United States Patent Office.

M. C. BATTEY, OF WASHINGTON, DISTRICT OF COLUMBIA.

Letters Patent No. 89,967, dated May 11, 1869.

IMPROVEMENT IN FASTENINGS FOR COLLARS.

The Schedule referred to in these Letters Patent and making part of the same.

To all whom it may concern :

Be it known that I, M. C. BATTEY, of the city and county of Washington, in the District of Columbia, have invented a new and improved Fastening for Collars; and I do hereby declare that the following is a full, clear, and exact description of the construction and operation of the same, reference being had to the accompanying drawings, making a part of this specification, in which—

Figure 1 is a perspective view.

Figure 2, a front view.

The object of this invention is to provide for public use a simple, cheap, and convenient fastening for collars, which can be readily and easily applied to any collar, and which will hold the same securely fastened.

To accomplish this object, I construct a thin metallic plate, A, provided at one end with one or more pointed projections *a a*, and near the other, with an eccentric or pear-shaped slot, *o*, adapted to receive the stud at the large end of the opening, and to hold it securely at the smaller end of the same. To each end of the collar, I attach one of these, in the manner shown in

fig. 1, that is to say, by bending the pointed projections *a a* into the shape of hooks, and hooking them into the collar, as there represented, or by first passing said points through the material of the collar, and then bending them down against its rear side, so that they will not draw out.

The method of fastening these plates to the shirt-stud or button will be readily understood without further description.

Having thus described my invention,

What I claim as new, and desire to secure by Letters Patent, is—

As an article of manufacture, the fastening for collars above described, consisting essentially of the plate A, provided with the pointed projections *a a* and the irregular opening *o*, adapted to receive and hold the stud in the manner described and shown.

M. C. BATTEY.
