Abstract:
The present invention provides methods for treating tendinopathy in the absence of inflammation by the transdermal administration of nitroglycerin. Such methods include methods for relieving pain associated with such tendinopathies. and the use of a transdermal patch configured to deliver glyceryl trinitrate at a rate of 5 mcg/hr to about 85 mcg/hr.
INTERNATIONAL SEARCH REPORT

A CLASSIFICATION OF SUBJECT MATTER

IPC(8) A61F 13/00

USPC 424/449

According to International Patent Classification (IPC) or to both national classification and IPC

B FIELDS SEARCHED

Minimum documentation searched (classification system followed by classification symbols)

U S 424/449

Documentation searched other than minimum documentation to the extent that such documents are included in the fields searched

Electronic data base consulted during the international search (name of data base and, where practicable, search terms used)

Please See Continuation Sheet

C DOCUMENTS CONSIDERED TO BE RELEVANT

Category Citation of document, with indication, where appropriate, of the relevant passages

Relevant to claim No

1-19

Date of the actual completion of the international search 10 April 2008 (10 04 2008)

Date of mailing of the international search report 28 APR 2008
