a heavy chain variable region comprising SEQ ID NO: 302; a light chain variable region comprising SEQ ID NO: 146 and a heavy chain variable region comprising SEQ ID NO: 303; a light chain variable region comprising SEQ ID NO: 147 and a heavy chain variable region comprising SEQ ID NO: 304; a light chain variable region comprising SEQ ID NO: 148 and a heavy chain variable region comprising SEQ ID NO: 305; a light chain variable region comprising SEQ ID NO: 149 and

a heavy chain variable region comprising SEQ ID NO: 306; a light chain variable region comprising SEQ ID NO: 150 and a heavy chain variable region comprising SEQ ID NO: 307; a light chain variable region comprising SEQ ID NO: 151 and a heavy chain variable region comprising SEQ ID NO: 308; a light chain variable region comprising SEQ ID NO: 152 and a heavy chain variable region comprising SEQ ID NO: 309; a light chain variable region comprising SEQ ID NO: 153 and a heavy chain variable region comprising SEQ ID NO: 310; a light chain variable region comprising SEQ ID NO: 154 and a heavy chain variable region comprising SEQ ID NO: 311; a light chain variable region comprising SEQ ID NO: 155 and a heavy chain variable region comprising SEQ ID NO: 312; a light chain variable region comprising SEQ ID NO: 156 and a heavy chain variable region comprising SEQ ID NO: 313; and a light chain variable region comprising SEQ ID NO: 157 and a heavy chain variable region comprising SEQ ID NO: 314.

In one embodiment the antibody or fragment thereof comprises a light chain variable region encoded by a polynucleotide sequence selected from the group consisting of SEQ ID NOs: 1571-1727 and a heavy chain variable region encoded by a polynucleotide sequence selected from the group consisting of SEQ ID NOs: 1728-1884.

In one embodiment the antibody or fragment thereof comprises a combination of light chain variable region and a heavy chain variable region selected from the group consisting of a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1571 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1728; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1572 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1729; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1573 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1730; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1574 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1731; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1575 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1732; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1576 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1733; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1577 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1734; a light chain variable

region encoded by a polynucleotide sequence comprising SEQ ID NO: 1578 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1735; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1579 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1736; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1580 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1737; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1581 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1738; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1582 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1739; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1583 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1740; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1584 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1741; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1585 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1742; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1586 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1743; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1587 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1744; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1588 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1745; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1589 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1746; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1590 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1747; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1591 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1748; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1592 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1749; a light chain variable region encoded by a

polynucleotide sequence comprising SEQ ID NO: 1593 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1750; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1594 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1751; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1595 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1752; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1596 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1753; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1597 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1754; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1598 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1755; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1599 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1756; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1600 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1757; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1601 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1758; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1602 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1759; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1603 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1760; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1604 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1761; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1605 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1762; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1606 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1763; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1607 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1764; a light chain variable region encoded by a polynucleotide sequence

comprising SEQ ID NO: 1608 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1765; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1609 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1766; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1610 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1767; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1611 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1768; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1612 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1769; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1613 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1770; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1614 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1771; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1615 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1772; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1616 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1773; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1617 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1774; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1618 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1775; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1619 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1776; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1620 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1777; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1621 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1778; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1622 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1779; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO:

1623 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1780; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1624 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1781; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1625 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1782; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1626 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1783; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1627 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1784; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1628 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1785; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1629 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1786; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1630 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1787; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1631 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1788; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1632 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1789; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1633 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1790; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1634 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1791; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1635 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1792; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1636 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1793; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1637 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1794; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1638 and a heavy

chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1795; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1639 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1796; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1640 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1797; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1641 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1798; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1642 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1799; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1643 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1800; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1644 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1801; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1645 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1802; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1646 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1803; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1647 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1804; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1648 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1805; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1649 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1806; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1650 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1807; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1651 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1808; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1652 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1809; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1653 and a heavy chain variable region

encoded by a polynucleotide sequence comprising SEQ ID NO: 1810; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1654 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1811; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1655 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1812; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1656 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1813; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1657 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1814; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1658 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1815; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1659 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1816; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1660 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1817; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1661 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1818; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1662 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1819; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1663 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1820; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1664 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1821; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1665 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1822; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1666 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1823; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1667 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1824; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1668 and a heavy chain variable region encoded by a polynucleotide

sequence comprising SEQ ID NO: 1825; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1669 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1826; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1670 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1827; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1671 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1828; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1672 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1829; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1673 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1830; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1674 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1831; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1675 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1832; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1676 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1833; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1677 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1834; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1678 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1835; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1679 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1836; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1680 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1837; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1681 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1838; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1682 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1839; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1683 and a heavy chain variable region encoded by a polynucleotide sequence comprising

SEQ ID NO: 1840; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1684 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1841; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1685 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1842; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1686 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1843; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1687 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1844; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1688 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1845; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1689 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1846; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1690 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1847; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1691 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1848; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1692 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1849; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1693 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1850; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1694 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1851; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1695 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1852; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1696 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1853; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1697 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1854; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1698 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1855; a

light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1699 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1856; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1700 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1857; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1701 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1858; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1702 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1859; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1703 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1860; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1704 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1861; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1705 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1862; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1706 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1863; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1707 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1864; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1708 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1865; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1709 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1866; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1710 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1867; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1711 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1868; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1712 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1869; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1713 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1870; a light chain variable

region encoded by a polynucleotide sequence comprising SEQ ID NO: 1714 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1871; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1715 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1872; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1716 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1873; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1717 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1874; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1718 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1875; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1719 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1876; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1720 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1877; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1721 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1878; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1722 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1879; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1723 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1880; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1724 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1881; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1725 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1882; a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1726 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1883; and a light chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1727 and a heavy chain variable region encoded by a polynucleotide sequence comprising SEQ ID NO: 1884..

[0377] Some antigen binding proteins comprise a variable light domain and a variable heavy domain as listed in one of the rows for one of the antibodies listed in TABLE 3. In some

instances, the antigen binding protein comprises two identical variable light domains and two identical variable heavy domains from one of the antibodies listed in TABLE 3. Some antigen binding proteins that are provided comprise a variable light domain and a variable heavy domain as listed in one of the rows for one of the antibodies listed in TABLE 3, except that one or both of the domains differs from the sequence specified in the table at only 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14 or 15 amino acid residues, wherein each such sequence difference is independently either a single amino acid deletion, insertion or substitution, with the deletions, insertions and/or substitutions resulting in no more than 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14 or 15 amino acid changes relative to the variable domain sequences specified in TABLE 3. In one embodiment, the antigen binding protein comprises a variable region sequence from Table 3, but with the N-terminal methionine deleted. Other antigen binding proteins also comprise a variable light domain and a variable heavy domain as listed in one of the rows for one of the antibodies listed in TABLE 3, except that one or both of the domains differs from the sequence specified in the table in that the heavy chain variable domain and/or light chain variable domain comprises or consists of a sequence of amino acids that has at least 70%, 75%, 80%, 85%, 90%, 95%, 96%, 97%, 98%, or 99% sequence identity to the amino acid sequences of the heavy chain variable domain or light chain variable domain sequences as specified in TABLE 3.

[0378] In another aspect, the antigen binding protein consists just of a variable light or variable heavy domain from an antibody listed in TABLE 3. In still another aspect, the antigen binding protein comprises two or more of the same variable heavy domains or two or more of the same variable light domains from those listed in TABLE 3. Such domain antibodies can be fused together or joined via a linker as described in greater detail below. The domain antibodies can also be fused or linked to one or more molecules to extend the half-life (e.g., PEG or albumin).

[0379] Other antigen binding proteins that are provided are variants of antibodies formed by combination of the heavy and light chains shown in TABLE 3 and comprise light and/or heavy chains that each have at least 70%, 75%, 80%, 85%, 90%, 95%, 96%, 97%, 98% or 99% identity to the amino acid sequences of these chains. In some instances, such antibodies include at least one heavy chain and one light chain, whereas in other instances the variant forms contain two identical light chains and two identical heavy chains.

[0380] The various combinations of heavy chain variable regions may be combined with any of the various combinations of light chain variable regions.

[0381] In a further embodiment, the isolated antigen binding protein provided herein is a human antibody comprising a sequence as set forth in TABLE 3 and is of the IgG_1-, IgG_2-IgG_3- or IgG_4-type.

[0382] The antigen binding proteins disclosed herein are polypeptides into which one or more CDRs are grafted, inserted and/or joined. An antigen binding protein can have 1, 2, 3, 4, 5 or 6 CDRs. An antigen binding protein thus can have, for example, one heavy chain CDR1 ("CDRH1"), and/or one heavy chain CDR2 ("CDRH2"), and/or one heavy chain CDR3 ("CDRH3"), and/or one light chain CDR1 ("CDRL1"), and/or one light chain CDR2 ("CDRL2"), and/or one light chain CDR3 ("CDRL3"). Some antigen binding proteins include both a CDRH3 and a CDRL3. Specific light and heavy chain CDRs are identified in TABLEs 4A and 4B, respectively.

[0383] Complementarity determining regions (CDRs) and framework regions (FR) of a given antibody may be identified using the system described by Kabat et al. in Sequences of Proteins of Immunological Interest, 5th Ed., US Dept. of Health and Human Services, PHS, NIH, NIH Publication no. 91-3242, 1991. Certain antibodies that are disclosed herein comprise one or more amino acid sequences that are identical or have substantial sequence identity to the amino acid sequences of one or more of the CDRs presented in TABLES 4A and 4B. These CDRs use the system described by Kabat et al. as noted above.

[0384] The structure and properties of CDRs within a naturally occurring antibody has been described, *supra*. Briefly, in a traditional antibody, the CDRs are embedded within a framework in the heavy and light chain variable region where they constitute the regions responsible for antigen binding and recognition. A variable region comprises at least three heavy or light chain CDRs, *see, supra* (Kabat *et al.*, 1991, *Sequences of Proteins of Immunological Interest*, Public Health Service N.I.H., Bethesda, MD; *see* also Chothia and Lesk, 1987, *J. Mol. Biol.* 196:901-917; Chothia *et al.*, 1989, *Nature* 342: 877-883), within a framework region (designated framework regions 1-4, FR1, FR2, FR3, and FR4, by Kabat *et al.*, 1991, *supra*; *see* also Chothia and Lesk, 1987, *supra*). The CDRs provided herein, however, may not only be used to define the antigen binding domain of a traditional antibody structure, but may be embedded in a variety of other polypeptide structures, as described herein.

[0385] In one embodiment the antibody or fragment thereof comprises a CDRL1, a CDRL2, a CDRL3, a CDRH1, a CDRH2, and a CDRH3. In one embodiment the antibody or fragment thereof comprises a CDRL1, a CDRL2, a CDRL3, a CDRH1, a CDRH2, and a CDRH3, wherein each CDRL1, CDRL2, CDRL3, CDRH1, CDRH2, and CDRH3, respectively,

comprises a sequence selected from the group consisting of SEQ ID NO: 629, SEQ ID NO: 786, SEQ ID NO: 943, SEQ ID NO: 1100, SEQ ID NO: 1257, and SEQ ID NO: 1414; SEQ ID NO: 630, SEQ ID NO: 787, SEQ ID NO: 944, SEQ ID NO: 1101, SEQ ID NO: 1258, and SEQ ID NO: 1415; SEQ ID NO: 631, SEQ ID NO: 788, SEQ ID NO: 945, SEQ ID NO: 1102, SEQ ID NO: 1259, and SEQ ID NO: 1416; SEQ ID NO: 632, SEQ ID NO: 789, SEQ ID NO: 946, SEQ ID NO: 1103, SEQ ID NO: 1260, and SEQ ID NO: 1417; SEQ ID NO: 633, SEQ ID NO: 790, SEQ ID NO: 947, SEQ ID NO: 1104, SEQ ID NO: 1261, and SEQ ID NO: 1418; SEQ ID NO: 634, SEQ ID NO: 791, SEQ ID NO: 948, SEQ ID NO: 1105, SEQ ID NO: 1262, and SEQ ID NO: 1419; SEQ ID NO: 635, SEQ ID NO: 792, SEQ ID NO: 949, SEQ ID NO: 1106, SEQ ID NO: 1263, and SEQ ID NO: 1420; SEQ ID NO: 636, SEQ ID NO: 793, SEQ ID NO: 950, SEQ ID NO: 1107, SEQ ID NO: 1264, and SEQ ID NO: 1421; SEQ ID NO: 637, SEQ ID NO: 794, SEQ ID NO: 951, SEQ ID NO: 1108, SEQ ID NO: 1265, and SEQ ID NO: 1422; SEQ ID NO: 638, SEQ ID NO: 795, SEQ ID NO: 952, SEQ ID NO: 1109, SEQ ID NO: 1266, and SEQ ID NO: 1423; SEQ ID NO: 639, SEQ ID NO: 796, SEQ ID NO: 953, SEQ ID NO: 1110, SEQ ID NO: 1267, and SEQ ID NO: 1424; SEQ ID NO: 640, SEQ ID NO: 797, SEQ ID NO: 954, SEQ ID NO: 1111, SEQ ID NO: 1268, and SEQ ID NO: 1425; SEQ ID NO: 641, SEQ ID NO: 798, SEQ ID NO: 955, SEQ ID NO: 1112, SEQ ID NO: 1269, and SEQ ID NO: 1426; SEQ ID NO: 642, SEQ ID NO: 799, SEQ ID NO: 956, SEQ ID NO: 1113, SEQ ID NO: 1270, and SEQ ID NO: 1427; SEQ ID NO: 643, SEQ ID NO: 800, SEQ ID NO: 957, SEQ ID NO: 1114, SEQ ID NO: 1271, and SEQ ID NO: 1428; SEQ ID NO: 644, SEQ ID NO: 801, SEQ ID NO: 958, SEQ ID NO: 1115, SEQ ID NO: 1272, and SEQ ID NO: 1429; SEQ ID NO: 645, SEQ ID NO: 802, SEQ ID NO: 959, SEQ ID NO: 1116, SEQ ID NO: 1273, and SEQ ID NO: 1430; SEQ ID NO: 646, SEQ ID NO: 803, SEQ ID NO: 960, SEQ ID NO: 1117, SEQ ID NO: 1274, and SEQ ID NO: 1431; SEQ ID NO: 647, SEQ ID NO: 804, SEQ ID NO: 961, SEQ ID NO: 1118, SEQ ID NO: 1275, and SEQ ID NO: 1432; SEQ ID NO: 648, SEQ ID NO: 805, SEQ ID NO: 962, SEQ ID NO: 1119, SEQ ID NO: 1276, and SEQ ID NO: 1433; SEQ ID NO: 649, SEQ ID NO: 806, SEQ ID NO: 963, SEQ ID NO: 1120, SEQ ID NO: 1277, and SEQ ID NO: 1434; SEQ ID NO: 650, SEQ ID NO: 807, SEQ ID NO: 964, SEQ ID NO: 1121, SEQ ID NO: 1278, and SEQ ID NO: 1435; SEQ ID NO: 651, SEQ ID NO: 808, SEQ ID NO: 965, SEQ ID NO: 1122, SEQ ID NO: 1279, and SEQ ID NO: 1436; SEQ ID NO: 652, SEQ ID NO: 809, SEQ ID NO: 966, SEQ ID NO: 1123, SEQ ID NO: 1280, and SEQ ID NO: 1437; SEQ ID NO: 653, SEQ ID NO: 810, SEQ ID NO: 967, SEQ ID NO: 1124, SEQ ID NO: 1281, and SEQ ID NO: 1438; SEQ ID NO: 654, SEQ ID NO: 811, SEQ ID NO: 968, SEQ ID NO: 1125, SEQ

[0387] In another aspect, an antigen binding protein includes 1, 2, 3, 4, 5, or 6 variant forms of the CDRs listed in TABLES 4A and 4B, each having at least 80%, 85%, 90%, 95% , 96%, 97%, 98%, or 99% sequence identity to a CDR sequence listed in TABLES 4A and 4B. Some antigen binding proteins include 1, 2, 3, 4, 5, or 6 of the CDRs listed in TABLES 4A and 4B, each or collectively differing by no more than 1, 2, 3, 4 or 5 amino acids from the CDRs listed in this table.

[0388] In various other embodiments, the antigen binding protein is derived from such antibodies. For instance, in one aspect, the antigen binding protein comprises 1, 2, 3, 4, 5 or all 6 of the CDRs listed in one of the rows for any particular antibody listed in TABLES 4A and 4B. In another aspect, an antigen binding protein includes 1, 2, 3, 4, 5, or 6 variant forms of the CDRs listed in one of the rows for an antibody in TABLES 4A and 4B, each CDR having at least 80%, 85%, 90%, 95%, 96%, 97%, 98%, or 99% sequence identity to a CDR sequence listed in TABLES 4A and 4B. Some antigen binding proteins include 1, 2, 3, 4, 5, or 6 of the CDRs listed in one of the rows of TABLES 4A and 4B, each differing by no more than 1, 2, 3, 4 or 5 amino acids from the CDRs listed in these tables. In another aspect, the antigen binding protein comprises all 6 of the CDRS listed in a row of TABLES 4A and 4B and the total number of amino acid changes to the CDRs collectively is no more than 1, 2, 3, 4, or 5 amino acids.

