⑤④ **Fastening device for container.**

⑤⑦ A fastening device for use in a container has an engaging piece (4) and a pressing member (5). The engaging member (4) is formed by bending a material to produce one leg (4b) and another leg (4c) facing the one leg, an opening portion (4a) being formed between the one leg and the another leg, at least one of the legs being formed with an engaging portion (4b) protruding outward relative to the opening portion, and both ends of the legs being formed with outwardly bent portions. The pressing member has a protrusion formed at the bottom thereof. The lid body (2) is formed with an insertion aperture (3), the engaging piece (4) is inserted into the insertion aperture (3), the protrusion is engaged with the opening portion, the pressing member is fixedly coupled to the container body, and engaging aperture (6) is formed in the container body.
