(54) Title: SYSTEM AND METHOD FOR CONFIGURING A CONTROL SYSTEM

(57) Abstract: A system for configuring a building automation control system includes a user interface configured to receive system data regarding specifications for the building automation control system from a user. Configuration logic is coupled to the user interface and is used to generate at least one view of the building automation control system. Packaging logic is coupled to the user interface and is used to generate at least one deliverable. A common data storage system is coupled to the configuration logic and the packaging logic. The data storage system is commonly accessible to the configuration logic and the packaging logic and includes a set of predefined preferences. The at least one view is generated based on at least the system data and the predefined preferences.