[0389] In one embodiment the antibody or fragment thereof comprises a light chain comprising a sequence selected from the group consisting of SEQ ID NOs: 315-471 and a heavy chain comprising a sequence selected from the group consisting of SEQ ID NOs: 472-

628. In one embodiment the antibody or fragment thereof comprises a combination of a light chain and a heavy chain selected from the group consisting of a light chain comprising SEQ ID NO: 315 and a heavy chain comprising SEQ ID NO: 472; a light chain comprising SEQ ID NO: 316 and a heavy chain comprising SEQ ID NO: 473; a light chain comprising SEQ ID NO: 317 and a heavy chain comprising SEQ ID NO: 474; a light chain comprising SEQ ID NO: 318 and a heavy chain comprising SEQ ID NO: 475; a light chain comprising SEQ ID NO: 319 and a heavy chain comprising SEQ ID NO: 476; a light chain comprising SEQ ID NO: 320 and a heavy chain comprising SEQ ID NO: 477; a light chain comprising SEQ ID NO: 321 and a heavy chain comprising SEQ ID NO: 478; a light chain comprising SEQ ID NO: 322 and a heavy chain comprising SEQ ID NO: 479; a light chain comprising SEQ ID NO: 323 and a heavy chain comprising SEQ ID NO: 480; a light chain comprising SEQ ID NO: 324 and a heavy chain comprising SEQ ID NO: 481; a light chain comprising SEQ ID NO: 325 and a heavy chain comprising SEQ ID NO: 482; a light chain comprising SEQ ID NO: 326 and a heavy chain comprising SEQ ID NO: 483; a light chain comprising SEQ ID NO: 327 and a heavy chain comprising SEQ ID NO: 484; a light chain comprising SEQ ID NO: 328 and a heavy chain comprising SEQ ID NO: 485; a light chain comprising SEQ ID NO: 329 and a heavy chain comprising SEQ ID NO: 486; a light chain comprising SEQ ID NO: 330 and a heavy chain comprising SEQ ID NO: 487; a light chain comprising SEQ ID NO: 331 and a heavy chain comprising SEQ ID NO: 488; a light chain comprising SEQ ID NO: 332 and a heavy chain comprising SEQ ID NO: 489; a light chain comprising SEQ ID NO: 333 and a heavy chain comprising SEQ ID NO: 490; a light chain comprising SEQ ID NO: 334 and a heavy chain comprising SEQ ID NO: 491; a light chain comprising SEQ ID NO: 335 and a heavy chain comprising SEQ ID NO: 492; a light chain comprising SEQ ID NO: 336 and a heavy chain comprising SEQ ID NO: 493; a light chain comprising SEQ ID NO: 337 and a heavy chain comprising SEQ ID NO: 494; a light chain comprising SEQ ID NO: 338 and a heavy chain comprising SEQ ID NO: 495; a light chain comprising SEQ ID NO: 339 and a heavy chain comprising SEQ ID NO: 496; a light chain comprising SEQ ID NO: 340 and a heavy chain comprising SEQ ID NO: 497; a light chain comprising SEQ ID NO: 341 and a heavy chain comprising SEQ ID NO: 498; a light chain comprising SEQ ID NO: 342 and a heavy chain comprising SEQ ID NO: 499; a light chain comprising SEQ ID NO: 343 and a heavy chain comprising SEQ ID NO: 500; a light chain comprising SEQ ID NO: 344 and a heavy chain comprising SEQ ID NO: 501; a light chain comprising SEQ ID NO: 345 and a heavy chain comprising SEQ ID NO: 502; a light chain comprising SEQ ID NO: 346 and a heavy chain comprising SEQ ID NO: 503; a light chain comprising SEQ

ID NO: 347 and a heavy chain comprising SEQ ID NO: 504; a light chain comprising SEQ ID NO: 348 and a heavy chain comprising SEQ ID NO: 505; a light chain comprising SEQ ID NO: 349 and a heavy chain comprising SEQ ID NO: 506; a light chain comprising SEQ ID NO: 350 and a heavy chain comprising SEQ ID NO: 507; a light chain comprising SEQ ID NO: 351 and a heavy chain comprising SEQ ID NO: 508; a light chain comprising SEQ ID NO: 352 and a heavy chain comprising SEQ ID NO: 509; a light chain comprising SEQ ID NO: 353 and a heavy chain comprising SEQ ID NO: 510; a light chain comprising SEQ ID NO: 354 and a heavy chain comprising SEQ ID NO: 511; a light chain comprising SEQ ID NO: 355 and a heavy chain comprising SEQ ID NO: 512; a light chain comprising SEQ ID NO: 356 and a heavy chain comprising SEQ ID NO: 513; a light chain comprising SEQ ID NO: 357 and a heavy chain comprising SEQ ID NO: 514; a light chain comprising SEQ ID NO: 358 and a heavy chain comprising SEQ ID NO: 515; a light chain comprising SEQ ID NO: 359 and a heavy chain comprising SEQ ID NO: 516; a light chain comprising SEQ ID NO: 360 and a heavy chain comprising SEQ ID NO: 517; a light chain comprising SEQ ID NO: 361 and a heavy chain comprising SEQ ID NO: 518; a light chain comprising SEQ ID NO: 362 and a heavy chain comprising SEQ ID NO: 519; a light chain comprising SEQ ID NO: 363 and a heavy chain comprising SEQ ID NO: 520; a light chain comprising SEQ ID NO: 364 and a heavy chain comprising SEQ ID NO: 521; a light chain comprising SEQ ID NO: 365 and a heavy chain comprising SEQ ID NO: 522; a light chain comprising SEQ ID NO: 366 and a heavy chain comprising SEQ ID NO: 523; a light chain comprising SEQ ID NO: 367 and a heavy chain comprising SEQ ID NO: 524; a light chain comprising SEQ ID NO: 368 and a heavy chain comprising SEQ ID NO: 525; a light chain comprising SEQ ID NO: 369 and a heavy chain comprising SEQ ID NO: 526; a light chain comprising SEQ ID NO: 370 and a heavy chain comprising SEQ ID NO: 527; a light chain comprising SEQ ID NO: 371 and a heavy chain comprising SEQ ID NO: 528; a light chain comprising SEQ ID NO: 372 and a heavy chain comprising SEQ ID NO: 529; a light chain comprising SEQ ID NO: 373 and a heavy chain comprising SEQ ID NO: 530; a light chain comprising SEQ ID NO: 374 and a heavy chain comprising SEQ ID NO: 531; a light chain comprising SEQ ID NO: 375 and a heavy chain comprising SEQ ID NO: 532; a light chain comprising SEQ ID NO: 376 and a heavy chain comprising SEQ ID NO: 533; a light chain comprising SEQ ID NO: 377 and a heavy chain comprising SEQ ID NO: 534; a light chain comprising SEQ ID NO: 378 and a heavy chain comprising SEQ ID NO: 535; a light chain comprising SEQ ID NO: 379 and a heavy chain comprising SEQ ID NO: 536; a light chain comprising SEQ ID NO: 380 and a heavy chain comprising SEQ ID NO: 537; a light chain comprising SEQ

ID NO: 381 and a heavy chain comprising SEQ ID NO: 538; a light chain comprising SEQ ID NO: 382 and a heavy chain comprising SEQ ID NO: 539; a light chain comprising SEQ ID NO: 383 and a heavy chain comprising SEQ ID NO: 540; a light chain comprising SEQ ID NO: 384 and a heavy chain comprising SEQ ID NO: 541; a light chain comprising SEQ ID NO: 385 and a heavy chain comprising SEQ ID NO: 542; a light chain comprising SEQ ID NO: 386 and a heavy chain comprising SEQ ID NO: 543; a light chain comprising SEQ ID NO: 387 and a heavy chain comprising SEQ ID NO: 544; a light chain comprising SEQ ID NO: 388 and a heavy chain comprising SEQ ID NO: 545; a light chain comprising SEQ ID NO: 389 and a heavy chain comprising SEQ ID NO: 546; a light chain comprising SEQ ID NO: 390 and a heavy chain comprising SEQ ID NO: 547; a light chain comprising SEQ ID NO: 391 and a heavy chain comprising SEQ ID NO: 548; a light chain comprising SEQ ID NO: 392 and a heavy chain comprising SEQ ID NO: 549; a light chain comprising SEQ ID NO: 393 and a heavy chain comprising SEQ ID NO: 550; a light chain comprising SEQ ID NO: 394 and a heavy chain comprising SEQ ID NO: 551; a light chain comprising SEQ ID NO: 395 and a heavy chain comprising SEQ ID NO: 552; a light chain comprising SEQ ID NO: 396 and a heavy chain comprising SEQ ID NO: 553; a light chain comprising SEQ ID NO: 397 and a heavy chain comprising SEQ ID NO: 554; a light chain comprising SEQ ID NO: 398 and a heavy chain comprising SEQ ID NO: 555; a light chain comprising SEQ ID NO: 399 and a heavy chain comprising SEQ ID NO: 556; a light chain comprising SEQ ID NO: 400 and a heavy chain comprising SEQ ID NO: 557; a light chain comprising SEQ ID NO: 401 and a heavy chain comprising SEQ ID NO: 558; a light chain comprising SEQ ID NO: 402 and a heavy chain comprising SEQ ID NO: 559; a light chain comprising SEQ ID NO: 403 and a heavy chain comprising SEQ ID NO: 560; a light chain comprising SEQ ID NO: 404 and a heavy chain comprising SEQ ID NO: 561; a light chain comprising SEQ ID NO: 405 and a heavy chain comprising SEQ ID NO: 562; a light chain comprising SEQ ID NO: 406 and a heavy chain comprising SEQ ID NO: 563; a light chain comprising SEQ ID NO: 407 and a heavy chain comprising SEQ ID NO: 564; a light chain comprising SEQ ID NO: 408 and a heavy chain comprising SEQ ID NO: 565; a light chain comprising SEQ ID NO: 409 and a heavy chain comprising SEQ ID NO: 566; a light chain comprising SEQ ID NO: 410 and a heavy chain comprising SEQ ID NO: 567; a light chain comprising SEQ ID NO: 411 and a heavy chain comprising SEQ ID NO: 568; a light chain comprising SEQ ID NO: 412 and a heavy chain comprising SEQ ID NO: 569; a light chain comprising SEQ ID NO: 413 and a heavy chain comprising SEQ ID NO: 570; a light chain comprising SEQ ID NO: 414 and a heavy chain comprising SEQ ID NO: 571; a light chain comprising SEQ

ID NO: 415 and a heavy chain comprising SEQ ID NO: 572; a light chain comprising SEQ ID NO: 416 and a heavy chain comprising SEQ ID NO: 573; a light chain comprising SEQ ID NO: 417 and a heavy chain comprising SEQ ID NO: 574; a light chain comprising SEQ ID NO: 418 and a heavy chain comprising SEQ ID NO: 575; a light chain comprising SEQ ID NO: 419 and a heavy chain comprising SEQ ID NO: 576; a light chain comprising SEQ ID NO: 420 and a heavy chain comprising SEQ ID NO: 577; a light chain comprising SEQ ID NO: 421 and a heavy chain comprising SEQ ID NO: 578; a light chain comprising SEQ ID NO: 422 and a heavy chain comprising SEQ ID NO: 579; a light chain comprising SEQ ID NO: 423 and a heavy chain comprising SEQ ID NO: 580; a light chain comprising SEQ ID NO: 424 and a heavy chain comprising SEQ ID NO: 581; a light chain comprising SEQ ID NO: 425 and a heavy chain comprising SEQ ID NO: 582; a light chain comprising SEQ ID NO: 426 and a heavy chain comprising SEQ ID NO: 583; a light chain comprising SEQ ID NO: 427 and a heavy chain comprising SEQ ID NO: 584; a light chain comprising SEQ ID NO: 428 and a heavy chain comprising SEQ ID NO: 585; a light chain comprising SEQ ID NO: 429 and a heavy chain comprising SEQ ID NO: 586; a light chain comprising SEQ ID NO: 430 and a heavy chain comprising SEQ ID NO: 587; a light chain comprising SEQ ID NO: 431 and a heavy chain comprising SEQ ID NO: 588; a light chain comprising SEQ ID NO: 432 and a heavy chain comprising SEQ ID NO: 589; a light chain comprising SEQ ID NO: 433 and a heavy chain comprising SEQ ID NO: 590; a light chain comprising SEQ ID NO: 434 and a heavy chain comprising SEQ ID NO: 591; a light chain comprising SEQ ID NO: 435 and a heavy chain comprising SEQ ID NO: 592; a light chain comprising SEQ ID NO: 436 and a heavy chain comprising SEQ ID NO: 593; a light chain comprising SEQ ID NO: 437 and a heavy chain comprising SEQ ID NO: 594; a light chain comprising SEQ ID NO: 438 and a heavy chain comprising SEQ ID NO: 595; a light chain comprising SEQ ID NO: 439 and a heavy chain comprising SEQ ID NO: 596; a light chain comprising SEQ ID NO: 440 and a heavy chain comprising SEQ ID NO: 597; a light chain comprising SEQ ID NO: 441 and a heavy chain comprising SEQ ID NO: 598; a light chain comprising SEQ ID NO: 442 and a heavy chain comprising SEQ ID NO: 599; a light chain comprising SEQ ID NO: 443 and a heavy chain comprising SEQ ID NO: 600; a light chain comprising SEQ ID NO: 444 and a heavy chain comprising SEQ ID NO: 601; a light chain comprising SEQ ID NO: 445 and a heavy chain comprising SEQ ID NO: 602; a light chain comprising SEQ ID NO: 446 and a heavy chain comprising SEQ ID NO: 603; a light chain comprising SEQ ID NO: 447 and a heavy chain comprising SEQ ID NO: 604; a light chain comprising SEQ ID NO: 448 and a heavy chain comprising SEQ ID NO: 605; a light chain comprising SEQ

ID NO: 449 and a heavy chain comprising SEQ ID NO: 606; a light chain comprising SEQ ID NO: 450 and a heavy chain comprising SEQ ID NO: 607; a light chain comprising SEQ ID NO: 451 and a heavy chain comprising SEQ ID NO: 608; a light chain comprising SEQ ID NO: 452 and a heavy chain comprising SEQ ID NO: 609; a light chain comprising SEQ ID NO: 453 and a heavy chain comprising SEQ ID NO: 610; a light chain comprising SEQ ID NO: 454 and a heavy chain comprising SEQ ID NO: 611; a light chain comprising SEQ ID NO: 455 and a heavy chain comprising SEQ ID NO: 612; a light chain comprising SEQ ID NO: 456 and a heavy chain comprising SEQ ID NO: 613; a light chain comprising SEQ ID NO: 457 and a heavy chain comprising SEQ ID NO: 614; a light chain comprising SEQ ID NO: 458 and a heavy chain comprising SEQ ID NO: 615; a light chain comprising SEQ ID NO: 459 and a heavy chain comprising SEQ ID NO: 616; a light chain comprising SEQ ID NO: 460 and a heavy chain comprising SEQ ID NO: 617; a light chain comprising SEQ ID NO: 461 and a heavy chain comprising SEQ ID NO: 618; a light chain comprising SEQ ID NO: 462 and a heavy chain comprising SEQ ID NO: 619; a light chain comprising SEQ ID NO: 463 and a heavy chain comprising SEQ ID NO: 620; a light chain comprising SEQ ID NO: 464 and a heavy chain comprising SEQ ID NO: 621; a light chain comprising SEQ ID NO: 465 and a heavy chain comprising SEQ ID NO: 622; a light chain comprising SEQ ID NO: 466 and a heavy chain comprising SEQ ID NO: 623; a light chain comprising SEQ ID NO: 467 and a heavy chain comprising SEQ ID NO: 624; a light chain comprising SEQ ID NO: 468 and a heavy chain comprising SEQ ID NO: 625; a light chain comprising SEQ ID NO: 469 and a heavy chain comprising SEQ ID NO: 626; a light chain comprising SEQ ID NO: 470 and a heavy chain comprising SEQ ID NO: 627; and a light chain comprising SEQ ID NO: 471 and a heavy chain comprising SEQ ID NO: 628.

[0390] In one embodiment the antibody or fragment thereof comprises a light chain encoded by a polynucleotide sequence selected from the group consisting of SEQ ID NOs: 1885-2014 and a heavy chain comprising a sequence selected from the group consisting of SEQ ID NOs: 2042-2198. In one embodiment the antibody or fragment thereof comprises a combination of a light chain and a heavy chain, selected from the group consisting of a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 1885 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2042; a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 1886 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2043; a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 1887 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2044; a light chain encoded by a

polynucleotide sequence comprising SEQ ID NO: 1888 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2045; a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 1889 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2046; a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 1890 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2047; a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 1891 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2048; a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 1892 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2049; a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 1893 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2050; a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 1894 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2051; a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 1895 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2052; a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 1896 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2053; a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 1897 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2054; a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 1898 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2055; a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 1899 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2056; a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 1900 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2057; a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 1901 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2058; a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 1902 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2059; a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 1903 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2060; a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 1904 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2061; a light chain encoded by a

polynucleotide sequence comprising SEQ ID NO: 1905 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2062; a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 1906 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2063; a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 1907 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2064; a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 1908 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2065; a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 1909 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2066; a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 1910 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2067; a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 1911 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2068; a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 1912 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2069; a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 1913 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2070; a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 1914 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2071; a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 1915 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2072; a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 1916 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2073; a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 1917 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2074; a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 1918 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2075; a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 1919 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2076; a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 1920 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2077; a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 1921 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2078; a light chain encoded by a

polynucleotide sequence comprising SEQ ID NO: 1922 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2079; a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 1923 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2080; a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 1924 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2081; a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 1925 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2082; a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 1926 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2083; a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 1927 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2084; a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 1928 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2085; a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 1929 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2086; a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 1930 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2087; a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 1931 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2088; a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 1932 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2089; a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 1933 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2090; a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 1934 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2091; a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 1935 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2092; a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 1936 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2093; a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 1937 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2094; a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 1938 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2095; a light chain encoded by a

polynucleotide sequence comprising SEQ ID NO: 1939 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2096; a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 1940 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2097; a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 1941 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2098; a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 1942 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2099; a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 1943 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2100; a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 1944 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2101; a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 1945 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2102; a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 1946 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2103; a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 1947 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2104; a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 1948 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2105; a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 1949 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2106; a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 1950 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2107; a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 1951 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2108; a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 1952 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2109; a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 1953 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2110; a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 1954 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2111; a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 1955 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2112; a light chain encoded by a

polynucleotide sequence comprising SEQ ID NO: 1956 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2113; a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 1957 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2114; a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 1958 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2115; a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 1959 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2116; a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 1960 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2117; a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 1961 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2118; a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 1962 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2119; a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 1963 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2120; a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 1964 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2121; a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 1965 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2122; a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 1966 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2123; a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 1967 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2124; a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 1968 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2125; a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 1969 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2126; a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 1970 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2127; a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 1971 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2128; a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 1972 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2129; a light chain encoded by a

polynucleotide sequence comprising SEQ ID NO: 1973 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2130; a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 1974 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2131; a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 1975 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2132; a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 1976 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2133; a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 1977 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2134; a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 1978 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2135; a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 1979 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2136; a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 1980 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2137; a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 1981 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2138; a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 1982 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2139; a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 1983 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2140; a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 1984 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2141; a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 1985 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2142; a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 1986 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2143; a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 1987 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2144; a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 1988 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2145; a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 1989 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2146; a light chain encoded by a

polynucleotide sequence comprising SEQ ID NO: 1990 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2147; a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 1991 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2148; a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 1992 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2149; a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 1993 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2150; a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 1994 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2151; a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 1995 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2152; a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 1996 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2153; a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 1997 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2154; a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 1998 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2155; a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 1999 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2156; a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2000 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2157; a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2001 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2158; a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2002 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2159; a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2003 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2160; a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2004 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2161; a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2005 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2162; a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2006 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2163; a light chain encoded by a

polynucleotide sequence comprising SEQ ID NO: 2007 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2164; a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2008 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2165; a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2009 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2166; a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2010 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2167; a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2011 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2168; a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2012 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2169; a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2013 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2170; a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2014 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2171; a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2015 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2172; a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2016 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2173; a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2017 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2174; a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2018 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2175; a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2019 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2176; a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2020 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2177; a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2021 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2178; a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2022 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2179; a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2023 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2180; a light chain encoded by a

polynucleotide sequence comprising SEQ ID NO: 2024 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2181; a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2025 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2182; a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2026 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2183; a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2027 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2184; a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2028 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2185; a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2029 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2186; a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2030 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2187; a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2031 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2188; a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2032 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2189; a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2033 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2190; a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2034 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2191; a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2035 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2192; a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2036 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2193; a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2037 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2194; a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2038 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2195; a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2039 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2196; a light chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2040 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2197; and a light chain encoded by a

polynucleotide sequence comprising SEQ ID NO: 2041 and a heavy chain encoded by a polynucleotide sequence comprising SEQ ID NO: 2198.

[0391] In another aspect, the antigen binding protein comprises a full length light chain and a full length heavy chain as listed in one of the rows for one of the antibodies listed in TABLE 5. Some antigen binding proteins that are provided comprise a full length light chain and a full length heavy chain as listed in one of the rows for one of the antibodies listed in TABLE 5, except that one or both of the chains differs from the sequence specified in the table at only 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14 or 15 amino acid residues, wherein each such sequence difference is independently either a single amino acid deletion, insertion or substitution, with the deletions, insertions and/or substitutions resulting in no more than 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14 or 15 amino acid changes relative to the full length sequences specified in TABLE 5. In one embodiment the antigen binding protein comprises a full length light chain and/or a full length heavy chain from Table 5 with the N-terminal methionine deleted. In one embodiment the antigen binding protein comprises a full length light chain and/or a full length heavy chain from Table 5 with the C-terminal lysine deleted. Other antigen binding proteins also comprise a full length light chain and a full length heavy chain as listed in one of the rows for one of the antibodies listed in TABLE 5, except that one or both of the chains differs from the sequence specified in the table in that the light chain and/or heavy chain comprises or consists of a sequence of amino acids that has at least 70%, 75%, 80%, 85%, 90%, 95%, 96%, 97%, 98%, or 99% sequence identity to the amino acid sequences of the light chain or heavy chain sequences as specified in TABLE 5.

[0392] In another embodiment, the antigen binding protein consists of a just a light or a heavy chain polypeptide as set forth in TABLE 5.

[0393] In still another aspect, antigen-binding proteins containing the CDRs, variable domains and/or full length sequences listed in TABLES 3, 4A, 4B, and 5 is a monoclonal antibody, a chimeric antibody, a humanized antibody, a human antibody, a multispecific antibody, or an antibody fragment of the foregoing. In another embodiment, the antibody fragment of the isolated antigen-binding proteins provided herein is a Fab fragment, a Fab' fragment, an $F(ab')_2$ fragment, an Fv fragment, a diabody, or a scFv based upon an antibody with the sequences as listed in TABLE 5.

[0394] In yet another aspect, the isolated antigen-binding protein provided in TABLE 5 can be coupled to a labeling group and can compete for binding to GIPR with an antigen binding protein of one of the isolated antigen-binding proteins provided herein.

[0395] In another embodiment, antigen binding proteins are provided that compete with one of the exemplified antibodies or functional fragments described above for specific binding to a human GIPR (e.g., SEQ ID NO: 3141). Such antigen binding proteins may bind to the same epitope as one of the antigen binding proteins described herein, or to an overlapping epitope. Antigen binding proteins and fragments that compete with the exemplified antigen binding proteins are expected to show similar functional properties. The exemplified antigen binding proteins and fragments include those described above, including those with heavy and light chains, variable region domains and CDRs included in TABLES 3, 4A, 4B, and 5. Thus, as a specific example, the antigen binding proteins that are provided include those that compete with an antibody having:

[0396] all 6 of the CDRs listed for any antibody listed in TABLES 4A and 4B;

[0397] a VH and a VL listed for any antibody listed in TABLE 3; or

[0398] two light chains and two heavy chains as specified for any antibody listed in TABLE 5.

[0399] The antigen binding proteins that are provided include monoclonal antibodies that bind to GIPR. Monoclonal antibodies may be produced using any technique known in the art, e.g., by immortalizing spleen cells harvested from the transgenic animal after completion of the immunization schedule. The spleen cells can be immortalized using any technique known in the art, e.g., by fusing them with myeloma cells to produce hybridomas. Myeloma cells for use in hybridoma-producing fusion procedures preferably are non-antibody-producing, have high fusion efficiency, and enzyme deficiencies that render them incapable of growing in certain selective media which support the growth of only the desired fused cells (hybridomas). Examples of suitable cell lines for use in mouse fusions include Sp-20, P3-X63/Ag8, P3-X63-Ag8.653, NS1/1.Ag 4 1, Sp210-Ag14, FO, NSO/U, MPC-11, MPC11-X45-GTG 1.7 and S194/5XXO Bul; examples of cell lines used in rat fusions include R210.RCY3, Y3-Ag 1.2.3, IR983F and 4B210. Other cell lines useful for cell fusions are U-266, GM1500-GRG2, LICR-LON-HMy2 and UC729-6.

[0400] In some instances, a hybridoma cell line is produced by immunizing an animal (e.g., a transgenic animal having human immunoglobulin sequences) with a GIPR immunogen; harvesting spleen cells from the immunized animal; fusing the harvested spleen cells to a myeloma cell line, thereby generating hybridoma cells; establishing hybridoma cell lines from the hybridoma cells, and identifying a hybridoma cell line that produces an antibody that binds a GIPR polypeptide. Such hybridoma cell lines, and anti-GIPR monoclonal antibodies produced by them, are aspects of the present application.

[0401] Monoclonal antibodies secreted by a hybridoma cell line can be purified using any technique known in the art. Hybridomas or mAbs may be further screened to identify mAbs with particular properties, such as the ability to increase GIPR activity.

[0402] Chimeric and humanized antibodies based upon the foregoing sequences are also provided. Monoclonal antibodies for use as therapeutic agents may be modified in various ways prior to use. One example is a chimeric antibody, which is an antibody composed of protein segments from different antibodies that are covalently joined to produce functional immunoglobulin light or heavy chains or immunologically functional portions thereof. Generally, a portion of the heavy chain and/or light chain is identical with or homologous to a corresponding sequence in antibodies derived from a particular species or belonging to a particular antibody class or subclass, while the remainder of the chain(s) is/are identical with or homologous to a corresponding sequence in antibodies derived from another species or belonging to another antibody class or subclass. For methods relating to chimeric antibodies, *see*, for example, United States Patent No. 4,816,567; and Morrison *et al.*, 1985, *Proc. Natl. Acad. Sci. USA* 81:6851-6855, which are hereby incorporated by reference. CDR grafting is described, for example, in United States Patent No. 6,180,370, No. 5,693,762, No. 5,693,761, No. 5,585,089, and No. 5,530,101.

[0403] Generally, the goal of making a chimeric antibody is to create a chimera in which the number of amino acids from the intended patient species is maximized. One example is the "CDR-grafted" antibody, in which the antibody comprises one or more complementarity determining regions (CDRs) from a particular species or belonging to a particular antibody class or subclass, while the remainder of the antibody chain(s) is/are identical with or homologous to a corresponding sequence in antibodies derived from another species or belonging to another antibody class or subclass. For use in humans, the variable region or selected CDRs from a rodent antibody often are grafted into a human antibody, replacing the naturally-occurring variable regions or CDRs of the human antibody.

[0404] One useful type of chimeric antibody is a "humanized" antibody. Generally, a humanized antibody is produced from a monoclonal antibody raised initially in a non-human animal. Certain amino acid residues in this monoclonal antibody, typically from non-antigen recognizing portions of the antibody, are modified to be homologous to corresponding residues in a human antibody of corresponding isotype. Humanization can be performed, for example, using various methods by substituting at least a portion of a rodent variable region for the corresponding regions of a human antibody (*see, e.g.,* United States Patent No.

5,585,089, and No. 5,693,762; Jones *et al.*, 1986, *Nature* 321:522-525; Riechmann *et al.*, 1988, *Nature* 332:323-27; Verhoeyen *et al.*, 1988, *Science* 239:1534-1536).

[0405] In one aspect, the CDRs of the light and heavy chain variable regions of the antibodies provided herein are grafted to framework regions (FRs) from antibodies from the same, or a different, phylogenetic species. For example, the CDRs of the heavy and light chain variable regions V_H1, V_H2, V_H3, V_H4, V_H5, V_H6, V_H7, V_H8, V_H9, V_H10, V_H11, V_H12 and/or V_L1, and V_L2 can be grafted to consensus human FRs. To create consensus human FRs, FRs from several human heavy chain or light chain amino acid sequences may be aligned to identify a consensus amino acid sequence. In other embodiments, the FRs of a heavy chain or light chain disclosed herein are replaced with the FRs from a different heavy chain or light chain. In one aspect, rare amino acids in the FRs of the heavy and light chains of GIPR antibodies are not replaced, while the rest of the FR amino acids are replaced. A "rare amino acid" is a specific amino acid that is in a position in which this particular amino acid is not usually found in an FR. Alternatively, the grafted variable regions from the one heavy or light chain may be used with a constant region that is different from the constant region of that particular heavy or light chain as disclosed herein. In other embodiments, the grafted variable regions are part of a single chain Fv antibody.

[0406] In certain embodiments, constant regions from species other than human can be used along with the human variable region(s) to produce hybrid antibodies.

[0407] Fully human GIPR antibodies are also provided. Methods are available for making fully human antibodies specific for a given antigen without exposing human beings to the antigen ("fully human antibodies"). One specific means provided for implementing the production of fully human antibodies is the "humanization" of the mouse humoral immune system. Introduction of human immunoglobulin (Ig) loci into mice in which the endogenous Ig genes have been inactivated is one means of producing fully human monoclonal antibodies (mAbs) in mouse, an animal that can be immunized with any desirable antigen. Using fully human antibodies can minimize the immunogenic and allergic responses that can sometimes be caused by administering mouse or mouse-derived mAbs to humans as therapeutic agents.

[0408] Fully human antibodies can be produced by immunizing transgenic animals (usually mice) that are capable of producing a repertoire of human antibodies in the absence of endogenous immunoglobulin production. Antigens for this purpose typically have six or more contiguous amino acids, and optionally are conjugated to a carrier, such as a hapten. *See, e.g.*, Jakobovits *et al.*, 1993, *Proc. Natl. Acad. Sci. USA* 90:2551-2555; Jakobovits *et al.*, 1993, *Nature* 362:255-258; and Bruggermann *et al.*, 1993, *Year in Immunol.* 7:33. In one example

of such a method, transgenic animals are produced by incapacitating the endogenous mouse immunoglobulin loci encoding the mouse heavy and light immunoglobulin chains therein, and inserting into the mouse genome large fragments of human genome DNA containing loci that encode human heavy and light chain proteins. Partially modified animals, which have less than the full complement of human immunoglobulin loci, are then cross-bred to obtain an animal having all of the desired immune system modifications. When administered an immunogen, these transgenic animals produce antibodies that are immunospecific for the immunogen but have human rather than murine amino acid sequences, including the variable regions. For further details of such methods, *see*, for example, WO96/33735 and WO94/02602. Additional methods relating to transgenic mice for making human antibodies are described in United States Patent No. 5,545,807; No. 6,713,610; No. 6,673,986; No. 6,162,963; No. 5,545,807; No. 6,300,129; No. 6,255,458; No. 5,877,397; No. 5,874,299 and No. 5,545,806; in PCT publications WO91/10741, WO90/04036, and in EP 546073B1 and EP 546073A1.

[0409] The transgenic mice described above, referred to herein as "HuMab" mice, contain a human immunoglobulin gene minilocus that encodes unrearranged human heavy ([mu] and [gamma]) and [kappa] light chain immunoglobulin sequences, together with targeted mutations that inactivate the endogenous [mu] and [kappa] chain loci (Lonberg *et al.*, 1994, *Nature* 368:856-859). Accordingly, the mice exhibit reduced expression of mouse IgM or [kappa] and in response to immunization, and the introduced human heavy and light chain transgenes undergo class switching and somatic mutation to generate high affinity human IgG [kappa] monoclonal antibodies (Lonberg *et al.*, *supra.*; Lonberg and Huszar, 1995, *Intern. Rev. Immunol.* 13: 65-93; Harding and Lonberg, 1995, *Ann. N.Y Acad. Sci.* 764:536-546). The preparation of HuMab mice is described in detail in Taylor *et al.*, 1992, *Nucleic Acids Research* 20:6287-6295; Chen *et al.*, 1993, *International Immunology* 5:647-656; Tuaillon *et al.*, 1994, *J. Immunol.* 152:2912-2920; Lonberg *et al.*, 1994, *Nature* 368:856-859; Lonberg, 1994, *Handbook of Exp. Pharmacology* 113:49-101; Taylor *et al.*, 1994, *International Immunology* 6:579-591; Lonberg and Huszar, 1995, *Intern. Rev. Immunol.* 13:65-93; Harding and Lonberg, 1995, *Ann. N.Y Acad. Sci.* 764:536-546; Fishwild *et al.*, 1996, *Nature Biotechnology* 14:845-851; the foregoing references are hereby incorporated by reference in their entirety for all purposes. *See*, further United States Patent No. 5,545,806; No. 5,569,825; No. 5,625,126; No. 5,633,425; No. 5,789,650; No. 5,877,397; No. 5,661,016; No. 5,814,318; No. 5,874,299; and No. 5,770,429; as well as United States Patent No. 5,545,807; International Publication Nos. WO 93/1227; WO 92/22646; and WO 92/03918, the

disclosures of all of which are hereby incorporated by reference in their entirety for all purposes. Technologies utilized for producing human antibodies in these transgenic mice are disclosed also in WO 98/24893, and Mendez *et al.*, 1997, *Nature Genetics* 15:146-156, which are hereby incorporated by reference. For example, the HCo7 and HCo12 transgenic mice strains can be used to generate human monoclonal antibodies against GIPR. Further details regarding the production of human antibodies using transgenic mice are provided below.

[0410] Using hybridoma technology, antigen-specific human mAbs with the desired specificity can be produced and selected from the transgenic mice such as those described above. Such antibodies may be cloned and expressed using a suitable vector and host cell, or the antibodies can be harvested from cultured hybridoma cells.

[0411] Fully human antibodies can also be derived from phage-display libraries (as disclosed in Hoogenboom *et al.*, 1991, *J. Mol. Biol.* 227:381; and Marks *et al.*, 1991, *J. Mol. Biol.* 222:581). Phage display techniques mimic immune selection through the display of antibody repertoires on the surface of filamentous bacteriophage, and subsequent selection of phage by their binding to an antigen of choice. One such technique is described in PCT Publication No. WO 99/10494 (hereby incorporated by reference).

[0412] The GIPR binding protein can also be a variant, mimetic, derivative or oligomer based upon the structure of GIPR antigen binding proteins have the CDRs, variable regions and/or full length chains as described above.

[0413] In one embodiment, for instance, an antigen binding protein is a variant form of the antigen binding proteins disclosed above. For instance, some of the antigen binding proteins have one or more conservative amino acid substitutions in one or more of the heavy or light chains, variable regions or CDRs.

[0414] Naturally-occurring amino acids may be divided into classes based on common side chain properties:

[0415] 1) hydrophobic: norleucine, Met, Ala, Val, Leu, Ile;

[0416] 2) neutral hydrophilic: Cys, Ser, Thr, Asn, Gln;

[0417] 3) acidic: Asp, Glu;

[0418] 4) basic: His, Lys, Arg;

[0419] 5) residues that influence chain orientation: Gly, Pro; and

[0420] 6) aromatic: Trp, Tyr, Phe.

[0421] Conservative amino acid substitutions may involve exchange of a member of one of these classes with another member of the same class. Conservative amino acid substitutions may encompass non-naturally occurring amino acid residues, which are typically

incorporated by chemical peptide synthesis rather than by synthesis in biological systems. These include peptidomimetics and other reversed or inverted forms of amino acid moieties.

[0422] Non-conservative substitutions may involve the exchange of a member of one of the above classes for a member from another class. Such substituted residues may be introduced into regions of the antibody that are homologous with human antibodies, or into the non-homologous regions of the molecule.

[0423] In making such changes, according to certain embodiments, the hydropathic index of amino acids may be considered. The hydropathic profile of a protein is calculated by assigning each amino acid a numerical value ("hydropathy index") and then repetitively averaging these values along the peptide chain. Each amino acid has been assigned a hydropathic index on the basis of its hydrophobicity and charge characteristics. They are: isoleucine (+4.5); valine (+4.2); leucine (+3.8); phenylalanine (+2.8); cysteine/cystine (+2.5); methionine (+1.9); alanine (+1.8); glycine (-0.4); threonine (-0.7); serine (-0.8); tryptophan (-0.9); tyrosine (-1.3); proline (-1.6); histidine (-3.2); glutamate (-3.5); glutamine (-3.5); aspartate (-3.5); asparagine (-3.5); lysine (-3.9); and arginine (-4.5).

[0424] The importance of the hydropathic profile in conferring interactive biological function on a protein is understood in the art (*see, e.g.,* Kyte *et al.*, 1982, *J. Mol. Biol.* 157:105-131). It is known that certain amino acids may be substituted for other amino acids having a similar hydropathic index or score and still retain a similar biological activity. In making changes based upon the hydropathic index, in certain embodiments, the substitution of amino acids whose hydropathic indices are within ±2 is included. In some aspects, those which are within ±1 are included, and in other aspects, those within ±0.5 are included.

[0425] It is also understood in the art that the substitution of like amino acids can be made effectively on the basis of hydrophilicity, particularly where the biologically functional protein or peptide thereby created is intended for use in immunological embodiments, as in the present case. In certain embodiments, the greatest local average hydrophilicity of a protein, as governed by the hydrophilicity of its adjacent amino acids, correlates with its immunogenicity and antigen-binding or immunogenicity, that is, with a biological property of the protein.

[0426] The following hydrophilicity values have been assigned to these amino acid residues: arginine (+3.0); lysine (+3.0); aspartate (+3.0±1); glutamate (+3.0±1); serine (+0.3); asparagine (+0.2); glutamine (+0.2); glycine (0); threonine (-0.4); proline (-0.5±1); alanine (-0.5); histidine (-0.5); cysteine (-1.0); methionine (-1.3); valine (-1.5); leucine (-1.8); isoleucine (-1.8); tyrosine (-2.3); phenylalanine (-2.5) and tryptophan (-3.4). In making

changes based upon similar hydrophilicity values, in certain embodiments, the substitution of amino acids whose hydrophilicity values are within ±2 is included, in other embodiments, those which are within ±1 are included, and in still other embodiments, those within ±0.5 are included. In some instances, one may also identify epitopes from primary amino acid sequences on the basis of hydrophilicity. These regions are also referred to as "epitopic core regions."

[0427] Exemplary conservative amino acid substitutions are set forth in Table 6.

Table 8: Conservative Amino Acid Substitutions

Original Residue	Exemplary Substitutions
Ala	Ser
Arg	Lys
Asn	Gln, His
Asp	Glu
Cys	Ser
Gln	Asn
Glu	Asp
Gly	Pro
His	Asn, Gln
Ile	Leu, Val
Leu	Ile, Val
Lys	Arg, Gln, Glu
Met	Leu, Ile
Phe	Met, Leu, Tyr
Ser	Thr
Thr	Ser
Trp	Tyr
Tyr	Trp, Phe
Val	Ile, Leu

[0428] A skilled artisan will be able to determine suitable variants of polypeptides as set forth herein using well-known techniques. One skilled in the art may identify suitable areas of the molecule that may be changed without destroying activity by targeting regions not believed to be important for activity. The skilled artisan also will be able to identify residues and

portions of the molecules that are conserved among similar polypeptides. In further embodiments, even areas that may be important for biological activity or for structure may be subject to conservative amino acid substitutions without destroying the biological activity or without adversely affecting the polypeptide structure.

[0429] Additionally, one skilled in the art can review structure-function studies identifying residues in similar polypeptides that are important for activity or structure. In view of such a comparison, one can predict the importance of amino acid residues in a protein that correspond to amino acid residues important for activity or structure in similar proteins. One skilled in the art may opt for chemically similar amino acid substitutions for such predicted important amino acid residues.

[0430] One skilled in the art can also analyze the 3-dimensional structure and amino acid sequence in relation to that structure in similar polypeptides. In view of such information, one skilled in the art may predict the alignment of amino acid residues of an antibody with respect to its three dimensional structure. One skilled in the art may choose not to make radical changes to amino acid residues predicted to be on the surface of the protein, since such residues may be involved in important interactions with other molecules. Moreover, one skilled in the art may generate test variants containing a single amino acid substitution at each desired amino acid residue. These variants can then be screened using assays for GIPR activity, thus yielding information regarding which amino acids can be changed and which must not be changed. In other words, based on information gathered from such routine experiments, one skilled in the art can readily determine the amino acid positions where further substitutions should be avoided either alone or in combination with other mutations.

[0431] A number of scientific publications have been devoted to the prediction of secondary structure. *See*, Moult, 1996, *Curr. Op. in Biotech.* 7:422-427; Chou *et al.*, 1974, *Biochem.* 13:222-245; Chou *et al.*, 1974, *Biochemistry* 113:211-222; Chou *et al.*, 1978, *Adv. Enzymol. Relat. Areas Mol. Biol.* 47:45-148; Chou *et al.*, 1979, *Ann. Rev. Biochem.* 47:251-276; and Chou *et al.*, 1979, *Biophys. J.* 26:367-384. Moreover, computer programs are currently available to assist with predicting secondary structure. One method of predicting secondary structure is based upon homology modeling. For example, two polypeptides or proteins that have a sequence identity of greater than 30%, or similarity greater than 40% can have similar structural topologies. The recent growth of the protein structural database (PDB) has provided enhanced predictability of secondary structure, including the potential number of folds within a polypeptide's or protein's structure. *See*, Holm *et al.*, 1999, *Nucl. Acid. Res.* 27:244-247. It has been suggested (Brenner *et al.*, 1997, *Curr. Op. Struct. Biol.* 7:369-376)

that there are a limited number of folds in a given polypeptide or protein and that once a critical number of structures have been resolved, structural prediction will become dramatically more accurate.

[0432] Additional methods of predicting secondary structure include "threading" (Jones, 1997, *Curr. Opin. Struct. Biol.* 7:377-387; Sippl *et al.*, 1996, *Structure* 4:15-19), "profile analysis" (Bowie *et al.*, 1991, *Science* 253:164-170; Gribskov *et al.*, 1990, *Meth. Enzym.* 183:146-159; Gribskov *et al.*, 1987, *Proc. Nat. Acad. Sci.* 84:4355-4358), and "evolutionary linkage" (*See*, Holm, 1999, *supra*; and Brenner, 1997, *supra*).

[0433] In some embodiments, amino acid substitutions are made that: (1) reduce susceptibility to proteolysis, (2) reduce susceptibility to oxidation, (3) alter binding affinity for forming protein complexes, (4) alter ligand or antigen binding affinities, and/or (4) confer or modify other physicochemical or functional properties on such polypeptides. For example, single or multiple amino acid substitutions (in certain embodiments, conservative amino acid substitutions) may be made in the naturally-occurring sequence. Substitutions can be made in that portion of the antibody that lies outside the domain(s) forming intermolecular contacts). In such embodiments, conservative amino acid substitutions can be used that do not substantially change the structural characteristics of the parent sequence (e.g., one or more replacement amino acids that do not disrupt the secondary structure that characterizes the parent or native antigen binding protein). Examples of art-recognized polypeptide secondary and tertiary structures are described in Proteins, Structures and Molecular Principles (Creighton, Ed.), 1984, W. H. New York: Freeman and Company; Introduction to Protein Structure (Branden and Tooze, eds.), 1991, New York: Garland Publishing; and Thornton *et al.*, 1991, *Nature* 354:105, which are each incorporated herein by reference.

[0434] Additional preferred antibody variants include cysteine variants wherein one or more cysteine residues in the parent or native amino acid sequence are deleted from or substituted with another amino acid (*e.g.*, serine). Cysteine variants are useful, *inter alia* when antibodies must be refolded into a biologically active conformation. Cysteine variants may have fewer cysteine residues than the native antibody, and typically have an even number to minimize interactions resulting from unpaired cysteines.

[0435] The heavy and light chains, variable regions domains and CDRs that are disclosed can be used to prepare polypeptides that contain an antigen binding region that can specifically bind to GIPR. For example, one or more of the CDRs can be incorporated into a molecule (*e.g.*, a polypeptide) covalently or noncovalently to make an immunoadhesion. An immunoadhesion may incorporate the CDR(s) as part of a larger polypeptide chain, may

covalently link the CDR(s) to another polypeptide chain, or may incorporate the CDR(s) noncovalently. The CDR(s) enable the immunoadhesion to bind specifically to a particular antigen of interest (*e.g.*, an GIPR polypeptide or epitope thereof).

[0436] Derivatives of the antigen binding proteins that are described herein are also provided. The derivatized antigen binding proteins can comprise any molecule or substance that imparts a desired property to the antibody or fragment, such as increased half-life in a particular use. The derivatized antigen binding protein can comprise, for example, a detectable (or labeling) moiety (*e.g.*, a radioactive, colorimetric, antigenic or enzymatic molecule, a detectable bead (such as a magnetic or electrodense (*e.g.*, gold) bead), or a molecule that binds to another molecule (*e.g.*, biotin or streptavidin)), a therapeutic or diagnostic moiety (*e.g.*, a radioactive, cytotoxic, or pharmaceutically active moiety), or a molecule that increases the suitability of the antigen binding protein for a particular use (*e.g.*, administration to a subject, such as a human subject, or other *in vivo* or *in vitro* uses). Examples of molecules that can be used to derivatize an antigen binding protein include albumin (*e.g.*, human serum albumin) and polyethylene glycol (PEG). Albumin-linked and PEGylated derivatives of antigen binding proteins can be prepared using techniques well known in the art. Certain antigen binding proteins include a pegylated single chain polypeptide as described herein. In one embodiment, the antigen binding protein is conjugated or otherwise linked to transthyretin (TTR) or a TTR variant. The TTR or TTR variant can be chemically modified with, for example, a chemical selected from the group consisting of dextran, poly(n-vinyl pyrrolidone), polyethylene glycols, propropylene glycol homopolymers, polypropylene oxide/ethylene oxide co-polymers, polyoxyethylated polyols and polyvinyl alcohols.

[0437] In some embodiments, the antigen binding protein comprises one or more labels. The term "labeling group" or "label" means any detectable label. Examples of suitable labeling groups include, but are not limited to, the following: radioisotopes or radionuclides (*e.g.*, ^{3}H, ^{14}C, ^{15}N, ^{35}S, ^{90}Y, ^{99}Tc, ^{111}In, ^{125}I, ^{131}I), fluorescent groups (*e.g.*, FITC, rhodamine, lanthanide phosphors), enzymatic groups (*e.g.*, horseradish peroxidase, β-galactosidase, luciferase, alkaline phosphatase), chemiluminescent groups, biotinyl groups, or predetermined polypeptide epitopes recognized by a secondary reporter (*e.g.*, leucine zipper pair sequences, binding sites for secondary antibodies, metal binding domains, epitope tags). In some embodiments, the labeling group is coupled to the antigen binding protein *via* spacer arms of various lengths to reduce potential steric hindrance. Various methods for labeling proteins are known in the art and may be used as is seen fit.

[0438] The term "effector group" means any group coupled to an antigen binding protein that acts as a cytotoxic agent. Examples for suitable effector groups are radioisotopes or radionuclides (*e.g.*, ^{3}H, ^{14}C, ^{15}N, ^{35}S, ^{90}Y, ^{99}Tc, ^{111}In, ^{125}I, ^{131}I). Other suitable groups include toxins, therapeutic groups, or chemotherapeutic groups. Examples of suitable groups include calicheamicin, auristatins, geldanamycin and maytansine. In some embodiments, the effector group is coupled to the antigen binding protein *via* spacer arms of various lengths to reduce potential steric hindrance.

[0439] In general, labels fall into a variety of classes, depending on the assay in which they are to be detected: a) isotopic labels, which may be radioactive or heavy isotopes; b) magnetic labels (*e.g.*, magnetic particles); c) redox active moieties; d) optical dyes; enzymatic groups (*e.g.* horseradish peroxidase, β-galactosidase, luciferase, alkaline phosphatase); e) biotinylated groups; and f) predetermined polypeptide epitopes recognized by a secondary reporter (*e.g.*, leucine zipper pair sequences, binding sites for secondary antibodies, metal binding domains, epitope tags, etc.). In some embodiments, the labeling group is coupled to the antigen binding protein *via* spacer arms of various lengths to reduce potential steric hindrance. Various methods for labeling proteins are known in the art.

[0440] Specific labels include optical dyes, including, but not limited to, chromophores, phosphors and fluorophores, with the latter being specific in many instances. Fluorophores can be either "small molecule" fluores, or proteinaceous fluores.

[0441] By "fluorescent label" is meant any molecule that may be detected *via* its inherent fluorescent properties. Suitable fluorescent labels include, but are not limited to, fluorescein, rhodamine, tetramethylrhodamine, eosin, erythrosin, coumarin, methyl-coumarins, pyrene, Malacite green, stilbene, Lucifer Yellow, Cascade BlueJ, Texas Red, IAEDANS, EDANS, BODIPY FL, LC Red 640, Cy 5, Cy 5.5, LC Red 705, Oregon green, the Alexa-Fluor dyes (Alexa Fluor 350, Alexa Fluor 430, Alexa Fluor 488, Alexa Fluor 546, Alexa Fluor 568, Alexa Fluor 594, Alexa Fluor 633, Alexa Fluor 660, Alexa Fluor 680), Cascade Blue, Cascade Yellow and R-phycoerythrin (PE) (Molecular Probes, Eugene, OR), FITC, Rhodamine, and Texas Red (Pierce, Rockford, IL), Cy5, Cy5.5, Cy7 (Amersham Life Science, Pittsburgh, PA). Suitable optical dyes, including fluorophores, are described in Molecular Probes Handbook by Richard P. Haugland, hereby expressly incorporated by reference.

[0442] Suitable proteinaceous fluorescent labels also include, but are not limited to, green fluorescent protein, including a Renilla, Ptilosarcus, or Aequorea species of GFP (Chalfie *et al.*, 1994, *Science* 263:802-805), EGFP (Clontech Labs., Inc., Genbank Accession Number

U55762), blue fluorescent protein (BFP, Quantum Biotechnologies, Inc., Quebec, Canada; Stauber, 1998, *Biotechniques* 24:462-471; Heim *et al.*, 1996, *Curr. Biol.* 6:178-182), enhanced yellow fluorescent protein (EYFP, Clontech Labs., Inc.), luciferase (Ichiki *et al.*, 1993, *J. Immunol.* 150:5408-5417), β galactosidase (Nolan *et al.*, 1988, *Proc. Natl. Acad. Sci. U.S.A.* 85:2603-2607) and Renilla (WO92/15673, WO95/07463, WO98/14605, WO98/26277, WO99/49019, United States Patents No. 5292658, No. 5418155, No. 5683888, No. 5741668, No. 5777079, No. 5804387, No. 5874304, No. 5876995, No. 5925558).

[0443] Nucleic acids that encode for the antigen binding proteins described herein, or portions thereof, are also provided, including nucleic acids encoding one or both chains of an antibody, or a fragment, derivative, mutein, or variant thereof, polynucleotides encoding heavy chain variable regions or only CDRs, polynucleotides sufficient for use as hybridization probes, PCR primers or sequencing primers for identifying, analyzing, mutating or amplifying a polynucleotide encoding a polypeptide, anti-sense nucleic acids for inhibiting expression of a polynucleotide, and complementary sequences of the foregoing. The nucleic acids can be any length. They can be, for example, 5, 10, 15, 20, 25, 30, 35, 40, 45, 50, 75, 100, 125, 150, 175, 200, 250, 300, 350, 400, 450, 500, 750, 1,000, 1,500, 3,000, 5,000 or more nucleotides in length, and/or can comprise one or more additional sequences, for example, regulatory sequences, and/or be part of a larger nucleic acid, for example, a vector. The nucleic acids can be single-stranded or double-stranded and can comprise RNA and/or DNA nucleotides, and artificial variants thereof (e.g., peptide nucleic acids). Any variable region provided herein may be attached to these constant regions to form complete heavy and light chain sequences. However, it should be understood that these constant regions sequences are provided as specific examples only. In some embodiments, the variable region sequences are joined to other constant region sequences that are known in the art.

[0444] Nucleic acids encoding certain antigen binding proteins, or portions thereof (*e.g.*, full length antibody, heavy or light chain, variable domain, or CDRH1, CDRH2, CDRH3, CDRL1, CDRL2, or CDRL3) may be isolated from B-cells of mice that have been immunized with GIPR or an immunogenic fragment thereof. The nucleic acid may be isolated by conventional procedures such as polymerase chain reaction (PCR). Phage display is another example of a known technique whereby derivatives of antibodies and other antigen binding proteins may be prepared. In one approach, polypeptides that are components of an antigen binding protein of interest are expressed in any suitable recombinant expression system, and the expressed polypeptides are allowed to assemble to form antigen binding proteins.

[0445] An aspect further provides nucleic acids that hybridize to other nucleic acids under particular hybridization conditions. Methods for hybridizing nucleic acids are well-known in the art. *See, e.g.,* Current Protocols in Molecular Biology, John Wiley & Sons, N.Y. (1989), 6.3.1-6.3.6. As defined herein, a moderately stringent hybridization condition uses a prewashing solution containing 5x sodium chloride/sodium citrate (SSC), 0.5% SDS, 1.0 mM EDTA (pH 8.0), hybridization buffer of about 50% formamide, 6x SSC, and a hybridization temperature of 55°C (or other similar hybridization solutions, such as one containing about 50% formamide, with a hybridization temperature of 42°C), and washing conditions of 60°C, in 0.5x SSC, 0.1% SDS. A stringent hybridization condition hybridizes in 6x SSC at 45°C, followed by one or more washes in 0.1x SSC, 0.2% SDS at 68°C. Furthermore, one of skill in the art can manipulate the hybridization and/or washing conditions to increase or decrease the stringency of hybridization such that nucleic acids comprising nucleotide sequences that are at least 65%, 70%, 75%, 80%, 85%, 90%, 95%, 98% or 99% identical to each other typically remain hybridized to each other.

[0446] The basic parameters affecting the choice of hybridization conditions and guidance for devising suitable conditions are set forth by, for example, Sambrook, Fritsch, and Maniatis (2001, Molecular Cloning: A Laboratory Manual, Cold Spring Harbor Laboratory Press, Cold Spring Harbor, N.Y., *supra*; and Current Protocols in Molecular Biology, 1995, Ausubel *et al.*, eds., John Wiley & Sons, Inc., sections 2.10 and 6.3-6.4), and can be readily determined by those having ordinary skill in the art based on, *e.g.*, the length and/or base composition of the nucleic acid.

[0447] Changes can be introduced by mutation into a nucleic acid, thereby leading to changes in the amino acid sequence of a polypeptide (*e.g.*, an antibody or antibody derivative) that it encodes. Mutations can be introduced using any technique known in the art. In one embodiment, one or more particular amino acid residues are changed using, for example, a site-directed mutagenesis protocol. In another embodiment, one or more randomly selected residues is changed using, for example, a random mutagenesis protocol. However it is made, a mutant polypeptide can be expressed and screened for a desired property.

[0448] Mutations can be introduced into a nucleic acid without significantly altering the biological activity of a polypeptide that it encodes. For example, one can make nucleotide substitutions leading to amino acid substitutions at non-essential amino acid residues. Alternatively, one or more mutations can be introduced into a nucleic acid that selectively changes the biological activity of a polypeptide that it encodes. For example, the mutation can quantitatively or qualitatively change the biological activity. Examples of quantitative

changes include increasing, reducing or eliminating the activity. Examples of qualitative changes include changing the antigen specificity of an antibody. In one embodiment, a nucleic acid encoding any antigen binding protein described herein can be mutated to alter the amino acid sequence using molecular biology techniques that are well-established in the art.

[0449] Another aspect provides nucleic acid molecules that are suitable for use as primers or hybridization probes for the detection of nucleic acid sequences. A nucleic acid molecule can comprise only a portion of a nucleic acid sequence encoding a full-length polypeptide, for example, a fragment that can be used as a probe or primer or a fragment encoding an active portion of a polypeptide.

[0450] Probes based on the sequence of a nucleic acid can be used to detect the nucleic acid or similar nucleic acids, for example, transcripts encoding a polypeptide. The probe can comprise a label group, *e.g.*, a radioisotope, a fluorescent compound, an enzyme, or an enzyme co-factor. Such probes can be used to identify a cell that expresses the polypeptide.

[0451] Another aspect provides vectors comprising a nucleic acid encoding a polypeptide or a portion thereof (*e.g.*, a fragment containing one or more CDRs or one or more variable region domains). Examples of vectors include, but are not limited to, plasmids, viral vectors, non-episomal mammalian vectors and expression vectors, for example, recombinant expression vectors. The recombinant expression vectors can comprise a nucleic acid in a form suitable for expression of the nucleic acid in a host cell. The recombinant expression vectors include one or more regulatory sequences, selected on the basis of the host cells to be used for expression, which is operably linked to the nucleic acid sequence to be expressed. Regulatory sequences include those that direct constitutive expression of a nucleotide sequence in many types of host cells (*e.g.*, SV40 early gene enhancer, Rous sarcoma virus promoter and cytomegalovirus promoter), those that direct expression of the nucleotide sequence only in certain host cells (*e.g.*, tissue-specific regulatory sequences, *see,* Voss *et al.*, 1986, *Trends Biochem. Sci.* 11:287, Maniatis *et al.*, 1987, *Science* 236:1237, incorporated by reference herein in their entireties), and those that direct inducible expression of a nucleotide sequence in response to particular treatment or condition (*e.g.*, the metallothionin promoter in mammalian cells and the tet-responsive and/or streptomycin responsive promoter in both prokaryotic and eukaryotic systems (*see, id.*). It will be appreciated by those skilled in the art that the design of the expression vector can depend on such factors as the choice of the host cell to be transformed, the level of expression of protein desired, etc. The expression

vectors can be introduced into host cells to thereby produce proteins or peptides, including fusion proteins or peptides, encoded by nucleic acids as described herein.

[0452] Another aspect provides host cells into which a recombinant expression vector has been introduced. A host cell can be any prokaryotic cell (for example, *E. coli*) or eukaryotic cell (for example, yeast, insect, or mammalian cells (*e.g.*, CHO cells)). Vector DNA can be introduced into prokaryotic or eukaryotic cells *via* conventional transformation or transfection techniques. For stable transfection of mammalian cells, it is known that, depending upon the expression vector and transfection technique used, only a small fraction of cells may integrate the foreign DNA into their genome. In order to identify and select these integrants, a gene that encodes a selectable marker (*e.g.*, for resistance to antibiotics) is generally introduced into the host cells along with the gene of interest. Preferred selectable markers include those which confer resistance to drugs, such as G418, hygromycin and methotrexate. Cells stably transfected with the introduced nucleic acid can be identified by drug selection (*e.g.*, cells that have incorporated the selectable marker gene will survive, while the other cells die), among other methods.

[0453] Expression systems and constructs in the form of plasmids, expression vectors, transcription or expression cassettes that comprise at least one polynucleotide as described above are also provided herein, as well host cells comprising such expression systems or constructs.

[0454] The antigen binding proteins provided herein may be prepared by any of a number of conventional techniques. For example, GIPR antigen binding proteins may be produced by recombinant expression systems, using any technique known in the art. *See, e.g.,* Monoclonal Antibodies, Hybridomas: A New Dimension in Biological Analyses, Kennet et al. (eds.) Plenum Press, New York (1980); and Antibodies: A Laboratory Manual, Harlow and Lane (eds.), Cold Spring Harbor Laboratory Press, Cold Spring Harbor, N.Y. (1988).

[0455] Antigen binding proteins can be expressed in hybridoma cell lines (*e.g.*, in particular antibodies may be expressed in hybridomas) or in cell lines other than hybridomas. Expression constructs encoding the antibodies can be used to transform a mammalian, insect or microbial host cell. Transformation can be performed using any known method for introducing polynucleotides into a host cell, including, for example packaging the polynucleotide in a virus or bacteriophage and transducing a host cell with the construct by transfection procedures known in the art, as exemplified by United States Patent No. 4,399,216; No. 4,912,040; No. 4,740,461; No. 4,959,455. The optimal transformation procedure used will depend upon which type of host cell is being transformed. Methods for

introduction of heterologous polynucleotides into mammalian cells are well known in the art and include, but are not limited to, dextran-mediated transfection, calcium phosphate precipitation, polybrene mediated transfection, protoplast fusion, electroporation, encapsulation of the polynucleotide(s) in liposomes, mixing nucleic acid with positively-charged lipids, and direct microinjection of the DNA into nuclei.

[0456] Recombinant expression constructs typically comprise a nucleic acid molecule encoding a polypeptide comprising one or more of the following: one or more CDRs provided herein; a light chain constant region; a light chain variable region; a heavy chain constant region (*e.g.*, C_H1, C_H2 and/or C_H3); and/or another scaffold portion of a GIPR antigen binding protein. These nucleic acid sequences are inserted into an appropriate expression vector using standard ligation techniques. In one embodiment, the heavy or light chain constant region is appended to the C-terminus of the anti-GIPR specific heavy or light chain variable region and is ligated into an expression vector. The vector is typically selected to be functional in the particular host cell employed (*i.e.*, the vector is compatible with the host cell machinery, permitting amplification and/or expression of the gene can occur). In some embodiments, vectors are used that employ protein-fragment complementation assays using protein reporters, such as dihydrofolate reductase (*see*, for example, U.S. Pat. No. 6,270,964, which is hereby incorporated by reference). Suitable expression vectors can be purchased, for example, from Invitrogen Life Technologies or BD Biosciences (formerly "Clontech"). Other useful vectors for cloning and expressing the antibodies and fragments include those described in Bianchi and McGrew, 2003, *Biotech. Biotechnol. Bioeng.* 84:439-44, which is hereby incorporated by reference. Additional suitable expression vectors are discussed, for example, in *Methods Enzymol.*, vol. 185 (D. V. Goeddel, ed.), 1990, New York: Academic Press.

[0457] Typically, expression vectors used in any of the host cells will contain sequences for plasmid maintenance and for cloning and expression of exogenous nucleotide sequences. Such sequences, collectively referred to as "flanking sequences" in certain embodiments will typically include one or more of the following nucleotide sequences: a promoter, one or more enhancer sequences, an origin of replication, a transcriptional termination sequence, a complete intron sequence containing a donor and acceptor splice site, a sequence encoding a leader sequence for polypeptide secretion, a ribosome binding site, a polyadenylation sequence, a polylinker region for inserting the nucleic acid encoding the polypeptide to be expressed, and a selectable marker element. Each of these sequences is discussed below.

[0458] Optionally, the vector may contain a "tag"-encoding sequence, *i.e.*, an oligonucleotide molecule located at the 5′ or 3′ end of the GIPR antigen binding protein coding sequence; the oligonucleotide sequence encodes polyHis (such as hexaHis), or another "tag" such as FLAG®, HA (hemaglutinin influenza virus), or myc, for which commercially available antibodies exist. This tag is typically fused to the polypeptide upon expression of the polypeptide, and can serve as a means for affinity purification or detection of the GIPR antigen binding protein from the host cell. Affinity purification can be accomplished, for example, by column chromatography using antibodies against the tag as an affinity matrix. Optionally, the tag can subsequently be removed from the purified GIPR antigen binding protein by various means such as using certain peptidases for cleavage.

[0459] Flanking sequences may be homologous (*i.e.*, from the same species and/or strain as the host cell), heterologous (*i.e.*, from a species other than the host cell species or strain), hybrid (*i.e.*, a combination of flanking sequences from more than one source), synthetic or native. As such, the source of a flanking sequence may be any prokaryotic or eukaryotic organism, any vertebrate or invertebrate organism, or any plant, provided that the flanking sequence is functional in, and can be activated by, the host cell machinery.

[0460] Flanking sequences useful in the vectors may be obtained by any of several methods well known in the art. Typically, flanking sequences useful herein will have been previously identified by mapping and/or by restriction endonuclease digestion and can thus be isolated from the proper tissue source using the appropriate restriction endonucleases. In some cases, the full nucleotide sequence of a flanking sequence may be known. Here, the flanking sequence may be synthesized using the methods described herein for nucleic acid synthesis or cloning.

[0461] Whether all or only a portion of the flanking sequence is known, it may be obtained using polymerase chain reaction (PCR) and/or by screening a genomic library with a suitable probe such as an oligonucleotide and/or flanking sequence fragment from the same or another species. Where the flanking sequence is not known, a fragment of DNA containing a flanking sequence may be isolated from a larger piece of DNA that may contain, for example, a coding sequence or even another gene or genes. Isolation may be accomplished by restriction endonuclease digestion to produce the proper DNA fragment followed by isolation using agarose gel purification, Qiagen® column chromatography (Chatsworth, CA), or other methods known to the skilled artisan. The selection of suitable enzymes to accomplish this purpose will be readily apparent to one of ordinary skill in the art.

[0462] An origin of replication is typically a part of those prokaryotic expression vectors purchased commercially, and the origin aids in the amplification of the vector in a host cell. If the vector of choice does not contain an origin of replication site, one may be chemically synthesized based on a known sequence, and ligated into the vector. For example, the origin of replication from the plasmid pBR322 (New England Biolabs, Beverly, MA) is suitable for most gram-negative bacteria, and various viral origins (*e.g.*, SV40, polyoma, adenovirus, vesicular stomatitus virus (VSV), or papillomaviruses such as HPV or BPV) are useful for cloning vectors in mammalian cells. Generally, the origin of replication component is not needed for mammalian expression vectors (for example, the SV40 origin is often used only because it also contains the virus early promoter).

[0463] A transcription termination sequence is typically located 3′ to the end of a polypeptide coding region and serves to terminate transcription. Usually, a transcription termination sequence in prokaryotic cells is a G-C rich fragment followed by a poly-T sequence. While the sequence is easily cloned from a library or even purchased commercially as part of a vector, it can also be readily synthesized using methods for nucleic acid synthesis such as those described herein.

[0464] A selectable marker gene encodes a protein necessary for the survival and growth of a host cell grown in a selective culture medium. Typical selection marker genes encode proteins that (a) confer resistance to antibiotics or other toxins, *e.g.*, ampicillin, tetracycline, or kanamycin for prokaryotic host cells; (b) complement auxotrophic deficiencies of the cell; or (c) supply critical nutrients not available from complex or defined media. Specific selectable markers are the kanamycin resistance gene, the ampicillin resistance gene, and the tetracycline resistance gene. Advantageously, a neomycin resistance gene may also be used for selection in both prokaryotic and eukaryotic host cells.

[0465] Other selectable genes may be used to amplify the gene that will be expressed. Amplification is the process wherein genes that are required for production of a protein critical for growth or cell survival are reiterated in tandem within the chromosomes of successive generations of recombinant cells. Examples of suitable selectable markers for mammalian cells include dihydrofolate reductase (DHFR) and promoterless thyrnidine kinase genes. Mammalian cell transformants are placed under selection pressure wherein only the transformants are uniquely adapted to survive by virtue of the selectable gene present in the vector. Selection pressure is imposed by culturing the transformed cells under conditions in which the concentration of selection agent in the medium is successively increased, thereby leading to the amplification of both the selectable gene and the DNA that encodes another

gene, such as an antigen binding protein that binds GIPR polypeptide. As a result, increased quantities of a polypeptide such as an antigen binding protein are synthesized from the amplified DNA.

[0466] A ribosome-binding site is usually necessary for translation initiation of mRNA and is characterized by a Shine-Dalgarno sequence (prokaryotes) or a Kozak sequence (eukaryotes). The element is typically located 3' to the promoter and 5' to the coding sequence of the polypeptide to be expressed.

[0467] In some cases, such as where glycosylation is desired in a eukaryotic host cell expression system, one may manipulate the various pre- or pro-sequences to improve glycosylation or yield. For example, one may alter the peptidase cleavage site of a particular signal peptide, or add prosequences, which also may affect glycosylation. The final protein product may have, in the -1 position (relative to the first amino acid of the mature protein), one or more additional amino acids incident to expression, which may not have been totally removed. For example, the final protein product may have one or two amino acid residues found in the peptidase cleavage site, attached to the amino-terminus. Alternatively, use of some enzyme cleavage sites may result in a slightly truncated form of the desired polypeptide, if the enzyme cuts at such area within the mature polypeptide.

[0468] Expression and cloning will typically contain a promoter that is recognized by the host organism and operably linked to the molecule encoding the GIPR antigen binding protein. Promoters are untranscribed sequences located upstream (*i.e.*, 5') to the start codon of a structural gene (generally within about 100 to 1000 bp) that control transcription of the structural gene. Promoters are conventionally grouped into one of two classes: inducible promoters and constitutive promoters. Inducible promoters initiate increased levels of transcription from DNA under their control in response to some change in culture conditions, such as the presence or absence of a nutrient or a change in temperature. Constitutive promoters, on the other hand, uniformly transcribe a gene to which they are operably linked, that is, with little or no control over gene expression. A large number of promoters, recognized by a variety of potential host cells, are well known. A suitable promoter is operably linked to the DNA encoding heavy chain or light chain comprising a GIPR antigen binding protein by removing the promoter from the source DNA by restriction enzyme digestion and inserting the desired promoter sequence into the vector.

[0469] Suitable promoters for use with yeast hosts are also well known in the art. Yeast enhancers are advantageously used with yeast promoters. Suitable promoters for use with mammalian host cells are well known and include, but are not limited to, those obtained from

the genomes of viruses such as polyoma virus, fowlpox virus, adenovirus (such as Adenovirus 2), bovine papilloma virus, avian sarcoma virus, cytomegalovirus, retroviruses, hepatitis-B virus, and Simian Virus 40 (SV40). Other suitable mammalian promoters include heterologous mammalian promoters, for example, heat-shock promoters and the actin promoter.

[0470] An enhancer sequence may be inserted into the vector to increase transcription of DNA encoding light chain or heavy chain comprising a GIPR antigen binding protein by higher eukaryotes. Enhancers are cis-acting elements of DNA, usually about 10-300 bp in length, that act on the promoter to increase transcription. Enhancers are relatively orientation and position independent, having been found at positions both 5' and 3' to the transcription unit. Several enhancer sequences available from mammalian genes are known (*e.g.*, globin, elastase, albumin, alpha-feto-protein and insulin). Typically, however, an enhancer from a virus is used. The SV40 enhancer, the cytomegalovirus early promoter enhancer, the polyoma enhancer, and adenovirus enhancers known in the art are exemplary enhancing elements for the activation of eukaryotic promoters. While an enhancer may be positioned in the vector either 5' or 3' to a coding sequence, it is typically located at a site 5' from the promoter. A sequence encoding an appropriate native or heterologous signal sequence (leader sequence or signal peptide) can be incorporated into an expression vector, to promote extracellular secretion of the antibody. The choice of signal peptide or leader depends on the type of host cells in which the antibody is to be produced, and a heterologous signal sequence can replace the native signal sequence. Examples of signal peptides that are functional in mammalian host cells include the following: the signal sequence for interleukin-7 (IL-7) described in US Patent No. 4,965,195; the signal sequence for interleukin-2 receptor described in Cosman *et al.*, 1984, *Nature* 312:768; the interleukin-4 receptor signal peptide described in EP Patent No. 0367 566; the type I interleukin-1 receptor signal peptide described in U.S. Patent No. 4,968,607; the type II interleukin-1 receptor signal peptide described in EP Patent No. 0 460 846.

[0471] In one embodiment the leader sequence comprises SEQ ID NO: 3157 (MDMRVPAQLL GLLLLWLRGA RC) which is encoded by SEQ ID NO: 3158 (atggacatga gagtgcctgc acagctgctg ggcctgctgc tgctgtggct gagaggcgcc agatgc). In another embodiment the leader sequence comprises SEQ ID NO: 3159 (MAWALLLLTL LTQGTGSWA) which is encoded by SEQ ID NO: 3160 (atggcctggg ctctgctgct cctcaccctc ctcactcagg gcacagggtc ctgggcc).

[0472] The expression vectors that are provided may be constructed from a starting vector such as a commercially available vector. Such vectors may or may not contain all of the desired flanking sequences. Where one or more of the flanking sequences described herein are not already present in the vector, they may be individually obtained and ligated into the vector. Methods used for obtaining each of the flanking sequences are well known to one skilled in the art.

[0473] After the vector has been constructed and a nucleic acid molecule encoding light chain, a heavy chain, or a light chain and a heavy chain comprising a GIPR antigen binding sequence has been inserted into the proper site of the vector, the completed vector may be inserted into a suitable host cell for amplification and/or polypeptide expression. The transformation of an expression vector for an antigen-binding protein into a selected host cell may be accomplished by well-known methods including transfection, infection, calcium phosphate co-precipitation, electroporation, microinjection, lipofection, DEAE-dextran mediated transfection, or other known techniques. The method selected will in part be a function of the type of host cell to be used. These methods and other suitable methods are well known to the skilled artisan, and are set forth, for example, in Sambrook *et al.*, 2001, *supra*.

[0474] A host cell, when cultured under appropriate conditions, synthesizes an antigen binding protein that can subsequently be collected from the culture medium (if the host cell secretes it into the medium) or directly from the host cell producing it (if it is not secreted). The selection of an appropriate host cell will depend upon various factors, such as desired expression levels, polypeptide modifications that are desirable or necessary for activity (such as glycosylation or phosphorylation) and ease of folding into a biologically active molecule.

[0475] Mammalian cell lines available as hosts for expression are well known in the art and include, but are not limited to, immortalized cell lines available from the American Type Culture Collection (ATCC), including but not limited to Chinese hamster ovary (CHO) cells, HeLa cells, baby hamster kidney (BHK) cells, monkey kidney cells (COS), human hepatocellular carcinoma cells (*e.g.*, Hep G2), and a number of other cell lines. In certain embodiments, cell lines may be selected through determining which cell lines have high expression levels and constitutively produce antigen binding proteins with GIPR binding properties. In another embodiment, a cell line from the B cell lineage that does not make its own antibody but has a capacity to make and secrete a heterologous antibody can be selected.

[0476] In one embodiment, the present invention is directed to an antigen binding protein produced by a cell expressing one or more of the polynucleotides identified in Tables 2, 3, 4, and 5.

[0477] In one aspect, a GIPR binding protein is administered for chronic treatment. In another aspect, the binding proteins are administered for acute therapy.

[0478] Pharmaceutical compositions that comprise a GIPR antigen binding protein are also provided and can be utilized in any of the preventive and therapeutic methods disclosed herein. In an embodiment, a therapeutically effective amount of one or a plurality of the antigen binding proteins and a pharmaceutically acceptable diluent, carrier, solubilizer, emulsifier, preservative, and/or adjuvant are also provided. Acceptable formulation materials are nontoxic to recipients at the dosages and concentrations employed.

[0479] In certain embodiments, the pharmaceutical composition may contain formulation materials for modifying, maintaining or preserving, for example, the pH, osmolarity, viscosity, clarity, color, isotonicity, odor, sterility, stability, rate of dissolution or release, adsorption or penetration of the composition. In such embodiments, suitable formulation materials include, but are not limited to, amino acids (such as glycine, glutamine, asparagine, arginine or lysine); antimicrobials; antioxidants (such as ascorbic acid, sodium sulfite or sodium hydrogen-sulfite); buffers (such as borate, bicarbonate, Tris-HCl, citrates, phosphates or other organic acids); bulking agents (such as mannitol or glycine); chelating agents (such as ethylenediamine tetraacetic acid (EDTA)); complexing agents (such as caffeine, polyvinylpyrrolidone, beta-cyclodextrin or hydroxypropyl-beta-cyclodextrin); fillers; monosaccharides; disaccharides; and other carbohydrates (such as glucose, mannose or dextrins); proteins (such as serum albumin, gelatin or immunoglobulins); coloring, flavoring and diluting agents; emulsifying agents; hydrophilic polymers (such as polyvinylpyrrolidone); low molecular weight polypeptides; salt-forming counterions (such as sodium); preservatives (such as benzalkonium chloride, benzoic acid, salicylic acid, thimerosal, phenethyl alcohol, methylparaben, propylparaben, chlorhexidine, sorbic acid or hydrogen peroxide); solvents (such as glycerin, propylene glycol or polyethylene glycol); sugar alcohols (such as mannitol or sorbitol); suspending agents; surfactants or wetting agents (such as pluronics, PEG, sorbitan esters, polysorbates such as polysorbate 20, polysorbate, triton, tromethamine, lecithin, cholesterol, tyloxapal); stability enhancing agents (such as sucrose or sorbitol); tonicity enhancing agents (such as alkali metal halides, preferably sodium or potassium chloride, mannitol sorbitol); delivery vehicles; diluents; excipients and/or pharmaceutical adjuvants. REMINGTON'S PHARMACEUTICAL SCIENCES, 18"

Edition, (A.R. Genrmo, ed.), 1990, Mack Publishing Company provides additional details and options for suitable agents that can be incorporated into the pharmaceutical compositions.

[0480] In certain embodiments, the optimal pharmaceutical composition will be determined by one skilled in the art depending upon, for example, the intended route of administration, delivery format and desired dosage. *See*, for example, REMINGTON'S PHARMACEUTICAL SCIENCES, *supra*. In certain embodiments, such compositions may influence the physical state, stability, rate of *in vivo* release and rate of *in vivo* clearance of the antigen binding proteins disclosed. In certain embodiments, the primary vehicle or carrier in a pharmaceutical composition may be either aqueous or non-aqueous in nature. For example, a suitable vehicle or carrier may be water for injection or physiological saline solution. In certain embodiments, GIPR antigen binding protein compositions may be prepared for storage by mixing the selected composition having the desired degree of purity with optional formulation agents (REMINGTON'S PHARMACEUTICAL SCIENCES, *supra*) in the form of a lyophilized cake or an aqueous solution. Further, in certain embodiments, the GIPR antigen binding protein may be formulated as a lyophilizate using appropriate excipients such as sucrose.

[0481] The pharmaceutical compositions can be selected for parenteral delivery. Alternatively, the compositions may be selected for inhalation or for delivery through the digestive tract, such as orally. Preparation of such pharmaceutically acceptable compositions is within the skill of the art.

[0482] The formulation components are present preferably in concentrations that are acceptable to the site of administration. In certain embodiments, buffers are used to maintain the composition at physiological pH or at a slightly lower pH, typically within a pH range of from about 5 to about 8.

[0483] When parenteral administration is contemplated, the therapeutic compositions may be provided in the form of a pyrogen-free, parenterally acceptable aqueous solution comprising the desired human GIPR antigen binding protein in a pharmaceutically acceptable vehicle. A particularly suitable vehicle for parenteral injection is sterile distilled water in which the GIPR antigen binding protein is formulated as a sterile, isotonic solution, properly preserved. In certain embodiments, the preparation can involve the formulation of the desired molecule with an agent, such as injectable microspheres, bio-erodible particles, polymeric compounds (such as polylactic acid or polyglycolic acid), beads or liposomes, that may provide controlled or sustained release of the product which can be delivered *via* depot injection. In certain embodiments, hyaluronic acid may also be used, having the effect of promoting

sustained duration in the circulation. In certain embodiments, implantable drug delivery devices may be used to introduce the desired antigen binding protein.

[0484] Certain pharmaceutical compositions are formulated for inhalation. In some embodiments, GIPR antigen binding proteins are formulated as a dry, inhalable powder. In specific embodiments, GIPR antigen binding protein inhalation solutions may also be formulated with a propellant for aerosol delivery. In certain embodiments, solutions may be nebulized. Pulmonary administration and formulation methods therefore are further described in International Patent Application No. PCT/US94/001875, which is incorporated by reference and describes pulmonary delivery of chemically modified proteins. Some formulations can be administered orally. GIPR antigen binding proteins that are administered in this fashion can be formulated with or without carriers customarily used in the compounding of solid dosage forms such as tablets and capsules. In certain embodiments, a capsule may be designed to release the active portion of the formulation at the point in the gastrointestinal tract when bioavailability is maximized and pre-systemic degradation is minimized. Additional agents can be included to facilitate absorption of the GIPR antigen binding protein. Diluents, flavorings, low melting point waxes, vegetable oils, lubricants, suspending agents, tablet disintegrating agents, and binders may also be employed.

[0485] Some pharmaceutical compositions comprise an effective quantity of one or a plurality of GIPR antigen binding proteins in a mixture with non-toxic excipients that are suitable for the manufacture of tablets. By dissolving the tablets in sterile water, or another appropriate vehicle, solutions may be prepared in unit-dose form. Suitable excipients include, but are not limited to, inert diluents, such as calcium carbonate, sodium carbonate or bicarbonate, lactose, or calcium phosphate; or binding agents, such as starch, gelatin, or acacia; or lubricating agents such as magnesium stearate, stearic acid, or talc.

[0486] Additional pharmaceutical compositions will be evident to those skilled in the art, including formulations involving GIPR binding proteins in sustained- or controlled-delivery formulations. Techniques for formulating a variety of other sustained- or controlled-delivery means, such as liposome carriers, bio-erodible microparticles or porous beads and depot injections, are also known to those skilled in the art. *See*, for example, International Patent Application No. PCT/US93/00829, which is incorporated by reference and describes controlled release of porous polymeric microparticles for delivery of pharmaceutical compositions. Sustained-release preparations may include semipermeable polymer matrices in the form of shaped articles, *e.g.*, films, or microcapsules. Sustained release matrices may include polyesters, hydrogels, polylactides (as disclosed in U.S. Patent No. 3,773,919 and

European Patent Application Publication No. EP 058481, each of which is incorporated by reference), copolymers of L-glutamic acid and gamma ethyl-L-glutamate (Sidman *et al.*, 1983, *Biopolymers* 2:547-556), poly (2-hydroxyethyl-inethacrylate) (Langer *et al.*, 1981, *J. Biomed. Mater. Res.* 15:167-277 and Langer, 1982, *Chem. Tech.* 12:98-105), ethylene vinyl acetate (Langer *et al.*, 1981, *supra*) or poly-D(-)-3-hydroxybutyric acid (European Patent Application Publication No. EP 133,988). Sustained release compositions may also include liposomes that can be prepared by any of several methods known in the art. *See, e.g.*, Eppstein *et al.*, 1985, *Proc. Natl. Acad. Sci. U.S.A.* 82:3688-3692; European Patent Application Publication Nos. EP 036,676; EP 088,046 and EP 143,949, incorporated by reference.

[0487] Pharmaceutical compositions used for *in vivo* administration are typically provided as sterile preparations. Sterilization can be accomplished by filtration through sterile filtration membranes. When the composition is lyophilized, sterilization using this method may be conducted either prior to or following lyophilization and reconstitution. Compositions for parenteral administration can be stored in lyophilized form or in a solution. Parenteral compositions generally are placed into a container having a sterile access port, for example, an intravenous solution bag or vial having a stopper pierceable by a hypodermic injection needle.

[0488] In certain formulations, an antigen binding protein has a concentration of at least 10 mg/mL, 20 mg/mL, 30 mg/mL, 40 mg/mL, 50 mg/mL, 60 mg/mL, 70 mg/mL, 80 mg/mL, 90 mg/mL, 100 mg/mL or 150 mg/mL. In one embodiment, a pharmaceutical composition comprises the antigen binding protein, a buffer and polysorbate. In other embodiments, the pharmaceutical composition comprises an antigen binding protein, a buffer, sucrose and polysorbate. An example of a pharmaceutical composition is one containing 50-100 mg/mL of antigen binding protein, 5-20 mM sodium acetate, 5-10% w/v sucrose, and 0.002-0.008% w/v polysorbate. Certain, compositions, for instance, contain 65-75 mg/mL of an antigen binding protein in 9-11 mM sodium acetate buffer, 8-10% w/v sucrose, and 0.005-0.006% w/v polysorbate. The pH of certain such formulations is in the range of 4.5-6. Other formulations have a pH of 5.0-5.5 (e.g., pH of 5.0, 5.2 or 5.4).

[0489] Once the pharmaceutical composition has been formulated, it may be stored in sterile vials as a solution, suspension, gel, emulsion, solid, crystal, or as a dehydrated or lyophilized powder. Such formulations may be stored either in a ready-to-use form or in a form (*e.g.*, lyophilized) that is reconstituted prior to administration. Kits for producing a single-dose administration unit are also provided. Certain kits contain a first container having a dried

protein and a second container having an aqueous formulation. In certain embodiments, kits containing single and multi-chambered pre-filled syringes (*e.g.*, liquid syringes and lyosyringes) are provided. The therapeutically effective amount of a GIPR antigen binding protein-containing pharmaceutical composition to be employed will depend, for example, upon the therapeutic context and objectives. One skilled in the art will appreciate that the appropriate dosage levels for treatment will vary depending, in part, upon the molecule delivered, the indication for which the GIPR antigen binding protein is being used, the route of administration, and the size (body weight, body surface or organ size) and/or condition (the age and general health) of the patient. In certain embodiments, the clinician may titer the dosage and modify the route of administration to obtain the optimal therapeutic effect.

[0490] Dosing frequency will depend upon the pharmacokinetic parameters of the particular GIPR antigen binding protein in the formulation used. Typically, a clinician administers the composition until a dosage is reached that achieves the desired effect. The composition may therefore be administered as a single dose, or as two or more doses (which may or may not contain the same amount of the desired molecule) over time, or as a continuous infusion *via* an implantation device or catheter. Appropriate dosages may be ascertained through use of appropriate dose-response data. In certain embodiments, the antigen binding proteins can be administered to patients throughout an extended time period. In certain embodiments, the antigen binding protein is dosed every two weeks, every month, every two months, every three months, every four months, every five months, or every six months.

[0491] The route of administration of the pharmaceutical composition is in accord with known methods, *e.g.*, orally, through injection by intravenous, intraperitoneal, intracerebral (intra-parenchymal), intracerebroventricular, intramuscular, intra-ocular, intraarterial, intraportal, or intralesional routes; by sustained release systems or by implantation devices. In certain embodiments, the compositions may be administered by bolus injection or continuously by infusion, or by implantation device.

[0492] The composition also may be administered locally *via* implantation of a membrane, sponge or another appropriate material onto which the desired molecule has been absorbed or encapsulated. In certain embodiments, where an implantation device is used, the device may be implanted into any suitable tissue or organ, and delivery of the desired molecule may be *via* diffusion, timed-release bolus, or continuous administration.

[0493] It also may be desirable to use GIPR antigen binding protein pharmaceutical compositions according to the disclosed *ex vivo*. In such instances, cells, tissues or organs that have been removed from the patient are exposed to GIPR antigen binding protein

pharmaceutical compositions after which the cells, tissues and/or organs are subsequently implanted back into the patient.

[0494] A physician will be able to select an appropriate treatment indication and target lipid levels depending on the individual profile of a particular patient. One well-accepted standard for guiding treatment of hyperlipidemia is the Third Report of the National Cholesterol Education Program (NCEP) Expert Panel on Detection, Evaluation, and Treatment of the High Blood Cholesterol in Adults (Adult Treatment Panel III) Final Report, National Institutes of Health, NIH Publication No. 02-5215 (2002), the printed publication of which is hereby incorporated by reference in its entirety.

[0495] The efficacy of a particular dose can be assessed by reference to biomarkers or improvement in certain physiological parameters. Examples of suitable biomarkers include, the ratio of free cholesterol to plasma lipid, free cholesterol to membrane protein, phospatidylcholine to sphingomyelin, or HDL-C levels.

[0496] Also provided herein are compositions comprising a GIPR antigen binding protein and one or more additional therapeutic agents, as well as methods in which such agents are administered concurrently or sequentially with a GIPR antigen binding protein for use in the preventive and therapeutic methods disclosed herein. The one or more additional agents can be co-formulated with a GIPR antigen binding protein or can be co-administered with a GIPR antigen binding protein. In general, the therapeutic methods, compositions and compounds may also be employed in combination with other therapeutics in the treatment of various disease states, with the additional agents being administered concurrently.

[0497] A "GLP-1 receptor agonist" refers to compounds having GLP-1 receptor activity. Such exemplary compounds include exendins, exendin agonists, GLP-1(7-37), GLP-1(7-37) analogs, GLP-1(7-37) agonists, and the like. The terms "GLP-1 receptor agonist" and "GLP-1 receptor agonist compound" have the same meaning.

[0498] The term "exendin" includes naturally occurring (or synthetic versions of naturally occurring) exendin peptides that are found in the salivary secretions of the Gila monster. Exendins of particular interest include exendin-3 and exendin-4. The exendins, exendin analogs, and exendin agonists for use in the methods described herein may optionally be amidated, and may also be in an acid form, pharmaceutically acceptable salt form, or any other physiologically active form of the molecule.

[0499] In one embodiment, the GLP-1 receptor agonist is GLP-1(7-37) or a GLP-1(7-37) analog.

[0500] In one embodiment, administration of at least one GLP-1 receptor agonist in combination with administration of at least one GIPR antagonist provides sustained beneficial effects of at least one symptom of a metabolic disorder.

[0501] In one embodiment, the therapeutically effective amounts of a GLP-1 receptor agonist and a GIPR antagonist are synergistically effective amounts.

[0502] Exendin-4 (HGEGTFTSDLSKQMEEEAVRLFIEWLKNGGPSSGAPPPS-NH_2 (SEQ ID NO: 3163)) is a peptide found in the saliva of the Gila monster, *Heloderma suspectum*; and exendin-3 (HSDGTFTSDLSKQMEEEAVRLFIEWLKNGGPSSGAPPPS-NH_2(SEQ ID NO: 3164)) is a peptide found in the saliva of the beaded lizard, *Heloderma horridum*. Exendins have some amino acid sequence similarity to some members of the glucagon-like peptide (GLP) family. For example, exendin-4 has about 53% sequence identity with glucagon-like peptide-1(GLP-1)(7-37) (HAEGTFTSDVSSYLEGQAAKEFIAWLVKGRG (SEQ ID NO: 3184)). However, exendin-4 is transcribed from a distinct gene, not the Gila monster homolog of the mammalian proglucagon gene from which GLP-1 is expressed. Additionally, exendin-4 is not an analog of GLP-1(7-37) because the structure of synthetic exendin-4 peptide was not created by sequential modification of the structure of GLP-1. Nielsen et al., *Current Opinion in Investigational Drugs*, 4(4):401-405 (2003).

[0503] "Exendin analog" refers to peptides which elicit a biological activity of an exendin reference peptide, preferably having a potency equal to or better than the exendin reference peptide (e.g., exendin-4), or within five orders of magnitude (plus or minus) of potency compared to the exendin reference peptide, when evaluated by art-known measures such as receptor binding and/or competition studies as described, e.g., by Hargrove et al., *Regulatory Peptides*, 141:113-119 (2007), the disclosure of which is incorporated by reference herein. Preferably, the exendin analogs will bind in such assays with an affinity of less than 1 μM, and more preferably with an affinity of less than 3 nM, less than 1 nM, or less than 0.1 nM. The term "exendin analog" may also be referred to as "exendin agonist". In a preferred embodiment, the exendin analog is an exendin-4 analog.

[0504] Exemplary exendins and exendin analogs exendin-4 (SEQ ID NO: 3163); exendin-3 (SEQ ID NO: 3164); Leu^{14}-exendin-4 (SEQ ID NO: 3165); Leu^{14},Phe^{25}-exendin-4 (SEQ ID NO: 3166); Leu^{14},Ala^{19},Phe^{25}-exendin-4 (SEQ ID NO: 3167); exendin-4(1-30) (SEQ ID NO: 3168); Leu^{14}-exendin-4(1-30) (SEQ ID NO: 3169); Leu^{14},Phe^{25}-exendin-4(1-30) (SEQ ID NO: 3170); Leu^{14},Ala^{19},Phe^{25}-exendin-4(1-30) (SEQ ID NO: 3171); exendin-4(1-28) (SEQ ID NO: 3172); Leu^{14}-exendin-4(1-28) (SEQ ID NO: 3173); Leu^{14},Phe^{25}-exendin-4(1-28) (SEQ ID NO: 3174); Leu^{14},Ala^{19},Phe^{25}-exendin-4 (1-28) (SEQ ID NO: 3175);

Leu^{14},Lys^{17,20},Ala^{19},Glu^{21},Phe^{25},Gln^{28}-exendin-4 (SEQ ID NO: 3176);

Leu^{14},Lys^{17,20},Ala^{19},Glu^{21},Gln^{28}-exendin-4 (SEQ ID NO: 3177);

Phe^{4},Leu^{14},Gln^{28},Lys^{33},Glu^{34}, Ile^{35,36},Ser^{37}-exendin-4(1-37) (SEQ ID NO: 3180);

Phe^{4},Leu^{14},Lys^{17,20},Ala^{19},Glu^{21},Gln^{28}-exendin-4 (SEQ ID NO: 3181);

Val^{11},Ile^{13},Leu^{14},Ala^{16},Lys^{21},Phe^{25}-exendin-4 (SEQ ID NO: 3182); and exendin-4-Lys^{40} (SEQ ID NO: 3183).

[0505] In one embodiment, the GLP-1 receptor agonist compound is an exendin-4 analog that has at least 80% sequence identity to exendin-4 (SEQ ID NO: 3163); at least 85% sequence identity to exendin-4 (SEQ ID NO: 3163); at least 90% sequence identity to exendin-4 (SEQ ID NO: 3163); or at least 95% sequence identity to exendin-4 (SEQ ID NO: 3163).

[0506] "GLP-1(7-37) analogs" refers to peptides which elicit a biological activity similar to that of GLP-1(7-37), when evaluated by art-known measures such as receptor binding assays or in vivo blood glucose assays as described, e.g., by Hargrove et al.,*Regulatory Peptides*, 141:113-119 (2007), the disclosure of which is incorporated by reference herein. In one embodiment, the term "GLP-1(7-37) analog" refers to a peptide that has an amino acid sequence with 1, 2, 3, 4, 5, 6, 7 or 8 amino acid substitutions, insertions, deletions, or a combination of two or more thereof, when compared to the amino acid sequence of GLP-1(7-37). In some embodiments a simple nomenclature is used to describe the GLP-1 receptor agonist, e.g., [Gly^{8}] GLP-1(7-37) designates an analogue of GLP-1(7-37) wherein the naturally occurring Ala in position 8 has been substituted with Gly. Alternatively, the same molecule can be designated as "GLP1 A2G" or even more simply as "A2G". Similarly, [Gly^{8}, His^{3}, Gly^{30}] GLP-1 (7-37) can be written as "GLP1 A2G/E3H/R30G" or as "A2G/E3H/R30G".

[0507] Exemplary GLP-1(7-37) and GLP-1(7-37) analogs include In one embodiment, the GLP-1 receptor agonist is GLP-1(7-37) or a GLP-1(7-37) analog. In one embodiment, the GLP-1 receptor agonist is selected from the group consisting of GLP-1(7-37) (SEQ ID NO: 3184);

[0648] .

[0649] Peptidyl linkers. The linker moiety, if present, can be "peptidyl" in nature (i.e., made up of amino acids linked together by peptide bonds) and made up in length, preferably, of from 1 up to about 40 amino acid residues, more preferably, of from 10 up to about 30 amino acid residues, and most preferably of from 10 to about 20 amino acid residues. The amino acid residues in the linker are from among the twenty canonical amino acids, more preferably, glycine, alanine, proline, asparagine, glutamine, and /or serine. Even more preferably, a peptidyl linker is made up of a majority of amino acids that are sterically unhindered, such as glycine, serine, and alanine linked by a peptide bond. It is also desirable that, if present, a peptidyl linker be selected that avoids rapid proteolytic turnover in circulation *in vivo*. Some of these amino acids may be glycosylated, as is well understood by those in the art. For example, a useful linker sequence constituting a sialylation site is $X_1X_2NX_4X_5G$ (SEQ ID NO: 3337), wherein X_1, X_2,X_4 and X_5 are each independently any amino acid residue. Preferred linkers include polyglycines, polyserines, and polyalanines, or combinations of any of these. Some exemplary peptidyl linkers are poly$(Gly)_{1-8}$, particularly $(Gly)_3$, $(Gly)_4$ (SEQ ID NO:480), $(Gly)_5$ (SEQ ID NO:3338) and $(Gly)_7$ (SEQ ID NO:3339), as well as, GlySer and poly$(Gly)_4$Ser, such as "L15" (GGGGSGGGGSGGGGS; SEQ ID NO:3340), poly$(Gly\text{-}Ala)_{2-4}$ and poly$(Ala)_{1-8}$. Other specific examples of peptidyl linkers include $(Gly)_5$Lys (SEQ ID NO:3341), and $(Gly)_5$LysArg (SEQ ID NO:3342). Other examples of useful peptidyl linkers are: Other examples of useful peptidyl linkers are:

[0650] $(Gly)_3Lys(Gly)_4$ (SEQ ID NO:3343);

[0651] $(Gly)_3$AsnGlySer$(Gly)_2$ (SEQ ID NO:3344);

[0652] $(Gly)_3Cys(Gly)_4$ (SEQ ID NO:3345); and

[0653] GlyProAsnGlyGly (SEQ ID NO:3345).

[0654] To explain the above nomenclature, for example, $(Gly)_3Lys(Gly)_4$ means Gly-Gly-Gly-Lys-Gly-Gly-Gly-Gly (SEQ ID NO:3346). Other combinations of Gly and Ala are also useful.

[0655] Other preferred linkers are those identified herein as "L5" (GGGGS; or "G_4S"; SEQ ID NO:3347), "L10" (GGGGSGGGGS; SEQ ID NO:3348); "L20" (GGGGSGGGGSGGGGSGGGGS; SEQ ID NO:3349) ; "L25" (GGGGSGGGGSGGGGSGGGGSGGGGS; SEQ ID NO:3350) and any linkers used in the working examples hereinafter.

[0656] In some embodiments of the compositions of this invention, which comprise a peptide linker moiety, acidic residues, for example, glutamate or aspartate residues, are placed in the amino acid sequence of the linker moiety. Examples include the following peptide linker sequences: $(Gly_3Ser)_2$ (SEQ ID NO: 3303), $(Gly_4Ser)_2$ (SEQ ID NO: 3304), $(Gly_3Ser)_3$ (SEQ ID NO: 3305), $(Gly_4Ser)_3$ (SEQ ID NO: 3306), $(Gly_3Ser)_4$ (SEQ ID NO: 3307), $(Gly_4Ser)_4$ (SEQ ID NO: 3308), $(Gly_3Ser)_5$ (SEQ ID NO: 3309), $(Gly_4Ser)_5$ (SEQ ID NO: 3310), $(Gly_3Ser)_6$ (SEQ ID NO: 3311), $(Gly_4Ser)_6$, GGEGGG (SEQ ID NO:3312);

[0677] GGGGAGGGGAGGGGAGGGG (SEQ ID NO: 3333);

[0678] GAPAPAPAPAPAPAPAPAPAPG (SEQ ID NO: 3334);

[0679] GSGSATGGSGSVASSGSGSATGS (SEQ ID NO: 3335); and

[0680] GSGSATGGSGSVASSGSGSATHL (SEQ ID NO: 3336).

[0681] In other embodiments, the linker constitutes a phosphorylation site, e.g., X1X2YX4X5G (SEQ ID NO:3351), wherein X1, X2, X4, and X5 are each independently any amino acid residue; X1X2SX4X5G (SEQ ID NO:3352), wherein X1, X2,X4 and X5 are

each independently any amino acid residue; or X1X2TX4X5G (SEQ ID NO:3353), wherein X1, X2, X4 and X5 are each independently any amino acid residue.

[0682] The linkers shown here are exemplary; peptidyl linkers within the scope of this invention may be much longer and may include other residues. A peptidyl linker can contain, e.g., a cysteine, another thiol, or nucleophile for conjugation with a half-life extending moiety. In another embodiment, the linker contains a cysteine for conjugation to maleimide, iodoacetaamide or thioester, functionalized half-life extending moiety.

[0683] Another useful peptidyl linker is a large, flexible linker comprising a random Gly/Ser/Thr sequence, for example: GSGSATGGSGSTASSGSGSATH (SEQ ID NO:3283) or HGSGSATGGSGSTASSGSGSAT (SEQ ID NO:3354), that is estimated to be about the size of a 1 kDa PEG molecule. Alternatively, a useful peptidyl linker may be comprised of amino acid sequences known in the art to form rigid helical structures (e.g., Rigid linker: -AEAAAKEAAAKEAAAKAGG-// SEQ ID NO:3355).

[0684] Examples

[0685] **Preparation of GLP1-GIPR Fusion Expression Constructs**

[0686] A Golden Gate Assembly (GGA) strategy was used to create all sequences with the general molecule design described in figures 3, 8, 13, 18, 25 and 28. Briefly, GGA relies upon TypeII restriction enzymes to cut and seamlessly ligate together multiple DNA fragments. In this example, the multiple DNA fragments consisted of a synthetic nucleic acid sequence (gBlock, Integrated DNA Technologies, Coralville, IA) encoding signal, GLP1 and linker peptides; another gBlock encoding anti-GIPR variable domains; an antibody constant domain fragment released from a Parts vector; and the expression vector backbone. Table 7 breaks out these representative fragments.

Table 7

Fragments Assembled to create GLP1-GIPR Fusion Constructs

Fragment	Expression units encoded by the Fragment
gBlock1	Signal Peptide-GLP1-Linker
gBlock2	Variable domain of anti-GIPR antibody
Part	Constant domain corresponding to anti-GIPR variable domain
Vector	Desired Expression Vector

[0687] This strategy allows mixing and matching of different GLP1-Linker combinations with different antibody chains. Repetitiveness in some linkers necessitated that portions of their sequence be split between the Signal-GLP1 gBlock and the anti-GIPR variable domain gBlock, but they otherwise followed the same strategy.

[0688] The GGA reactions were composed of 10 ng of gBlock1, 10 ng of gBlock2, 10 ng of the Part vector, 10 ng of the expression vector, 1 µl 10x Fast Digest Reaction Buffer + 0.5 mM ATP (Thermo Fisher, Waltham, MA), 0.5 µl FastDigest Esp3I (Thermo Fisher, Waltham, MA), 1 µl T4 DNA Ligase (5U/µl, Thermo Fisher, Waltham, MA) and water to 10 µl. The reactions were performed over 15 cycles consisting of a 2 minute digestion step at 37 ºC and a 3 minute ligation step at 16 ºC. The 15 cycles were followed by a final 5 minute 37 ºC digestion step and a 5 minute enzyme inactivation step at 80 ºC. The GGA product can then be directly transformed into competent cells for growth and screened by standard sequencing methods. Representative constructs as shown by amino acid composition are shown in Table 8.

WO 2018/237095 PCT/US2018/038634

[0690] Transient Expression

[0691] GLP1 GIPR mAb fusion polypeptides of which the first 22 amino acids are the VK1 signal peptide) were transiently expressed in HEK 293-6E cells at $1.5x10^6$ cells/ml, transfected with 0.5 mg/L DNA (0.1 mg/L GLP1 GIPR in pTT5 vector with 0.4 mg/L empty pTT5 vector) (Durocher et al. NRCC, Nucleic Acids. Res. (2002) 30, e9) with 4 ml PEI/mg DNA in F17 media (Thermo Fisher). Yeastolate and Glucose were added to cultures 1 hour after transfection. Cells were grown in suspension in F17 expression medium supplemented with 0.1% Kolliphor, 6 mM L-Glutamine and 50 µg/ml Geneticin for 6 days and harvested for purification.

[0692] Stable Expression

[0693] GLP1 GIPR mAb fusion polypeptides of which the first 22 amino acids are the VK1 signal peptide) were stably expressed in suspension adapted CHO-K1 cells with the corresponding cDNAs. Transfections were performed using Lipofectamine LTX (Thermo Fisher) according to the manufacturer's protocol. Briefly, a total of 30 – 36 µg of the mammalian expression plasmid DNA was used at a 1:1 ratio for the antibody fusion dimer. For each, the plasmid DNA was added to 3-4 ml OPTI-MEM (Thermo Fisher) and mixed. In a separate tubes, 72-75 µl Lipofectamine LTX was added to 3-4 ml OPTI-MEM. The solutions were then incubated for 5 minutes at room temperature. To form the transfection complex, the DNA and Lipofectamine LTX mixtures for each were combined and incubated at room temperature for an additional 20 minutes.

[0694] Log phase CHO-K1 cells were pelleted by centrifugation (1200 - 1500 RPM for 5 minutes), washed one time with 1X PBS (Thermo Fisher) and resuspended to 1.5 - 2 $x10^6$ viable cells/mL in OPTI-MEM. For each transfection, 5 - 6 mL of the washed cells were added to a 125 mL volume shake flask. The DNA transfection complex was then added to the cells. The flasks were incubated at 36 °C with 5% CO_2, shaking at 150 RPM for 6 hours. To stop the transfection, 9-12 ml growth media was added to each flask, and cells were incubated for 48 to 72 hours.

[0695] To begin selection, cells were pelleted by centrifugation (1200 - 1500 RPM for 5 minutes) 72 hours post-transfection and, the media was replaced with 23 – 25 mL of growth media supplemented with antibiotics. Selection media was changed 2-3 times per week,

diluting cultures when needed to ensure cultures did not over-grow (≤5 - 6 x10^6 vc/mL), until cell viability and density recovered.

[0696] Large scale productions (2.3 L – 2.5 L) were carried out in shake flasks at 36 °C. Productions were seeded at 2 x10^6 vc/mL in production media. Conditioned media was harvested on day 5 by centrifugation followed by filtration (0.45 µm).

[0697] **Purification**

[0698] Cell culture media containing recombinantly expressed anti-GIPR antibody GLP1 fusions were loaded directly onto MabSelect SuRE (MSS) columns. Following loading, each MSS column was washed with 5 column volumes of 25 mM Tris-HCl, 100 mM Sodium Chloride, pH 7.4. The MSS column was further washed with 3 column volumes of 25 mM Tri-HCl, 500 mM L-Arginine, pH 7.5 and then washed with an additional 5 column volume of Tris-HCl, 100 mM Sodium Chloride, pH 7.4. Finally, the bound anti GIPR antibody GLP1 fusion molecules were eluted with 100 mM Sodium Acetate, pH 3.6. The MSS elutions were collected in sterile containers and immediately titrated with 2 M Tris-Base, pH 9.2 to a final pH of 5.8. The pH adjusted MSS elutions were filtered with 0.2 µm PES membrane for the next step which was cation exchange purification.

[0699] The pH adjusted MSS elution pools were loaded onto a cation exchange column SP Sepharose HP (SP HP) equilibrated with 20 mM 2-morpholin-4-ium-4-ylethanesulfonate (MES), pH 6.2. The column was washed with 3 column volumes of 20 mM MES, pH 6.2 and then the bound proteins were eluted with a linear gradient (20 column volume gradient from 0 to 140 mM sodium chloride, then an additional 10 column volume gradient from 140 mM sodium chloride to 160 mM sodium chloride). Following the linear gradient, the remaining bound material was removed by step elution of 20 mM MES, 400 mM sodium chloride, pH 6.2. Alternatively, for some constructs a 20 column volume gradient of 0 to 160 mM NaCl or 0 to 240 mM NaCl in 20 mM MES, pH 6.2 were used to eluted the bound protein. The UV-VIS threshold of 50 or 100 mAU was set for the collection of 0.25 column volume fractions for 1 to 53 ml columns and 0.05 column volume fractions for 245 ml columns. The purity of the cation exchange fractions were evaluated by analytical size exclusion, Caliper micro-capillary electrophoresis (Perkin Elmer) and mass spectrophotometry. The cation exchange fractions selected for the highest purity and yield were pooled and filtered with 0.2 µm MES membrane filter. The SP HP pools were buffer exchanged with 10 mM Potassium Phosphate, 160 mM L-Arginine, pH 6.0 and concentrated to the desired concentration with

30 kDa molecular cut off PES membrane. The formulated pools were filtered with 0.2 µm PES membrane and then stored at -80^0 C. Examples of the final yield and purity by size exclusion chromatography is shown in figures 4 and 9.

[0700] GLP-1 agonist activity

[0701] CHOK1 cells stably expressing the human GLP-1R were used to measure peptide or recombinant fusion-induced cAMP production in a homogeneous time-resolved fluorescence (HTRF) assay according to the manufacturer's instructions (CISBIO, cat# 62AM4PEJ). Serial diluted peptides or recombinant fusions were incubated with 40,000 cells in assay buffer (0.1% BSA, 500 uM IBMX in F12 media) for 15 min at 37 °C. Cells were then lysed with lysis buffer containing cAMP-d2 and cAMP cryptate (CISBIO) and incubated for 1 hour at room temperature before being measured in Evision plate reader (PerkinElmer). The cAMP levels were expressed as a fluorescence ratio of 665/620 nm. The GLP-1 activity assessments of both synthetic peptides is shown in figures 1 and 2. The GLP-1 activity assessments of the recombinant molecules is shown in figures 4, 9, 14, 15, 16, 17, 19, 23 and 29.

[0702] GIPR antagonist activity

[0703] HEK 293T cells stably expressing the human GIPR were used to measure peptide or recombinant fusion-induced cAMP generation in HTRF assay according to the manufacturer's instructions (Cisbio, cat# 62AM4PEJ). Serial diluted recombinant fusions or GIPR antibody were incubated with 30,000 cells in assay buffer (0.1% BSA, 500 uM IBMX in F12 media) for 30 min at 37 °C before treatment with GIP at final concentration of 0.05 nM. Cells were incubated for 30 min at 37 °C and then lysed in lysis buffer containing cAMP-d2 and cAMP cryptate (CISBIO) for 1 hour at room temperature. The fluorescence was measured in Evision plate reader (PerkinElmer) and the cAMP levels are expressed as a ratio of 665/620 nm. The GIPR antagonist activity assessments of the recombinant molecules is shown in figures 4, 9, 14, 15, 16, 17, 19, 23 and 29.

[0704] Pharmacokinetic Studies

[0705] Preliminary pharmacokinetic (PK) studies were conducted with CD-1 mice. The general design of the PK studies is outlined in figures 26 and 30. GIPR-GLP1 bispecific fusion constructs were dosed to Male CD-1 mice by intravenous bolus administration. Blood samples were taken at each time point post-dose. All plasma specimens were stored at approximately -70 °C (±10 °C) until transferred for subsequent analysis.

[0706] For LC-MS/MS, fusion construct stock solutions (1 mg/mL) were made from reference standards in A5Su buffer and stored at -70 °C. 1 mg/mL fusion construct stock solutions were used to prepare 100 µg/mL working solution in A5Su buffer and were stored in a refrigerator at 2 to 8 °C. Standard samples were prepared in CD-1 mouse plasma. Standards concentrations of 100, 250, 500, 1000, 2500, 5000 and 10,000 ng/mL were prepared by serial dilution of a freshly prepared 10,000 ng/mL solution in mouse plasma using the 100 µg/mL fusion construct working solution. 25 µl mouse plasma samples were aliquoted into the appropriate well of a 96-well plate, followed by the addition of 25 µL of magnetic beads immobilized with anti-human Fc capture antibody Ab35. Samples were then incubated for 60 min at room temperature. After washing with 250 mM NH_4HCO_3 buffer, the beads were denatured using 8 M urea and reduced by tris(2-carboxyethyl) phosphine (TCEP), and followed by trypsin digestion. After quenched with formic acid, samples were centrifuged and the supernatant was transferred to a 96-well plate then injected (10 µL) onto the LC-MS/MS system for analysis.

[0707] The LC-MS/MS consisted of an Acquity UPLC system (Waters, Milford, MA) coupled to a 5500 QTRAP mass spectrometer (AB Sciex, Toronto, Canada) with a Turbo IonSpray® ionization source. The analytical column was an Acquity UPLC BEH C18 column (2.1 mm × 100 mm). The mobile phases were 0.1% formic acid in water (mobile phase A) and 0.1% formic acid in acetonitrile (mobile phase B). Data was collected and processed using AB Sciex Analyst® software (version 1.5).

[0708] The calibration curve was derived from the peak area ratios (fusion construct tryptic surrogate peptide /internal standard) versus the concentrations of the corresponding fusion construct standards using $1/x^2$ weighted linear least-squares regression. The regression equations from the calibration standards was used to back calculate the measured concentrations for each standard and plasma samples.

[0709] Two assays for GIPr-GLP1 fusion constructs

[0710] Intact fusion assay:

[0711] Immunoprecipitation capture /detection: Ab 35 (anti-huFc) – GLP1 N-term peptide

[0712] Total antibody assay:

[0713] Immunoprecipitation capture /detection: Ab 35 (anti-huFc) – huFc peptide

[0714] Noncompartmental analysis was performed on individual mouse plasma concentration-nominal time data using Phoenix® WinNonlin® (version 6.4; Certara, Princeton, NJ). Individual concentration values less than the lower limit of qualification (LLOQ, 250 ng/mL) were reported as below the quantitation limit (BQL) and set to zero for the calculation of summary statistics. Mean concentration values less than the LLOQ were not reported or plotted. All concentrations values less than the LLOQ were excluded from the noncompartmental analysis. Nominal doses and nominal sampling times were used for PK analysis.

[0715] The following PK parameters were estimated:

[0716] The initial concentration (C_0) value after intravenous administration was estimated by back extrapolation to time zero using the first 2 observed declining concentration values.

[0717] The area under the concentration-time curve from time zero to infinity (AUCinf) was calculated by the linear trapezoidal method.

[0718] The terminal-phase half-life ($t_{1/2,z}$) was calculated as $\ln 2/\lambda_z$. λ_z is the first-order rate constant of drug associated with the terminal portion of the curve.

[0719] Systemic clearance (CL) was calculated as:

[0720] CL=Dose/AUCinf after intravenous administration

[0721] The pharmacokinetic properties of a select set of the recombinant molecules is shown in figures 7, 12, 20, 21, 22, 24, 27, 31 and 37.

[0722] In Vivo Pharmacodynamic Studies

[0723] Diabetic mice were selected primarily to screen for GLP-1 activity of our bispecific molecules. Molecules were selected based on their potential to reduce plasma glucose levels at different time points post injection. In addition, body weight loss or inhibition of body weight gain was also measured indicative of GLP-1 activity, GIPR inhibition, or a combination of both, either from co-administration of each or from the bispecific molecule. Diet-induced obese mice (DIO) were also used as a model to measure weight loss effects from treatment with different molecules.

[0724] Male db/db mice (#642) were obtained from Jackson Laboratories (Bar Harbor, ME) and delivered at 8-9 weeks of age. Upon arrival, mice were group-housed at four per cage and maintained in controlled environmental conditions with 12 hour light (6:30 AM – 6:30 PM) and dark cycles (6:30 PM – 6:30 AM). Mice were fed a standard rodent chow diet (2020x Harlan Teklad) with free-access to drinking water.

[0725] Mice were acclimated to environment conditions for one to two weeks. Prior to dosing, mice were handled and body weight measurements were taken. One day prior to dosing, conscious mice were bled from the retro-orbital sinus for plasma glucose measurement using a handheld AlphaTrak glucometer designed for rodent plasma (Zoetis, Parsippany, New Jersey). On the day of dosing, baseline plasma glucose and body weight measurements were taken. The cage mean for plasma glucose and body weight were used to stratify cages into treatment groups. Mice were maintained in their home cages. Following administration of test article, plasma glucose was measured at various time points at (3 and 6hr) and plasma glucose and body weight measurements were taken every 24hrs thereafter. Plasma glucose levels were measured until levels returned to near baseline levels and body weight measurements were taken until the rate of body weight gain was similar to Vehicle-treated control group. Results of the body weight studies for a select set of the recombinant molecules is shown in figures 5, 6, 10 and 11.

[0726] A single study was performed using DIO mice. Male DIO mice (#380050) were obtained from Jackson Laboratories (Bar Harbor, ME) and delivered at 18 weeks of age and 12 weeks on high-fat diet (HFD: D12492, Research Diets, New Brunswick, NJ). Mice were single-housed and acclimated for an additional 5 weeks. The objective of this study was to confirm GIPR Ab effect when fused with GLP-1 at different sites and with different linkers. Since the GLP-1 peptide is the same across all the molecules, the greatest and most sustained body weight loss effect would indicate retention of GIPR Ab activity when fused with GLP-1. The screen molecules were tested with a GIPR Ab that cross-reacts in mice. A different GIPR Ab 2G10 that is minimally active in mice was also used as a negative control. Any of our molecules that behaved like the 2G10 fused GIPR Ab would indicate that our fusion molecule adversely affected GIPR Ab activity. Mice were treated with a single injection of Vehicle, or various bispecific fusion molecules dosed at 0.5mg/kg. These molecules all consisted of various combinations of the same GLP-1 peptide fused to either the heavy or light chain of GIPR Ab 5G12 by 1 of 2 possible linkers. Body weight was measured daily until body weights began to rebound back to baseline levels. Results of the body weight study for a select set of the recombinant molecules is shown in figure 36.

[0727] In an effort to modulate and screen the GLP-1 potency of various bispecific molecules, C57BL6 mice were selected to run acute glucose tolerance tests (IPGTT) following administration of the bispecific molecule as outlined in figures 32 and 34. C57BL6 mice were obtained from Charles River Laboratories (Hollister, CA) and delivered at 8-9 weeks of age. Upon arrival, mice were single-housed to prevent fighting and maintained in controlled environmental conditions with 12 hour light (6:30 AM – 6:30 PM) and dark cycles (6:30 PM – 6:30 AM). Mice were fed a standard rodent chow diet (2020x Harlan Teklad) with free-access to drinking water.

[0728] Mice were acclimated to environment conditions and handled for one week. On the day of the study, conscious mice were bled from the retro-orbital sinus for plasma glucose measurement using an AlphaTrak meter (Zoetis, Parsippany, New Jersey) and a body weight measurement was also taken. After all mice have been weighed and bled, individual plasma glucose and body weight values were used to stratify mice into treatment groups. Mice were administered by intraperitoneal (IP) injection the test article and placed into a fresh cage and fasted for four hours. Following a four hour fast, a plasma glucose measurement was taken (0 min) and immediately injected with 50% dextrose (2 g/kg, IP, Hospira) for the glucose challenge. Plasma glucose was subsequently measured at 30 and 90 minutes post glucose injection. Fresh chow was weighed and placed back into the cages after the 90 minute plasma glucose measurement. Body weight and food intake was measured approximately every 24 hours post the test article dose to observe the body weight loss and food intake inhibition effects and rebound. Results of the IPGTT on a select set of the recombinant molecules is shown in figures 33 and 35.

CLAIMS

What is claimed is:

1. A composition comprising:

a) an antibody or functional fragment thereof that binds to and antagonizes human Gastric Inhibitory Peptide Receptor (GIPR), wherein the antibody or functional fragment thereof comprises a light chain variable region and a heavy chain variable region; and

b) a Glucagon-like Polypeptide-1 (GLP-1) receptor agonist comprising the amino acid sequence of SEQ ID NO: 3239, wherein the C-terminus of the GLP-1 receptor agonist is fused to N-terminus of either the light chain variable region or the heavy chain variable region.

2. The composition of claim 1, wherein said human GIPR has a sequence comprising a sequence selected from the group consisting of SEQ ID NO: 3141, SEQ ID NO: 3143, and SEQ ID NO: 3145.

3. The composition of claim 1 or 2, wherein said antibody is a monoclonal antibody, a recombinant antibody, a human antibody, a humanized antibody, a chimeric antibody, or a multispecific antibody.

4. The composition of claim 1, wherein said functional fragment is a Fab fragment, a Fab' fragment, or a F(ab')2 fragment.

5. The composition of claim 3, wherein said antibody is a human antibody.

6. The composition of claim 3, wherein said antibody is a monoclonal antibody.

7. The composition of claim 3, wherein said antibody or functional fragment thereof is of the IgG1-, IgG2-, IgG3-, or IgG4-type.

8. The composition of claim 7, wherein said antibody or functional fragment thereof is of the IgG1- or the IgG2-type.

2018288852 31 Jan 2025

9. The composition of claim 3, wherein said antibody comprises a CDRL1, a CDRL2, a CDRL3, a CDRH1, a CDRH2, and a CDRH3, wherein each CDRL1, CDRL2, CDRL3, CDRH1, CDRH2, and CDRH3, respectively, comprises a sequence selected from the group consisting of SEQ ID NO: 629, SEQ ID NO: 786, SEQ ID NO: 943, SEQ ID NO: 1100, SEQ ID NO: 1257, and SEQ ID NO: 1414; SEQ ID NO: 630, SEQ ID NO: 787, SEQ ID NO: 944, SEQ ID NO: 1101, SEQ ID NO: 1258, and SEQ ID NO: 1415; SEQ ID NO: 631, SEQ ID NO: 788, SEQ ID NO: 945, SEQ ID NO: 1102, SEQ ID NO: 1259, and SEQ ID NO: 1416; SEQ ID NO: 632, SEQ ID NO: 789, SEQ ID NO: 946, SEQ ID NO: 1103, SEQ ID NO: 1260, and SEQ ID NO: 1417; SEQ ID NO: 633, SEQ ID NO: 790, SEQ ID NO: 947, SEQ ID NO: 1104, SEQ ID NO: 1261, and SEQ ID NO: 1418; SEQ ID NO: 634, SEQ ID NO: 791, SEQ ID NO: 948, SEQ ID NO: 1105, SEQ ID NO: 1262, and SEQ ID NO: 1419; SEQ ID NO: 635, SEQ ID NO: 792, SEQ ID NO: 949, SEQ ID NO: 1106, SEQ ID NO: 1263, and SEQ ID NO: 1420; SEQ ID NO: 636, SEQ ID NO: 793, SEQ ID NO: 950, SEQ ID NO: 1107, SEQ ID NO: 1264, and SEQ ID NO: 1421; SEQ ID NO: 637, SEQ ID NO: 794, SEQ ID NO: 951, SEQ ID NO: 1108, SEQ ID NO: 1265, and SEQ ID NO: 1422; SEQ ID NO: 638, SEQ ID NO: 795, SEQ ID NO: 952, SEQ ID NO: 1109, SEQ ID NO: 1266, and SEQ ID NO: 1423; SEQ ID NO: 639, SEQ ID NO: 796, SEQ ID NO: 953, SEQ ID NO: 1110, SEQ ID NO: 1267, and SEQ ID NO: 1424; SEQ ID NO: 640, SEQ ID NO: 797, SEQ ID NO: 954, SEQ ID NO: 1111, SEQ ID NO: 1268, and SEQ ID NO: 1425; SEQ ID NO: 641, SEQ ID NO: 798, SEQ ID NO: 955, SEQ ID NO: 1112, SEQ ID NO: 1269, and SEQ ID NO: 1426; SEQ ID NO: 642, SEQ ID NO: 799, SEQ ID NO: 956, SEQ ID NO: 1113, SEQ ID NO: 1270, and SEQ ID NO: 1427; SEQ ID NO: 643, SEQ ID NO: 800, SEQ ID NO: 957, SEQ ID NO: 1114, SEQ ID NO: 1271, and SEQ ID NO: 1428; SEQ ID NO: 644, SEQ ID NO: 801, SEQ ID NO: 958, SEQ ID NO: 1115, SEQ ID NO: 1272, and SEQ ID NO: 1429; SEQ ID NO: 645, SEQ ID NO: 802, SEQ ID NO: 959, SEQ ID NO: 1116, SEQ ID NO: 1273, and SEQ ID NO: 1430; SEQ ID NO: 646, SEQ ID NO: 803, SEQ ID NO: 960, SEQ ID NO: 1117, SEQ ID NO: 1274, and SEQ ID NO: 1431; SEQ ID NO: 647, SEQ ID NO: 804, SEQ ID NO: 961, SEQ ID NO: 1118, SEQ ID NO: 1275, and SEQ ID NO: 1432; SEQ ID NO: 648, SEQ ID NO: 805, SEQ ID NO: 962, SEQ ID NO: 1119, SEQ ID NO: 1276, and SEQ ID NO: 1433; SEQ ID NO: 649, SEQ ID NO: 806, SEQ ID NO: 963, SEQ ID NO: 1120, SEQ ID NO: 1277, and SEQ ID NO: 1434; SEQ ID NO: 650, SEQ ID NO: 807, SEQ ID NO: 964, SEQ ID NO: 1121, SEQ ID NO: 1278, and SEQ ID NO: 1435; SEQ ID NO: 651, SEQ ID

heavy chain comprising SEQ ID NO: 585; a light chain comprising SEQ ID NO: 429 and a heavy chain comprising SEQ ID NO: 586; a light chain comprising SEQ ID NO: 430 and a heavy chain comprising SEQ ID NO: 587; a light chain comprising SEQ ID NO: 431 and a heavy chain comprising SEQ ID NO: 588; a light chain comprising SEQ ID NO: 432 and a heavy chain comprising SEQ ID NO: 589; a light chain comprising SEQ ID NO: 433 and a heavy chain comprising SEQ ID NO: 590; a light chain comprising SEQ ID NO: 434 and a heavy chain comprising SEQ ID NO: 591; a light chain comprising SEQ ID NO: 435 and a heavy chain comprising SEQ ID NO: 592; a light chain comprising SEQ ID NO: 436 and a heavy chain comprising SEQ ID NO: 593; a light chain comprising SEQ ID NO: 437 and a heavy chain comprising SEQ ID NO: 594; a light chain comprising SEQ ID NO: 438 and a heavy chain comprising SEQ ID NO: 595; a light chain comprising SEQ ID NO: 439 and a heavy chain comprising SEQ ID NO: 596; a light chain comprising SEQ ID NO: 440 and a heavy chain comprising SEQ ID NO: 597; a light chain comprising SEQ ID NO: 441 and a heavy chain comprising SEQ ID NO: 598; a light chain comprising SEQ ID NO: 442 and a heavy chain comprising SEQ ID NO: 599; a light chain comprising SEQ ID NO: 443 and a heavy chain comprising SEQ ID NO: 600; a light chain comprising SEQ ID NO: 444 and a heavy chain comprising SEQ ID NO: 601; a light chain comprising SEQ ID NO: 445 and a heavy chain comprising SEQ ID NO: 602; a light chain comprising SEQ ID NO: 446 and a heavy chain comprising SEQ ID NO: 603; a light chain comprising SEQ ID NO: 447 and a heavy chain comprising SEQ ID NO: 604; a light chain comprising SEQ ID NO: 448 and a heavy chain comprising SEQ ID NO: 605; a light chain comprising SEQ ID NO: 449 and a heavy chain comprising SEQ ID NO: 606; a light chain comprising SEQ ID NO: 450 and a heavy chain comprising SEQ ID NO: 607; a light chain comprising SEQ ID NO: 451 and a heavy chain comprising SEQ ID NO: 608; a light chain comprising SEQ ID NO: 452 and a heavy chain comprising SEQ ID NO: 609; a light chain comprising SEQ ID NO: 453 and a heavy chain comprising SEQ ID NO: 610; a light chain comprising SEQ ID NO: 454 and a heavy chain comprising SEQ ID NO: 611; a light chain comprising SEQ ID NO: 455 and a heavy chain comprising SEQ ID NO: 612; a light chain comprising SEQ ID NO: 456 and a heavy chain comprising SEQ ID NO: 613; a light chain comprising SEQ ID NO: 457 and a heavy chain comprising SEQ ID NO: 614; a light chain comprising SEQ ID NO: 458 and a heavy chain comprising SEQ ID NO: 615; a light chain comprising SEQ ID NO: 459 and a

heavy chain comprising SEQ ID NO: 616; a light chain comprising SEQ ID NO: 460 and a heavy chain comprising SEQ ID NO: 617; a light chain comprising SEQ ID NO: 461 and a heavy chain comprising SEQ ID NO: 618; a light chain comprising SEQ ID NO: 462 and a heavy chain comprising SEQ ID NO: 619; a light chain comprising SEQ ID NO: 463 and a heavy chain comprising SEQ ID NO: 620; a light chain comprising SEQ ID NO: 464 and a heavy chain comprising SEQ ID NO: 621; a light chain comprising SEQ ID NO: 465 and a heavy chain comprising SEQ ID NO: 622; a light chain comprising SEQ ID NO: 466 and a heavy chain comprising SEQ ID NO: 623; a light chain comprising SEQ ID NO: 467 and a heavy chain comprising SEQ ID NO: 624; a light chain comprising SEQ ID NO: 468 and a heavy chain comprising SEQ ID NO: 625; a light chain comprising SEQ ID NO: 469 and a heavy chain comprising SEQ ID NO: 626; a light chain comprising SEQ ID NO: 470 and a heavy chain comprising SEQ ID NO: 627; and a light chain comprising SEQ ID NO: 471 and a heavy chain comprising SEQ ID NO: 628.

12. The composition of any one of claims 1-11, wherein the composition further comprises a linker peptide in between the C-terminus of the GLP-1 receptor agonist and the N-terminus of the light chain variable region or heavy chain variable region.

13. The composition of claim 12, wherein the linker peptide is selected from the group consisting of $(Gly_3Ser)_2$; $(Gly_4Ser)_2$; $(Gly_3Ser)_3$; $(Gly_4Ser)_3$; $(Gly_3Ser)_4$; $(Gly_4Ser)_4$; $(Gly_3Ser)_5$; $(Gly_4Ser)_5$; $(Gly_3Ser)_6$; $(Gly_4Ser)_6$; GGEGGG (SEQ ID NO:3265); GGEEEGGG (SEQ ID NO:3266); GEEEG (SEQ ID NO:3267); GEEE (SEQ ID NO:3258); GGDGGG (SEQ ID NO:3269); GGDDDGG (SEQ ID NO:3270); GDDDG (SEQ ID NO:3271); GDDD (SEQ ID NO:3272); GGGGSDDSDEGSDGEDGGGGS (SEQ ID NO:3273); WEWEW (SEQ ID NO:3274); FEFEF (SEQ ID NO:3275); EEEWWW (SEQ ID NO:3276); EEEFFF (SEQ ID NO:3277); WWEEEWW (SEQ ID NO:3278); FFEEEFF (SEQ ID NO:3279); GGGG (SEQ ID NO: 3327); GGGGSGGGG (SEQ ID NO: 3328); GAPAPAPAPG (SEQ ID NO: 3329); GGGGAGGGGAGGGG (SEQ ID NO: 3330); GAPAPAPAPAPAPG (SEQ ID NO: 3331); GAPAPAPAPAPAPAPAPG (SEQ ID NO: 3332); GGGGAGGGGAGGGGAGGGG (SEQ ID NO: 3333); GAPAPAPAPAPAPAPAPAPAPG (SEQ ID NO: 3334); GSGSATGGSGSVASSGSGSATGS (SEQ ID NO: 3335); and GSGSATGGSGSVASSGSGSATHL (SEQ ID NO: 3336).

2018288852 31 Jan 2025

14. The composition of claim 1, wherein the GLP-1 receptor agonist consists of the amino acid sequence of SEQ ID NO: 3239.

15. A fusion construct comprising:

a) an antibody that binds to and antagonizes Gastric Inhibitory Peptide Receptor (GIPR), wherein the antibody comprises a light chain variable region having the amino acid sequence of SEQ ID NO: 74 and a heavy chain variable region comprising the amino acid sequence of SEQ ID NO: 231; and

b) a Glucagon-like Polypeptide-1 (GLP-1) receptor agonist comprising the amino acid sequence of SEQ ID NO: 3239, wherein the C-terminus of the GLP-1 receptor agonist is fused to N-terminus of either the light chain variable region or the heavy chain variable region.

16. The fusion construct of claim 15, wherein the antibody comprises a light chain polypeptide amino acid sequence of SEQ ID NO: 388 and a heavy chain polypeptide amino acid sequence of SEQ ID NO: 545.

17. The fusion construct of claim 15 or claim 16 further comprising:

a linker peptide that fuses the C-terminus of the GLP-1 receptor agonist to the N-terminus of the light chain variable region or the heavy chain variable region of the antibody.

18. The fusion construct of claim 17, wherein the linker peptide comprises the amino acid sequence of SEQ ID NO: 3333.

19. The fusion construct of any one of claims 15–18, wherein the C-terminus of the GLP-1 receptor agonist is fused to the N-terminus of the light chain variable region of the antibody.

20. The fusion construct of any one of claims 15–18, wherein the C-terminus of the GLP-1 receptor agonist is fused to the N-terminus of the heavy chain variable region of the antibody.

21. The fusion construct of any one of claims 15–18, wherein the GLP-1 receptor agonist consists of the amino acid sequence of SEQ ID NO: 3239.

2018288852 31 Jan 2025

22. A glucagon like polypeptide-1 (GLP-1) receptor agonist comprising the amino acid sequence of SEQ ID NO: 3239.

23. A fusion construct comprising the GLP-1 receptor agonist polypeptide of claim 22.

24. A method of treating a metabolic disorder in a subject, the method comprising administering to the subject a therapeutically effective amount of the composition of any one of claims 1–14, the fusion construct of any one of claims 15-21, or the GLP-1 receptor agonist of claim 22.

25. Use of the composition of any one of claims 1–14, the fusion construct of any one of claims 15-21, or the GLP-1 receptor agonist of claim 22 in the manufacture of the medicament for treating a metabolic disorder in a subject.

26. The method of claim 24 or the use of claim 25, wherein the metabolic disorder is a glucose metabolism disorder.

27. The method or use of claim 26, wherein the glucose metabolism disorder is selected from hyperglycemia, hyperinsulinemia, glucose intolerance, insulin resistance, and diabetes mellitus.

28. The method of claim 24 or the use of claim 25, wherein the metabolic disorder is obesity.

- > 1000-fold potency decrease with truncation of single N-terminal residue.
- Truncation to Gly35 well tolerated and eliminates potential Arg36 trypsin site.
- His-Ala is the DPP-IV recognition sequence. Minimal impact when Ala8 substituted with Gly, Val, and Ser, but 500-fold decrease when substituted with Leu.
- Replacement of Glu9 with Gln does not shift potency and may reduce Gly8-Glu9 cleavage observed in vivo from mouse.

FIG. 26

Mouse pk study

- Purpose
  - Evaluate the single dose pharmacokinetics of 4 GIPR-GLP1 recombinant fusions in mice
- Constructs
  - GLP1 analog: A2G/G16E/A24E/V27K/K28N/R30G
  - Linkers: 1Kmod or G4A
  - Fusion to heavy chain (HC) or light chain (LC) of 2G10

LMR	Description
PL-50123	GLP1(Ana)-1K-αhuGIPR(2G10) HC
PL-50124	GLP1(Ana)-G4A-αhuGIPR(2G10) HC
PL-50125	GLP1(Ana)-1K-αhuGIPR(2G10) LC
PL-50126	GLP1(Ana)-G4A-αhuGIPR(2G10) LC

- Study design
  - Each construct administered as 5 mg/kg IV bolus to CD-1 mice (n=3 per group)
  - Plasma collected at 0.083, 24, 48, 96, 168, 240, and 336 hr post-dose for PK bioanalysis by intact and total assay

FIG. 30

Mouse pk study

- Purpose
  - Evaluate the single dose pharmacokinetics of 4 GIPR-GLP1 recombinant fusions in mice
- Constructs
  - GLP1 analog: A2G/G16E/A24E/R30G
  - Linkers: 1Kmod or G4A
  - Fusion to heavy chain (HC) or light chain (LC) of 2G10

LMR	Description
PL-51409	GLP1(Ana)-1K-αhuGIPR(2G10) HC
PL-51408	GLP1(Ana)-G4A-αhuGIPR(2G10) HC
PL-51406	GLP1(Ana)-1K-αhuGIPR(2G10) LC
PL-51407	GLP1(Ana)-G4A-αhuGIPR(2G10) LC

- Study design
  - Each construct administered as 5 mg/kg IV bolus to CD-1 mice (n=3 per group)
  - Plasma collected at 0.083, 24, 48, 96, 168, 240, and 336 hr post-dose for PK bioanalysis by intact and total assay

FIG. 31A

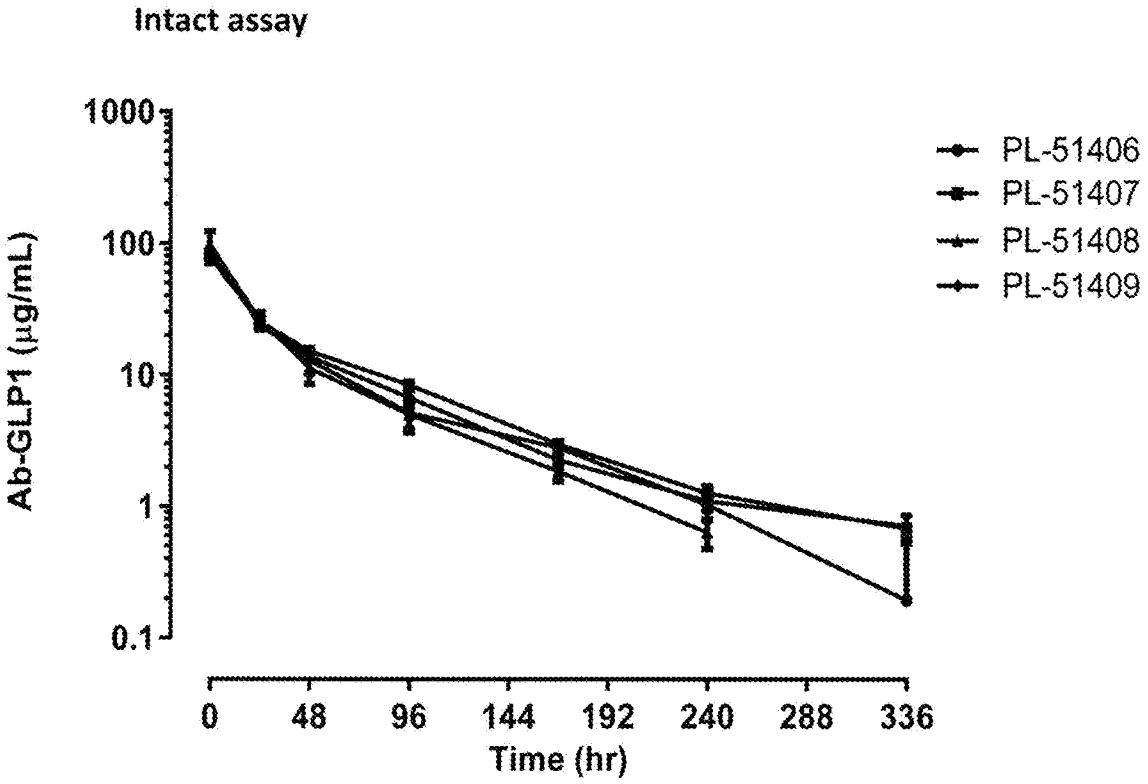

FIG. 31B

LMR	C_0 (µg/mL)	AUC_{0-t} (hr*µg/mL)	CL_{0-t} (mL/hr/kg)	$T_{1/2,terminal}$ (hr)
PL-51409	91.6	2860	1.75	70.0
PL-51408	98.3	2660	1.88	47.7
PL-51406	78.7	2600	1.92	57.9
PL-51407	81.1	2980	1.68	68.8

FIG. 31C

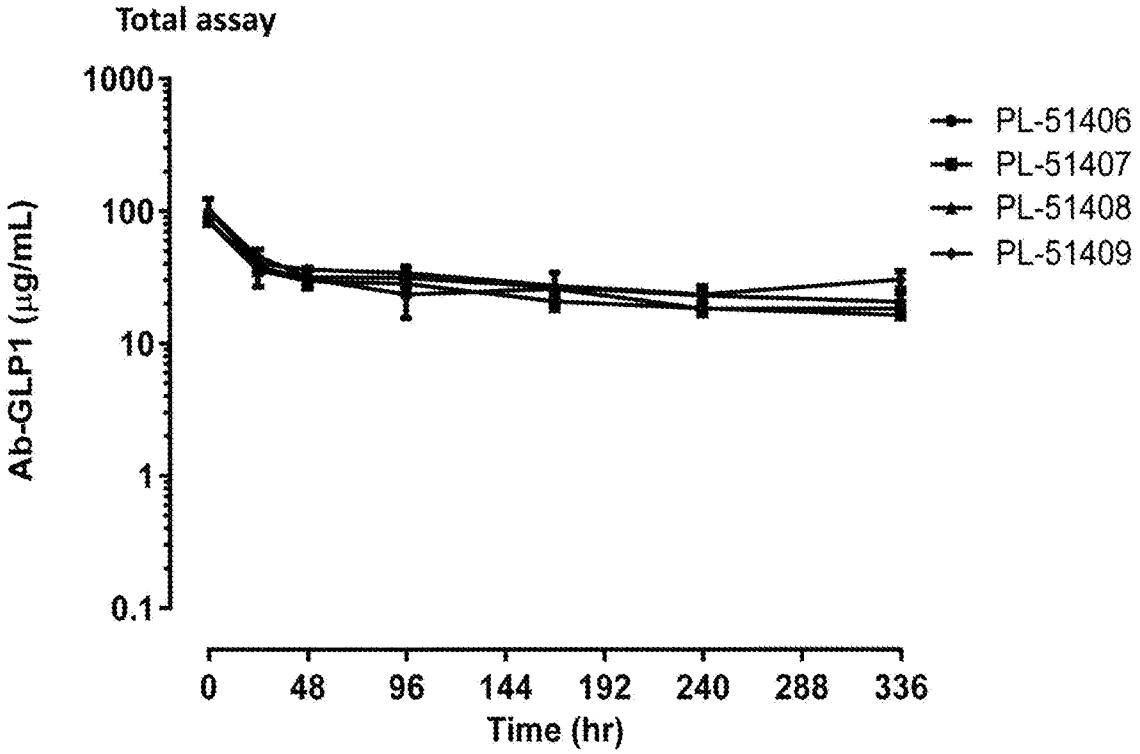

FIG. 31D

LMR	C_0 (µg/mL)	AUC_{0-t} (hr*µg/mL)	CL_{0-t} (mL/hr/kg)	$T_{1/2,terminal}$ (hr)
PL-51409	100	10900	0.459	*n/a
PL-51408	104	10200	0.490	n/a
PL-51406	85.5	8740	0.572	n/a
PL-51407	83.5	8450	0.592	n/a

*Terminal slope insufficient for accurate half-life determination
